Business Responsible for Hitler

EXTENSION OF REMARKS
OF
HON. JAMES J. DAVIS
OF PENNSYLVANIA
IN THE SENATE OF THE UNITED STATES

Monday, July 14, 1941

EDITORIAL FROM LABOR

Mr. DAVIS. Mr. President, I ask unanimous consent to have printed in the RECORD an editorial entitled "Business Responsible for Hitler," taken from the July 15, 1941, issue of Labor, a national weekly newspaper.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

[From Labor of July 15, 1941]

BUSINESS RESPONSIBLE FOR HITLER—BANKER DECLARES NAZIS WERE ON WAY OUT WHEN INDUSTRIALISTS GAVE THEM HELP, EXPECTING THEM TO DESTROY UNIONS

The frightful mess in which the world finds itself today is very largely the result of the stupidity and greed of European businessmen. Labor has repeatedly made that statement, and it is confirmed up to the hilt by T. Graydon Upton, who represented large American financial interests in Germany and England from 1932 to 1940.

In an article in Harper's magazine, Upton declares that Hitler today would be but an uneasy memory had it not been for the support he received from German businessmen and industrialists. In 1932, the banker asserts, the Nazis were "all washed up" and were about to disappear from the scene. They had lost heavily in an election, were deeply in debt, and had no funds with which to start a new campaign.

Business was picking up and workers were restless and demanding a share in the increasing prosperity, which employers were unwilling to grant.

"During these crucial days," Upton says, "important business interests swung their support to the astounding Hitler-Hugenberg-Papen coalition which ushered in the National Socialist domination. Looking back, it seems quite possible that if businessmen had given less consideration to immediate industrial problems and more to the deeper implications of national socialism, Hitler never would have ruled Germany."

All that businessmen saw in national socialism was an ally against the power of the trade unions, Upton declares. They thought, he said, that after the unions were destroyed and their leaders shot or sent to concentration camps it would be easy to handle Hitler and his assorted thugs.

The unions were destroyed according to plan, but businessmen learned to their sorrow they had jumped out of the frying pan into the fire.

"Today," Upton says as a warning to American businessmen, "German businessmen are suffering more under the Hitler regime than any group in the country except the Jews."

Upton insists that businessmen in England, Holland, Belgium, France, and other countries now under the heel of Hitler's troops made the same mistake.

"There was a tragic failure of the business mentality to comprehend the forces, aims, and methods of national socialism," he says. "They thought Hitler was out to destroy labor and other liberal organizations, while all the time his sole purpose was to destroy everything that civilized man holds precious.

"In every major country of Europe business has played a vital role in preparing its own destruction. By ignorance and refusal to cooperate with liberal forces it has aided a reaction which has dispossessed and destroyed it. By its failure to rise above the 'business outlook' and comprehend the deceptive tactics and terrible scope of national socialism, it has been bombed and annihilated in the office and in the home.

"In this there is a lesson to us businessmen. We can avoid a similar catastrophe only if in thought and action we deliberately give first place not to business factors but to social progress within our democratic structure."

And the same advice might well be taken to heart by labor-hating Members of Congress who are looking for a Hitler to "put workers in their place."

United States Citizens May Not Enlist in the Armed Forces of a Foreign Country

REMARKS
OF
HON. LEWIS D. THILL
OF WISCONSIN
IN THE HOUSE OF REPRESENTATIVES

Monday, July 14, 1941

Mr. THILL. Mr. Speaker, there has been some agitation of late to enlist American manhood in the armies of foreign powers. These war salesmen who are so anxious to have someone else do the fighting and dying are either deliberately encouraging the violation of law or they are proceeding with their nefarious importunings ignorant of certain provisions of the Criminal Code. It is an outrage against humanity and decency to play upon the emotions of impressionable youth and by the use of insidious wiles and devices to induce them to enlist in the armed forces of a foreign power.

The following provisions of the Criminal Code prohibit any United States citizen from entering the service of a foreign power against any country with whom the United States is at peace:

Title 18, chapter 2 of the United States Code details the following offenses against neutrality:

Section 21 (Criminal Code, sec. 9): Accepting commission to serve against friendly power. Every citizen of the United States who, within the territory or jurisdiction thereof, accepts and exercises a commission to serve a foreign prince, state, colony, district, or people, in war, by land or by sea, against any prince, state, colony, district, or people, with whom the United States are at peace, shall be fined not more than $2,000 and imprisoned not more than 3 years (Rev. Stat. sec. 5281; Mar. 4, 1909, ch. 321, sec. 9, 35 Stat. 1089).

Section 22 (Criminal Code, sec. 10, amended): Enlisting in foreign service; exceptions. Whoever, within the territory or jurisdiction of the United States, enlists or enters himself or hires or retains another person to enlist or enter himself, or to go beyond the limits or jurisdiction of the United States with intent to be enlisted or entered in the service of any foreign prince, state, colony, district, or people as a soldier or as a marine or seaman on board of any vessel of war, letter of marque, or privateer shall be fined not more than $1,000 and imprisoned not more than 3 years: *Provided*, That this section shall not apply to citizens or subjects of any country engaged in war with a country with which the United States is at war, unless such citizen or subject of such foreign country shall hire or solicit a citizen of the United States to enlist or go beyond the jurisdiction of the United States with intent to enlist or enter the service of a foreign country. Enlistments under this proviso shall be under regulations prescribed by the Secretary of War (Rev. Stat. sec. 5282; Mar. 4, 1909, ch. 321, sec. 10, 35 Stat. 1089; May 7, 1917, ch. 11, 40 Stat. 39).

St. Lawrence Seaway

EXTENSION OF REMARKS
OF
HON. JOHN C. BUTLER
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES

Monday, July 14, 1941

STATEMENT OF HON. JOHN C. BUTLER, OF NEW YORK

Mr. BUTLER. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following statement I made before Rivers and Harbors Committee in opposition to St. Lawrence seaway:

Mr. Chairman, members of the Rivers and Harbors Committee, I am JOHN C. BUTLER, Congressional Representative of the Forty-second District of the State of New York. I have lived all of my life in Buffalo, and for 15 years of that time have been associated with the grain-elevator business. I notice in this Report IV, page 52, of the Department of Commerce that they have made a lot of statements about the little loss to this industry the construction of the St. Lawrence seaway would cause. I don't know where they got their figures; they don't match the figures that I know are true figures in many cases.

For instance, they state that the "entire discussion reveals that the largest loss to Buffalo is likely to be in its grain transfer activities, a loss estimated to affect 200 jobs." Why, in Local No. 109 of the Grain Shovelers alone there are 555 members; and in the Grain Elevator Employees Local No. 1286 there are some 550 members. Then take the flour-mill workers. They have more than 500 members in Local No. 21021. Besides, there are many other large labor organizations such as car sealers, weigh masters, samplers and tallymen, stevedores, feed and cereal plants, and railroad employees, such as engineers, firemen, switchmen and trainmen, clerks, section hands, coal-trestle operators, auto carriers, and terminal operators And this list does not cover all of the industries depending upon the water front for their existence and maintenance.

Indirectly, anything affecting those industries is reflected in the repair shops and shipyards dependent upon the front-line trades of the water front for their income. That section of my district known as the First Ward of the City of Buffalo is made up of people who earn their livelihood from water-front industries. Most of them have lived there all their lives—own their homes, which in turn have been owned through several generations of the same family. If the incomes in these homes are cut out or cut down through lack of employment on the water front, these properties and buildings will be vacated and the city will not be able to collect the taxes which it now collects. Factories and homes in that district would simply fall into the hands of the city for nonpayment of taxes. To the youngest and most inexperienced economist this can mean only one thing—the income of the city will shrink in like proportion as these men and factories and mills lose their financial mainstay.

The statements made in this report, No. IV, concerning the number of employees directly affected by the seaway are confused generalities—the same generalities I have noticed throughout the other reports on this subject which have been issued by the Department of Commerce. For instance, in speaking of the workers directly affected by the seaway, they state, I quote, "The statistics concerning them are very meager" (p. 52). How in heaven's name, I ask you, can we then accept their ridiculous conclusion a few paragraphs later on, and again I quote, that the "losses in terms of economic activity, employment and pay rolls * * *" would be "in round numbers, 200 workers."

Buffalo is acknowledged to be the largest flour-milling center of the world; how then can these men who have made the report and who have nothing to lose through the transfer of foreign grain traffic from Buffalo to upper lake ports, have the audacity to state, that, I quote, "the position of Buffalo is benefited"? (p. 56). In my opinion, the people who compiled this Report IV were given a job to do—to show in roundabout and highly technical terms that it would be economical to put millions of dollars into the building of an unnecessary seaway which would deprive present transportation and terminal facilities of their livelihood. This scheme which would tie up so much money and material has long been a daydream but now it has become a nightmare to deprive us of just so much money, men, and material so badly needed for our defense program.

Gentlemen, the untold number of clerks who worked on this survey for the Department of Commerce apparently had no time or thought for the cost to Lake ports should this seaway actually be put into operation. If we take away the source of revenue from these port cities—their very heart's blood, taxes—how can they be expected to have any money left for the improving or rebuilding of their harbors so as to accommodate the ocean-going vessels which are predicted to travel the route opened by the St. Lawrence seaway?

According to the report of the Department of Commerce, although, I quote, "Buffalo would lose all its transfer business on grain destined to ocean ports," I heard the Governor of our great State of New York testify before this committee that the St. Lawrence seaway is necessary in order to increase the power to meet demands of its industries, etc. Gentlemen, the obvious reason why he would come down here to testify to such nonsense is that he was merely doing as he was told. He hasn't called in the workers of the lake fronts—he hasn't consulted with the owners of lake fleets; he hasn't consulted with the city engineer of the city of Buffalo, for instance, to find out what it would cost the city to improve its harbor in order to accommodate those boats. He hasn't even consulted our mayor, or if he did he is disregarding his advice, for our mayor opposes this project. No; he has taken the word of a few so-called experts who, like himself, have been sold this thing from a political angle.

From what I can learn right there in my own part of the State, if there is any need for more power there, we have considerable idle capacity at Niagara Falls that can be put into use and if more is needed over and above the amount now under construction in Buffalo, I am convinced that the logical and sensible program to enter upon would be that of constructing steam plants in the areas where there are demands for the power. If our water-front industries are forced to close, we won't need more. It seems to me that we have met all the demands for shipping, storage, and power up to now and are in shape to take care of increased demands on all of those facilities.

I urge you to consider the plea of those of us who have made an honest, thorough study of this question as it concerns our own community and as it concerns the Nation at large. Every man in all of the groups I have mentioned in water-front labor at Buffalo would be ready and willing for the deep waterway to be built from Montreal to Duluth if he thought it would in any way strengthen our national-defense program—yes; they would probably be among the first to use their picks and shovels to hasten the work if they believed it a true defense measure. But we cannot believe it would aid in national defense—it would take too long to build, and I can only see the use of those words, "national defense," as a mask to hide its real nature.

Therefore, gentlemen, I hope that your decision in this matter will be consistent with our theory that this agreement between the United States and Canada should not be ratified.

Bastille Day

EXTENSION OF REMARKS
OF
HON. STYLES BRIDGES
OF NEW HAMPSHIRE
IN THE SENATE OF THE UNITED STATES

Monday, July 14, 1941

EDITORIAL FROM THE NEW YORK TIMES AND NEW YORK HERALD TRIBUNE

Mr. BRIDGES. Mr. President, I ask unanimous consent to have inserted in the Appendix of the RECORD two editorials on Bastille Day, one from the New York Times and one from the New York Herald Tribune.

There being no objection, the editorials were ordered to be printed in the RECORD, as follows:

[From the New York Times]

BASTILLE DAY

There will be little dancing in the streets of Paris today, the anniversary of the fall of the Bastille. This national holiday, so similar in significance to the Fourth of July, will be a day of sadness for the people of Paris and of all France.

Once the castle of the Bastille overshadowed the city of Paris. Within the castle, from time to time, were incarcerated the men held dangerous in a stirring France: Voltaire; the Encyclopedist Morellet; La Beaumelle, Marmontel. The prison was surrounded by a wide moat and guns, ready to quell any uprising, pointed down upon the city. Yet the Bastille was stormed and taken.

Today on French soil a new Bastille has risen. It is not visible, but one may see its jailers as they march through the streets of occupied France in the brown uniform of the Nazi invader. The lettre de chacet is no longer employed, but daily disappear men and women who knew too much or spoke too freely. The writers of France are scattered, her patriots hushed. The terror is not bounded by walls and turrets, but it is swift and merciless.

This is a bastion that must be stormed and destroyed; a new emblem of tyranny that must disappear from France. The task is gigantic, but the French, remembering their past, will be equal to the future. While the Nazis occupy France each day is Bastille Day for its people—a reminder of their tradition of liberty and a renewed call to action.

[From the New York Herald Tribune]

TWO BRIEF YEARS

It is a fantastic experience to look back across 2 brief years to July 14, 1939, the

one hundred and fiftieth anniversary of the fall of the Bastille. Europe was officially at peace then; the outlines of the continent had suffered little apparent change since Versailles, although Austria was gone, and Albania, and Czechoslovakia. Down the Champs-Elysees paraded the principal supporters of the European order, the French Army, unmatched in prestige in the world. In a position of honor in that traditional display were British guardsmen in red coats and bearskins, British sailors and marines—and the close-packed Parisian crowds shouted "Vive l'Angleterre!" President Lebrun, speaking at a demonstration of French unity, flung the challenge of the democratic way into the teeth of that black cloud of reaction mounting east of the Rhine: "Immutably attached to these principles of 1789, France recognizes for all men, without distinction of birth, color, or religion the right of access to liberty and equality."

One year passed. Poland, Norway, Holland, and Belgium went, in flame and blood, the way of Czechoslovakia. The French Army was swept from the field, and the armistice at Compiegne and the tragic necessity of Mers-el-Kebir divided France from her former ally, Britain. There was a government at Vichy that claimed to speak for France, that cast scorn upon the principles of 1789 and entered upon the pathetic and inglorious program of placating victorious Germany by imitating her vicious system.

Another year has seen the piecemeal destruction of Europe continued with the fall of Yugoslavia and Greece; it has seen the government of Marshal Petain go ever father along the road he chose in his first days of power; has seen him give his blessing to Frenchmen who might be deluded enough to fight beside the Germans in the east, to the end that Hitler's fetters might be the more irrevocably fastened upon France; has seen the culminating tragedy of Frenchmen battling Frenchmen in the strange and unhappy little war that has just ended in Syria.

From that Bastille Day of 1939 to today the record of events makes somber reading for Frenchmen—less so because of France's defeat, for many nations have lost wars without losing self-respect, than because the self-appointed leaders of France have capitulated spiritually to the enemies of France and of the human race. Yet Frenchmen have matter for pride as well; the muzzled millions of their nation have not succumbed to the alien poison; the free spirits under General de Gaulle have kept the tricolor in the fight against Hitlerism, and that fight will be won. Men of courage in France and without its borders can still say, as Winston Churchill said on the dark Bastille Day of 1940:

"And I proclaim my faith that some of us will live to see a 14th of July when a liberated France will once again rejoice in her greatness and her glory, and once again stand forward as a champion of the freedom and the rights of man."

Penalty on Wheat Raised in Excess of Quota

EXTENSION OF REMARKS

OF

HON. RAYMOND S. SPRINGER

OF INDIANA

IN THE HOUSE OF REPRESENTATIVES

Monday, July 14, 1941

Mr. SPRINGER. Mr. Speaker, untold thousands of our farmers are struggling for their existence throughout the Central and Middle Western States. They have been regimented throughout the past 8 years and they have been told what they could do and what they could not do. Our farmers have become confused, and they cannot tell when they plant their crop whether they will be entitled to harvest that crop or whether they will be penalized by their Government because they do harvest that which they have sown and planted. They have the one certain element however, and that is that their taxes in ever-increasing amounts will have to be paid. When their own Government forces them to curtail their crops, and to limit their production, they have no way to raise the money with which to pay their taxes. At the present moment our farmers are called upon to give to various funds for the benefit of our soldiers now in the camps—they are called upon to make their contribution to every request—and now our Government has reached the point that it fixes allotments for wheat long after the wheat has been planted and sown, and if the farmer exceeds a quota which is fixed at or near the time he is ready to harvest his crop, he is penalized.

The recent penalty provisions in the Agricultural Adjustment Act of 1938, as amended, of 49 cents per bushel on the excess of wheat raised over the quota, fixed long after the crop was sown, which was approved by the Agricultural Department, and also by the Agricultural Committee, in the House, is one of the most unjust provisions which has been foisted upon our farmers. Our farmers could not know when they sowed their wheat in the fall of the year 1940 that some agency would change their quota at harvest time, and they could not tell that the penalty provisions would be changed from 15 cents per bushel to the unusual and unjust amount of 49 cents per bushel. This high and unusual penalty will be highly injurious to our farmers. It has been placed upon them at a time when they had no opportunity to protect themselves by reducing their wheat acreage in accordance with a fixed allotment—because the allotment was fixed at the time the crop was ready to be harvested. With that exceedingly high penalty, in many instances the penalty will far exceed any profits which might have been derived from that crop, and I have discovered some instances in which the penalty exceeds the total amount the farmer could receive from his entire crop of wheat. That policy is destructive of our basic industry—farming. This penalty on the excess of wheat, above the quota fixed at harvest, is one of the rankest injustices our farmers have experienced at the hands of the New Deal. Those in charge of the administration of this unjust program should allow every farmer to feed the excess of his wheat, above the quota, to his own livestock, and poultry, and without any penalty attaching for so doing. This penalty provision should be decreased, immediately, to 15 cents per bushel, as is provided in the original act.

Mr. Speaker, I have introduced two bills today, one of which provides for the reduction of the penalty on wheat raised in excess of the quota fixed to 15 cents per bushel, as was provided in the original act; the second bill provides that our farmers will have the right to feed all wheat in excess of the quota fixed this year to their own livestock and poultry on their own farm without any penalty attaching to such excess.

Our farmers are struggling to pay their taxes and to meet their debts. They are the producers from the soil. Quite soon they will be called upon to produce to the limit of their ability in order to feed the warring nations and our own vast Army. Our agricultural communities are the command post of our national defense. If agriculture fails, then our defense fails. We should never countenance our own Government imposing penalties upon our farmers because they produce in excess of the quota fixed by some man, somewhere, when there are starving people throughout the world, and our own Nation is no exception, because we have hungry people within our own borders.

LETTER TO SECRETARY OF AGRICULTURE

Mr. Speaker, I have written a letter to the Secretary of Agriculture upon this highly important subject. I desire to incorporate a copy of my letter to the Secretary herewith, and I ask unanimous consent to include, with my own remarks on this subject, a copy of the letter which I have written to the Honorable Claude Wickard, Secretary of Agriculture, upon this subject, which letter follows:

JULY 12, 1941.

HON. CLAUDE WICKARD,
Secretary of Agriculture,
Washington, D. C.

MY DEAR MR. SECRETARY: Quite recently I have received many petitions from the farmers within my district, and in the State of Indiana, wherein they are vigorously protesting against the imposition of the penalty of 49 cents on wheat raised in excess of the quota. Many public meetings have been held throughout Indiana, and other States, and many such meetings will be held in the future, protesting against the imposition of such penalty.

May I say that it is my firm belief that the farmers are entirely justified in making these protests. I feel confident you will agree with me on this point.

At the time the wheat was sown, in the fall of 1940, the Agriculture Adjustment Act of 1938, as amended, was in force, and the penalty provided in the act was then 15 cents per bushel on the excess of wheat raised on each farm. The farmers knew of that law and they knew of the penalty provided in it, and with that knowledge they sowed their wheat. They did not contemplate that any change would be made in either their allotments or in the penalty.

Almost at harvest time, this year, the recent and very excessive penalty was included in the amendments presented by the Agriculture Committee of the House. Since that amendment became law new quotas have been established and the excessive penalty is subject to be applied. Our farmers had no way of protecting themselves. Their wheat had been sown, and when it was harvested and threshed the penalty attached. This penalty must be paid, or adjusted in the manner required, before the farmer can sell or dispose or use his wheat, or any part thereof. This is a most unjust imposition upon our farmers. My construction of the present policy is that the Department of Agriculture should want to help the farmer rather

than to injure him. If this policy of imposing the penalty of 49 cents per bushel on the excess of wheat is enforced this year, it will be highly injurious to every farmer, both large and small.

As you know, our farmers must pay their taxes upon their farms; this burden is inescapable. When they sowed their wheat last fall they invested their labor, the cost of seed wheat, and the cost of fertilizer, and when the very recent allotment of allowable acreage was announced, which applied to all farmers, in many cases the penalty imposed, of 49 cents per bushel on the excess, will exceed any profit in the wheat after the labor and the cost of seeding has been deducted.

I am convinced your Department does not desire to injure our farmers by imposing this unjust penalty. It certainly was not your intention to impose that heavy and excessive penalty upon our farmers at the time the amendment was reported out of the Agriculture Committee. My better judgment advises me that it was intended to force the storage of the wheat at the moment and to prevent a large volume of it from entering the market immediately after the threshing was concluded.

Many farmers need this excess of wheat for feeding purposes upon their farms. The corn crop was short last year because of drought, and the excess of wheat at this time would be exceedingly helpful for feeding purposes. This should be permitted without any penalty being imposed. A vast majority of our farmers are insisting that the excess of wheat over the allotment recently fixed be allowed to be used for feeding livestock and poultry on their farm without any penalty being imposed against them. I am in full accord with that policy.

In the light of fairness to our farmers, and in view of the policy of your Department to aid our farmers rather than to injure them, I hope you will, in the administration of this law, allow all excess of wheat to be used by the farmer upon his own farm for feeding purposes without penalty; that the penalty provision be restored to 15 cents per bushel, as is provided in the original act. May I say that I will introduce on Monday two bills which will embrace the items embraced in this paragraph of my letter, in which I hope you will concur. In the meantime I trust you will use your good office to aid the farmers in this matter. We are struggling to develop our national defense, and if we should become involved in this war you will call upon our farmers to produce as never before. In the face of that threat of war, I hope you will not impose upon these producers—our farmers—this unjust and unprecedented penalty.

Very truly yours,

RAYMOND S. SPRINGER,
Member of Congress,
Tenth District, Indiana.

Hidden Hold-up Men

EXTENSION OF REMARKS
OF
HON. A. S. MIKE MONRONEY
OF OKLAHOMA
IN THE HOUSE OF REPRESENTATIVES

Monday, July 14, 1941

ARTICLE FROM WASHINGTON DAILY NEWS AND EDITORIAL FROM THE NEW YORK WORLD-TELEGRAM

Mr. MONRONEY. Mr. Speaker, under leave to extend my remarks, I would like to call the attention of the House membership to H. R. 5259 which I have only recently introduced.

The bill is simple in its objectives—that is—to remove from blanket exemptions under the antitrust laws certain immunities now being used by a small minority of labor leaders to restrain trade and to conspire to further monopolistic practices. The bill in no way interferes with the legitimate objectives of labor organizations, but would prohibit those nonlabor activities that are so adversely affecting many workingmen and businesses through misuse of their union power to restrain trade.

Under recent holdings of the Supreme Court, especially in the Hutchinson case, the Court has held that present authority is lacking for restraining these activities. H. R. 5259 would especially grant such authority to the Antitrust Division to act in such cases of willful conspiracy to victimize consumers and honest contractors and businessmen under the guise of union activity.

In view of the completeness of two articles, I am including a news story from the Washington Daily News regarding the bill, and also an editorial from the New York World-Telegram, which I would like to incorporate in my remarks:

[From the Washington News of July 10, 1941]

"UNION TOLL BRIDGES" HIT—"LABOR'S HOLD-UP MEN" TARGET OF TWO BILLS

(By E. A. Evans)

Two bills before Congress today are aimed at demolishing what Thurman Arnold calls "the union toll bridges that now victimize consumers, small business men, and workers alike."

One was introduced yesterday by Representative MIKE MONRONEY (Democrat, Oklahoma), the other a few days ago by Representative FRANCIS E. WALTER (Democrat, Pennsylvania). Both are designed to make the Federal antimonopoly laws a more potent weapon against what Mr. Arnold, the Assistant Attorney General in charge of antitrust-law enforcement, calls "labor's hidden hold-up men."

Each bill undertakes to define what shall and what shall not be considered legitimate objectives of labor organizations and to declare that unions, their officers, and members, shall be subject to antitrust prosecution, either civil or criminal, if they restrain trade in pursuit of illegitimate aims.

COVERED BY CLAYTON ACT

The Clayton Act, passed in 1914, provides that unions shall not be punished under the antitrust laws for "lawfully carrying out" their "legitimate objectives." Labor leaders contend that this confers complete antitrust immunity on their organizations.

Mr. Arnold maintains, however, that "a few powerful, strategically placed unions" have robbed the public by imposing trade restraints for purposes which have nothing to do with such unquestionably legitimate labor objects as collective bargaining, better wages, shorter hours, or improved working conditions.

He has charged many conspiracies by unions, acting alone or in concert with employers, to raise prices, prevent use of improved materials and methods, compel the hiring of unnecessary workers, drive independent concerns out of business, and destroy other unions.

EFFORTS RESTRICTED

Recent United States Supreme Court decisions have drastically restricted Mr. Arnold's efforts to prosecute unions for engaging in such conspiracies. In effect, the Court has held:

That an A. F. of L. union can, with impunity, use boycotts, strikes, and other means of attempting to ruin an employer's business because he deals, legally and in good faith, with another A. F. of L. union.

That an A. F. of L. union can use similar methods to attempt to compel an employer to violate a National Labor Relations Board order directing him to employ members of a C. I. O. union.

That the antitrust laws do not protect a builder who is prevented by a union from using cheaper or better materials.

BEYOND COURT REACH

By these decisions the Supreme Court is widely believed to have placed unions beyond reach of the antitrust laws unless they are caught conspiring with employers or other outsiders. And, observers have pointed out, if labor is immune to prosecution merely because it acts alone, the full effect of a union-employer conspiracy to restrain trade probably can be attained without danger to either party. Instead of making an agreement with the employer—for instance, to raise prices—the union can make a "demand" and the employer can plead that he was forced to accede to it.

These decisions represent what the court interprets to be the will of Congress. The Monroney and Walter bills amount to proposals that Congress shall assert its own will and undo what the court has done.

SIMPLE AMENDMENT

The Monroney bill is offered as a simple amendment to the Clayton Act, which itself was an amendment to the original Sherman antitrust law. The bill declares that it shall not be considered a legitimate labor object for a union to act alone or combine to restrain trade for the purpose of:

1. Compelling an employer to cease dealing with another union which has been designated by the N. L. R. B., or with a union which is not company-dominated.

2. Inducing an employer to pay bribes or blackmail to union officers, agents, or representatives.

3. Restricting the use of any materials, machines, or equipment, unless the restriction is related to wages, hours, health, safety, or working conditions, or unless it is a merely temporary and good-faith method of retarding technological employment during a period of orderly change or is designed to forestall imposition of a speed-up system.

4. Fixing prices, allocating customers, restricting production, eliminating competing employers, or monopolizing commerce.

OTHER MORE SWEEPING

The Walter bill is much more sweeping, and it goes beyond the mere antitrust objectives by proposing to confer upon Federal district courts' jurisdiction over all threatened labor stoppages, with special emphasis on strikes in defense industries.

It provides that any person who is affected, injured, or threatened with injury by a strike may apply to any Federal court for relief. Pending determination of the action, a strike would be contempt of court. Strikes involving defense activities would be referred by the courts to the National Defense Mediation Board.

The duty of the courts or the Mediation Board would be to determine whether the strike or threatened strike would have the effect of obstructing commerce, and, if so, whether it would be for the purpose of a lawful labor objective. Persons found guilty of conspiring to restrain trade for purposes which the bill defines as unlawful labor objectives would be subject to a fine of $5,000, imprisonment for 1 year, or both.

[From the New York World-Telegram of July 10, 1941]

"HIDDEN HOLD-UP MEN"

We're glad to see action starting in Congress at last toward curbing those whom

Thurman Arnold has so accurately described as "labor's hidden hold-up men."

These are the individuals who have seized control of a few powerful and stategically placed labor unions and are exploiting them for purposes having no relation to legitimate labor objectives.

Such purposes as boosting prices, preventing use of improved materials and more efficient methods, driving independent employers out of business, destroying other unions, and generally preying on the public.

Mr. Arnold, being Assistant Attorney General of the United States, determined to do something about these robbers. He went after them with the Federal antitrust laws—and with much success for awhile. He thought that union officials who stopped interstate commerce for reasons having nothing to do with wages, hours, working conditions, or collective bargaining should be punished just as businessmen are punished for restraining trade to increase their own profits.

But the United States Supreme Court thought that Congress intended otherwise, and it has pretty effectively tied Mr. Arnold's hands by decisions which seem to mean, in practical effect, that the antitrust laws can't touch crooks who victimize consumers, businessmen, and workers under the cloak of unionism.

Two bills have now been introduced in Congress proposing, by different methods, to undo what the Supreme Court has done. These bills are described in an article by E. A. Evans of our Washington bureau on page 2.

The one introduced by Representative MONRONEY of Oklahoma seems to us the simpler remedy. It would amend the antitrust laws to say plainly that unions and union officials can be prosecuted for restraining trade for certain purposes which obviously are not legitimate objectives of labor organization. The other bill, by Representative WALTER of Pennsylvania, goes much further, entering the field of strike prevention, which perhaps could better be the subject of legislation addressed specifically to that problem.

But we hope the House Judiciary Committee will hold prompt and public hearings on both these measures and report one of them out for a vote by the whole membership of Congress.

The practices at which these bills are aimed do not benefit labor as a whole. They benefit only the "hidden hold-up men" at the expense of higher living costs for rank-and-file union members as well as for everyone else in the country. Labor bosses, of course, will cry that these measures are attacks on labor's rights. That simply is not so. They are attacks on wrongs perpetrated in the name of labor and to the great injury of honest labor.

An Editorial Eulogy of Secretary Harold L. Ickes

EDITORIAL FROM TACOMA NEWS-TRIBUNE

Mr. COFFEE of Washington. Mr. Speaker, under leave to extend my remarks in the RECORD, I am quoting a recent editorial from the Daily News-Tribune of Tacoma, in which Secretary Ickes is lauded for his devotion to, and friendship for, the Pacific Northwest.

Because this editorial incorporates views generally entertained by the progressive people of that enterprising section, I am reading it into the CONGRESSIONAL RECORD. The editorial is as follows:

[From the Tacoma (Wash.) Daily News-Tribune]

REAL FRIEND OF NORTHWEST

Three years ago when Tacoma was making another of its desperate efforts to get construction on its Narrows Bridge started Secretary Ickes was taken to the site.

"What's over there?" he asked grumpily as he gazed across at the tree-covered western shores of the Narrows.

But we got the P. W. A. grant from Ickes which made the bridge possible, and this was but one of a series of proofs of friendship and interest for Tacoma and the Northwest of the Interior Department's chief.

And now, as the Nation's productive forces are geared up for an all-out program of national defense and aid to the beleaguered British Isles, it is becoming more apparent that the man who is doing more than anyone else to shape the destiny of the Pacific Northwest is the honest, courageous, plain-spoken but sensitive Harold L. Ickes.

All during the depression years the anti-irrigation bloc in Congress and the Industrial East threw farm surpluses at him to stop the well-planned irrigation and reclamation programs, but to no avail. Mr. Ickes persevered and won, and now Dust Bowl victims are rolling west to greener pastures.

Over the bitter opposition of all power interests, most of the Nation's press, and organized business groups, Secretary Ickes insisted on building the high dam at Grand Coulee and the great Bonneville project on the lower Columbia. A mounting Government debt, huge surpluses of power everywhere, a Nation's income cut in half was the picture Mr. Ickes faced when he appeared before the Appropriations Committees of Congress asking for funds and more funds to finish the jobs and create a new industrial empire in the Pacific Northwest. Support from his chief and a faith in the Northwest equaled by few pioneers were his chief weapons, but they were sufficient, and now the Department's half a billion dollar babies are grown and ready for work. Long before Grand Coulee's little brother Bonneville turned is first turbine Mr. Ickes had skilled industrial engineers covering the country looking for industries whose basic raw material is power. At Tacoma, Longview, Vancouver, and Portland great plants are under construction and operating, and others are on their way.

Mr. Ickes has needed and used his influence as a Cabinet officer to create competition in the aluminum industry and to bring that industry to the Northwest. He is now calling for the making of aluminum from our native alunite ores and for the building of aluminum fabricating plants here so as to insure the continuous operation of plants when the emergency is over and normalcy returns.

It is now Ickes' turn to smile at the cartoonists, the gossip columnists, and anti-western development bloc in Congress. There is a power shortage. Night ball games are threatened in the East, power conservation is the order of the day. Senators are crying out for plants on the Tennessee, the Arkansas, and St. Lawrence Rivers to furnish power to speed up defense industries. This is an ominous sign for Washington and Oregon. It means serious competition for later power that will be coming in at Coulee and Bonneville. No Senators as yet are talking of the possibilities of further Columbia power. It is eastern power that is demanded.

It would seem that the policy of the Northwest is clear cut. We should support, with real unanimity, Mr. Ickes and his Federal power administration.

Valley Forge

EXTENSION OF REMARKS

OF

HON. W. F. NORRELL

OF ARKANSAS

IN THE HOUSE OF REPRESENTATIVES

Monday, July 14, 1941

ADDRESS OF HON. DAVID D. TERRY, OF ARKANSAS, DELIVERED AT WASHINGTON MEMORIAL CHAPEL, VALLEY FORGE, ON ARKANSAS STATE SUNDAY, JULY 13, 1941

Mr. NORRELL. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following address of Hon. DAVID D. TERRY, of Arkansas:

This is the eighteenth annual Arkansas State Sunday at Valley Forge, and it is my very great privilege to represent our Governor, the Honorable Homer M. Adkins, and to speak to you under the auspices of the Arkansas State Society, Daughters of the American Revolution.

It happens that all my life I have wanted to see Valley Forge, but this is my first visit.

It is impossible to hear the name Valley Forge or even to think of it without emotion; one's heart expands at the sound; no place in our land means so much; it is the richest spiritual heritage of our country.

From my earliest childhood the name has brought before my mind's eye a cold, bleak, snowbound countryside, with ragged, unkempt, half-starved Continental soldiers warming their numbed hands and bodies before the flickering flames of their meager camp fires.

That was in the winter of 1777–78. No better description of the miseries of that winter can be found than the words of Washington himself:

"Without arrogance or the smallest deviation from truth, it may be said that no history now extant can furnish an instance of an army's suffering such uncommon hardships as ours has done, and bearing them with the same patience and fortitude. To see men without clothes to cover their nakedness, without blankets to lie upon, without shoes (for the want of which their marches might be traced by the blood from their feet), and almost as often without provisions as with them, marching through the frost and snow, and at Christmas taking up their winter quarters within a day's march of the enemy without a house or a hut to cover them till they could be built, and submitting without a murmur, is a proof of patience and obedience which in my opinion can scarce be paralleled."

The first Roosevelt thus described the situation in an address delivered here July 4, 1904:

"Here at Valley Forge Washington and his Continentals warred not against the foreign soldiery but against themselves, against all the appeals of our nature that are most difficult to resist, against discouragement, discontent, the mean envies and jealousies and heart-burnings sure to arise at any time in large bodies of men, but especially sure to arise when defeat and disaster have come

to large bodies of men. Here the soldiers who carried our national flag had to suffer from cold, from privation, from hardship, knowing that their foes were well housed, knowing that things went easier for the others than they did for them. And they conquered because they had in them the spirit that made them steadfast, not merely on an occasional great day, but day after day in the life of daily endeavor to do duty well."

At the time the Continental soldiers were famishing for want of food and perishing for want of cover at Valley Forge the soil of my State belonged to a foreign country. Arkansas, over a thousand miles to the southwest and a journey of weeks through the trackless forests, was a part of Spain, for that was a quarter of a century before Thomas Jefferson purchased from Napoleon Bonaparte the empire west of the Mississippi, from which my own State was carved. Although Arkansas was never one of the Thirteen Original Colonies, which wrested their liberties from the English Crown, many of the people who settled in Arkansas came there from older sections of the country, and their descendants among our citizens proudly boast of membership in the societies that go back to ancestral participation in the struggle for independence.

Valley Forge is truly symbolic of the great qualities of character, fortitude, and devotion that in Washington and his heroic band made possible the difference between success and failure in that great experiment in freedom. Valley Forge envisions to me a quiet, dignified soldier on his knees in prayer before his Maker, asking for strength and guidance in difficult days; it means the putting aside of the temptation to take the easier road to surrender and to the bright lights and warm homes only a few miles away; it means a little band of resolute men, buoyed up by the example of a God-given leader, who were willing to suffer unto death rather than betray the confidence of that leader and their country's cause.

It is well, my friends, that we should repair here today and breathe deeply of the air of this historic spot. Sometimes I feel that it would do all of us good if from time to time, we should be permitted to touch hallowed ground. I think in that way we might be better able to cleanse our spirits and revive our souls.

To me, it is in the nature of a religious experience to stand before Washington's tomb at Mount Vernon on a quiet afternoon and commune for the while with the spirit of the Father of our Country; and, although I am a southerner, one of the greatest privileges that my stay in the Capital City has afforded me is to visit the Lincoln Memorial and pause for a while at the feet of that most lifelike statue of the great Civil War President. I sometimes feel that perhaps the spirits of these great men brood over the places that are so closely linked with their earthly trials and struggles.

Last week we celebrated the one hundred and sixty-fifth anniversary of the Declaration of Independence. Probably at no time since the close of the Revolutionary War has the future seemed so dark or our path so uncertain as at this particular time in the history of our country. The Revolution was fought and the blood of our patriot soldiers was shed in order that an experiment might be tried on this earth—our country was to be the crucible in which the test should be made as to whether or not a government of the people, by the people, and for the people could be wrought from the forms of older governments and made to endure.

We have gone onward and upward as a nation since that first lowly beginning, which was fashioned out of the toil and sacrifice, sweat, and blood of our forefathers, until now we are the richest and strongest Nation on the earth. And yet at this time the very principles upon which our Government was founded are being weighed in the balance, and liberty and freedom and equality of opportunity are threatened with extinction by the rising tide of brute force that is now sweeping over this earth. Democracy is on trial. It is flaunted and despised as being weak and inefficient by those who now seek to supplant it by deceit, duplicity, and armed might.

While we have grown into a great Nation, I sometimes feel that our uniformly successful journey down the road of national life has softened our citizenship so that we cannot bear hardship and suffering and deprivation in the way of our ancestors, and that the keen realization of the principles for which they fought has been dulled by the passing years.

Have we eaten the cake of life so long that the effort is too great to go back to the simpler fare of the earlier days? Have we strayed too far away from the Oregon Trail, blazed by settlers of the great Northwest? Have we as a nation lost from our blood and sinew the iron put there by the heroic days of 1861–65, when in defense of what they thought was right brother met brother on the field of battle, from Bull Run to Appomattox? Have we become so weak and anemic that we cannot as a nation decide upon the course of conduct in our relations toward aggressor nations and have the hardihood and stamina to pursue that course to the end?

Since March 1938, 17 nations of the earth have lost their liberty. Are we in our own country taking liberty too much for granted? On The Archives Building in Washington, which contains the records of our heroic past, are graven these words: "Eternal vigilance is the price of liberty." Have we enjoyed so long the blessings our valiant forefathers won for us that they seem not privileges to be won and preserved by each generation but attributes of life, as unfailing as the daily rising and going down of the sun?

We in this country are too prone to sit supinely by and let our fellow Americans bear the burdens of citizenship. Going back to Biblical days, we may learn something from the example of Moses when he, too, even as we today, stood on holy ground. You remember that God spoke to him and said, "Put off thy shoes from off thy feet, for the place where thou standest is holy ground." The story continues and Moses communes with God. He is a Jew. He knows the sufferings of his people; he is a foster son of the Egyptians, and knows them also. Clearly he is the appointed one to rescue his race. But he does not want the task and tries to avoid it. He argues:

"Who am I that I should go to Pharaoh?
No one will listen to me if I go.
I am slow of speech and of a slow tongue.
And, finally, Lord, send someone else."

His attitude is not an uncommon one in our own day. All too many of us turn the running of our country over to the so-called politicians and take no further interest in public affairs. We may exercise our right of suffrage if it is not too hot or too cold on election day, or if we have nothing more important to do. All too many of us have no time to make up our minds about State, National, or international matters, except when our own personal or financial interests are affected.

In a period like this, when our country is facing great social, economic, and political world problems, and when we are beset with doubts and difficulties on all sides, it is meet and proper that we should turn our eyes and steps to this historic shrine of our country, so that we may be reborn and acquire new strength and determination to press on to the ultimate goal of our national ideal.

The national ideal is the ideal of freedom—freedom of thought and speech, freedom of assembly, freedom to worship God. The cause of religious freedom is the cause of mankind. The conception of one God and one human family, of all men as brothers and sons of God, is the source of the conception of freedom and democracy in the modern world.

In conclusion, may I quote from the message of our President to the Congress on May 16 of last year? He said:

"For more than three centuries we have been building on this continent a free society, a society in which the promise of the human spirit may find fulfillment. Commingled here are the blood and genius of all the peoples of the world who have sought this promise.

"We have built well. We are continuing our efforts to bring the blessings of a free society, of a free and productive economic system, to every family in the land. This is the promise of America.

"It is this that we must continue to build—this that we must continue to defend.

"It is the task of our generation. But we build and defend not for our generation alone. We defend the foundations laid by our fathers. We build a life for generations yet unborn. We defend and we build a way of life, not for America alone, but for all mankind."

Closer To It Than You Think

EXTENSION OF REMARKS

OF

HON. PAUL W. SHAFER

OF MICHIGAN

IN THE HOUSE OF REPRESENTATIVES

Monday, July 14, 1941

EDITORIAL FROM THE CHICAGO TRIBUNE

Mr. SHAFER of Michigan. Mr. Speaker, in my opinion Members of Congress who have supported legislation surrendering their powers to the Executive, should read the forceful editorial, Closer to It Than You Think, which appeared in the July 12 issue of the Chicago Tribune. I therefore include this editorial in the Appendix of the RECORD:

[From the Chicago Tribune of July 12, 1941]

CLOSER TO IT THAN YOU THINK

One of the administration's War Department bills, introduced without approval by Senator ROBERT R. REYNOLDS as chairman of the Military Affairs Committee, provides that notwithstanding the provisions of any other law the President may "employ any and all members and units of the Army of the United States * * * in such manner and in such places, either within or beyond the limits of the Western Hemisphere, as he shall deem necessary in the interests of defense."

No Member of Congress will deceive himself as to the meaning of that grant of authority. It plainly takes from the National Legislature the power to preserve the Nation's peace by refusing to declare war. It nullifies the constitutional prerogative of Congress and removes an all-important check upon a willful and ambitious Chief Executive.

If a President had the power to employ the American armed forces "in such manner and in such places" as he wished, the only restraint upon him would be the congressional control of the purse. Appropriations

could be refused, but with an American force once engaged in a war abroad, with its fate dependent on supplies, the moral coercion to provide them would be supreme. Others of the War Department bills propose to inflict upon the National Guard and the drafted men the intolerable bad faith of retaining them in service indefinitely—in spite of the previous acts of Congress limiting their training to 1 year.

The new powers Mr. Roosevelt seeks in his quest of the military dictatorship over the country are to be exercised during any period which he proclaims one of unlimited national emergency. He has proclaimed such an emergency, although it is meaningless in law, representing nothing more than his own edict. The already partly stupefied country did not much inquire where Mr. Roosevelt got the sanction to declare that he had more authority merely because he said he had it, and said he had it because of conditions which he said existed. His assumptions were accepted.

He has already made treaties and occupied territory with merely a nod to Congress as he rode over it. He has nullified the constitutional requirement that he act upon the advice and consent of the Senate. When he has done a thing he fulfills what he thinks is his full obligation to his oath of office by notifying Congress that he has done so. The agreement Mr. Roosevelt negotiated with the Prime Minister of Iceland was submitted to the Parliament of that little sovereign nation and ratified by a vote of 39 to 3, although candor would compel the Icelanders to admit that it was only a formal action, the decision having been forced upon them by the British and the Americans, whether they liked it or not. However, it was, even as a formal recognition of parliamentary procedure, a great deal more than Mr. Roosevelt thought necessary.

Congress is committing suicide. It is not only killing itself, but it is killing the American system of government. It is going down the path taken by every legislative assembly in the countries which submitted to a Fuehrer and found itself his slave. There are disloyal Americans who are trying to put the Nation in the British Empire and make it a dominion in that monarchial system of government. There are other disloyal Americans who would add the United States to the Communist union of sovietized subjects. The question of what the American Republic will be under the military dictatorship which Mr. Roosevelt has established and seeks to extend will be decided by the Seventy-seventh Congress, and very soon.

If this Congress abdicates, it will never regain its powers. The issue is very grave and is made graver because of the confusion in which so many of the people have been thrown and by the synthetic war hysteria produced by artful manipulation of emotions and fears. The propaganda which is driving the country to war and to the destruction of its free political and economic system is powerfully organized, with subsidized and purchased newspapers, and with access, under covert threat, to all the various chains of communications—all willingly or unwillingly playing their part to execute the great conspiracy.

Our polls show 80 percent of the people against war and against dictatorship. At times they must think their form of government is utterly failing them when their opinions and their wishes, their good judgment and their common sense, prevail so little against Mr. Roosevelt's drive to accomplish his ends and impose his will. He rides down the good judgment of the people and by undermining and by direct assault he storms Congress. The issue is with the Congressmen. If they leave the American system of representative government an empty shell on Capitol Hill, they will have destroyed this Republic.

Preserve American Democracy

EXTENSION OF REMARKS

OF

HON. JOHN M. COFFEE

OF WASHINGTON

IN THE HOUSE OF REPRESENTATIVES

Monday, July 14, 1941

RADIO ADDRESS OF HON. JAMES F. O'CONNOR, OF MONTANA

Mr. COFFEE of Washington. Mr. Speaker, the distinguished gentleman from Montana [Mr. O'CONNOR] recently delivered a characteristically moving and challenging address on the subject of international relations. In this speech Mr. O'CONNOR presents remedies and recommendations as to the policy to be pursued by Congress. I read it into the RECORD as part of my remarks:

Ladies and gentlemen, last week we Americans celebrated the most important holiday in the world, the most important to us and to the world because it marked the birth of a new world freedom.

Our Declaration of Independence and the struggle of 13 weak Colonies to win our freedom from foreign oppression did more to set the world free than all the wars in history. We lighted a torch of liberty which lifted the dark shadows that hovered over all lands. We gave courage and resolution to oppressed peoples everywhere. Ours was the spark that lighted the fire of revolt for liberty and economic justice in France and Italy and Germany, and in the nations of South America. By precept and example we proved that liberty and democratic self-government can be attained if only a people want it and have the courage and hardihood to fight for it.

It is said today that there is disunion among our peoples. This is hardly true. Our people are united as never before on their resolution to maintain and keep our liberty and democratic form of government and defend ourselves. There is only disunion and difference of opinion among us as to the best way to preserve our independence, freedom, and democracy and defend our country. Our objective is the same. We disagree only as to the method. I do not charge those with whom I find myself in disagreement with being appeasers, tories, and dishonest or moved by any ulterior motive. Through our history, people have differed. I refer to the beginning of our national history. Today, more than ever before, Americans should remember the year 1776.

Then, too, there were two factions. One was the appeasement group, better known as Tories. They believed that the Colonies should remain under the British Crown; they believed we were not strong enough to stand alone in a hostile world; they pointed to the fact that English troops were all around us and that other greedy European powers—France, Spain, and Portugal—all had footholds in this hemisphere.

The other group; well, you might call them isolationists; they believed we should break with the Old World; we should live our own life; we should not involve ourselves in European troubles; we should not submit to dictation and interference and meddling from across the Atlantic; that we could and should be a democratic republic in a world of monarchs and autocracies.

This was the group which won the fight in the First Congress, and we boldly proclaimed our intention to govern ourselves. Washington, Franklin, Adams, and Jefferson carried the day, the die was cast, and freedom was born.

Today we stand again at the crossroads. There are those advocating union; and again what road shall we take? We hear that the world has become smaller on account of aircraft, and that a madman is loose in Europe, and because of aircraft we may be in his path of destruction. To make this statement is to answer in the negative. You cannot invade a country except with an army. You cannot transport an army by aircraft a distance of 3,000 miles or more. The army would have to be transported to our country by ships. Our aircraft, fighting planes, and bombers could and would destroy the ships before they ever reached our shores. I have never heard any informed Navy or aircraft officer say we could be invaded. Yet we must arm to the teeth and be prepared against any eventuality. Now, why are we urged to throw ourselves headlong into one of Europe's hundreds of wars that have been going on for centuries and will continue to go on? It has been contended that we want to restore democracy in the world; that we want to establish the four freedoms everywhere—freedom from want, from fear, of speech, and religion. Fathers and mothers, this is a big order for your boys, your girls, their children, and their children's children to carry out everywhere when we have been unable to establish the four freedoms here in our own country thus far. Yes; also to destroy nazism and fascism. Well, every country is entitled to its own form of government. We must not impose by force our views or form of government on any other country. They have the right to choose their form of government the same as we.

The Congress has made certain commitments. It passed the lease-lend bill and implemented it by passing a $7,000,000,000 appropriation bill to help England with materials. We did this on the theory that it was a peace measure to preserve our peace. Now, what is happening? The President of the United States is being pressed by every possible means by those surrounding him, and particularly Secretary Knox, to go into this war, to engage in an undeclared war on the Atlantic Ocean. It is said the Navy now carries shooting orders. Churchill is asking us to pool our Navy with the British Navy. Gen. Sir Archibald P. Wavell and Lt. Gen. Sir Claude Auchinleck said at Cairo that another American Expeditionary Force would be needed if Britain and the United States were to defeat Hitler. Churchill told these men to make these statements. Let us think through on these demands; what they mean to us. We must save Soviet Russia from Hitler. We would have to bring freedom to China, to crush imperialistic Japan, to reconstitute Poland, Czechoslovakia, Greece, Belgium, Holland, France, Norway, Yugoslavia, Bulgaria, Rumania, Hungary, Albania, Ethiopia, and countless other nations, besides conquering Germany. If we could do this job, what would we do with them after we did it? Could you control them, and would you want to if you could? Would you want to place an army of occupation to see that they stayed good? In the meantime, we would have lost millions of the flower of our young manhood buried in foreign countries or sea and billions and billions of our material wealth. Yes; we are willing to sacrifice every dollar of our wealth and every drop of blood of American manhood and womanhood in defense of our country, but only in defense. We must not let Churchill dictate to us and tell us what to do and when to do it. You heard about a quarter of a century ago the same slogan, "We must destroy the Kaiser." We helped destroy the Kaiser, and at what cost. Did it help us or anybody else? Thousands of our sons lie buried in

France. Although 24 years have gone by, those war debts are still unpaid. I am begging the fathers and mothers and the young manhood of this country to demand of their Senators and Congressmen to help our President resist the forces that are trying to drive him into this war. We in Washington know the influences that are back of these moves that would take our finest young men and destroy them in foreign battlefields and fill our hospitals with insane men as well as bankrupt our country. Ah, do not be sure that in trying to save so-called democracy in Europe by getting into this war that we won't lose it at home.

Picture shows, radio commentators, scare headlines, writers whose words are gold bought, international newspapers, are getting their work in on official Washington. Here we are thinking only of war and what is going on in Europe and little of our own problems. We live in a great big country. Our resources are numberless and matchless. It is a big job, big enough for anyone to look after this country instead of trying to police and look after the world. We cannot have everything we want everywhere.

Now, I want to make this point clear that nothing can happen in Europe, Asia, or Africa that will free America from its economic ills, and victory, defeat, or compromise over there will leave us with our major problems: Unemployment, poverty among our poor people, and lack of distribution only magnified many fold and made more difficult of solution. The repercussions, whatever they are when peace is finally declared, will put us in a position facing the most trying and arduous times through which this country has passed or we hope we will ever again have to face. So, looking for no hope from that source on the conclusion of this debacle in Europe; unemployment, hunger, and a lower standard of living for everybody will stalk our footsteps everywhere. We must prepare now to absorb this shock.

There is no denying the fact that democracy is the hope of the world. We cannot hope to challenge the world's attention to the benefits of democracy unless we make democracy work in America. We cannot sit supinely by and deal in platitudes and say we have a Nation of four freedoms. In theory that is right, but we have not been making this theory work. One-third of our people would today be in want were it not for the defense program, in being engaged in the manufacturing of things to kill people with, and even with this program, millions of our people are in want. Are those poor people who are in want free of fear? When they get up in the morning of the first day of the month, they don't know if they will have enough to get through until the last day of that month. Freedom of religion—let us see. We are all striving for the same objective, namely, the salvation of our soul and the betterment of mankind and we are supposed to have the right to obtain those objectives through any religious faith we adopt. Yet, I have known where people were discriminated against because they were of a certain religious faith. We have not equality of our racial groups. Persons are today being discriminated against because of by accident they happen to belong to a certain racial group. This is not democracy at work.

Nazi-ism, fascism, communism won't do. They deny the freedom of man. Man was not born to be dictated to by any person. I am opposed to any form of "ism" that has for its purpose a state or socialized ownership and control of the personal privileges of the people.

The most that can be said as between these "isms" is that there is a distinction without a difference. Hitler and Stalin, each the leader of a pack, are now at grips. It is to be hoped that they will bat the brains out of each other. So far as affecting the morals and welfare of the world, victory either way would make little, if any, difference. However, these wolves have been hunting for victims in two packs in the past. Should either win now all would hunt together. In the past, each, fearful of the other, spent time on the watch. Should a winner emerge, the pack would give its entire time conquering free peoples. The history of both show that they have been trying to outdo each other in brutality, human massacre, wickedness, and human slavery. Each hand is equally bloody.

Let there be no doubt whoever wins we must be on our guard. We have called them every name in the catalog and we now must be prepared to back those accusations up. I want to emphasize that we must not get into this European war. It is going to be a long, disastrous, and bloody one. Human lives do not and will not count. We must stay out of this caldron of human butchery. We must be on our guard to keep this country free from any foreign entanglements with any foreign nation. We are willing to help England short of war without stripping ourselves of our needed defense materials.

If you agree with what I am saying, demand of your Senators, Congressmen, and President more thought and consideration of our problems here in America. Let us not follow some fine-spun theory that England is our first line of defense. Why, as I said before, that when we were in our swaddling clothes we kicked ourselves loose from England. Are we weaker now than we were then or are we stronger? If we are weaker, let us hide behind England's skirts. If we are stronger, let us stand on our feet. When we were only a baby we didn't need her protecting skirts. I have no patience with the claim that is made that England is fighting our war. We can fight our own wars.

I pledged my people in Montana that I would do everything within my power to keep this country out of war; to keep our boys from being sent to Europe whether they are soldiers or seamen to be killed in any foreign war. I am keeping that pledge. I am pleading for your help to keep us out of war; to wire your Senators, Congressmen, and President to keep us out.

Now, in closing, let us first of all thank God that we are Americans; that we are a free people. Let us continue to lend every mite of our power to preparing defense for our Nation so that it may achieve victory in any contest. Let us at the same time pray to God that the leaders in our world, who are motivated by pride for fear someone else will go down in history greater than they, also by greed and selfishness because of the desire for power, be given light to the end that this insane destruction of human lives and property cease and that God in all His wisdom will again save the world. Let us have faith in our God. Let us have faith in our country, and lastly, let us have faith in ourselves. Let us be Americans for America.

Monument of Deficits

REMARKS

OF

HON. ROBERT F. RICH

OF PENNSYLVANIA

IN THE HOUSE OF REPRESENTATIVES

Monday, July 14, 1941

Mr. RICH. Mr. Speaker, I want to set up a red monument today to the greatest deficit that the world has ever known, which has been created by the present administration. I will place in the RECORD the annual deficits of this administration from March 3, 1933, to date, and it will show that the average deficit has been over three and one-half billion dollars annually. There has been nothing like it in the history of the world by any nation anywhere. If that is a credit and an honor, then we have this monument constructed to perpetuate the memory of this administration. To me, though, it is a disgrace and a dishonor, and especially so when we realize that our children and our grandchildren will have to pay the bill for this monument that has been erected. A monument of inefficiency and incompetence for no competent administration would have permitted such inefficiency.

When President Franklin D. Roosevelt was seeking office in 1932 he made this statement on October 19 in Pittsburgh:

> The credit of the family depends chiefly upon whether that family is living within its income. And that is equally true of the Nation. If the Nation is living within its income, its credit is good.
>
> If government lives beyond its income for a year or two, it can usually borrow temporarily at reasonable rates. But if, like a spendthrift, it throws discretion to the winds and is willing to make no sacrifice at all in spending; if it extends its taxing to the limit of the people's power to pay and continues to pile up deficits, then it is on the road to bankruptcy.

Now the statements that he made and his performance are very, very far apart, for I give you a list of the deficits of the Federal Government since Mr. Roosevelt has been at the head:

Mar. 4 to June 30, 1933	$392,600,000
1934	3,935,991,685
1935	3,575,357,963
1936	4,763,841,642
1937	2,707,347,110
1938	1,384,160,931
1939	3,542,267,954
1940	3,611,056,036
1941	5,167,678,471

In red average over three and one-half billion a year.

Mr. Roosevelt criticized very greatly the administration of former President Hoover and in reference to Mr. Hoover's administration he made the following statement in his speech at Sioux City, Iowa, September 29, 1932:

> We are not getting an adequate return for the money we are spending in Washington, or to put it another way, we are spending altogether too much money for Government services that are neither practical nor necessary. And then, in addition to that, we are attempting too many functions. We need to simplify that the Federal Government is giving to the people.
>
> I accuse the present administration of being the greatest spending administration in peacetimes in all our history. It is an administration that has piled bureau on bureau, commission on commission, and has failed to anticipate the dire needs and the reduced earning power of the people. Bureaus and bureaucrats, commissions and commissioners have been retained at the expense of the taxpayer.

Now all you need do is to examine the record of Mr. Hoover and you will find that in 4 years Mr. Hoover did not go in

the red as the average of Mr. Roosevelt's deficit for the past 8 years. It certainly should cause him at least a little concern, but he says nothing about the deficit any more than he says about balancing the Budget. But all he is thinking about and his administration is spend, spend, spend. Some day it will be too late, and that will be when the Nation is bankrupt and when we go through the greatest revolutionary changes any nation has ever known, and the responsibility is due to the President of the United States. Why does he continue this extravagant, wasteful expenditure of funds, heaping the burden on the children of oncoming generations. This is the question I cannot fathom and I hope that the good thinking Jeffersonian Democrats will storm the White House with requests for economy in government before it is too late.

OF

HON. WILBURN CARTWRIGHT

OF OKLAHOMA

IN THE HOUSE OF REPRESENTATIVES

Monday, July 14, 1941

TELEGRAM FROM HON. ROBERT S. KERR TO OKLAHOMA CONGRESSIONAL DELEGATION

Mr. CARTWRIGHT. Mr. Speaker, recently the Democratic national committeeman from Oklahoma, Hon. Robert S. Kerr, was scheduled to lunch with the congressional delegation from Oklahoma in the Speaker's dining room in the National Capitol, but it became necessary for him to return to his home, and he sent a telegram which was read at the meeting. Because of its patriotic spirit and its complimentary references to our delegation, I have asked and secured permission to have his message printed in the RECORD.

Mr. Speaker, I have known Bob Kerr quite intimately for 30 years and have always found him to be an honorable and upright gentleman. He was born and partly reared in a log cabin in Pontotoc County, near Ada, Okla., where the old Kerr home is still standing. He comes of a splendid family. His aged mother is one of the sweetest Christian characters it has ever been my privilege to know. His late father, a highly respected and stalwart Christian gentleman, while engaged in farming, was elected to county office and then moved to town. His several children attended the public schools of Ada and continued their education at East Central State College at Ada. It was my happy privilege to go through college there with Bob, as he was called by his friends. He was a brilliant and popular student.

It was also my pleasure to be a member of the First Baptist Church of Ada, where he was general secretary of the Sunday school and an active leader in the church. Unlike some who have succeeded in the business world, Bob Kerr has not departed from his early training. For the past 8 years he has been teaching a Bible class in the First Baptist Church of Oklahoma City. He is an honest and upright man. He is as clean as a hound's tooth. All his life he has had strong and definite convictions, with the courage to express those convictions at all times and under all circumstances. His word is his bond.

He was born on a red-clay hill in Pontotoc County in circumstances peculiar to pioneer Indian Territory, inheriting not wealth but, rather, an indomitable courage to move ever westward, onward, and upward to success. He is an outstanding example of a self-made man. I am familiar with his early struggles. One of the schools I taught was at Eubanks, 4 miles north of Tupelo, Okla., where I received $60 per month. When I left to assume a better position as a teacher in another school it was my pleasure to recommend Bob Kerr for my place. After teaching for $60 a month for some time, he completed the normal course at East Central State Teachers College. Later he engaged in the wholesale produce business, then studied law in a law office and passed the bar examination. From law he entered into the oil business, and is now president of Kerlyn Oil Co., of Oklahoma City.

Mr. Speaker, it may be a little presumptuous on my part to make these complimentary remarks about an old friend, but a "rose to the living is more than sumptuous wreaths to the dead," and I appreciate the opportunity to say these things about Bob Kerr.

The following is the telegram addressed to the Oklahoma congressional delegation on June 9, 1941:

I had hoped to attend your luncheon tomorrow, the 10th, but am compelled to return to Oklahoma tonight. The entire Oklahoma delegation is to be congratulated upon the wisdom and courage it has shown and is showing in the effort being successfully made to bring an end to unnecessary and unwarranted strikes against national-defense projects. Oklahoma democracy is overwhelmingly in favor of a program of total defense of America and keeping the horrors of this war removed from our shores by providing planes and tanks and all other necessary munitions of war, including food, to England and her allies and insuring the delivery of these supplies to Great Britain by whatever means necessary to get them delivered. To be successful in our great effort for this national-defense program the entire energy of America's manpower, resources, and industrial capacity must be cooperatively utilized and any and all subversive and alien agencies or forces must be rooted out and destroyed. I have every confidence that American labor and capital will fully cooperate. I again congratulate you upon your courageous leadership in this matter and pledge you any help and support I am capable of giving you.

ROBERT S. KERR.

American Involvement in European War

EXTENSION OF REMARKS

OF

HON. FOREST A. HARNESS

OF INDIANA

IN THE HOUSE OF REPRESENTATIVES

Monday, July 14, 1941

EDITORIAL FROM THE WABASH (IND.) PLAIN DEALER

Mr. HARNESS. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following editorial from the Wabash (Ind.) Plain Dealer of July 11, 1941:

[From the Wabash (Ind.) Plain Dealer of July 11, 1941]

CONGRESSMAN HARNESS REPLIES TO THE OPEN LETTER

The following is the reply of Congressman FOREST A. HARNESS, of the Fifth Indiana District, to the Open Letter editorial of the Wabash Plain Dealer and Times Star of July 2 relative to the war issue and the advisability of a national poll on the question.

"It is, I assure you, a pleasure to tell the people of Wabash County through the Plain Dealer my own position on the matter of American involvement in the European war, and to cite my record in Congress as it touches that question.

"I am sincerely and vigorously opposed to the United States participating in the present war in Europe now, just as I have been in the past. As evidence, I cite you to my position on the following measures:

"I opposed the revision of the Neutrality Act in the special session of 1939. While I have never believed that a nation could legislate a state of neutrality, or that it could advantageously follow a fixed and rigid course in its international relations, basic fallacies enacted in the Neutrality Act, I nevertheless foresaw that the revision asked by the administration would open the way for the increasing degree of intervention in the present struggle which has followed.

"I opposed the Selective Service Act. While I have always believed in preparedness for America, and while I believe universal military training is the most democratic way to man our defenses, I felt that the act was designed more for the purpose of entering the European war and for the immediate effect it would have in our international relations than for the real purpose of strengthening our own defenses. I felt that the age limits of 21 to 45 in the bill as it passed the House and the Senate (the age limits were reduced from 21 to 35 in conference) would cause unnecessary hardships and tend to upset domestic business and industry. I also insisted upon the provisions in this act which guarantee that men drafted for service shall not be sent outside the Western Hemisphere. Unrelated to the question of foreign involvement, but important in causing me to vote against this measure, was the administration's provision to authorize the seizure of industries by the President.

"I opposed the Lend Lease Act because I believed it gave the President entirely too much unrestrained authority to involve us in actual hostilities.

"I opposed the Ship Seizure Act which gave the President the authority to take over

the vessels of belligerents and captive neutral nations for the sole purpose of placing them in the service of Great Britain.

"I have protested the policy of the President in stripping our own Navy and Army of ships, planes, guns, and munitions for Great Britain, not only because he has repeatedly committed acts of outright hostility, but because all of these acts before the passage of the Lend Lease Act were clearly in violation of his constitutional rights.

"Finally, I have spoken and worked consistently against the several steps by which the administration has taken us closer and closer to actual hostilities. On several occasions, I have spoken on these subjects in our district. Many Wabash people will remember that I warned against these recent developments a year ago when I addressed a meeting in the city of Wabash.

"I agree fully with your observation that the American people were denied their fundamental right to vote upon this issue of involvement in the last national election. That may yet prove to be a truly tragic misfortune. I think, however, that the views of the people on this great issue have been made unmistakably clear by every poll and every expression of public opinion within the past few months.

"A single poll, such as that recently taken in the President's own congressional district, should not in my opinion ever be made the basis for a Representative's action. As you know, too much depends in such polls upon the wording of the question submitted for a vote, I would very much prefer, therefore, to depend upon the mail I receive from my constituents on any subject from day to day; and upon my own personal contacts with the people back home. This is not intended to discount a popular poll by any means. It is merely to make the point that continuous mail and personal contacts are, in my opinion, a more accurate and dependable measurement. As you know, any issue of importance will elicit hundreds—even thousands of letters.

"Within the past year I have received no less than 7,500 letters touching this main issue in every possible way. As big a job as it is to read and answer that many letters, the people at home who have written me know that these letters have received my personal attention. The direct knowledge gained from these letters, checked against the information coming from personal contacts at home, from the opinions of qualified local observers, and from polls of public opinion, such as that conducted by your own paper, give a far more complete and accurate picture of the public sentiment than any single poll.

"Again, let me say, however, that I do not discount the common poll method. While I am in favor of the principle, I think it ought to be checked against the methods suggested, which I follow in my own office. To keep in touch with the sentiment in our district, I shall continue to welcome individual letters from the home folks and shall continue to talk to and exchange ideas with as many people at home personally as I possibly can.

"Let me repeat that I am vigorously opposed to our entrance into this war and shall continue to do everything in my power to avert the final and last step that would plunge us into the conflict. I shall also oppose the removal of the restriction in the Selective Service Act against sending our drafted men outside the Western Hemisphere. Furthermore, I do not believe that we should break faith with nearly a million of our young men who are now in training under the Selective Service Act by authorizing the President to keep them in service beyond the year for which they were inducted."

More Recent Developments in Our Foreign Policy

EXTENSION OF REMARKS

OF

HON. FRANK H. BUCK

OF CALIFORNIA

IN THE HOUSE OF REPRESENTATIVES

Monday, July 14, 1941

Mr. BUCK. Mr. Speaker, a little more than 6 weeks ago I rose in the House to make a few remarks concerning the dangers to the United States in the existing world situation. I propose today to discuss this subject briefly in the light of recent developments.

The German attack on Soviet Russia, launched on the morning of June 22, has tremendous implications for the United States and for the entire Western Hemisphere. We are reminded anew that armies bent on conquest cannot stand still; that they must ever push on and on. We see further and conclusive evidence of Hitler's plan for world domination. We see another example of Hitler's treachery. We see again that nonaggression pacts made by Germany with other nations are not a protection for these nations, but a trap to ensnare them. We see another endeavor of Hitler to destroy a nation, enslave a people, and steal their economic resources, as German engines of destruction bomb, blast, and burn their way into the heart of the Soviet Union with the vision before them of the wheat fields of the Ukraine and the oil wells of the Caucasus.

There are new dangers for the United States in this latest move of Hitler's monstrous military machine. If he should be successful in the conquest of Soviet Russia, he would be master of continental Europe and of a large part of Asia. He would control territory within 50 miles of our own Alaska. German military forces would be able to move into a position facing us just across the Bering Sea. The Nazi air force could prepare bases so close to our shores that its planes could bomb American territory with great ease. German submarines and sea raiders would be in a position readily to attack American shipping in the Pacific. In short, if Germany should succeed in the conquest of Russia, the political and military situation in the Pacific would be vastly affected.

The German attack on Russia must have ominous meaning for Japan, a partner of Germany and Italy in the military alliance of September 27, 1940. Japan by now should be able to read unmistakably the handwriting on the wall. She should see that Italy, which started out as a partner in the alliance, is now in fact a vassal of Germany; that Italy is almost as completely dominated by Germany today as many of the European countries which have gone down before Hitler's armies. Japan should realize that if Hitler overcomes Soviet Russia and thus dominates Siberia, the Japanese position would be seriously menaced; that if Hitler's legions should reach the borders of Mongolia and Manchuria, Japanese safety would be imperiled. Japan must realize that a successful conquest by Germany of Soviet Russia would mean that her people might soon be goose-stepping at Hitler's command.

In the present situation the policy to be followed by the United States is clear. We, in the United States, everyone of us, should unite overwhelmingly in the task of safeguarding our Nation. We should increase the tempo of our defense effort. Faster and faster we should build planes and ships and tanks and guns. We should prepare for a challenge in the Pacific and in the Atlantic. We should make our Nation an impregnable fortress in this world of danger.

The safety of our Nation is the goal of the hour. Speed of production is our paramount need. There must be no interference in work toward our goal. Production must not be interrupted through lack of cooperation of labor and management. Every man and woman must do his or her duty in providing for the common defense.

The question has arisen whether we should furnish supplies to the Russians in their fight to repel German aggression. The President has answered that question in the affirmative. He has said that this country will give all possible aid to the Russians for their defense against the Nazis. I am in entire accord with the position taken by the President. I favor aiding Russia to the extent that such aid does not interfere with our established program of assisting Great Britain and China. To help the Russians does not mean that we approve of their system of government, of their philosophy of life. We in the United States are opposed to the fundamental concepts of the dictatorships of the Nazis and the Communists. But we must be realists. In the present situation, with Hitler endeavoring to conquer the world, the United States and the Soviet Union have as a common purpose the defeat of Hitler. In this situation it is in our own national interest, in our own self-defense, a wise policy to furnish all feasible aid to the Russians to carry on their struggle.

Acting Secretary of State Sumner Welles has stated well the attitude of this Government in the following words:

> Any defense against Hitlerism, any rallying of the forces opposing Hitlerism, from whatever source these forces may spring, will hasten the eventual downfall of the present German leaders, and will therefore redound to the benefit of our own defense and security.

If Hitler should conquer Soviet Russia, there is good reason to believe that, with his east flank secure, he would make an all-out attempt to crush Great Britain; that he would transfer his armies from the east front to the west front for a great assault across the English Channel. The outcome of that battle obviously would be of incalculable importance for the future of the world. Consequently we should continue and increase our aid to Great Britain. This course has been overwhelmingly approved by the people of the United States as a part of our pro-

gram of national defense. The British people, in their courageous battle to preserve their nation, have great need for increasing amounts of military, agricultural, and industrial supplies from this country. These supplies are needed now. We must insure that they are speeded to the British in adequate quantities. We must insure that, if and when the hour for the complete German assault against Great Britain comes, the British people shall not want for weapons to defend themselves.

In addition to extending aid to Great Britain, we should continue our assistance to China. The Chinese people manifest to the world the magnificent will of a people to resist the dismemberment of their country. They are battling heroically against the sweep of the general conflagration. Recent events have shown conclusively that the safety of this Nation and of this hemisphere calls for resistance to aggression wherever resistance will be most effective. As a part of our own program of national defense, therefore, we must send more and more supplies to China for use in repelling attack.

We must not forget that the entire Western Hemisphere is threatened by the aggression rampant in the world today. We must remember also that an attack by an aggressor power against any nation in the Western Hemisphere would clearly menace the United States. Consequently, we should continue and perfect our cooperation with the other American nations for the defense of this hemisphere.

I should like to refer briefly to the ruthless sinking by a German submarine of the American merchant ship *Robin Moor* in the South Atlantic Ocean. This vessel was sunk on May 21, without provision for the safety of the passengers and crew and in spite of the fact that its American nationality was admittedly known to the commander of the submarine. This lawless German act appears to have been committed to intimidate the United States; to drive American commerce from the high seas. It is another assertion of Hitler's purpose to obtain control of the seas as a part of his program of world conquest. Our Government has wisely made clear to Germany that we will not be intimidated, that we will not permit Germany to drive American ships from the high seas.

Now and then we hear talk of appeasing Hitler, of endeavoring to negotiate with him, but realists cannot take this talk seriously. The record of Hitler is too clear in our minds. Actions speak louder than words. This subject was referred to by President Roosevelt in his fireside chat of December 29, 1940. His words, true then and truer now, I quote as follows:

> The experience of the past 2 years has proven beyond doubt that no nation can appease the Nazis. No man can tame a tiger into a kitten by stroking it. There can be no appeasement with ruthlessness. There can be no reasoning with an incendiary bomb. We know now that a nation can have peace with the Nazis only at the price of total surrender.

When I last spoke to the House 6 weeks ago I expressed concern that many people in this country were complacent about the dangers to the United States in the international situation. I am inclined to believe that in the light of recent developments this complacency is disappearing. I do not believe that many American citizens can be undisturbed when, in addition to the other dangers on the international horizon, we are faced with the possibility that Hitler may obtain control of territory adjacent to our own; that the Nazi flag may be planted on the Bering Strait.

The defense task before us is hard. A long time may be required for its completion. There can be no shirking from it. I have faith enough in the American people to believe that in the face of the present dangers they will unite wholeheartedly and labor faithfully in a mighty and sustained defense effort which will insure the safety of our Nation.

The St. Lawrence Seaway Is Vital to Our National Defense and to the Nation's Future Growth

---

EXTENSION OF REMARKS

OF

HON. CLYDE T. ELLIS

OF ARKANSAS

IN THE HOUSE OF REPRESENTATIVES

Monday, July 14, 1941

RADIO ADDRESS BY HON. CLYDE T. ELLIS OF ARKANSAS

Mr. ELLIS. Mr. Speaker, on July 8 I delivered on the National Radio Forum program of the blue network of the National Broadcasting Co. an address on the St. Lawrence seaway proposal. I quote it here in full:

On June 5 President Roosevelt recommended to Congress the development of the Great Lakes-St. Lawrence seaway; that, in the interest of our common defense, we join with Canada in harnessing the vast power of our mutually owned St. Lawrence River, now running in wanton waste to the sea, and in eliminating the barrier that stands between the world's greatest inland waterway system and ocean navigation.

It is interesting that roughly every 5 years since 1897 some joint commission of the United States and Canada has been appointed to study the feasibility of all or part of this proposal. Without exception, each has recommended it—including the 1920 commission, of which Herbert Hoover was chairman, both for navigation and hydroelectric development.

On March 19, this year, an agreement was signed between the United States and Canada providing for immediate action "when it is approved by the legislative bodies of the two countries."

Briefly the agreement provides for several miles of channel deepening, two dams, locks, and a powerhouse.

And because a lot of false statements have been made, and will continue to be made about it, I give you the following figures:

Cost to the United States, $200,000,000—definitely not a billion dollars, as has been suggested, but one-fifth of that.

Period of construction: Three to four working seasons—and with types of labor and materials in which there is still a surplus.

Result: 1,100,000 horsepower for each, this country and Canada, the opening of the greatest inland waterway on earth to ocean shipbuilding and world commerce and a shorter and less hazardous route to the British Isles.

It has been my privilege for the past 3 weeks, as a member of the Rivers and Harbors Committee of the House of Representatives, to participate in hearings on the proposal. We have heard Secretary of War Stimson, Secretary of the Navy Knox, and Office of Production Management Director Knudsen, all urging speed, for Hitler's power production has dwarfed ours long ago. He is sinking two merchant ships for every one that both Great Britain and the United States are building—and we need a two-ocean Navy as quickly as we can get it. We have heard Secretary of Commerce Jesse Jones brilliantly picture its importance to the country's total industrial and commercial vitality now and after the war. We have heard Assistant Secretary of State Berle explain the proposal in the light of threatening international developments, for in the event of a world naval race the Lakes would offer our safest haven of construction. We have heard Chairman Olds of the Federal Power Commission in an eloquent appeal for the immediate utilization of the river's power resources—enormous power, at half the cost of steam.

And finally we have heard General Robins of the Corps of United States Army Engineers reveal the comprehensive plan for the greatest benefits at the lowest cost of any American project yet proposed, save only the Panama Canal.

These men are charged with the defense of this Nation. They all say it is vital and they are best in position to know. If we don't follow our chosen leaders on matters of defense, whom shall we follow?

"What a boon it would have been to our present defense program," said Mr. Knox, "had this project been constructed when first recommended."

Most railroads, protecting the value of a top-heavy capital structure, view with alarm any proposal to make available to the people of the United States the natural advantages of water transportation by development of the rivers with which this country is so generously endowed. Their lobbyists pack our committee room. Their dog-in-the-manger attitude disregards paralyzing transportation bottlenecks already developing.

Joseph Eastman, Chairman of the Interstate Commerce Commission, stated recently, "The transportation facilities of the country will be strained to the utmost before we are through. The railroads are going to need all the help they can get and it is no time for petty hostilities."

The Power Trust, which has fought every move of the Government to relieve the people of its monopolistic control of the God-given resource of electrical energy, has been so discredited by its own scandalous methods, previously employed to prevent progressive legislation, that it no longer dares approach a congressional committee in open support of its reactionary self-interest. But it has no difficulty in hiring others, camouflaged as officials of disinterested planning boards or cross-section commercial groups, to represent its opposition to any measure which would expand our power production. Even as power rationing goes into effect in many parts of the country, even as farmers and housewives, businessmen and manufacturers face a shortage of the electricity so essential to the preservation of our modern civilization, spokesmen for the private utilities are organizing every pressure that money can buy to assure the continued extravagant wastage of the abundant potential natural-hydroelectric resources of our rivers.

Mr. Knudsen revealed the quality that makes him what he is when he stated to our

committee "Power is progress and I do not believe there will ever be power enough in the United States, our country is growing so fast."

We have also heard the expression of opposition from representatives of private groups in cities and sections of our Nation who fear the loss, to some extent, of what they regard as an economic advantage over the rest of the country because of existing geographical factors. It is interesting to note that the areas from which these groups come are largely those that have already enjoyed the benefits of river, harbor, and inland waterway improvement at Government expense.

Faith in the wide horizon has been passed down to us by our forefathers who had the vision to develop a continent-wide Nation. Even they had to fight a vehement and self-righteous minority who saw American destiny as limited only to the Atlantic seaboard. One Cabinet member told us, "Every selfish group that has ever gambled yet on the improbability of future American growth has lost."

These hearings have epitomized a struggle now going on in this country that will determine whether we are serious in our fight against nazi-ism and to preserve democracy by the utilization of every resource at our command. Germany, in her ruthless and devastating drive for world domination, has achieved an almost miraculous production of comparatively meager resources by forcing maximum results from monopolistic industries which preferred, like some of ours, to preserve a scarcity economy. Yet we in this country, where our philosophy of government centers in the welfare of all our citizens, must fight at every hand the crippling effect of those who measure every defense activity in terms of its ultimate effect on their invested capital or special privilege

By what suicidal reasoning is it argued that the necessary expansion of our productive capacity, on which our survival as a nation depends, will ruin us in the future?

This is a war of production. The President stated it clearly and emphatically in his message, and I quote:

"Production and more production is the keynote of our all-out race for national defense. Electric power and transportation are limiting factors in the production of planes, guns, tanks, and ships.

"The enemies of democracy are developing every hydroelectric resource and every waterway from Norway to the Dardanelles. Are we to allow this continent to be outmatched because short-sighted interests oppose the development of one of our greatest resources?"

The St. Lawrence project will add to our available electrical energy an amount which if transformed into aluminum would make 30,000 planes; it will open up facilities for ship construction which, as Mr. Knudsen has pointed out, could deliver 500,000 to a million tons of additional ships a year, even while this project is under construction; it will offer a transportation route for 16,000,000 additional tons of freight at a time when our railroad facilities are already becoming overtaxed to a dangerous degree; and it will shorten by a thousand miles the dangerous open-water route to the beleaguered British Isles.

Some have suggested that the war may be over before the seaway and power units can be completed. It may be over before the battleships we are building can be completed, too. But, said Mr. Stimson: "* * * it is necessary to prepare for a very long emergency. * * * There is a very good chance, a very strong chance, in my opinion, of the emergency lasting long enough to enable this country to reap the benefits of this construction." And, said Mr. Knox: "We are going to live in a disturbed world for a long time."

Should the war come to an early end, then this is one of the projects we shall need anyway to help absorb the shock of the inevitable post-war chaos.

But the opponents have been obliged, in a miserably poor showing, to rest their case largely on the argument that the project is economically unsound.

I come from a part of the country which has benefited little from the industrial development of the rest of the country and which has suffered much from discriminatory conditions imposed upon us by monopolistic financial and industrial interests. The State of Arkansas will never be convinced that we in this country have reached the peak of our economic development at a level which gives its citizens an average income of $244 a year. We know what it means to suffer the debilitating effects of absentee ownership, discriminatory freight rates, and abominably high power rates imposed by companies more interested in their own profits than the welfare of the people.

The T. V. A. has brought great benefits to our neighboring States and is a masterpiece in defense preparation. I am sponsoring in the Congress a bill which would provide a similar development for the basins of the Arkansas, the Red, the White, and the St. Francis Rivers in eight Southwestern States. On such projects depend not only our ability to survive in a world at war but our future as a vital and dynamic democracy.

Even when the present conflict is ended, the war of production will not be over. Either we will find ourselves confronted with the competition of a slave economy dominated by a victorious Germany or we will face the supreme challenge of a devastated world looking largely to us for economic salvation and the reestablishment of democratic principles everywhere.

The St. Lawrence project presents itself to you and to us in Congress as another test of our temptation to take the short and selfish view like the fallen democracies abroad, or of our ability to make democracy work for the common good of all and to turn the total productive capacity of the mightiest nation of the earth toward our only hope of defeating the totalitarian brutes of Europe.

Grand, Glorious Iowa

EXTENSION OF REMARKS

OF

HON. WILLIAM S. JACOBSEN

OF IOWA

IN THE HOUSE OF REPRESENTATIVES

Monday, July 14, 1941

EDITORIAL FROM THE DAVENPORT (IOWA) DEMOCRAT AND LEADER

Mr. JACOBSEN. Mr. Speaker, under leave to extend my remarks, I include herein an editorial which appeared in the Davenport Democrat and Leader, of Davenport, Iowa, on July 10, 1941:

[From the Davenport (Iowa) Democrat and Leader of July 10, 1941]

GRAND, GLORIOUS IOWA

"In all that is good, Iowa affords the best."

Where have we heard that slogan before? Though familiar in our minds, we feel that in this troublesome world it affords repetition today.

While most of the nations of the Old World border on starvation, Iowa remains the land of plenty. It is the bread basket of the United States.

Revised statistics available at the moment show Iowa to be first in:

Corn production—19 percent of United States total.

Oats production—17 percent of United States total.

Hog production—27 percent of total number slaughtered under Federal inspection.

Horse numbers—7 percent of United States total.

Grade A land—25 percent of United States total.

Value of livestock and poultry—8 percent of United States total. Total estimated value of Iowa livestock and poultry on January 1, 1941, was $428,318,000.

Hog numbers—17 percent of United States total.

Poultry numbers—7 percent of United States total.

Poultry production—6 percent of United States total.

Egg production—7 percent of United States total.

Per capita production of agricultural products:

Soybean-hay production—18 percent of United States total.

Timothy seed—44 percent of United States total.

Popcorn—53 percent of United States total.

Percentage of total land area in farms—97 percent of the land area in Iowa is in farms.

Cash farm income—8 percent of United States total.

Percentage of improved farm land:

Production of all grain crops—13 percent of United States total.

Marketings of grain-fed cattle.

Undoubtedly, most of us should know Iowa better than we do. How many at random could name the official State flower? Before hands are raised we'll tell it. It is the wild rose. How many know the lettering on the great seal of the State of Iowa? The words are as applicable today as when first placed thereon: "Our liberties we prize and our rights we will maintain." The "Ioway" corn song is familiar in most States of the Union. Its chorus:

"We're from Ioway, Ioway,
State of all the land,
Joy on every hand,
We're from Ioway, Ioway,
That's where the tall corn grows."

Iowa, "beautiful land," as the Indians called the region, was first seen by white men when Marquette and Joliet touched the west bank of the Mississippi River near the mouth of the Des Moines in 1673.

Marquette, a Jesuit priest, and Joliet, a fur trader, entered the great Father of Waters by way of the Wisconsin River and traveled downstream several days before noticing the first signs of habitation. They had almost reached what is now the southern boundary of the State when near the confluence of the Des Moines and Mississippi Rivers they discerned footprints on the west bank of the Mississippi and a path leading through the woods. Following the path they came to an Indian village and met friendly Indians. History thus records the first visit of white men to the country which many years later became the State of Iowa.

Yes; Iowa is a great State. We should all be proud of it.

Interest on Farm Loans

EXTENSION OF REMARKS
OF
HON. JARED Y. SANDERS, JR.
OF LOUISIANA
IN THE HOUSE OF REPRESENTATIVES

Monday, July 14, 1941

Mr. SANDERS. Mr. Speaker, I have recently discussed, from time to time, the situation of the farmers, particularly those in the South, during the present emergency. There seems to be a general misunderstanding on this situation. The efforts to freeze farm prices considerably below parity, and the general statements made in various quarters to the effect that the spending for national defense has brought relief to the farmers, are all evidence of this misunderstanding.

As a matter of fact, spending for national defense has been largely concentrated in large industrial centers, and unemployment in the farm sections has not been relieved to any great extent by the national-defense program. And unless and until our agricultural products are sold at 100 percent parity to the farmer, the American farmer will continue to bear an unjust proportion of the burden.

I have recently received resolutions from three national farm-loan associations in my district, namely, Ascension National Farm Loan Association, Gonzales, La.; Clinton National Farm Loan Association, Clinton, La.; West Feliciana National Farm Loan Association, St. Francisville, La.

These resolutions truly represent the feelings of the farmers in this section. They know what the condition is that confronts them. These people do not now and never have asked for anything that is not justly due. After a thorough canvass of the situation facing the farmers in that section, these members state that the temporary reduction of interest rates to 3½ percent, which has been granted in the past, should be continued on farm loans. I know from personal experience that what these farmers say is based upon fact, not fancy.

Under leave to extend my remarks, I submit the three resolutions in question, which are as follows:

Whereas borrowers through the Ascension National Farm Loan Association have obtained loans from the Federal Land Bank of New Orleans and the Land Bank Commissioner, these loans bearing contract interest rates of up to 6 percent; and

Whereas during the past several years Congress has seen fit to provide for a temporary reduction of this interest rate to 3½ percent, which reduction has been very beneficial to the borrowers through this association; and

Whereas it is felt that conditions in agriculture will not have sufficiently improved to warrant a return to the contract rates on the various loans at the time this temporary reduction expires: Therefore be it

Resolved, That the stockholders of the Ascension National Farm Loan Association, in session this 27th day of June 1941, do express to the Congress of the United States their appreciation for this reduction in interest and respectfully request a continuance of this benefit to the borrowers through this system; be it further

Resolved, That the president and the secretary-treasurer of this association are authorized to furnish certified copies of this resolution to the Federal Land Bank of New Orleans, to the Farm Credit Administration, and to our Senators and Congressmen.

I, L. B. Duplessis, president of the Ascension National Farm Loan Association of Gonzales, La., hereby certify that the foregoing is a true and correct copy of a resolution adopted at a meeting of the stockholders of said association duly held on the 27th day of June 1941.

L. B. DUPLESSIS,
President.

Attest:

CLIFFORD C. REDDELL,
Secretary-Treasurer.

Whereas borrowers through the Clinton National Farm Loan Association have obtained loans from the Federal Land Bank of New Orleans, and the Land Bank Commissioner, these loans bearing contract interest rates of up to 6 percent; and

Whereas during the past several years Congress has seen fit to provide for a temporary reduction of this interest rate to 3½ percent, which reduction has been very beneficial to the borrowers through this association; and

Whereas it is felt that conditions in agriculture will not have sufficiently improved to warrant a return to the contract rates on the various loans at the time this temporary reduction expires: Therefore be it

Resolved, That the stockholders of the Clinton National Farm Loan Association, in session this 3d day of July 1941, do express to the Congress of the United States their appreciation for this reduction in interest, and respectfully request a continuance of this benefit to the borrowers through this system; be it further

Resolved, That the president and the secretary-treasurer of this association are authorized to furnish certified copies of this resolution to the Federal Land Bank of New Orleans, to the Farm Credit Administration, and to our Senators and Congressman.

I, W. L. Haney, president of the Clinton National Farm Loan Association of Clinton, La., hereby certify that the foregoing is a true and correct copy of a resolution adopted at a meeting of the stockholders of said association duly held on the 3d day of July 1941.

W. L. HANEY, *President.*

Attest:

CLIFFORD C. REDDELL,
Secretary-Treasurer.

Whereas borrowers through the West Feliciana National Farm Loan Association have obtained loans from the Federal Land Bank of New Orleans and the Land Bank Commissioner, these loans bearing contract interest rates of up to 6 percent; and

Whereas during the past several years Congress has seen fit to provide for a temporary reduction of this interest rate to 3½ percent, which reduction has been very beneficial to the borrowers through this association; and

Whereas it is felt that conditions in agriculture will not have sufficiently improved to warrant a return to the contract rates on the various loans at the time this temporary reduction expires: Therefore be it

Resolved, That the stockholders of the West Feliciana National Farm Loan Association, in session this 3d day of July 1941, do express to the Congress of the United States their appreciation for this reduction in interest and respectfully request a continuance of this benefit to the borrowers through this system; be it further

Resolved, That the president and the secretary-treasurer of this association are authorized to furnish certified copies of this resolution to the Federal Land Bank of New Orleans, to the Farm Credit Administration, and to our Senators and Congressmen.

I, R. H. Daniel, president of the West Feliciana National Farm Loan Association of St. Francisville, La., hereby certify that the foregoing is a true and correct copy of a resolution adopted at a meeting of the stockholders of said association duly held on the 3d day of July 1941.

R. H. DANIEL, *President.*

Attest:

CLIFFORD C. REDDELL,
Secretary-Treasurer.

The Agricultural Situation of 1941

EXTENSION OF REMARKS
OF
HON. FOREST A. HARNESS
OF INDIANA
IN THE HOUSE OF REPRESENTATIVES

Monday, July 14, 1941

ADDRESS BY OSCAR B. SMITH

Mr. HARNESS. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following address of Oscar B. Smith before the Clinton County Farmers Guild at Frankfort, Ind., on July 5, 1941:

THE AGRICULTURAL SITUATION OF 1941

BACKGROUND

In any discussion of the present-day agricultural situation a more comprehensive grasp is had by reviewing the history thereof. The details of a picture become diminished or increased according to the background against which it is projected, and our appreciative concept is governed by our reaction to the setting forth of these fundamental principles. The background, or history, of present-day farm conditions is not a thing of beauty despite the efforts of past leaders to delineate a rosy hue or a silver lining. Possibly the brightest spot in agricultural history appears in 1925 when, after the land-grant colleges threw up their hands in horror of attempting to solve the farm economic problem, the farmers took hold of the situation themselves and proceeded to work out their own salvation with fear and trembling. At a joint meeting of the National Grange, Farmers' Union, Farm Bureau, the present officers of the National Farmers' Guild, and commodity cooperatives there was formed the Corn Belt committee. This committee in turn appointed a subcommittee, consisting of Milo Reno, Edward E. Kennedy, John Tromble, Thomas Cashman, and Henry A. Wallace, now Vice President of the United States, and together they set up a schedule of minimum prices for farm products. These were called cost-of-production prices at the farm and were as follows: Milk, $2.76 per hundredweight; corn, 94 cents per bushel; hogs, $11.32 per hundredweight; wheat, $1.38 per bushel; cotton, 25 cents per pound; oats, 50 cents per bushel. Mr. Wallace insisted that these figures were too low, and he proposed a schedule of prices which were: Milk, $4.04 per hundredweight; corn, $1.36 per bushel; hogs, $13.60 per hundredweight; wheat, $2.90 per bushel; cotton, 32 cents per pound; and oats, 75 cents per bushel. This schedule was then adopted and was enthusiastically endorsed by one of agriculture's true friends, Senator CHARLES L.

McNARY, of Oregon. From the principles expounded, Senator McNARY and Representative Haugen drafted the McNary-Haugen bill only to see it twice vetoed.

THE A. A. A.

Then came the Agricultural Adjustment Act which was of some help economically, but its regimentation policies cost the farmer his freedom. Its storage of surpluses acted as a ceiling over farm prices, and fulfilled a scriptural passage, "He that withholdeth corn, the people shall curse him: But blessing shall be upon the head of him that selleth it." (Proverbs xi: 26.) Mr. Wallace became Secretary of Agriculture and announced that cost-of-production prices in Iowa and Illinois were 54 cents for corn, 30 cents for oats, and 86 cents for wheat. The drop in prices resulting from this statement called for the grain markets to close to prevent utter collapse. Markets gradually pulled back to normal and in February of 1937 corn in Clinton County, Ind., stood at $1.03, soybeans, $1.50, wheat, $1.32; and oats, 49 cents. Mr. Wallace and three of his assistants spoke over the radio decrying high prices, and on February 27, 1937, under the advocacy of Mr. Wallace, Mr. Morgenthau addressed the Harvard Conference to this effect. Banks doubled their reserves, credit was contracted nearly $2,000,000,000, and the farmer was again forced to take it on the chin.

PARITY PAYMENTS

Parity payments are considered the keynote of the A. A. A., but are indiscriminate in their allotment. For instance, cotton in 1940 was listed seventh in farm value of crops produced in the United States, only contributing 5 percent to national farm income. Yet cotton farmers drew the lion's share of parity payments, receiving 46 percent of the total payments. Corn was second place in farm value of agricultural products, producing 14 percent of farm income, yet only drew 28 percent of the parity payments. Wheat, in eighth place, producing 5 percent of farm income, draw 25 percent of parity payments. Rice is in twenty-eighth place and draw 1 percent of parity payments. Milk is in first place as a producer of farm wealth, yet received no subsidy, but contributes 17.5 percent to farm wealth. Oats, potatoes, barley, oranges, soybeans, apples, sugar beets, peaches, and sorghums all have a greater farm value than rice, yet are disregarded in the parity program. The 1941 amendments to the A. A. A. have slated tobacco and peanuts to be added to the list of parity-payment subsidies, making a total of six products, accounting for only 27 percent of the value of all farm commodities.

CONGRESSIONAL HEARINGS

The House of Representatives in April and May conducted hearings before its Committee on Agriculture and listened to the testimony of farm leaders on pending legislation affecting the agricultural situation. Supporters of the A. A. A. demanded its continuance and indulgence of subsidy payments of 85-percent parity loans. They refused to ask for 100-percent parity, and failed to offer a substitute plan to relieve the Federal Treasury of its obligation to the Nation under the defense emergency. Another plan being considered is the income-certificate plan, commonly known as the refined-processing-tax plan. It only applies to cotton, wheat, tobacco, rice, and peanuts, or in other words, is applicable to those items which are only 13 percent of the farm value of all agricultural production. The Massingale proposal outlined in H. R. 1101 is the streamlined version of the farmer's hopes originally embodied in the McNary-Haugen bill. If the Massingale proposal had been adopted years ago, marketing quotas would have been unheard of and our defense forces would now be comfortably outfitted and in readiness.

MARKETING QUOTAS

To mention marketing quotas is to take notice of their effect. The A. A. A. calls for a 50-percent penalty of the 85-percent-parity loan on excess production, and thereby imposes a higher tariff against the American farmer taking his excess wheat into the American market than the Government imposes on the Canadian producer selling wheat in the American market. The penalty against the American farmer for selling his excess wheat is 49 cents per bushel, while there is only a 42-cents-per-bushel tariff against the Canadian farmer coming into the American market. This also applies to corn. The marketing-quota penalty against corn would be 35 cents per bushel, while the tariff on imported corn is 25 cents per bushel. The marketing-quota penalty against cotton is 6.9 cents per pound, while there is no import duty on cotton except on the long staple above 1 inch. Most of our cotton is less than 1 inch staple. The first 3 months of 1941 saw imports increase 910 percent of Canadian hogs and pork products as compared with the corresponding period of 1940. What this means is that Canada gets cash on the barrel head in our markets, and under our lease-lend program we buy Canadian pork and with American-produced pork we lease-lend it to Great Britain, the mother country of Canada. If Canadian pork is to be donated to Great Britain, Canada should be the donor. As Congressman LAMBERTSON narrates, "Daddy, why do we celebrate the Fourth of July?" "Hush, child."

THE OFFICE OF PRICE ADMINISTRATION OF CIVILIAN SUPPLY

The administration evidently discounts the irritation the foregoing causes the patriotic American farmers, for it recently established a Bureau known as the Office of Price Administration of Civilian Supply, under Mr. Leon Henderson. This distinguished citizen henceforth announced his capabilities by announcing a speculation warning, and a planned ceiling over certain farm commodities. It was a Triple A Junior. Simultaneous with this statement wheat prices dropped 4 cents, rye 5 cents, soybeans 8 cents, lard $1 cwt., hogs 15 cents cwt., and cotton $1.50 a bale. All this was done despite the fact that only 2 weeks before on June 16, the Senate had passed a resolution, Senate Resolution 117, which was sponsored by Senator THOMAS, stating that no agency of the Government should undertake to fix minimum prices below parity on basic farm commodities which at present, would be wheat $1.149, cotton 16.12 cents, corn 83.5 cents, rice $1.057, and Maryland tobacco 17.9 cents. My friends, it is inconceivable that a mere agency should so brazenly override the desires of the Senate of the United States. Is it possible that these agencies constitute a supercongress? Our elected delegations in Congress remain our only hope and their actions must be respected.

SURPLUSES

Instead of surpluses, I contend that we are confronted with threatened shortages. The two greatest corn crops ever produced in the United States was in 1920 and 1906. The yields of 1932 and 1937, which were supposed to create such large surpluses, favorably compare with the yields of 1896 and 1905. The all-time record yield of wheat was in 1915, and cotton reached its peak production in 1926, yet in all those years of peak production the surplus problem solved itself. Why? Because our iron laws of economy or the 1-1-7 ratio of national income was functioning properly. Wealth was created at its sources, namely the soil, the water, and the air, and of these the soil created 70 percent of the total. A dollar of farm income supports $1 in pay rolls, and $7 of national income.

Overproduction, underconsumption, and lack of purchasing power are synonymous. Farm surpluses melt away when this ratio is not interfered with, and under it Triple A's, programs, subsidies, allotments, quotas, and penalties are relegated to the junk pile. Farmers realize that something has gone wrong, and they are determined to have it uncovered. Witness the recent birth of the National Marketing Quota Protest Association. No farm organization ever developed so suddenly or spread so rapidly, and I glory in the spunk of its founding fathers. In common with the National Farmers' Guild they ask no favors, only a square deal. Farmers do not object to a 10-percent, cost-plus defense contract being awarded their industrial brethren, but they would appreciate the same treatment instead of merely recovering the cash outlay required to produce a crop, to say nothing of contributing time, equipment, and investment as gifts to the consumer. The bill H. R. 1101 now pending in Congress will correct all the foregoing evils. Introduced by one of the most lovable men that ever graced the Halls of Congress, the late Representative Sam Massingale, this bill will apply to 52 farm products which are 99 percent of the value of all farm production. It will eliminate the patchwork and give the farmer his parity income from the market places and preserve to him the American market. It will eliminate subsidies, allotments, penalties, quotas, and foreign dumping. It will automatically dispose of so-called surpluses.

CONGRESS

In Congress there are many friends of the farmer. Being human, they make mistakes, but in the spirit of brotherhood, we the people, overlook their little inconsistencies and frailties, knowing that we all constitute an indivisible economy. These noble characters with whom we have entrusted our destinies have heard of the "plight of the farmer" for so long, that I do not blame them if the phrase makes them sick. They are overworked, but rest assured they are trying to reach solutions though many of them have undermined their health in so doing. For these good efforts we owe them endless homage. With the endorsement of the National Farmers Guild, they have enacted the Frazier-Lemke Act, the Federal Land Bank Low Interest Act, the Wool Labeling Act, Department of Agriculture Memo 893, and many others. The farmer's thanks also to the Senate for its recent passage of the Hog Processing Tax Refund Act. This bill carries the endorsement of the National Farmers Guild and the National Grange. Locally, the Indiana Farmers Guild endorsed and secured the passage of amendments to the Soil Conservation Districting Act and the Farm Truck License Act at the last session of the Indiana Legislature, hence a word of gratitude to our State lawmakers is not amiss.

However, the most important legislation still lies ahead as H. R. 1101 rests its case before Congress. It echoes the voice of truth to this age. Will the door be opened or closed to this visitant? The grains of truth have been sown, and the weeds of error are being displaced.

America and the War

EXTENSION OF REMARKS

OF

HON. GERALD W. LANDIS

OF INDIANA

IN THE HOUSE OF REPRESENTATIVES

Monday, July 14, 1941

RADIO ADDRESS BY HON. GERALD W. LANDIS, OF INDIANA

Mr. LANDIS. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following radio ad-

dress which I delivered over the Columbia Broadcasting System, Washington, D. C., on July 12, 1941:

Fellow Americans, we are at the crossroads of America. On the decisions now made by our people and their leaders on matters of foreign policy may depend our national welfare for years to come. I have no personal ax to grind. I want you to realize I am above the draft age and have no near relatives who would have to fight. I also have no financial interests in Europe or Asia.

As a veteran of the World War, however, I fervently believe we should never again soak Europe's soil with American blood. My pledges in the last election were not mere campaign oratory. I have made an honest effort to make all of them come true. My pledge to the people of my district was to keep our American boys out of foreign struggles unless we were attacked. I have voted against every step which I believe would lead to war.

The minds of the American people are confused. The people who must suffer and give up their lives are entitled to know all of the facts.

America is on the verge of throwing our treasure and our blood in the European war, with the consequences that no one can foretell. I believe our true mission is to follow the principles of the foreign policy laid down by the founders of our country. I don't believe that Paul Revere made a mistake when he took his horse out of the stable, nor do I believe that George Washington and his men made a mistake when they fought, bled, and died for us in 1776. Under this foreign policy we became the greatest democracy, the most powerful and the most prosperous in the world. For more than a hundred years we were content to work out our own destiny.

In 1917 we deviated from this doctrine and entered the World War to save this country for democracy. The United States received nothing from this war, but a several-billion-dollar war debt, thousands of disabled young men, shiploads of flag-draped coffins, and three cemeteries in France.

Again, today, this administration is departing from the established foreign policy made by the stalwart founders of our Nation. I believe it is a grave mistake. Surely, it has not come to the point where America must raise a crop of boys every 20 years to be slaughtered in Europe. We do not want to create a new generation of Gold Star Mothers.

War, in reality, is the destroyer of life and property. War means black-outs, shrieking shells, and speeding bombing planes across the sky. Most of us remember the horrors of the last war and its aftermath; the dead upon the battlefields, the bitter tears of womanhood, disease, and hospitals where armless, legless, and blinded men await eternity. We also recall the terrible depression. The insufferable burdens of costs, and the dislocations of everything that makes for normal happiness.

I can close my eyes and hear the voices of our soldier dead buried on Flanders Field, who must now realize that they fought and died in vain. I can see the outstretched arms of millions of mothers who see their sons in danger of becoming cannon fodder, in another World War.

Fellow Americans, would you be willing to risk the lives of at least 6,000,000 American boys and $200,000,000,000 in a struggle across the seas? Do you believe it would be easy to transport and land millions of American boys on unfriendly soil? Are we to rush arms and the cream of American youth every time Europe is in trouble? Would you be willing to maintain standing armies abroad and battleships in foreign ports to enforce peace? Are you willing to neglect our own national defense by sending most of our war equipment to foreign lands?

At this point I want to pay tribute to the mothers of America who have thus far done their share in keeping America out of war. They have spoken fearlessly and courageously regarding their feelings concerning America's involvement in another European conflict.

In thinking of these mothers, I am reminded, however, of the words of Mark Twain. "A few fair men on the other side will argue and reason against the war with speech and pen and at first will have a hearing and will be applauded, but it will not last long; the others will outshout them. * * * Before long you will see this curious thing: The speakers stoned from the platform and free speech strangled by hordes of furious men who in their secret hearts are still as one with these stoned speakers but do not dare say so. And now the whole nation, pulpit and all, will take up the war cry and shout itself hoarse, and mob any man who ventures to open his mouth, and presently such mouths will cease to open."

It is true, American sympathies have crystallized. Our hearts go out to freedom where it fights or falters. But do we want to support these sympathies by sending American sons to rot and die on foreign fighting grounds, battling for a peace no man has yet been bold enough to define or wise enough to propound?

From our vantage point 3,000 miles away, we cannot direct the destiny of Europe, unless we annex the Continent or patrol the battle fronts forever. And to undertake such a colossal task might dim the destiny of all the world by bringing the black-out of human liberties to the Western Hemisphere.

Our first plan was not to sell war materials to nations who have repudiated their honest war debts. Then Congress repealed the Neutrality Act and established "cash and carry." Later Congress eliminated the cash feature by passing the lease-lend bill and appropriated $7,000,000,000 to carry it out. Now they want us to convoy and deliver the goods. The next step will be to man the tanks and bombers, and last we will be asked to send millions of young Americans to do the fighting.

I believe the defenders of America have more courage than any people in the world, but it will take more than courage to win this war. We need tanks, antitank guns, antiaircraft guns, bombers and more bombers. We do not have enough equipment for our draftees and National Guardmen who are already in service.

If we go to war now, we will be facing the greatest odds we ever faced. Why make the same mistake other countries have made, by going off to war while tragically unprepared in terms of modern fighting equipment? If we get into this war, there will be no 40-hour week and time and one-half overtime for labor. There will be no parity prices for the farmer, and there will be no peacetime profits for industry, if we expect to win. We will be compelled to pay taxes and more taxes. If we go to war unprepared, it will be a long, hard struggle.

Many have said it will be impossible for Hitler to invade England. If this is true we know it would be impossible for him to invade America. With the proper defense, I don't believe he would have one chance in a million in making a successful invasion of the United States. There are not enough ships in all the world to transport an army of 1,500,000 men and supplies to America.

Both the opponents and proponents of the lease-lend bill believe that incidents which would certainly involve us in war could not occur if American vessels were kept out of danger zones. If we convoy, our ships and planes undoubtedly will be attacked by the Germans. Convoys mean shooting and shooting means war.

I would like to quote from Senator GEORGE, chairman of the Senate Foreign Relations Committee, CONGRESSIONAL RECORD, April 2, 1941. "As plainly as I can, I have always stood against convoying vessels by the American fleet, and will stand against convoying vessels by any unit of the American fleet until and unless the point shall come when I shall be willing to vote for war, because, in my judgment convoying would lead us into actual war."

Good old common sense and old-fashioned strategy would be to build up a strong national defense before we ever attempt to convoy or even talk about going to war.

It stands to reason if Great Britain can continue to maintain her export trade and deliver the goods to the Western Hemisphere in direct competition with the United States, without convoys by the United States, then certainly she can take war materials from this country over to England without United States convoys.

By making democracy work at home we can best give service to the world by protecting what we have on the continent on which it functions, we can do, by our example of success, that which our armies could not permanently achieve. Right ideals can move eastward from this continent to Europe as readily as wrong ideals can move westward from Europe over here. Let us give devotion to our right ideals at home.

It is impossible to predict the future of America unless we focus our attention upon our national defense and our unsolved problems of unemployment, underprivileged citizens, underpaid farmers, and idle capital. We must first set our own house in order if we are to be of service to our neighbors across the seas.

Real Americans must be placed on guard for the greatest test of moral, physical, and spiritual courage. America has no place for an individual who places any other flag, constitution, way of life, or any other ideals of government above our own. If we are to preserve our liberty and continue to go forward, we must gird ourselves to resist all attacks from within on the American way of life.

This Nation is united on a real defense program. Americans are all willing to pay their share of the costs. But they want, and they are entitled to have, full value received for the money spent. They desire the elimination of waste and red tape They would like to see more workers transferred from New Deal departments to the national-defense program, rather than adding more civilian employees to the Federal pay roll. They also desire that the defense production be expanded by farming out some of the defense projects to smaller communities.

We must have unity in keeping America out of war. Is the executive department divided on this issue? Do the Secretaries of the Army and Navy express the sentiments of the President? The American people are entitled to know all of the facts. Let us help the President keep his sacred pledge he made at Boston, when he said, "And while I am talking to you fathers and mothers, I give you one more assurance. I have said this before, but I shall say it again and again and again—your boys are not going to be sent into any foreign wars."

America must wake up. Let's meet the challenge to America with American courage and in the American way. Our destiny is to make America the home of democracy. Our big job is to keep America out of Europe and Europe out of America.

And you fellow Americans can help win this fight for peace. Write your President, your Senators, and your Congressman and express your desires for peace. Write those letters today.

R. F. C. Loan to Central Republic Bank & Trust Co. of Chicago

EXTENSION OF REMARKS

OF

HON. GEORGE A. PADDOCK

OF ILLINOIS

IN THE HOUSE OF REPRESENTATIVES

Monday, July 14, 1941

ARTICLE FROM THE CHICAGO DAILY NEWS

Mr. PADDOCK. Mr. Speaker, it is with great satisfaction that I invite the attention of the House to recent newspaper statements showing the repayment of most of the $90,000,000 loan made in June 1932 by the Reconstruction Finance Corporation to the Central Republic Bank & Trust Co. of Chicago. As is shown by the accompanying article which appeared in the Chicago Daily News of June 19, 1941, more than $77,700,000 has been repaid, with additional collateral amply in excess of the balance.

These facts not only justify the original loan, but indicate that the liquidation of assets under the direction of Jesse Jones has been well handled.

It seems particularly appropriate to note in the CONGRESSIONAL RECORD the satisfactory progress made toward repaying this loan. Frequently in the past, partisan discussion has treated this transaction with great inaccuracy.

The article follows:

[From the Chicago Daily News of June 19, 1941]

FAMED DAWES LOAN OF $90,000,000 TO BE PAID IN FULL—COLLECTIONS ALREADY OVER $77,700,000; $42,900,000 OF COLLATERAL LEFT

(By Royal F. Munger)

Every penny of the principal of the famous $90,000,000 Dawes loan by the Reconstruction Finance Corporation to the Central Republic Bank & Trust Co. is practically certain to be repaid, according to information gained through authoritative sources today.

The loan, it will be remembered, was made in the days of wild excitement in June 1932, in the worst month of the national depression, when every leading banking institution in the city was facing unusual depositor activity, and many banks were surrounded by such huge crowds as to require police regulation of the clamoring depositors.

At a stormy session of bankers, Charles G. Dawes refused to accept a loan of any kind unless assured enough to protect every penny of the money of his depositors. The loan was made, but subsequently was made the target of terrific criticism.

It was political ammunition in political campaigns because of the fact that Dawes himself, famous general, famous diplomat, and ex-Vice President of the United States, was a leading Republican.

And now the evidence begins to build up that the loan was sound. According to the best figures which can be obtained, and admittedly not official in character, although indisputably true, the liquidation of the assets of the Central Republic Bank & Trust Co. turned over to the Reconstruction Finance Corporation has already brought in funds to repay the bulk of the money.

Repayments have amounted to more than $77,700,000, or around 86 percent of the loan, of which about $9,000,000 was made up of payment of the stockholder liability. That leaves, at a rough calculation, about $12,300,000 of principal still to be paid. That it will be paid appears more than a certainty.

Here again the officials of the Reconstruction Finance Corporation would naturally be reluctant to make any official statement, but shrewd banking estimates can come fairly close to the facts.

The remaining collateral in the hands of the Reconstruction Finance Corporation to be liquidated to meet the remainder of the loan has a face amount of $42,900,000. At the very worst it is considered that this will bring in at least $13,300,000 under liquidation, and the returns may easily be considerably better than this.

In every year in which the liquidation of collateral has been progressing, and that covers an 8-year period, the Reconstruction Finance Corporation officials have made estimates of the value of the collateral.

In each case, before the end of the year, it has been necessary to make an upward revision of values in the light of experience. In most years the upward revision has been as much as 10 percent.

At a conservative estimate, therefore, the assets still to be sold under the Dawes loan liquidation will bring in enough to cover every penny of the principal, to pay all the costs of administration of the loan, and to apply at least $1,000,000 on the accrued interest. The cost of administration, incidentally, is understood to have been extremely low.

At last accounts—and our information is up to a comparatively recent date—the total expenses of the handling of the Central Republic loan on the part of the Reconstruction Finance Corporation, including the expenses of litigation, have amounted to $1,041,819.52, or a total of less than 1½ percent on the amount collected. That is really an extraordinarily low collection cost in comparison with the costs of some other situations involving smaller banks in the Middle West.

There will be no sharp increase in expenses, for the bulk of that work has been done, and the only marked change that is likely to take place is an increase in the sums realized from the remaining assets.

In fact, this last is quite likely, and there is better than an even chance, even from our own somewhat sketchy information, that the recoveries will cover all the $90,000,000 principal, all costs, and as much as $3,000,000 on the accrued interest.

That factor of interest is one on which there might well be considerable discussion. At the time of the banking crisis, when no man knew what the next day might bring forth, the bank was in no position to argue. It took what it could get.

Since then the general rate of interest on banking funds has gone down and down, but the R. F. C. bookkeeping, originally set up to let the R. F. C. show a profit if possible, has continued to charge against the big loan the original rate of 5½ percent per annum.

Technically, this would amount to something like $20,000,000, but, of course, that is entirely out of line with subsequent R. F. C. policy. The rate on preferred stock taken in banks to keep them in a strong position, for instance, has been cut repeatedly. No one has cared particularly, since the stockholder liability has already been applied, and the actual interest payment will be what excess is realized from the assets.

At this moment we are not in a position to try to estimate the credit that should go to different individuals in connection with the collection of the big loan. Jesse Jones, of course, deserves some credit for the fact that it was a sound loan in the first place.

Aside from that, somebody—whom eventually we hope to recognize clearly enough to identify—must have done a whale of a good job.

Letter of Charles Wesley Heard

EXTENSION OF REMARKS

OF

HON. ESTES KEFAUVER

OF TENNESSEE

IN THE HOUSE OF REPRESENTATIVES

Monday, July 14, 1941

LETTER TO THE EDITOR OF THE CHATTANOOGA EVENING TIMES

Mr. KEFAUVER. Mr. Speaker, under leave to extend my remarks in the RECORD, I wish to include a letter from Mr. Charles Wesley Heard to the editor of the Chattanooga Evening Times, Tuesday, July 1, 1941:

I ask space to answer a few questions by Times readers.

Question from an Irish-American friend. So we must destroy Prussia to save British imperialism and Russian bolshevism?

Answer. No. In this war there are only two sides—the German side and the American side. Both England and Russia are fighting on the American side for American freedom—and for Irish freedom, as well as their own. On the record since Munich neither Ireland nor the United States deserves freedom—and will not remain free long unless straight-thinking Irishmen and Americans wake up, take over, and force our Governments to act against Hitler. Because what we do—or fail to do—during the next 3 months will decide the future of nations on six continents, including our own.

Question. You say in the Evening Times that Germany must be destroyed before there can be peace in the world. Why?

Answer. I thought I gave valid reasons for the statement. If not, here is a fundamental reason for it: Civilization rests on the sanctity of the contract. Unless agreements are kept, there can be no commerce, no government, no social order; only chaos and return to savagery. Hitler and the German Government have broken every pledge they have made. No mentally competent person would accept a promise—whether verbal or documentary—from either.

Question. You demand the destruction of Prussia, but Hitler is fighting our enemy, communism. Would it not be better to let Germany and Russia destroy each other?

Answer. Judgment poisoned by emotion is blind; religion that conflicts with common sense is spurious. The Master said: "You shall know the truth, and the truth shall make you free." And He gave us a scientific method of orderly thinking based on common sense to enable us to discover the truth about any matters. Here is formula—His yardstick by which to judge men and nations:

"Judge not according to appearances; judge righteously."

That is, judge not according to prejudice, according to wishful thinking, according to emotional appeals by gangsters and aggressors to deceive the ignorant; but, judge according to known facts—or, knowledge acquired through scientific research or premediated, orderly thinking.

Both religion and science rest on this Christ formula for orderly, unemotional, scientific thinking which has met every test of recorded time. Every great document from the Ten Commandants and the Sermon on the Mount to the Declaration of Independence and the Constitution of the United States; every great discovery, every great invention, every constructive act of every individual, group, or nation—from the time of

Moses to the present, has resulted from the application of this Christ formula for straight thinking. It is the one infallible rule we have by which to judge Germany; and its application to the activities of Hitler and the German people will convince any man of principle who is 14 years old mentally, that peace, safety, and justice can never be established in the world until Germany has been destroyed or rendered harmless.

Question. Don't you know this is a war in defense of capitalism?

Answer. It is not. It is a war in defense of freedom and against enslavement by Germany. The best the Rockefeller, Morgan, Mellon, and Du Pont families can expect in event of German victory is to become German stooges and minority stockholders in their own corporations. And, there are four American Quislings whose activities indicate they hope to be elected President in 1944—either of whom, if elected, would, under German pressure, soon see that our perennial plutes received "blocked" dollars in exchange for even their minority holdings in their own corporations.

For 40 years I have opposed and exposed the many injustices of privilege. I shall never let up on them. But, compared to the Germans, our pampered plutes are fumbling amateurs at enslaving peoples. The German people are neither better nor worse than Hitler. Led by Prussia, they are mankind's deadliest menace—a menace to all that self-respecting white men hold dear. They must be destroyed or rendered helpless and taught the wisdom of self-restraint.

Wake up, America.

CHARLES WESLEY HEARD,
EAST CHATTANOOGA.

Argentina's Anniversary

EXTENSION OF REMARKS
OF
HON. SOL BLOOM
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES

Monday, July 14, 1941

EDITORIAL FROM THE WASHINGTON EVENING STAR OF JULY 11, 1941

Mr. BLOOM. Mr. Speaker, under leave to extend my remarks in the RECORD, I include therein the following editorial from the Washington Evening Star of Friday, July 11, 1941, entitled "Argentina's Anniversary":

[From the Washington Evening Star of July 11, 1941]

ARGENTINA'S ANNIVERSARY

It is 5,216 miles from Washington to Buenos Aires, but current events have served to shorten the distance in theory if not in fact. President Roosevelt, greeting the people of the Republica Argentina during their celebration of the one hundred and twenty-fifth aninversary of their independence, declared that "during these critical times * * * it is especially heartening to participate in an eloquent expression of the unity of ideals which firmly binds" the several countries of the Western Hemisphere.

Such words would have meant little had they been uttered 50 years ago. Conditions in the world as recently as 1932 called for no particular identification of interest among the diverse communities of the Americas. Yet as far back as 1816 there were ties between the United States and the provinces of the Silver River. The constitution of Argentina, when it was adopted in 1853, showed noteworthy similarity with that framed at Philadelphia in 1783.

Generally speaking, however, only casual mutualities bound Argentina and the United States during more than a century of their parallel existence. The compelling changes in communication and transportation since the opening of the present century were necessary, it would seem, to prompt an effective fraternity in Pan America. Now, in reaction to processes more or less cataclysmic, the western half of the earth is being unified. The impact of "the challenge abroad to the Christion civilization which they cherish as a precious heritage" is apprehended by all the nations of the New World.

Resolutely faced, of course, that menace to which Mr. Roosevelt referred may prove to be a beneficial power in its constructive effects. Something was required to bring together the liberty-loving peoples of the Americas. The passing of the next few months may serve to show that evil on occasion brings forth good. Perhaps the friendship of Argentina and the United States may prove to be one of the great creative motives of the age.

Meanwhile, let there be no question about the sincerity of the good wishes extended to the citizens of the Argentine Republic on the anniversary of their separation from Spain. Their brothers, their neighbors in the United States truly entertain for them the kindliest and most generous feelings.

Unemployment Problem and W. P. A.

EXTENSION OF REMARKS
OF
HON. WILLIAM A. PITTENGER
OF MINNESOTA
IN THE HOUSE OF REPRESENTATIVES

Monday, July 14, 1941

Mr. PITTENGER. Mr. Speaker, when relief legislation was pending before Congress during the last few days of June, I took occasion several times to protest the cut in the amount of appropriations for the Work Projects Administration. I pointed out that while war industries had furnished additional jobs in some sections of the country, this was not true in my district. No war industries have been located in northern Minnesota, and the need for furnishing jobs for the unemployed is just as acute as ever. During the debate I indicated that a large number of people now employed on W. P. A. projects would be laid off and forced back on the county relief rolls. That is exactly what has happened. I quote from a typical letter to show just how this policy of cutting down appropriations and discontinuing W. P. A. projects is working out. The writer says, after discussing the fact that she is a widow and that she and her children were dependent on relief, and after telling me that her daughter was on a W. P. A. project:

My daughter received her lay-off notice, effective at once, the reason being that there were insufficient funds.

The writer continues—

Due to my health, I am dependent on my daughter and she certainly needs her job. She is willing to take a position in private employment, but it seems as though there isn't such a thing.

And then the writer makes this significant statement—

Seven billions for England and insufficient funds here for our needy workers who receive only $65.60 a month on which to live is incomprehensible.

I concur in the statement of this very sincere person, and I think the administration leaders committed a grave injustice on the unemployed people in this country when they refused in June to increase the amount of appropriations for W. P. A. projects. There is still time in which to rectify this error, and I hope that proper steps will be taken along those lines.

Evidently the Board of County Commissioners for St. Louis County, Minn., agrees with me in these conclusions, and I submit herewith a resolution adopted by the county board on July 7, 1941, which reads as follows:

Whereas there has been a great reduction in the W. P. A. quota for the county of St. Louis, Minn., which necessitates an increase in direct relief furnished to those who were dropped from the W. P. A. rolls; and

Whereas peculiarly the county of St. Louis has not been successful in obtaining an increase in employment under the defense program; and

Whereas the county of St. Louis has suffered an approximate 40-percent decrease in valuation for taxation purposes in the last 10 years, and it appears to this board that there will be a further reduction in valuation for the year 1942: Now, therefore, be it

Resolved, That this board goes on record petitioning President Franklin D. Roosevelt; Howard Hunter, acting W. P. A. commissioner; Congressman William A. Pittenger; and United States Senators Henrik Shipstead and Joseph H. Ball to reestablish the W. P. A. quota for St. Louis County as of June 1, 1941; be it further

Resolved, That the county auditor is hereby requested to send a copy of this resolution to each of the persons above named.

Farmer Must Obey Triple-A Plan

EXTENSION OF REMARKS
OF
HON. CHARLES A. EATON
OF NEW JERSEY
IN THE HOUSE OF REPRESENTATIVES

Monday, July 14, 1941

ARTICLE BY MARK SULLIVAN

Mr. EATON. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following article by Mr. Mark Sullivan:

FARMER SEEN WITH NO CHOICE EXCEPT TO OBEY TRIPLE A PLAN—MARK SULLIVAN DECLARES GOVERNMENT'S PROGRAM TO KEEP WHEAT PRODUCTION UNDER CONTROL HAS BECOME COMPLETELY COMPULSORY

(By Mark Sullivan)

WASHINGTON, July 13.—I sat in the living room of a farmer in Pennsylvania. I saw a triple A agent come in with a brief case of documents. I saw the agent hand the farmer the card, and the farmer sign the card and

pass it back to the agent. I saw the agent countersign the card and pass it back to the farmer. I heard the agent say, quite amiably and matter-of-factly: "That's your marketing card—you can sell your wheat now without any trouble."

I came back to Washington. I set out to find how come. I think I have it correct, though I can't be positive. It is not just a single statute—I could read one statute and by concentration understand it. But this is the sum of several statutes, passed at different times, and many regulations handed down by triple A. The net of all is this:

Triple A tells every farmer how many acres of wheat he may plant.

If any farmer plants more than Triple A dictates, he is fined 49 cents a bushel on the excess he raises. (Forty-nine cents is nearly half the recent price of a bushel—it is a penalty of nearly 50 percent.) Until he pays the 49 cents a bushel fine the farmer cannot sell the excess to anybody.

He is not even allowed to feed it to a steer or hog, if that steer or hog is to be sold off the farm.

He is not allowed to feed it to a cow, if the milk from that cow is to be sold off the farm.

He is not allowed to feed it to a chicken, if that chicken, or the egg thereof, is to be sold off the farm.

All he can do with the excess, if he wants to escape the fine of 49 cents a bushel, is to feed it carefully to only such steers or hogs as he and his family will eat on the farm; or to those cows whose milk and butter he and his family will eat on the farm; or to such chickens as, or the eggs thereof, he and his family will eat on the farm.

INTRICATE BOOKKEEPING

This is going to mean some pretty intricate bookkeeping on the farm. "Hey, Jim, don't feed that wheat to the red hen—we're going to sell her eggs. Feed it to the white hen—we eat her eggs. Remember what I told you—feed the wheat from the big bin to the white hen, and the wheat from the little bin to the red hen."

In order to police all this, make everybody pay his fine and catch the lawbreakers, they have a thing they call a "marketing card." Every farmer who raises wheat must have one. It is a Government license, must be signed by the local Triple A agent, and must bear also the signature of the farmer himself. No farmer, in all the United States can sell a bushel of wheat without a license to sell, signed by a Government official. Think that over. (Theoretically, a farmer who raises less than 15 acres does not need to have a marketing card. But, practically, he must—for no dealer can take the risk of buying a bushel of wheat from any farmer unless the marketing card is produced. The dealer must guard himself against "bootlegged" wheat.)

There is just one way by which the farmer can get Triple A to relieve him from paying the 49 cents per bushel fine. He can give the excess wheat away. Not give it to a neighbor—if he gives it to any neighbor or friend, he must pay the 49 cents per bushel. But he can give it to—guess whom? He can give it to Triple A. I quote from a Department of Agriculture announcement issued July 2:

"Under provisions of the wheat-marketing quota law, the farmer who produces wheat in excess of his farm quota has the choice of: (1) Paying a penalty of 49 cents a bushel on this excess; (2) storing the excess wheat in accordance with regulations, thus postponing the payment of penalty; or (3) delivering the excess to the Department of Agriculture for use in relief programs, thus avoiding payment of the penalty."

COULD PLOW UNDER WHEAT

There is, of course, another way. The farmer could plow under some of his wheat in the spring while there is still time to plant something else. I imagine some farmers must have done this.

For administering all this intricacy, measuring the farmer's acreage keeping records on him, Triple A has an immense army of agents all over the country. There is one or more in every farm community. The total throughout the country for administering the whole triple A program on all crops runs into tens of thousands.

What is the purpose of it all? To compel farmers to raise less wheat. I said "compel," and "compel" is the word. A fine of 49 cents a bushel is a good compeller. As Representative FREDERICK C. SMITH, of Ohio, put it the other day: "The Government's farm program has become completely compulsory. * * * The strong arm of the law stands over the farmer * * *."

Why does the farmer stand for it? Because he must. It is the law passed by Congress; it is part of the New Deal.

I think I have got this straight. Some of it seems incredible. But the most incredible parts of it are told me by a competent person who assures me it is "unqualifiedly 100 percent correct." If there is any error, I am sure those alert and diligent publicity men in the Department of Agriculture will correct me, and I will print the correction.

Saving America

EXTENSION OF REMARKS

OF

HON. HOMER D. ANGELL

OF OREGON

IN THE HOUSE OF REPRESENTATIVES

Monday, July 14, 1941

ADDRESS BY HON. HOMER D. ANGELL, OF OREGON

Mr. ANGELL. Mr. Speaker, under leave to extend my remarks, I include the following address I delivered before the sixth national Townsend convention at Buffalo, N. Y., June 30, 1941:

It is a very great honor, indeed, to be accorded the privilege of speaking to you assembled here in this great convention. You come from the four corners of our broad land and from all walks of life with a single determination to find a solution for our social and economic ills which threaten to destroy our democracy. As one of the Representatives in the United States Congress I embrace the opportunity to meet with you and all good American citizens having our Nation's welfare at heart, and to discuss with you the momentous problems confronting our Nation today.

My good friends, we face a grim task here in this Republic today. The loyalty and sacrifice of all of us is challenged. For over 150 years we have gone forward, building a society which stands foremost in the nations of the world as a country giving to its citizens the opportunity and the right to live and to work in peace and to enjoy unmolested the freedom, rights, and privileges only enjoyed by a free democratic society.

Now, however, we find ourselves in a world that is topsy-turvy—a world that has gone stark mad in the lust to kill, to conquer, and to destroy. As we survey the ravages of the holocaust of war sweeping over Europe and Asia, leaving only slavery, death, and chaos in its wake, we have been brought to the stern realization that we must put our own house in order, so that we may keep the ravages of war from our own shores. As a result the Congress of the United States, with hardly a dissenting vote, has authorized a preparedness program to make our country impregnable against attack. We, in the Congress, have appropriated and authorized for the coming fiscal year $48,000,000,000 for national defense. I know that you and I cannot fully appreciate the size of such a stupendous sum of money. However, the total cost of the first World War was only $60,000,000,000. The very preservation of this Nation we all love may indeed turn upon the course we take and the success that attends our efforts. We are arming for defense in a world at war.

We want to make America strong—strong to protect our country from invasion and attack from without, and equally strong to prevent the insidious inroads from within of anti-American doctrines and subversive activities; strong in our ability to stamp out and banish from our land "fifth columnists," saboteurs, "reds," and all others who seek to undermine our Government and substitute in its place false doctrines founded upon the ideologies of the Old World. America is a broad land, but there is no place, even in its far corners, to harbor any of these anti-Americans. We must either be for America or against it. In this time of peril and crisis, when the very existence of our Nation is at stake, we must see to it, you and I, that those who are against America find no refuge within our gates. There is no room in America for Quislings or Trojan horses.

We cannot escape the conclusion that the stupendous work we are doing to provide for all-out national defense may be of no avail if, in the very efforts we put forth, we fail to preserve and protect the democracy that is America—our own American way of life. We have 132,000,000 American citizens whose welfare is the first consideration of our Government. If, in our axiety to make our country impregnable, we lose sight of the welfare of the men, women, and children who are America, we will fail miserably. For 10 years—long before there was any threat or possibility of war—we have been wrestling without success with this great domestic problem, our own economic and social welfare. When the nightmare of war shall cease—and it will cease some time—this domestic problem which so far we have been unable to solve will be intensified manyfold. When the war ends we will have a Federal debt in excess of one hundred billions of dollars. When defense activities stop we will have economic chaos. We will have many millions of American citizens called home from service in our armed forces and from the defense industries without work, and we must see that they find employment in private industry. The Federal Treasury will be sucked dry, and it cannot support them. We will have the job of transforming our whole economic and social structure from a wartime basis to peace activities. When we were confronted with this World War II we had 10,000,000 unemployed, and there has been no appreciable absorption of the unemployed in other than defense activities. With the ending of the war the unemployment problem will be many times more acute than it was when our national-defense program began. Reconstruction of our economic and social structure during the post-war period will put to the test our democracy. We must meet the challenge. We must begin now to find solutions.

Our Government recently made an extensive survey and study of the incomes and economic and social welfare of our American families. Some 29,400,000 families and 10,000,000 single individuals were considered, representing over 126,000,000 American citi-

sens. This survey discloses an appalling situation in the economic condition of our people. We found that 14 percent, comprising over 4,000,000 families, had an average income of only $312 a year for an entire family; 27½ percent, more than 8,000,000 families, had an average income of $758. Two-thirds of our American families had incomes on an average of only $826 a year, or $69 a month, for an entire American family. Such a meager allowance provides only 5 cents per meal. It means undernourishment, stunted children, and disease. This demonstrates conclusively that the foremost domestic problem confronting America today is underconsumption.

America is endowed with an abundance of natural resources, the richest country on earth. It is able to produce more of the necessities of life for each and every one of its citizens than any other country on earth, and yet in the midst of plenty there is dire need. The fault is not due to production, as our factories, our broad fields, and farms are producing great quantities of foodstuffs, clothing, and the necessities of life of every kind, for which there has been no market. The Government, through huge subsidies and the surplus-commodity program, has purchased or controlled and stored great quantities of these essentials for human welfare, and yet two-thirds of our American families are in tragic need of these necessities to maintain themselves, because they are without the power to purchase them. We yearn for markets for the productive enterprise of America so that our farms may be put to work, our factories kept open, and the 10,000,000 unemployed before the war may find purchasing power, and yet right here on our doorstep in the homes of two-thirds of our American families is the greatest market of any in the world, unsupplied. The stumbling block is that these American families, deprived of the necessities of life, have been unable, under our economic and social structure, to find remunerative employment. They are without the purchasing power that would not only provide them with food and clothing and other essentials but which would in turn make markets for the huge surpluses piling up from the farms, the factories, and the workshops.

The tireless energies of the human mind have wrought unceasingly, by inventions, scientific discoveries, and new processes, to extend the scope of human activity and accomplishment in the field of technology. Through such processes has America developed the American productive system to its present marvelous perfection. In the United States today, through the use of the physical sciences and mechanical arts, the major part of the goods and services consumed are provided by scientific processes and power machinery. Our workers are able to produce a much greater volume and variety of goods than heretofore to provide food, clothing, and shelter, as well as a higher standard of life to our people. Our productive capacity per man has multiplied manyfold. In supplanting handicrafts by scientific processes and mechanical devices, a maladjustment has taken place in manpower or labor, resulting in unemployment and loss in purchasing power. The loss of purchasing power in the workers displaced has thrown the industrial machine out of balance. To restore this balance, purchasing power must be provided. Fewer workers being required in productive enterprise to supply our wants, it follows a portion of the body of workers must be retired.

Eighty-five percent of the farmer's income comes from the production of foodstuffs. We at once see that if we rid ourselves of this bottleneck in our distribution of American production, we will not only provide for this great group of American families in want, but we will provide an ample market, not only for farm production but all of the necessities of life. Twenty-five percent of our people live on farms, yet they receive only 6 percent of the total national income. The national income in the 30 years, 1909 to 1939, increased 250 percent—from twenty-six and four-tenths billion dollars to sixty-seven and six-tenths billion dollars. The farmer's cash income, however, in 1939, was approximately the same as it was in 1909, when the farmers received 16.4 percent of the total income. The farmer's average wage for his labor is from 5 to 20 cents an hour.

The United States census for 1890 shows that at that time 75 percent of all our people over 65 years of age were gainfully employed. At the present time more than 75 percent of them over 65 are not only dependent upon others for support and are not employed, but practically no persons of that age can secure a new job. Let us heed the admonition and wisdom given by Paul 19 centuries ago in his letter to the Romans, when he said: "We then that are strong ought to bear the infirmities of the weak, and not to please ourselves." (Romans xv: 1.)

For some 2 years now I have served on a voluntary committee of the Members of the House of Representatives seeking a solution of the problem of unemployment and the break-down of our distribution system. We have come to some definite conclusions, as follows:

With modern and scientific methods of mass production during this machine age, a large group of our citizens remain idle and are not utilized in productive enterprise. Industry has rejected and refused to employ persons 60 years of age or over. This large group of our people is elected to be retired against their will. These elder citizens who have served their time as workmen in American enterprise and have helped to build America, but now in their later years are being cast off from productive enterprise, are the ones that are entitled to retirement and to receive an annuity sufficient to maintain them in decency as befits an American citizen.

Our conclusion is that there should be adopted a Federal old-age annuity plan, universal in its application, for all citizens 60 years or over, financed by a broad tax. The amount of the annuity should be of sufficient size to permit these elder citizens to live in comfort and according to the American standards. Such a plan, we believe, would not only provide purchasing power to these elder citizens, but it would help to bring about national recovery and provide markets for American produce. Such a program would assist materially in correcting the evils of our system of distribution, and would permit all of our citizens to share equitably in the fruits of American enterprise.

In conclusion, I repeat, Let us provide for our national defense—strong and impregnable, with power on land, sea, and in the air to beat off the attacks of all who may seek to attack us. Let us dedicate this great power to the defense of America. Then let us, with equal will and power, take up the battle from within and solve our economic and social problems which bid fair to wreck our democratic way of life. We must prove that our democracy can meet this challenge, and that democracy will work. Let us retire our senior citizens on a decent annuity, put back to work our young manhood, restore the balance between production and distribution, that every American family may have gainful employment, providing the purchasing power necessary to right living according to American standards. This is all-out defense for America on all fronts and will save the American way of life.

Let you and me and every American in this tragic hour in our Nation's life, when doubt, false prophets, and propaganda are abroad in our land, keep our feet on the ground and our eyes on the stars, and, as did our fathers of old, with firm reliance on the protection of Divine Providence, pledge our lives and our fortunes to the one end of saving America.

After the War—What? Boom or Bust?

EXTENSION OF REMARKS

OF

HON. JERRY VOORHIS

OF CALIFORNIA

IN THE HOUSE OF REPRESENTATIVES

Monday, July 14, 1941

ARTICLE BY BLAIR MOODY IN THE DETROIT NEWS

Mr. VOORHIS of California. Mr. Speaker, here is further evidence from one of our ablest students and writers on public affairs as to the almost desperate importance of the passage at an early date of the Wagner-Voorhis resolution, to create now a commission of outstanding citizens and Members of Congress and the executive department to make sure we do not "bust" when our defense program is over, but that, instead, we establish on a sound basis a long-time answer to unemployment and related problems.

Mr. Blair Moody has written a series of articles on this subject, and as a matter of fact every one of them ought to be read by every Member of Congress. I have selected the first article of the series for inclusion here, but would like, before quoting it, to give you one paragraph from the third article in his series:

There simply haven't been enough goods to go around or, rather, there hasn't been enough money to take off the shelves the goods that could be produced. Obviously, Government spending is justified to tide over an emergency, but is it justified perpetually if nothing is being done meanwhile, to straighten out what is basically wrong?

And now here is Mr. Moody's first article in full:

[From the Detroit News of June 16, 1941]

AFTER THE WAR—WHAT? BOOM OR BUST?

(By Blair Moody)

WASHINGTON, June 16.—Obscured by the rush to arm and the pressure of imminent war, there is taking shape in the highest reaches of official Washington a sweeping shift in basic slant, a gigantic awakening to economic realism.

Nothing except the single issue of peace or war is so important to the average citizen as whether this little-publicized but rapidly spreading point of view fades or becomes the dominant pattern of the United States after the crisis. On what President Roosevelt does about this, scarcely less than what he does about the Nazis, may rest the future welfare of the American people.

For when and if Hitler is thwarted in his plan to dominate the world, the American family will have to live. There will have to be a job at a wage high enough to rent a home, or own one, and buy every month the necessities of life and a few luxuries.

Either that, or the whole structure of the country will explode in universal suffering and confusion.

For the doleful, "orthodox" economists, who have never yet found out enough about the American economy to make it function on all cylinders, are now predicting:

"After this boom there's no way to escape a bust that will make the crash of 1930–32 look like a minor dip."

And what then?

The people have served notice in three Presidential elections how they feel about closed factories, impoverished farms, and breadlines.

That bust will come, all right, if things move along the same old groove of producing only what can be sold at a predetermined high price, ballyhooing overproduction in a land where two-thirds of the families have incomes under $1,500 and therefore scarcely can be glutted with goods, and accepting as inevitable ersatz farm income and folklore finance.

But some of Mr. Roosevelt's economic realists do not concede it is necessary to plunge down that road to disaster. They think there is only one thing sure about our framework of the future—and that is that it will be different.

If we continue to accept the slow strangulation of scarcity policies, it will be worse—much worse, they say. But if this country gears itself to use its tremendous power to produce—and forces itself to lick the distribution problem which has so far bogged down in clashing self-interests and stupid preconceptions—standards of living can be immeasurably better.

A system keyed to production rather than price would, obviously, mean a terrific wrench.

It would jar the mentalities of those who do not yet realize that drastic changes have become unavoidable, that the system that has been kept alive for two decades by stimulants and opiates—the foreign loans, installment buying and credit inflation of the twenties, and the New Deal spending experiments of the thirties which never really worked until, with the war, it reached a magnitude that has now provided the clear alternative:

Use our power to produce or collapse.

Those drastic changes would not, of course, alter the basic idea of our system of incentive, initiative and profits. Their objective would be to make that system work—produce enough for a decent living for everyone who will work—so it will not be strangled by its own strictures and stupidities.

Mr. Roosevelt's progressive brain trusters—who are, by the way, not of the old New Deal hit-'em-in-the-jugular type, but liberal middle-roaders—believe that the tremendous performance of our industrial and agricultural systems in stepping up production for war provides the answer.

If we can produce for war, they ask, why not for the people? Why not to increase the standard of living in peacetime?

If Government spending on arms can make the factories whir, if the shortage of food abroad can reverse our whole "scarcity" farm plan, if the bookkeeping items that represent Uncle Sam's borrowing can increase profits and shove the national income right up through the skylight, why cannot the factories and farms be made to whir also by spending of the people—people buying to increase their own standards of living with money they earn, in the aggregate, producing those goods?

In other words, if we turn our productive power loose when the war is over and call "overproduction" by its real name, "underconsumption," why would not that provide the answer for which we have all been looking? Certainly, it could not be much worse than what seems inescapably ahead under the alternative system of "scarity!"

READJUSTMENTS AHEAD

Readjustments? Of course. But the readjustments are long overdue. The architects of this new economy point out that the rubber-stamp traditionalists who are resisting economic expansion overlook the two most important facts of the modern age.

The first is that the masses of the world are in revolution against unfair and insufficient distribution of the world's goods.

But both communism and fascism have proved, by and large, tragic for the masses themselves.

In the United States the revolution took the milder form of the New Deal, which improved conditions by stimulants and palliatives but now must make a choice that will kill the capitalistic system or cure it.

The second great "forgotten fact" is that, for the first time in history, man is able to (but doesn't) produce enough so everyone can have a decent living.

That so many millions still have living standards a thin slice above the Middle Ages not only is needless tragedy for them, but also impending disaster for those who have most to lose if our system blows up—for now that we have a system of mass production we must have mass consumption to sustain it.

The President's progressive economists assert that producing more is not a scheme to share the wealth by shearing the wealthy; its objective is to make more and gear prices, wages, and production so those who now have too little may buy and, incidentally, improve business. That, they say, is the only way capitalism can long endure.

Their text was uttered at Des Moines by HENRY A. WALLACE, probably the best economic mind in Washington, in his first speech as Vice President: "The battle of peace is to raise the living standards of the common man by distributing what we have learned to produce."

When WALLACE'S disciples have their case assembled, they'll put it to the President once more like this:

"How else can you attain that war aim you fought for long before there was a war—'freedom from want'? Fall in that and the profit system may strangle itself to death and drag down with it democracy and your other three hopes for the world—freedom of speech, freedom of religion, and freedom from fear."

The President is listening.

Importance of Air Power Calls for Independent Force

EXTENSION OF REMARKS

OF

HON. JENNINGS RANDOLPH

OF WEST VIRGINIA

IN THE HOUSE OF REPRESENTATIVES

Monday, July 14, 1941

Mr. RANDOLPH. Mr. Speaker, those who believe in a separate air force for the United States and those who are against the plan—all are in agreement certainly that air power is growing in importance, due in large measure to lessons coming out of the present world conflict.

GERMANY RECOGNIZED AIR POWER

Maj. Alexander P. de Seversky, writing in the July issue of Flying and Popular Aviation, has the following to say:

Throughout history, new weapons have imposed new tactical principles upon the science of war making. Throughout history, too, some nations have been quicker than others to recognize and apply those principles. Because they were more alert, or simply more desperate, they have utilized the new weapon for the conquest of neighbors—if those neighbors remained muscle-bound by traditional thinking.

This familiar pattern of behavior was illustrated perfectly and with tragic results in the years preceding the present world conflict. In Germany the new weapon—air power—was being forged with great energy for all the world to see. Yet, on the other side of its frontier, France continued to live complacently in its fool's paradise of military delusions. It remained comfortable and self-satisfied behind its useless Maginot Line. France had put up a dam, and actually expected it to keep out the torrential rains of air attack from overhead.

But before we Americans speak too harshly of the blindness and inertia of France, let us take a good look at ourselves. The sad fact is that even today, with the second World War nearing the end of its second year, the United States has not yet fully recognized the new weapon and its implications for America's defense program. We build two-ocean navies in about the same spirit that France built its frontier fortifications, without reference to the new dimension of modern warfare. Not only do our air defenses remain inadequate and technically backward, but we continue to divide them between the Army and the Navy, each of which, naturally, treats aviation as a mere adjunct or extension of its own organization.

American military aeronautics, to put the matter bluntly, is still in a primitive condition—this in the country where modern aviation was born. Those of us who have grasped the meaning of genuine air power therefore have a clear duty. It is to hammer away, day and night—and even at the risk of making ourselves a nuisance—at the mind and conscience of our Nation, to awaken it somehow to the realities of the new situation.

Only air power can fight and defeat air power. The hope that antiaircraft artillery on land or on ships could meet the threat from the air has by this time been abandoned. Such artillery can keep the enemy planes at a higher altitude, thus reducing their accuracy of aim. The actual elimination, or even stalemating, of an attacking air force, however, can be achieved only by a superior air force. This principle is especially recommended to the attention of those who still like to fool themselves with theories of defensive equipment. The only defense against the menace of attack from the skies, are planes in the skies.

In a hundred ways the war has shown that all activities of military aviation must be concentrated into a single department or ministry, autonomous in its own field and directed by aviation experts. We need only think of an infantryman, or an admiral, in command of the all-air battle of Britain to see the absurdity of keeping the new weapon tethered to the older services.

Both Germany and Britain have separate air power, on a par with their respective navies and armies. With every passing week both belligerents have come to regard this independence and equality as essential. Proposals to put their air forces under command of the army or the navy would sound to them as insane. Now that the primacy of air control as the condition for any other type of fighting is apparent, it seems actually ludicrous that we should in our country still be obliged to argue the matter. With battles under way overhead, in which ground troops and naval contingents are little more than helpless onlookers, it is truly tragic that we should continue to keep American aviation subordinated to the elder services.

Those responsible for America's national security must break through the psychological restraints of inherited ideas and tackle the new realities. The American people must bring the leverage of their opinion to bear on

the situation. The problem is too important to be ignored or slurred over. Let's build for genuine air power, in line with the lessons and the warnings written big as life on the skies over this war.

AIR-BORNE TROOPS WIN BATTLE

The foregoing paragraphs are but a small part of an article which I trust will be read in its entirety. I wish to direct attention to a further discussion of this subject from an article in Military Review, published by Command and General Staff School, Fort Leavenworth, Kans. It is called Men Descending From the Clouds and is by Lt. Col. Leo Donovan and Lt. J. J. Gleason, United States Army:

Benjamin Franklin in 1783 wrote: "Five thousand balloons, capable of raising 2 men each, could not cost more than 5 ships of the line; and where is the prince who can afford so to cover his country with troops for its defense as that 10,000 men descending from the clouds might not in many places do an infinite deal of mischief before a force could be brought together to repel them?"

There is nothing new except what is forgotten, so the saying goes, and certainly it applies to the case of air-borne troops.

On the 10th of May 1940 and the days immediately succeeding, the world was startled by news of military developments which seemed well-nigh beyond credence. * * * Fantastic developments were happening. The renowned and powerful fortress of Eben-Emael, key of the Belgian defense lines guarding the Meuse and the Albert Canal, a gun-studded mass of masonry which loomed proof alike against bombs, artillery, tanks, shock troops and gas, had fallen within a few hours of the time the attack began. Scores of miles behind the Dutch defensive positions, which had not as yet been successfully penetrated, the airports of Rotterdam were in the hands of the foe, vital bridges had fallen to the invader and savage assaults were being launched upon the invirons of The Hague by gray-clad infantrymen. A startling technique was being employed by Germany—a new "Angriffsmittel" the Reichswehr called it—a "secret weapon" the headlines proclaimed.

As a matter of fact, save in an applicatory sense, there was nothing new and nothing secret about what was being done. Simply, the situation was that air-borne troops—parachute troops and air-landing infantry—were functioning for the first time on a large scale in actual warfare. "Vertical envelopment" had arrived and was passing a practical test.

The nature of air-borne troops and of their organization and equipment, the principles applying to the way in which they could be successfully used, had been the subject of study at one time or another during the last 10 years by the armies of Russia, Germany, Italy, France, England, and the United States.

There is a wide gap, however, between military theory and experiment, however sound, and the actual appreciation of a new technique by the conservative body of armies at large. Only the German Army seems to have carried through seriously in the matter of a parachute and air-landing forces. Russia, to whom goes the credit of having pioneered boldly in the field, seems in late years to have been seized by doubt of the new method's validity. Other armies appear to have dabbled in it, but to have regarded it, in the final analysis, as a sort of spectacular military sideshow rather than as a practical way of winning wars. So Germany got the jump on the rest of the world.

In the air-borne operation we find a dynamic technique, new at least in the sense that it has gone hitherto unappreciated. Its practical worth, its lightninglike power, have been indisputably settled. Yet its potentialities have only begun to reveal themselves. Does it not behoove us, then, to master this technique of the sky in our own laboratory of military study and experiment? Should the air-landing force, after all, be a type unit, specially trained for its work? If so, what will be the composition of such an organization? How will it be trained? For what missions will it be employed? Can new weapons be found to add to its powers? The army that answers such questions may be well repaid for its effort.

SEPARATE AIR FORCE NEEDED NOW

Mr. Speaker, I am in agreement with Owen L. Scott, writing in the Sunday Washington, D. C. Star, when he says:

Every development in this war suggests that the airplane is the weapon that will decide the presently disputed issue of world control. Experience in Russia is only confirming the lesson written over Poland and France and Britain, as well as over the Atlantic and the South Pacific.

Control of the air over Britain will determine whether that island is invaded. Control of the air over the Atlantic will determine whether Britain will starve. Air control over the South Pacific will decide whether Japan dares to venture in that direction. Given air control, China could turn the tables on Japan.

These now accepted conclusions provide the one lesson of the present war that cannot be mistaken. The question is whether the United States is learning the lesson and, if so, whether it is applying it in practice. The answer is that the United States certainly has learned the lesson and is beginning to apply it in practice.

The Germans, who have led the world in development of air strategy and in airplane development for military purposes, say there are only two areas in the world with the resources adequate for development of air dominance. Those areas are the United States and Russia. Germany may be seeking in Russia those resources in metals and in lubricants and fuel which a really vast airplane development requires. The United States has everything at hand for development of its own air power—from the materials to the skills and abilities.

However, like any nation that is inclined to be fairly content with its lot, the United States was slow to turn its attention to development of military and naval aviation on a vast scale. This fact gave Germany and, to some extent, Japan, a chance to forge ahead temporarily in the actual building of military aircraft.

The writer goes on to say:

There remains the question of whether the American Army and Navy are prepared to get the most that they can out of the airplanes that American industry is equipped to build.

Aviators are almost a unit in arguing that the potential air power of the country never will be developed adequately until aviation is recognized as a separate military force—as the Army and Navy now are recognized.

Hitler gave his air force full head. Results are to be seen in the conquest of all of Europe. But Hitler hasn't been able, with everything he has, to conquer the British Isles owing to their air defense. This means that the United States still has time to bring its potential air power to bear in the present struggle. Similarly, the Japanese, with their production of 250 planes a month, will not be able to overcome the Chinese or to conquer in the South Pacific before American air power can be felt.

It is this country's opportunity to develop its air strength to gain ascendancy in a world in which distances are shrinking and in which air power is becoming dominant.

AL WILLIAMS PREACHES AIR STRENGTH

My colleagues, there can be no doubt that this Nation must continue to turn its attention to strengthening our air force. We need to preach this doctrine over and over again, just as Maj. Al Williams does so dramatically and factually daily in his newspaper column. There are others who are doing a fine work in this fight. Let us cooperate in telling the story to all our people.

The President as the Maker of High Policy

EXTENSION OF REMARKS

OF

HON. SOL BLOOM

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Monday, July 14, 1941

ARTICLE BY WALTER LIPPMANN

Mr. BLOOM. Mr. Speaker, under leave to extend my remarks in the RECORD, I include therein the following article by Walter Lippmann, which appeared in the New York Herald Tribune of Saturday, July 12, 1941:

[From the New York Herald Tribune of July 12, 1941]

THE PRESIDENT AS A MAKER OF HIGH POLICY

(By Walter Lippmann)

In a more perfect world no great action involving war and peace would ever be taken by the President without first obtaining the explicit approval of Congress. We have never had a President, it is fair to say, who would not have preferred to obtain prior authorization from Congress rather than to act on his own responsibility and depend upon a subsequent ratification or on some kind of tacit assent.

The whole action of the Government would be immensely stronger, and, therefore, in the end less costly if this procedure could be followed.

But as a matter of historic fact, none of the decisive developments of American policy has ever obtained prior authorization from Congress. The historic moves which mark the rise of the United States as a great power have all of them been decided upon by the President and initiated by Executive action. Congress did not authorize Jefferson to make the Louisiana Purchase, and Jefferson at least thought that if he went first to Congress he would either fail to get the authorization or would lose the chance to obtain Louisiana: "A John Randolph (the Burton Wheeler of that time) would," said Jefferson, "find means to protract the proceedings on it by Congress until the ensuing spring, by which time new circumstances would change the mind of the other party."

The basic foreign policy of the United States, namely the Monroe Doctrine, was announced in a Presidential message to Congress. The doctrine was a direct challenge to the purposes of all the great powers of the continent of Europe and, if the challenge was accepted, it committed this country to war as a belligerent partner of Great Britain. There was no prior authorization by Congress, nor even a subsequent ratification. Yet the Monroe Doctrine has stood for more than a century as the central purpose of American foreign policy, approved today by those who

call themselves isolationists as well as by the rest of the Nation.

The Mexican War had begun, and two big battles had been fought, before Congress acted. In the Civil War Lincoln acted 10 weeks before there was a vote in Congress, and it is by no means certain that Lincoln would have obtained authority from Congress if, instead of acting to save the Union, he had invited a debate. These are the facts of experience, disconcerting as they are to our ideas of how representative government ought to work. Nor was that the end of it. The two most far-reaching developments of American foreign policy in the period between the Civil War and the first World War were the establishment of an American interest in the Far East and the construction of the Panama Canal. Neither of these momentous actions had the prior authorization of Congress.

Yet every one of these great measures which have shaped the very life of the Nation—its territorial limits and its place in this hemisphere and its position in the world—have been decided upon by the President and set in motion by his orders. The Louisiana Purchase, the Monroe Doctrine, the Mexican War, the preservation of the Union, the Far Eastern policy, the Panama Canal, not to mention the expulsion of Napoleon III from Mexico and the stabilization of the Caribbean, we owe to the fact that successive Presidents have done what they deemed necessary and expedient, relying upon their constitutional powers in the conduct of foreign relations and as Commander in Chief.

It is an abuse of language to describe this time-honored procedure as "dictatorship" or to profess to believe that measures which conform with the practice of our greatest Presidents for a century and a half are somehow a novel usurpation of power. The truth of the matter is, and all our experience proves it, that in these largest questions the President, who is elected by the whole people, more truly represents the Nation than do legislators elected by relatively small constituencies.

Jefferson had a better mandate from the people than John Randolph, a Congressman from Roanoke, Va. Time has proved that Jefferson was right, as it has proved that Monroe and Lincoln and Theodore Roosevelt were right when, faced with momentous decisions, they took the decisions rather than risk the consequences of the obstructive delays of the filibustering minorities in Congress.

It is unfortunate that they had to choose between the imperative interests of the Nation and the ideals of a harmonious collaboration with Congress. But almost invariably they have had to make this hard choice, the reason being that the Senate of the United States has a set of rules and customs which prevent collaboration.

The rules of the Senate today, like the rules of the House before they were reformed, create the condition described by former Speaker Reed when he said that the "only way to do business inside the rules is to suspend the rules. * * * The object of the rules appears to be to prevent the transaction of business."

This lamentable state of affairs cannot be remedied merely by insisting that the President go to Congress for specific authority whenever he deems an action necessary or expedient. There have been occasions, and they have been among the most critical in our history, when the duty to act transcended the duty to obtain prior authority from Congress. It is true that some Presidents have managed to keep closer to Congress than have others. It is certainly true that Mr. Roosevelt would be better off if he kept the responsible leaders of Congress more thoroughly informed.

But the fact remains that there are in every Congress men who cannot be consulted, because they refuse to treat any information as confidential, and no delicate diplomatic policy, much less a military measure, can be conducted successfully in the newspaper headlines. The minority who will not act responsibly disrupt all intimacy between the branches of the Government. This fact, plus the fact that the rules of the Senate are a license to obstruction and filibustering, have made Congress virtually unable to take a deciding part in the formation of great policy. It is too bad. But there is no remedy for it unless there is a reform in the rules of the Senate or in the practices of a handful of Senators.

The Grange's Part in the Building of the United States Department of Agriculture

EXTENSION OF REMARKS

OF

HON. JOHN C. KUNKEL

OF PENNSYLVANIA

IN THE HOUSE OF REPRESENTATIVES

Monday, July 14, 1941

ARTICLE FROM THE NATIONAL GRANGE MONTHLY

Mr. KUNKEL. Mr. Speaker, the July issue of the National Grange Monthly contained a very interesting and instructive article on the part played by the National Grange in originating and developing the United States Department of Agriculture. This article was written by Mr. Fred Brenckman, Washington representative of the Grange, and I feel it will be of interest to every farmer and to everyone who is interested in farming.

The article follows:

[From the National Grange Monthly of July 1941]

Among the foremost legislative projects of the Grange in its early days was that which called for Cabinet rank for the Department of Agriculture. The story of the leading part played by the Grange in this successful campaign, covering a period of nearly 15 years, is one that deserves to be retold during this diamond jubilee year of the organization. Strange as it may seem the work of the Department of Agriculture had its origin in the Patent Office of the United States. It was in 1835, 106 years ago, that Henry L. Ellsworth, of Connecticut, was appointed as Commissioner of Patents by President Andrew Jackson. From his youth Ellsworth was deeply interested in agriculture and from 1804 to 1806, when he was still in his early teens, he conducted a column in the Connecticut Courant called the Farmers' Repository.

Prior to 1835, he traveled in the prairie States and became convinced that they had great agricultural possibilities. He therefore began to purchase for himself and others large tracts of public land in the region from Michigan to Iowa. The problem concerning the most profitable crops to grow on these lands, and the need of improved implements for their culture and harvest, were never absent from his mind.

When the Hartford County Agricultural Society was formed in 1817, Ellsworth was chosen as its secretary, and among his publications was an address which he delivered before the society March 24, 1818. In this he stated that one of the objects of the society was "to aid them [the farmers] in their labors, by the introduction of new seeds and implements of husbandry, and by the distribution of the most valuable publications on agricultural subjects." It is, therefore, easy to understand why Ellsworth was profoundly interested in the Patent Office, which held the numerous and constantly growing records and models of inventions of agricultural implements and processes.

NEW SEEDS AND PLANTS DISTRIBUTED

As Commissioner of Patents, Ellsworth immediately began to collect from various sources new and valuable varieties of seeds and plants, and to distribute these with the aid of Congressmen and others. Naval officers, consuls, and private citizens traveling abroad were frequently bringing to this country seeds and plants which might be used in our agriculture, but which were largely lost because there was no agency for their preservation and distribution. In his report for 1837, Ellsworth therefore suggested the creation of a public depository for such articles "whence they may be dispensed to every part of the Union."

This part of the Commissioner's report was referred to the Committee on Agriculture of the House of Representatives, together with a resolution on this subject, introduced on March 5, 1838. Two days later Congressman Joseph F. Randolph, of New Jersey, made a report from this committee favoring the project recommended by Ellsworth. He also introduced a bill appropriating $5,000 to create "an agricultural depository" in the Patent Office and to provide "a clerk to be denominated the agriculturist, at $1,600 and two laborers." The report of the committee called attention to the embarassment which had resulted from the loss of seeds and plants stored in customhouses and elsewhere, which had been brought to this country in obedience to a Treasury circular of September 6, 1827, requiring consuls to collect and transmit seeds and plants, information regarding climate, soil, propagation, cultivation, insect pests, and uses, and agricultural literature. The Secretary of the Navy had asked naval officers to assist in this work.

Congress did not pass this bill, and the efforts made by Ellsworth to aid agriculture without authority from Congress aroused some criticism. This led to a letter from the chairman of the House Committee on Patents January 21, 1839, asking for information "relative to the collection and distribution of seeds and plants; also the practicability of obtaining agricultural statistics."

In his reply, Commissioner Ellsworth defended the work he had done to aid agriculture and asked for a small appropriation from the patent fund for seed distribution, in order that he might be relieved from expenses already becoming onerous to himself individually. He also expressed a willingness to collect and report agricultural statistics.

In the Appropriation Act of March 3, 1839, Congress allocated from the funds granted to the Patent Office the sum of $1,000 for the collection of statistics and for other agricultural purposes. Since agricultural inquiries were included in taking the census of 1840, the Patent Office spent very little of its appropriation for that purpose.

In 1840 more than 30,000 packages of seed were distributed. That year Commissioner Ellsworth urged the importance of an annual report of the state of the crops in different sections as a preventive against monopoly and a good criterion to calculate the state of exchange.

In 1841 the Commissioner of Patents stated that the plan of making a complete collec-

tion of agricultural implements used, both in this and foreign countries, and the introduction of foreign seeds, was steadily pursued.

In this report, Ellsworth strongly urged the importance of the application of the sciences, particularly chemistry, to agriculture. The analysis of soils and the extraction of oil and sugar from corn were cited as examples of the benefit to agriculture from chemical investigations. The appointment of a single clerk to collect agricultural statistics was also suggested.

ELLSWORTH RESIGNS AS COMMISSIONER

Commissioner Ellsworth resigned in 1845, and the report of the Patent Office for that year was prepared under the direction of his successor, Edmund Burke, a native of Vermont, who practiced law in New Hampshire, from which State he had served as a Representative in Congress. This was a document of 1,184 pages, nearly 1,100 of which were devoted to statistics and miscellaneous information on agricultural subjects. Much space was given to potato diseases. Because of the growing volume of business relating to patents, and dissatisfaction with the use of the patent funds for agricultural purposes, Commissioner Burke suggested that Congress make a special appropriation for the agricultural work of the Patent Office. The result was that Congress made no appropriation for such work in 1846. There was, therefore, no report for that year.

In 1847, more than 60,000 packages of seeds were distributed from the Patent Office, including some contributed by the French Minister of Agriculture and Commerce. In his report for that year, Commissioner Burke said that a new era seemed to be opening in agricultural education with a beginning of instruction related to agriculture at Yale, Harvard, and in Ohio. He expressed the thought that lecturers could do much to diffuse agricultural knowledge. It was not until many years afterward that the farmers' institutes were established, which in turn have been largely superseded by the Agricultural Extension Service.

Under the act of March 3, 1849, creating the Department of the Interior, the Patent Office was transferred to that Department. That year Thomas Ewbank became Commissioner of Patents. Devoted to literary and scientific pursuits, Ewbank delegated to Daniel Lee, editor of the Genesee Farmer of New York, the preparation of the agricultural part of the report of the Patent Office.

Dr. Lee emphasized the importance of agricultural education, on the ground that a scientific knowledge of agriculture is essential as a basis for improved practice and conservation of fertility of the soil. He held that along with the things needed to help agriculture were studies which would aid in the control of insect pests and plant diseases; analysis of soils, marls and fertilizers; improvements in dairy animals; better methods of preserving agricultural products used for food; distribution of better seeds and plants; and the more thorough collection of agricultural statistics with the aid of States and counties.

There can be no doubt that much valuable work was done through the agency of the Patent Office, in the dissemination of information relating to agriculture and particularly in the distribution of improved varieties of seeds and plants. In recognition of the growing importance of this work, there was a demand that a separate bureau or agency be created to look after it.

CONGRESS CREATES NEW DEPARTMENT

Accordingly, on May 13, 1862, Congress passed a bill creating the Department of Agriculture, which was approved by President Lincoln on May 15. However, the Department so created was merely a little bureau, headed by the Commissioner of Agriculture, who had no seat in the President's Cabinet.

The first Commissioner of Agriculture was Isaac Newton, who was promoted on July 1, 1862, from his position as chief of the agricultural section of the Patent Office. Newton was a successful and progressive farmer of Delaware County, Pa. He continued to serve as Commissioner of Agriculture until 1867, the year of his death.

Particular interest attaches to Newton's name in Grange circles, for it was he who commissioned Oliver Hudson Kelley, then a clerk in the Department, to make a survey of agricultural conditions in the South immediately after the Civil War. As is well known, it was while engaged in this enterprise that Kelley first conceived the plan that led to the establishment of the Grange.

In developing the Department of Agriculture, Commissioner Newton kept in view the plan which had been outlined about 20 years before by Jesse Buell, as follows: (1) Collection and dissemination of statistical and other useful information relating to agriculture; (2) collecting and distributing seeds and plants for use in this and other countries; (3) answering inquiries of farmers and others on all matters relating to agriculture; (4) testing by experiment implements, cereals, seeds, and plants; (5) chemical analysis of soils, grains, fruits, plants, vegetables, and manures, and publication of results; (6) establishing professorships of botany and entomology; (7) establishing an agricultural library and museum. While the Department today has a suitable library, it still lacks anything resembling an adequate museum.

The initial appropriation for the Department was $60,000, to which was added on March 3, 1863, a deficiency appropriation of $20,000. For the fiscal year 1867 the appropriation for agriculture was $199,100.

APPOINTMENT OF WILLIAM SAUNDERS

In 1862, soon after becoming Commissioner of Agriculture, Newton called to Washington William Saunders, a leading horticulturist and landscape gardener, for consultation in laying out the Department grounds and planning its horticultural work. Saunders was appointed botanist and superintendent of the propagating gardens, and served in the Department for 38 years, or until his death in 1900.

Very few men have had better preparation for their life work than William Saunders had. He came of a family of noted gardeners and throughout his early life he enjoyed exceptional opportunities to study botany, horticulture, and landscape gardening in Scotland, his native country. To an excellent general education, he added besides a course in horticulture in Edinburgh College and several years' training in practical gardening.

He came to the United States in 1848, and engaged in gardening on an estate at New Haven, Conn. Immediately he began to contribute articles to Hovey's Magazine of Horticulture and wrote much for other journals. In 1854 he entered into a partnership with Thomas Meehan at Germantown, Pa., and the firm built up a large business in horticulture and landscape gardening. He was broadly interested in all phases of rural life. In 1855 he published suggestions for farm organizations, with features like those of the Grange, and is well known. In 1867 he was one of the founders of the Grange and became the first master of the National Grange.

Under Saunders' direction, the Department's propagating garden was used during Commissioner Newton's administration for growing grapes, pears, strawberries, gooseberries, grain, and vegetables. A glass house for orchard fruits was erected, and in 1865 a greenhouse with a section for tropical plants was built.

CONDUCTED ON MODEST SCALE

The modest scale upon which the Department was conducted may be gathered from a letter written by Commissioner Newton's successor, Horace Capron, on January 13, 1868, to Schuyler Colfax, of New York, Speaker of the House of Representatives. It was in part:

"For the purpose of a better organization of the clerical and other necessary force of the office, I would respectfully recommend that the act of Congress approved March 15, 1862, establishing the Department, be amended by supplementary legislation, so as to fix and define the disposition of its officers, as follows, that is to say: One statistician, one entomologist, one chemist, one assistant chemist, one superintendent of seed room, one librarian, one disbursing and auditing officer, three clerks of the fourth class, four clerks of the third class, six clerks of the second class, seven clerks of the first class, five copyists and attendants on museum, one chief messenger, two assistant messengers, two workmen, and six laborers."

NATIONAL GRANGE LEADS FIGHT

The movement which led to the establishment of the Department of Agriculture was in no sense a manufactured demand. It was spontaneous and came up from the grass roots. As the first general farm organization of the country, the Grange made articulate the demand that the activities of the Department of Agriculture should be expanded and that the head of the Department should be given Cabinet rank. It was at the tenth annual session of the National Grange, held at the Palmer House, in Chicago, in 1876, that M. G. Davie, master of the Kentucky State Grange, introduced resolutions bearing on this subject.

These resolutions were unanimously adopted, and the campaign to raise the Department of Agriculture to Cabinet rank got under way in real earnest. One of the chief promoters of the plan in Congress was D. Wyatt Aiken, of South Carolina, who was one of the most active backers of the Grange in the South in the early days, and who served as a member of the executive committee of the National Grange from 1873 to 1885.

CONSTITUTIONALITY QUESTIONED

While most Members of Congress expressed themselves as being in hearty sympathy with any plan calculated to improve agricultural conditions, there were those who had doubts regarding the constitutionality of the proposal that the Department of Agriculture should be raised to Cabinet rank.

Up to that time, the seven executive departments of the Government that had been created, State, Treasury, War, Justice, Post Office, Navy, and Interior, bore the same relationship to all the people. It was, therefore, argued in certain quarters that to create an executive department for one particular group, those engaged in agriculture, would be class legislation, and therefore unconstitutional.

It was likewise contended with some degree of justification that if agriculture was entitled to a seat in the President's Cabinet, industry and labor should be accorded equal recognition. There were those who advocated that any new department which might be created should contain separate bureaus, charged with promoting the interests of agriculture, industry, labor, transportation, and business. But that did not suit the farmers. They argued that agriculture was justly entitled to a department of its own, while carefully refraining from saying or doing anything to offend or alienate any of the other groups in our national life.

The attitude of the farmers of the country with reference to this matter was well expressed in an address delivered by Norman J. Colman, Commissioner of Agriculture, at a meeting of the National Grange at Lansing, Mich., in 1887. He said he would not favor any change in the rank of the Department "unless it could be kept for agriculture alone." Numerous petitions to Congress from State granges and others interested in the matter took the same position.

After many abortive efforts, a bill raising the Department of Agriculture to Cabinet rank was passed by the House of Representatives under suspension of the rules May 21, 1888, by vote of 236 to 13.

As this bill passed the House, it contained a section transferring the Signal Service of the United States Army to the Department of Agriculture. Those opposing such a transfer argued that the Signal Corps was composed of enlisted men of the United States Army. "Should the Secretary of Agriculture, a civilian, be permitted to command a unit of the Army?" was one of the questions that was asked. "Who is going to maintain discipline or punish desertion?" was another embarrassing question.

PRESIDENT CLEVELAND APPROVES BILL

Not wishing to jeopardize the chances of the bill, the friends of the measure in the Senate struck out this particular section and the bill passed without a record vote on September 21, 1888. After a long fight, the House conferees agreed to the Senate amendment on February 1, 1889, and the bill was signed by President Grover Cleveland on February 9.

The following year Congress passed a separate act establishing the Weather Bureau in the Department of Agriculture, effective July 1, 1891. Norman J. Colman, of Missouri, was appointed by President Cleveland as the first Secretary of Agriculture, and he served in that capacity until March 4, 1889, when the administration changed.

Colman was founder and first president of the Missouri Horticultural Society, president of the Missouri Live Stock Breeders' Association, and the publisher of Colman's Rural World. He was likewise an active member of the Grange.

WORTHY MASTER BRIGHAM COMMENTS

Referring to the influence exerted by the Granges throughout the country in raising the Department of Agriculture to Cabinet rank, Col. J. H. Brigham, of Ohio, master of the National Grange, had this to say in his annual address at the twenty-third session, held at Sacramento, Calif., in November 1889:

"For several years we have sought to secure the elevation of the Department of Agriculture, and annually my predecessors have reported the failure of a measure introduced in Congress for that purpose. Repeated failures did not discourage us. The scoffs and sneers of opponents—some of them farmers—only caused us to reform our lines and return to the field where we had met defeat. It is my privilege at this session to report that our perseverance has been rewarded. The chief of the Department of Agriculture will henceforth be a trusted adviser of the President, a position from which he can at all times secure a recognition of the chief industry of our country and through the Executive make such recommendations to Congress as the interests of agriculture may demand."

Fifty-two years have gone by since the Department of Agriculture was made an executive department of the Government. During this period, 12 Secretaries have presided over the Department, all but 2 of them coming from the Middle West. Their names and the States from which they were appointed are as follows:

Norman J. Colman, Missouri; Jeremiah M. Rusk, Wisconsin; J. Sterling Morton, Nebraska; James Wilson, Iowa; David F. Houston, Texas; Edwin T. Meredith, Iowa; Henry C. Wallace, Iowa; Howard M. Gore, West Virginia; W. M. Jardine, Kansas; Arthur M. Hyde, Missouri; Henry A. Wallace, Iowa; and Claude R. Wickard, Indiana.

Space forbids any attempt to mention even briefly the widespread ramifications and the manifold activities of the Department of Agriculture as it is constituted today. That the scientific work conducted by the Department has been of inestimable value to agriculture cannot be doubted. Its far-flung regulatory work simply reflects the growing complexity of our modern civilization.

If the Department has shown a tendency to become top-heavy during recent years, it is sufficient to say that this is a characteristic that distinguishes practically all the other departments of the Federal Government.

The Idea of a University

EXTENSION OF REMARKS

OF

HON. JENNINGS RANDOLPH

OF WEST VIRGINIA

IN THE HOUSE OF REPRESENTATIVES

Monday, July 14, 1941

ADDRESS OF DR. PAUL F. DOUGLASS, PRESIDENT OF AMERICAN UNIVERSITY

Mr. RANDOLPH. Mr. Speaker, under leave to extend my remarks, I include an address given to the faculty of the School of Social Sciences and Public Affairs of the American University by Dr. Paul F. Douglass, president of that institution. I believe that Dr. Douglass's conception of the idea of a university should be read by all those interested in the part which higher education must play in our present world chaos of ideas and values.

The address follows:

A university is a voluntary human association for the communication, circulation, and cultivation of knowledge. It is a fellowship of generations; not merely of master and student, representing two generations, but of a timeless and immortal unseen comradeship in that infinite continuum of perplexity and achievement which we call culture and which is the cumulative bequest of time to eternity. It is a place, as Cardinal Newman so well said, "where inquiry is pushed forward, and discoveries verified and perfected, and rashness rendered innocuous, and error exposed, by the collision of mind with mind, and knowledge with knowledge."

A university is life moving in the stream of time, with points of reference and dimensioned obligations. John Dewey explains the process (for a university is certainly a process) by saying that "we who now live are parts of a humanity that extends into the remote past—a humanity that has interacted with nature. The things in civilization we prize most are not of ourselves. They exist by the grace of the doings and sufferings of the continuous human community in which we are a link. Ours is the responsibility of conserving, transmitting, rectifying, and expanding the heritage of values we have received that those who come after us may receive it more solid and secure, more widely accessible and more generously shared than we have received it."

I do not like to say that the function of a university is to teach. We are all aware that the university in the beginning was actually an apprenticeship. The emphasis was always on the student's ambition to learn; to learn by becoming an intimate part of a voluntary human association existing for the communication, circulation, and cultivation of knowledge. There is, of course, a continuing ethic in such an association. Any master who is worthy of his calling pours forth his wares to his apprentice as a missionary, because he sees in the maturing generation a bearer of culture which must transmit a heritage of values to be made more widely accessible and more generously shared.

Here and there in the intellectual history of the Occident there have on some few occasions been produced, and I use the passive voice, seminal groups from which new lines of thought and values have emanated and which have created a contagious environment of discriminating inquiry and coherent statement. That discriminating inquiry and coherent statement is a function of the total situation and the totality of the group. Such seminal groups cannot be hired; they cannot be planned; they cannot be coerced. They seem merely to exist and to appear as full-blown gifts of God.

When a university does become such a seminal fellowship, the university becomes a life of free and enriching communion and is a cooperative means for the progressive attainment of significant personalities. In the intimate face-to-face relationships of these local communities, logic, as John Dewey says, "recurs to the primitive sense of the word. Dialog. Ideas which are not communicated, shared, and reborn in expression are but soliloquy, and soliloquy is but broken and imperfect thought. There is no limit to the liberal expansion and confirmation of limited personal intellectual endowment which may proceed from the flow of social intelligence when that circulates by word of mouth from one to another in the communications of the local community. We lie, as Emerson said, 'in the lap of an immense intelligence.'"

I am fearful for our culture only when social inquiry is stifled in soliloquy and when the liberal expansion of limited personal intellectual endowment is stymied and when the flow of social intelligence is dammed up by the power of the police, which can be either a uniformed squadron or a state of mind. I am fearful for our culture in America because I am observant of the retarding effect of the power of police, defined as a state of mind, which is now inhibiting the flow of social intelligence.

We are suffering in American education and in American culture from intellectual and spiritual astigmatism. Our minds do not quite bring things to focus and as a result our vision is indistinct and the images by which our minds operate and our hearts beat are blurred and imperfect. Our action is adjusted to our distorted sight. The result is that we have too few university comradeships which exist as contagious environments of discriminating inquiry and coherent statement. We are surrounded by practitioners of intellectual and political homeopathy.

For a time we had reason to believe here in America that our social science was moving in the direction of a functional realism possessed with the spirit of ethical revolution and social reconstruction. We are disappointingly witnessesing, however, the renaissance of mysticism in the university world. This intellectual mysticism, on the one hand, as emotion sinks below the level of mind and, on the other, as an intellectual theology transcends the level of mind.

John Dewey is quite correct when he says that "if external authority in action is given up, it must be because internal authority of truth, discovered and known to reason, is substituted. It is because we are appalled by the tremendous responsibility incumbent upon us who are willing to submit ourselves to this internal authority of truth that we, in our weakness, are all too often ready to relinquish it for the deadening substance of an external authority and dogma. To me, the faith for which the American university stands is just this willingness to submit ourselves to the discipline and the responsibility of this internal authority of truth, projected in the spirit of ethical revolution to the ends of social reconstruction.

I have only this to say to the scholars who are joined together here in this comradeship this noon: May this be our collective endeavor—to sustain a genuine university as a voluntary human association for the communication, circulation, and cultivation of knowledge; as a place where inquiry is pushed forward, and discoveries verified and perfected, and rashness rendered innocuous, and error exposed, by the collision of mind with mind, and knowledge with knowledge; as a contagious environment of discriminating inquiry and coherent statement; as a seminal fellowship in whose free and enriching communion by cooperative means significant personalities are nurtured; as a school of functional realism possessed with the spirit of ethical revolution and social reconstruction; as a comradeship subjecting itself to the discipline of accepting the responsibility of the internal authority of truth, discovered and known to reason; as a contagious environment in which the patterns of culture are brought to bear on the behavior of the individual for the release of collaborative and constructive intelligence.

It is our good fortune to be united in a program of cooperation in a new Dark Age; in the Capital City of the world where what flickering light still shines sheds its rays upon intimate groups of men who possess in quality and quantity a more vital conception of the dynamics of human fellowship than exists elsewhere in our world. The problems of human management, to which our school is now dedicated, are the real issues of our age; and we are surrounded and counseled and sustained by a society of souls concerned with making an inner truth, guided by a knowledge of the past and fortified by reflective choice, the power by which we shall transmit to other generations refined tools of hand and mind and strengthened and redeemed powers of the heart to make man worthy of the image in which he has been created.

I wish only to add this testimony in closing. For the second time in my life I have been thrown intimately in association in a common enterprise with Leon C. Marshall, chairman of our faculty. At Chicago he was reaching for something in the content and technique of education which could not be attained in the field of economics in Chicago. A mighty array of volumes bear witness to his quest. At Johns Hopkins he was still in quest of something in the content and technique of human society which could not be attained in the field of jurisprudence in Baltimore. A library of statistical monographs, which some day will be restudied and their resources discovered, bears witness to his pilgrimage.

The aspiration which was young at Chicago, the dream which dwelt at Hopkins, is now in Washington among us in the maturity of a life. Perhaps I am presumptuous to seek to state it, but I believe the dream, which was spiritual, was merely this: That by discriminating inquiry and coherent statement the past experience of mankind can be brought to bear upon the present conduct of the individual so that man can make his contribution by the understanding of himself and his world to his neighbor and to posterity. It is our fortune now to share in the fruition of that dream in the maturity of Dean Marshall's scholarship and leadership. It is our duty to play our part in this vital reconstruction of the ways of knowledge of world and self for the achievement of an ordered society and a disciplined soul.

Plight of Small Industries

EXTENSION OF REMARKS

OF

HON. LINDLEY BECKWORTH

OF TEXAS

IN THE HOUSE OF REPRESENTATIVES

Monday, July 14, 1941

EDITORIAL FROM THE TYLER (TEX.) COURIER-TIMES

Mr. BECKWORTH. Mr. Speaker, I think the comments contained in the following editorial published in the Tyler Courier-Times, under date of June 6, 1941, are very timely. The authorities of our Government should give immediate consideration to the problems and difficulties facing small industries. That every small industry suitable for utilization for national-defense purposes should be in use admits of no question.

[From the Tyler (Tex.) Courier-Times of June 6, 1941]

PLIGHT OF SMALL INDUSTRIES

The Nation is just beginning to realize the seriousness of one of the problems presented by the huge defense effort. This is the plight of hundreds of small nondefense industries whose operations have been greatly curtailed if not wholly stopped by the demands of the armament program.

Without the testimony of one O. P. M. official, in the defense contract division, it would be easy to see the effect of priorities on little plants which find themselves unable to get the raw materials necessary for production. Now, it is predicted that about one-third of the Nation's industries will be seriously affected by midsummer, some of them perhaps forced to shut down.

There is a growing belief that a system of subcontracts should be encouraged. The more large orders are farmed out to small industries, the easier it will be to cushion the economic shock of priorities. And many factories now engaged in making nondefense articles can be converted to some line related to defense. Some have already made the adjustment, thereby assuring for themselves the privilege of priorities.

The Federal Government cannot permit a large part of the capital investment of the Nation to be destroyed unnecessarily. Although military needs come first, the distribution of the work and the profits over a large area can be promoted by official action. New lines of manufacture can be recommended.

Unless this job is done and done well, the collapse of many small businesses will have far-reaching effect. Idle machinery means idle men, especially if they are not fitted for defense work.

France Forever

EXTENSION OF REMARKS

OF

HON. WILLIAM H. SMATHERS

OF NEW JERSEY

IN THE SENATE OF THE UNITED STATES

Tuesday, July 15 (legislative day of Monday, July 14), 1941

ADDRESS OF HON. HAROLD L. ICKES, SECRETARY OF THE INTERIOR

Mr. SMATHERS. Mr. President, I ask unanimous consent to have published in the Appendix of the RECORD a very able address delivered by the Honorable Harold L. Ickes, Secretary of the Interior, in New York City on Monday night, July 14.

This address of Secretary Ickes so thoroughly and completely expresses my opinion and conviction on the subject matter with which it deals that I commend the address very highly to my colleagues.

There being no objection, the address was ordered to be printed in the RECORD, as follows:

Today free Frenchmen everywhere are celebrating Bastille Day just as 10 days ago free Americans everywhere renewed their devotion to their country and its institutions.

Independence Day for Americans commemorates the adoption of the Declaration of Independence. That revered document, written by Jefferson, whose firm friendship for the French people I need not elaborate upon, is still in physical existence—the most cherished exhibit in the keeping of the Nation. Bastille Day, on the other hand, is celebrated, not only by the French but also by lovers of liberty everywhere, precisely because the Bastille no longer exists.

French liberties sprang from the destruction of a physical symbol that represented oppressions and terrors that the French people had suffered for centuries.

Today, unhappily, France lies crushed. Some may think that France will never rise again. But these think wrongly. Their conclusion is not based upon a just estimate of the French will to liberty and the determination of its people that France shall rise again as she has in the past.

You could not have chosen a better title for your organization, or a more inspiring battle cry, than "France Forever." France Forever may be parsed as either past, present, or future. For France has been forever. And France lives today. Even in lovely Paris, where the Nazi war lords scornfully regard the Parisians as inferior human beings, France lives and will continue to live.

That it should be France Forever is also the determination of America. No country has contributed more to the civilization that we enjoy and in which we delight than has France. France has given the world some of its greatest scientists and scholars and artists. It was France that first developed and then generously shared with mankind the arts of civilized living. Not since ancient Greece—and perhaps not even then—has there been any land comparable to France.

Such a country cannot die. Americans who owe so much to France will help her to regain her independence.

On the face of it, France was defeated on the field of battle, but that is neither the whole nor the real story. French soldiers, than whom there are no braver in the world, fought with their usual courage, but their real foe was not military. Their actual enemy was treachery, lying words, and subversive activity. French newspapers, with few exceptions, spoke falsely to them, lulling the French people into an illusory sense of security. Some French politicians were too rapacious for power to care about the Nazi menace that must have been apparent to them. Venality in high places—among political leaders, newspapers, and even the armed forces—corrupted the very core of French public life.

Every country has always had people willing to sell their homeland and even their religion and families for money or power. France has her Lavals, Norway her Quislings, and Yugoslavia her Paveliches. In our own country we have doubtful public characters whose motives cannot be seen clearly until the curtain rises a litle higher.

France was not merely defeated. She collapsed. France was destroyed from within in the same manner that Hitler has boasted that he will destroy America. France was not crushed in the war. She was beaten before the war.

What we Americans must etch into our own brains and hearts is why France collapsed. We must avoid repeating the blunders of France; we must correct glaring mistakes that already exist.

One good way to find out how to avoid the tragedy of France and to understand what Hitler proposes to deal out to us is to read Francis Hackett's recent book What Mein Kampf Means to America. This should be on the "must" list of every thoughtful American. Hackett writes of Hitler's methods of internal demoralization—a technique he used with particularly deadly effect in France. I recommend especially the chapter entitled "Typhoid Mary." This chapter helps one to understand ex-Colonel Lindbergh. It makes one realize what a menace he and those like him are to this country and its free institutions, whether they know what they are doing or whether they don't.

Too many of France's public men were corrupt or inefficient. They were ready victims of the Nazi poison. Vaunting their own patriotism and willingness to sacrifice all for France, men of influence and wealth went about talking appeasement and defeatism. I say again that we have precisely the same kind of people in this country. French appeasers and traitors excused Hitler's breaking of solemn treaties on the cowardly justification that France must maintain peace at any price. They could not see that peace can be maintained at any price only if men are willing to pay any price for liberty.

Goebbels' lying words did more to destroy French democracy than Hitler's marching soldiers. In a thousand ways and by a thousand tongues, Nazi propaganda subtly but surely undermined French self-confidence, cast doubts, spread disunity, induced race hatred, instilled hate in the employer against labor and in labor against the employer. French morale was destroyed by an inner canker.

Nazi propaganda and treacherous leadership kneaded France into soft dough, ready for the fiery oven of the Nazi baker.

There is a frightening lesson in this for us.

Amongst us, too, Nazis, pro-Nazis, and crypto-Nazis are active. We have our defeatists and appeasers, Hitler's conscious and unconscious tools, who would make us soft and malleable against the coming of Hitler's angels of hell. With forked tongues and foolish yammerings, they fill the air with their lying voices and treacherous arguments. They strive with might and main—these American Lavals and Quislings—to paralyze our wills and undermine our confidence.

They do not care what they say. They are indifferent to truth, they despise logic, they hate facts. They want only to confuse us and to deceive us. They use whatever words may accomplish their purpose. Persuaded by Hitler that the art of propaganda is to make heaven appear to be hell and hell, heaven, they would convince us that night is day; that black is white; that a lie is the very truth.

These Nazi scuttlefish pour ink on the truth in order to blacken out the light of freedom.

Let me give you a recent example.

Soon after Hitler once again had broken his solemn pledge and treacherously attacked his Russian ally, ex-Colonel Lindbergh was asked what he thought of it.

Sententiously he replied: "A very, very unusual development. * * * It is something that requires profound analysis."

It was clear that Lindbergh did not have his cue. Cautious man that he is, he did not want to say the wrong thing. So he posed as a heavy thinker, making an effort to concoct an effective apology for this latest flowering of Hitler gangsterism.

Nine days passed, during which the Nazi party line was worked out and the official Nazi propaganda was handed out in Germany to Hitler mouthpieces and Nazi fellow travelers all over the world. Then arose the Knight of the German Eagle and offered this Nazi party line to the country.

This is what Mr. Lindbergh said. Listen carefully:

He said that Hitler had gone to war against Poland because the British and the French had forced him to.

He said that Hitler had been forced to attack France and Britain because—believe it or not—the British would not permit him to attack Russia.

In other words, Hitler would have us believe, via Lindbergh, that the English people and the French people have been undergoing horrible sufferings in order to protect Mr. Stalin and to prevent Russia from being invaded. The incredible Mr. Lindbergh would have us believe that so great, so self-sacrificing, was the love of the English people and the French people for Russia that they were willing to die and turn their countries over to rapine and murder in order to save Mr. Stalin.

Mr. Lindbergh has a reputation as a practical joker, and perhaps this was offered as a ghastly jest. In any event, he spoke these words, apparently in sober earnestness—and was applauded by the pro-Nazis in the audience that gathered to hear him—in the Civic Auditorium in the city of San Francisco on July 1, 1941.

Goebbels was undoubtedly chuckling at this shameless distortion of elementary truth, this pathological violation of the canons of decency. Undoubtedly he enjoyed it all the more because it fell from the lips of a man who had gained fame and riches at the hands of the American people.

Why, every child who can read knows that France was destroyed and that England is in deadly peril today because the Lindberghian appeasers who were then in power in those countries spent all of their energies and precious time trying to prevail upon Hitler to attack Russia and leave them at peace. This effort to persuade Hitler to turn on Russia was the very cornerstone of the abortive and destructive policy of appeasement, the perfect flower of Munich.

The Goebbelses and the Lindberghs do not fool the American people now that we have seen the grisly Hitler strike one deluded victim after the other in the back.

The American people have learned the tragic lesson of France and of Europe. The American people know who is the enemy of human decency and civilization.

That enemy is still Hitler. The Nazis are still the most immediate and terrible threat to our freedom and our way of life. The American people know that you can't make a skunk cabbage smell like a rose; a menacing Nazi cannot be made to look like a friendly human being.

Lindbergh pretends to be shocked that Russia is now in this war, although Russia is only fighting in desperate self-defense. Lindbergh, with mock piety, exclaims that he would rather be in alliance with Germany, or even with England, than with Russia. Well, he has always been in comfortable alliance with Germany, but why does he maliciously sneer at England? He can always find some left-handed way of sticking a pin into England for the benefit of Hitler.

It is dreadful to Lindbergl. that Russia should defend herself against Hitler and thus find a common objective with England, but he experienced no shock when Hitler signed a treaty of nonaggression with Stalin 2 years ago. Lindbergh did not damn Germany when Hitler and Stalin were holding hands. On the contrary, according to the Lindberghs, Hitler and his ally, Stalin, were riding the "wave of the future." There was no use fighting or even protesting against the "wave of the future," the Lindberghs were telling us. Now they sing a different tune.

No one has ever heard Lindbergh utter a word of horror at, or even of aversion to, the bloody career that the Nazis are following, nor a word of pity for the innocent men, women, and children who have been deliberately murdered by the Nazis in practically every country in Europe.

The Lindberghs, as cheerers-on of Hitler when the latter was an ally of Russia, actively helped communism. In defending nazi-ism, Lindbergh was defending communism when these two were making common cause against the democracies. Lindbergh now denounces communism because it defends itself against the aggression of Hitler, but I have never heard this Knight of the German Eagle denounce Hitler or nazi-ism or Mussolini or fascism. I have never heard him raise his voice for any of the raped countries of Europe, not even for France where, for a long period, he collaborated with Dr. Alexis Carrel, who is reputed to be a Nazi sympathizer, in developing an artificial heart. I could tell ex-Colonel Lindbergh where he could readily locate an artificial heart with the aid of an X-ray machine.

No; I have never heard Lindbergh utter a word of pity for Belgium, or Holland, or Norway, or England. I have never heard him express a word of pity for the Poles or the Jews who have been slaughtered by the hundreds of thousands by Hitler's savages. I have never heard Lindbergh say a word of encouragement to the English for the fight that they are so bravely making for Lindbergh's right to live his own life in his own way, as well as for their own right to do so. As a matter of fact, I have never heard Lindbergh say a word for democracy itself. Has any one of you?

No; all of Lindbergh's passionate words are to encourage Hitler and to break down the will of his own fellow citizens to resist Hitler and nazi-ism.

But exposing enemy and subversive propaganda is only one of our tasks. We must also take active steps to avoid the tragedy that has befallen France and to help that great country resume her place in the family of civilized nations.

Some of these steps we have already taken.

Our Navy has occupied Iceland, an island that lies athwart the ship lanes of the North

Atlantic. Iceland will become another one of our great bases, where our armed forces will do their part to keep Hitler out of America and thereby help to isolate him on the continent of Europe. It is both fitting and prophetic that Iceland, the oldest democracy in the world, should become a vital outpost in the world war for freedom.

On the industrial front, our tremendous plant is now beginning to turn out great quantities of the weapons and materials that will ensure our liberty and help to restore that of others. Much, much more, is still to be done; but we have already accomplished much. I know that you will be heartened to know that our rate of plane manufacture is increasing greatly. In the last 12 months the output of machine tools has doubled. Garand rifles have trebled. Minor naval craft under construction rose from 54 to 407 in the last year. We are now producing 6 times as much powder as we did a year ago. We are manufacturing 14 times as many tanks as we did a year ago. And all of this is only a start.

But we need time, and time is not like rubber. You can't stretch it. You can't buy it. We have been borrowing time from the British but we have no right to borrow any more.

Fortunately, a miraculous turn of events has given us an opportunity to gain precious time. Hitler's unexpected attack on Russia is a golden chance of which we must take full advantage. Such a gift of precious time is not likely to come again.

While Hitler is busy waging his wanton war with Russia—despite his solemnly plighted word—we must utilize every moment to increase our production, step up our output, and swiftly pour the resources and materials of war into Britain.

Let me say emphatically that, together with the overwhelming majority of the American people, I repudiate communism no less than nazi-ism. I have always fought both of them with all my might. But I denounce with all my heart the obvious trick that Lindbergh and others are helping the Nazis to play when they say that to help Britain to defend herself from the Nazis while the latter are fighting Russia is to help communism. We are not helping communism. We are fighting the scourge of Hitler, who is bent upon destroying civilization, who has announced his intention to dominate the world, with whom hatred for democracy is a wild obsession.

If Hitler should conquer Russia, it would not be a defeat of communism; it would be a world-shaking victory for nazi-ism.

Let me tell you what would happen if Hitler were to defeat Russia:

He would acquire enormous stores of military supplies—planes, guns, tanks, trucks, submarines.

He would seize vast oil fields and refineries.

He would come into possession of a staggering amount of natural resources—coal, minerals, and timber. He would control more than 11,000,000,000 bushels of wheat, rye, oats, barley, and corn—which not only are vital foodstuffs but are also capable of yielding important oils. You can realize how stupendous is this total of 11,000,000,000 bushels of grains when you are told that all of the democracies combined produce only 9,000,000,000 bushels.

He would be in a position to make slaves of nearly 200,000,000 Russians.

He would stop all aid to China, so that Japan would be free for new reckless adventures in Asia and in the Pacific.

If he should control Siberia, Hitler would become a menace to nearby Alaska and threaten our Pacific coast and outlying islands.

A victory over Russia would give him incalculable prestige in South America, and it would also encourage our own defeatists, appeasers, and Fascist fellow travelers.

In other words, the defeat of Russia would mean a nightmare for us and for Britain. Russia's enormous resources would give Hitler powerful weapons for his unfinished attack on Britain. And should Britain go down under the onslaught of a Nazi military machine reinforced by the tremendous resources of all Europe and most of Asia, we would be left isolated and forced to fight, alone, for our very lives.

Hitler hates us just as vengefully today as did the German General Staff a quarter century ago. In the last war Admiral von Tirpitz, the German sea lord, said bluntly to James W. Gerard, our Ambassador to Berlin:

"We shall exact as a condition of peace the surrender of the British Fleet. We shall man that fleet with our sailors and sail for America and collect from that fat, rich degenerate nation the entire expenses of the war."

Even before he came into power, Hitler said that he hated America because it was the strength of America that had brought about the defeat of Germany in the last World War.

If we permit Britain to be defeated, Hitler will be in a position to wreak his vengeance upon us.

This must not happen.

The American people are determined to defeat Hitler at all costs.

Our Government is under a mandate to help defeat Hitler at all costs.

We will do this. But make no mistake about it, there is a long and bitter struggle ahead. It will call for work and tears and sacrifice. It calls for work and sacrifice now.

What we are engaged in is a struggle for our existence as a free nation.

If Britain depends upon us for help in her fight to remain a free nation, we depend, in equal measure, upon Britain. Whether it shall be France forever, in the future as in the past, hinges upon the outcome of the momentous struggle that is going on in the world today. Upon this outcome also depends the fate of the once independent nations of freemen of which Hitler and his hordes have made a holocaust.

The Late Governor A. B. White of West Virginia

EXTENSION OF REMARKS

OF

HON. HARLEY M. KILGORE

OF WEST VIRGINIA

IN THE SENATE OF THE UNITED STATES

Tuesday, July 15 (legislative day of Monday, July 14), 1941

ARTICLE BY CHARLES B. SMITH

Mr. KILGORE. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD a news article from a Capitol reporter, Mr. Charles Brooks Smith, published in the Fairmont (W. Va.) Times, relative to the recent death of former Governor White of West Virginia, going into his history in previous crises of the Government.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

[From the Fairmont (W. Va.) Times of July 8, 1941]

STATE JOURNAL RECALLED WITH MAN'S PASSING—DEATH OF A. B. WHITE, OF PARKERSBURG, BRINGS UP MEMORIES

(By Charles Brooks Smith)

WASHINGTON, July 7.—The death of Albert Blakeslee White, 84, brings back memories of other days. Personal to this writer is one which recalls—as if it were necessary—that Mr. White was his first employer. We proudly became a cub reporter for the State Journal of Parkersburg, and, if they heard about it, we have no doubt that Charles A. Hanna and Marse Henry Watterson took a firmer grasp on their journalistic laurels and resolved to keep a more watchful eye on them. We knew more about the newspaper business then than we learned during the 48 years ensuing.

Mr. White was a red head. Temperamentally he ran true to the color. He was impulsive and fiery at times, knew it, sought and took advice from friends whose hair was not red and whose heads were cooler. It no doubt saved him from a lot of trouble, but he managed to get into a lot of it at that, for those were the days of personal journalism, when rival editors hurled insults at each other and frequently fists when they met on Court Square. Everybody in town took sides in these quarrels and they themselves held the editor personally responsible for every item in his newspaper. He wrote the whole sheet, ignoring the members of his staff. They just sat around loafing, while the editor did all the work, fading away ever and anon to make a call on a sympathetic beer merchant down the street. Mr. White's old State Journal turned out such well-known names in West Virginia in their time as Matt Hughes, who became one of the Methodist Episcopal Church's greatest bishops; Waitman Barbe, than whom the State never produced a finer; and F. Kent Loomis, who lost his life carrying from Washington to Abyssinia, the first treaty which King Menelik II ever made with a civilized country. The brilliant and magnetic Matt Hughes didn't get religion when he was a reporter. The old State Journal office had no spiritual atmosphere to speak of. It was no exception to the rule, then or now; newspaper offices are no substitute for meeting houses.

AT THE PEAK

Red-headed "Bert" White was started on his political career when this blazing symbol of youthful precocity began to practice on a dilapidated, two-deck Smith-Premier, with two fingers, and it was as noiseless as "Squire Kork's" sawmill. Mr. White was aiming at the governorship; young Mr. Smith at Mr. White's sacred sanctum. How it turned out, if you haven't heard, Albert Blakeslee White became Governor of West Virginia in 1900 and, if you don't mind, we'll just skip what happened to the other chap, merely mentioning that years later Mr. Smith Goes to Washington. And was still there from last reports.

Mr. White's success was confined to the realm of politics and public affairs. In every position he held he was outstanding as a leader, an administrator, and a maker of policies. He had about every talent it takes to make a success in politics and government, and in this career he was most assuredly a success. As late in his life as 1921, President Harding tendered him the position of United States Commissioner of Internal Revenue. He declined it with thanks; he did not wish to come to the National Capital. Had he wished otherwise, we wonder how much higher he might have climbed up the ladder. He had what it takes—we repeat—and the setting here at that time was perfect for him.

Whether he ever regretted this, we do not know. We do know that he did regret selling his majority interest in the State Journal, after he was nominated for Governor. He had the idea that continuing to own it and being its nominal editor would embarrass his campaign. Friends tried to argue him out of this idea, but it was fixed, and he carried it out. They were right, he was wrong; he said so himself in later years. Had he retained possession of the State Journal what might the newspaper situation in the Parkersburg field be today? The old State Journal folded up and passed away.

A GREAT GALAXY

For 40 years the Republican Party was dominant in West Virginia, and it, in turn, was dominated by four men whose word was the law and the gospel and the discipline of that habitually victorious organization. And one of the members of this powerful quartet was Albert Blakeslee White. The other three were Stephen Benton Elkins, Nathan Bay Scott (whose widow died at her home here last month, aged 94), and William Meekins Owens Dawson.

Elkins and White were college trained, brainy men. Dawson was self-educated, a student, possessor of a wonderful mind. He couldn't have been abler if he had a couple of college diplomas. Scott was a rugged, strong character, a straight shooter, said what he thought regardless, friend and companion of Mark Hanna and the big shots of that day, who understood him and loved him. He made his "pile" in mining in the West and in industry and banking in the Wheeling area before he crashed the gate to big-time politics. He was a foundling, reared by a Scot couple in Ohio not far from Wheeling, until he marched off to the Civil War, a Union soldier. He loved them; he kept their memories green with words of gratitude, respect, almost of worshp, as his friends well knew. The Republican Party in the State never had a more generous financial backer than Scott. He put in his own money. Elkins and Scott had two terms as Senator; Dawson succeeded White as Governor in 1904. White was ambitious to become Senator. He tried for the nomination twice in the twenties, but failed to make it. His political day was past; many of his powerful associates and lieutenants were dead or outmoded; a new generation had come on. The last 10 of his 84 years he lived in retirement with the memories of his greatness.

"And life runs on, the road grows strange
With faces new—and near the end
The milestones into headstones change—
'Neath every one a friend."

Tribute to Nelson Rockefeller

EXTENSION OF REMARKS

OF

HON. HARRY FLOOD BYRD

OF VIRGINIA

IN THE SENATE OF THE UNITED STATES

Tuesday, July 15 (legislative day of Monday, July 14), 1941

ARTICLE BY DAVID LAWRENCE

Mr. BYRD. Mr. President, I ask unanimous consent to insert in the Appendix of the RECORD an article written by David Lawrence with respect to the very valuable work being performed by Nelson Rockefeller respecting our relations with South America.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

ROCKEFELLER'S IMPORTANT TASK—INTER-AMERICAN OFFICE CAN SERVE UNITED STATES WELL

(By David Lawrence)

More and more the attitude of South American countries toward the future policies of the United States is giving genuine concern. The theory that Latin America is wholly sympathetic with President Roosevelt's foreign policy is a bit outworn. European inroads into the thinking of governments to the south of us are such that the United States Government has reverted to the policy it applied during the first World War—an active educational campaign among the peoples of Central and South America with the hope of maintaining their cooperation, no matter what contingency may arise.

To carry on an educational campaign in Latin America, where Nazi agents are numerous and where newspapers and magazines are subsidized directly by Nazi funds, is a difficult task for the United States. Thus far the American Government has not resorted to such tactics. The plan rather is to make available information through legitimate channels with the hope that persons influential in the Latin American scene will see that America's side gets a fair deal.

Certainly South America needs certain raw materials on which priorities have been established here. Financial aid for commercial transactions is also essential. Under such circumstances and with so many ramifications to the whole program, it was most natural that President Roosevelt should create an agency, now known as the office of Inter-American Affairs, which is headed by Nelson Rockefeller.

RED TAPE MUST BE CUT

But as often happens in the case of an expanding government, the department which has hitherto handled all matters concerning external relations finds it necessary to take into account activities by other agencies of the same government which cannot operate under the strict rules of a foreign-office procedure. Red tape, for instance, has to be cut, and the customary diplomatic machinery cannot be used sometimes to obtain action on various commercial matters growing out of an emergency.

For several months the problem of adjusting the office of Inter-American Affairs to the work of the State Department and its representatives abroad has been one of the challenges of the war emergency. But it can be stated that the integration of the two agencies has been accomplished, due especially to the tact and skill of Sumner Welles, Under Secretary of State, who is No. 1 man in knowledge and background of Latin-American affairs covering the last quarter of a century.

SEPARATE STAFFS ADVISABLE

It is no criticism of our trained diplomatic officers in foreign countries to say that they are not technically familiar with all the problems growing out of attempts to improve public opinion in the countries where they reside. They are trained in the art of silences and cautious statement rather than aggressive combat against such bold and at times vicious opponents as the Nazi agents can be. The situation properly calls for a separate set of representatives who, while working with the embassies and legations, are not restricted by diplomatic etiquette in dealing with anti-American manifestations.

During the first World War, the United States Government, through the Committee on Public Information, headed by George Creel, established information centers in many foreign capitals and this proved an effective way to get the doctrines of President Wilson printed in the foreign press, to say nothing of the many tasks of counteracting attacks on the United States, which were likewise performed.

MAY OUTLAST EMERGENCY

The office of Inter-American Affairs, which Mr. Rockefeller administers, has just received a small appropriation from Congress, which it will devote to the improvement of America's prestige abroad by educational campaigns. For the first time in many years, the United States Government formally has recognized that it was important to pay attention not only to commercial but cultural relations, and such splendid work has already been done by the hundreds of persons operating under the office of Inter-American Affairs that it would not be at all surprising if this continued as a permanent institution long after the emergency had passed.

Mr. Rockefeller seems to have the organizing qualities which have brought to his side some able volunteers familiar with Latin-American relations. His engaging personality has made him quite popular among the officials of the New Deal. The main reason is that he works night and day at the job of speaking for and to Latin-American commercial and cultural interests insofar as they affect national policy here. This is something too big and far reaching to be left as a side issue of a department which has to care for our diplomatic interests not only in Latin America but all over the world, and that's why the working arrangements between the State Department and the office of Inter-American Affairs constitute a milestone in efficient progress.

War Polls and Realism

EXTENSION OF REMARKS

OF

HON. HARLEY M. KILGORE

OF WEST VIRGINIA

IN THE SENATE OF THE UNITED STATES

Tuesday, July 15 (legislative day of Monday, July 14), 1941

EDITORIAL FROM THE WHEELING (W. VA.) INTELLIGENCER

Mr. KILGORE. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an editorial published in the Wheeling Intelligencer of the issue of July 8, 1941, on the subject of war polls and realism. The editorial discusses polls and their lack of benefit.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

[From the Wheeling (W. Va.) Intelligencer of July 8, 1941]

WAR POLLS AND REALISM

Polls conducted by newspapers and various sampling organizations designed to sound out public opinion report uniform and overwhelming sentiment against participation by the United States in what now is called a shooting war.

The essence of public feeling on the question seems to be all possible aid to the adversaries of Nazi Germany, short, however, of actual participation by American forces.

That, incidentally, has been the stated position of the administration from the beginning, and still is the position, so far as may be judged from anything said by Mr. Roosevelt at any time up to the present writing.

It might be in the interest of national well-being to examine this attitude in the light of the realities.

What will we do if this aid short of fighting proves inadequate?

That is a possibility that none of the short-of-war champions, from Mr. Roosevelt down, seems ever to have taken into consideration—at least publicly.

Yet it is a very real possibility, as should be apparent to those willing to look the facts in the face.

The British, we may be very sure, have been counting on it for a long time, though most of their official statements on American participation have carefully avoided the suggestion that anything more than supplies from the United States ever will be needed.

One of the exceptions to this rule is General Wavell, the British soldier to win more acclaim than any other in this war. About to relinquish his post of commander in chief in the Middle East, General Wavell voiced some war opinions in a recent interview with Harold Denny, published in the New York Times. The general's conclusions are of interest and importance to every American. In brief, here they are:

Whatever happens in eastern Europe where Germany and Russia now are locked in combat, the war will be determined finally in the West as it was in the last war.

In the end, it will be a battle of manpower.

Airplanes, tanks, ammunition, guns from America, valuable though they have been, are and will be, will not be enough. American manpower will be needed.

Germany will be beaten eventually only by an invasion of her soil, which will require the assistance of American troops.

In brief, Hitler cannot be defeated, says a man whose opinion merits respect, unless the United States sends soldiers to Europe.

Well, what are we going to do about it?

We are going to send soldiers, of course. And every public man who assures American mothers that we will not do so is deceiving them.

The last chance to avoid the sending of American soldiers was lost when we abandoned our neutral status and committed acts of war against Germany.

Whether that was a wise or unwise course to pursue is no longer important and is not, in the present circumstances, a proper matter of debate. The step was taken and we must abide by it. We are the enemy of Germany and her allies, by our own choice. A conquering Germany in Europe, therefore, can be expected to act toward us only as toward an enemy.

The point we wish to make is that the time is past when sentiment about whether or not we want to go to war is pertinent, or when debate of the matter can serve any useful purpose. The time to have shaped official action to public sentiment was before steps which meant war were taken. We are in the war now, and will have to see it through. If that means sending troops to Europe, we will send them, no matter what our preference might be. And the sooner we quit shadow boxing with straw votes and evading the facts in official quarters, the better prepared we will be for what the future holds.

Extension of Time for Which Selectees Have Been Called

REMARKS

OF

HON. STEPHEN M. YOUNG

OF OHIO

IN THE HOUSE OF REPRESENTATIVES

Tuesday, July 15, 1941

Mr. YOUNG. Mr. Speaker, regarding the meeting at the White House yesterday attended by congressional leaders and Chief of Staff Gen. George C. Marshall published reports have it that the President persuaded Congressmen to begin action immediately to hold selective-service men in active service beyond the year. Mr. Speaker, I am a supporter of President Roosevelt, but why should I vote to disregard an implied obligation, if not a direct contract, simply because professional soldiers warn that more serious crises are imminent?

Our soldiers who are privates in the Army are paid $21 per month and have to like it. Our selective-service soldiers at the end of 1 year's training become increasingly valuable in our armed forces. Therefore, Congress should increase the minimum pay of such soldiers from $21 to $45 per month and make appropriate increases for noncommissioned officers. Then an appeal could properly be made to such soldiers to volunteer for further service during the period of this emergency.

To this good hour the young men in our armed forces—selective-service men and National Guard men and their mothers are the only individuals who have made sacrifices in this national emergency. At the time these young men were ordered from their homes and peacetime pursuits there was an implied agreement, if not a direct contract, that they would be permitted to return at the end of a year's training unless this Nation was actually at war. This Nation is at peace. We are providing national defense measures for Western Hemisphere protection.

Our need is for a compact, mobile, thoroughly mechanized army notwithstanding the plea of professional officers who apparently desire that our armed forces be expanded to about 3,000,000 men. Hitler conquered France with 12 panzer divisions of thoroughly mechanized soldiers; 120,000 men plus a couple thousand pilots. The bulk of his great army of 2,000,000 was useful only in occupying captured territory. Of course, American professional Army officers will receive quick promotions in a rapidly expanding army. Let us disregard pleas not based on fact and preserve the morale of our Army and the sanctity of contract. Our Government is dependent upon the faith and confidence of its citizens.

Some advocates of this plan to keep selective-service men for a further period of training say the American soldier is the best paid in the world. They know not whereof they speak. Canada, though poor compared to the wealth of this Nation, pays its privates $1.30 per day. Canadian non-coms receive as much as $100 per month. In addition, the Canadian Government makes dependent allowances to families of men in the service. For example, a dependent wife of an army private or noncommissioned officer receives $35 per month and $12 additional each per month for 2 children. Thus, the Canadian Government pays the Canadian soldier and wife and 2 children $99.30 per month. Also in Canada skilled workers in the army receive extra pay. Certainly our soldiers should receive as much as unskilled labor in private industry.

Indianapolis Association of Credit Men Leads the Way Toward Fiscal Reform

EXTENSION OF REMARKS

OF

HON. LOUIS LUDLOW

OF INDIANA

IN THE HOUSE OF REPRESENTATIVES

Tuesday, July 15, 1941

Mr. LUDLOW. Mr. Speaker, out in Indianapolis we have many sound thinkers who believe that in the matter of Government financing we cannot forever overwork the outgo without paying some attention to the intake.

The Indianapolis Association of Credit Men has taken the lead in the restoration of a sound national fiscal policy in the United States by asking Congress "to devote as much thought to cutting expenses as is devoted toward raising taxes."

In standing and influence the Indianapolis Association of Credit Men ranks at the very top among organizations of American businessmen. Its executive manager, Merritt Fields, is nationally known as an able business executive, a fiscal expert, a keen analyst, with extraordinary breadth of vision.

I think the Congress and the country generally would like to know what the Indianapolis Association of Credit Men is doing in the vitally necessary task of restoring a sound economy. With a cut of at least $2,000,000,000 in national nondefense expenditures as its goal, the association is preparing to flood Congress with a vast number of petitions urging the national lawmaking body to study the program of savings in nondefense outlays that was suggested to the Ways and Means Committee by Dr. George S. Benson, president of Harding College, Searcy, Ala., on May 15 last. The cuts proposed by Dr. Benson would effectuate a total saving of $2,031,000,000, which the Indianapolis association believes should be the very minimum as an objective.

In a bulletin sent out to the members of his association on July 1, Mr. Fields, the executive manager, said:

There is no way in conscience that Congress can levy the new taxes of $3,500,000,000 upon you, the taxpayers, without first cutting to the bone all unnecessary expenditures. Even Secretary of the Treasury Morgenthau testified expenses could be cut by $1,000,000,000, but he refused to be specific, and, we repeat, nobody so far has disputed Dr. Benson's testimony. We stand on that, and think if Congress is prodded it can make even greater cuts. The third page of this bulletin is your petition to Congress. Just detach the petition from the bulletin, sign, and mail it to us. We will then present the petition to the Ways and Means Committee with a frank statement that this is an organized effort on the part of the Indianapolis Association of Credit Men to cut expenses.

PARTIAL LIST OF PARTICIPATING FIRMS

That Congress is in for a good deal of "prodding" is indicated by the speed and alacrity with which these petitions are being signed and rushed to Washington. Although the campaign is hardly more than started, petitions have been received at my office from firms affiliated with the Indianapolis Association of Credit Men and are being introduced by me today in the House.

This movement of Indianapolis businessmen, many of whom are nationally and internationally known, to induce Congress to make a start toward drastic retrenchment in Government nondefense expenditures no doubt will have a profound reflex effect on business circles throughout the entire country. Already a number of business organizations throughout the land are planning to follow the lead of the Indianapolis association and the Indianapolis campaign may be the prelude to a Nation-wide awakening to the danger of astronomical spending and continued unbridled license in piling up national debt without reference to national income. It begins to look as if the Indianapolis Association of Credit Men may have started something really worth while in the direction of national fiscal reform.

TEXT OF THE PETITION

The text of the petition already signed by a large number of Indianapolis businessmen, and which undoubtedly will be signed during the next few weeks by many hundreds more, is as follows:

A PETITION TO THE CONGRESS TO SAVE AN ESTIMATED $2,031,000,000 FOR NATIONAL DEFENSE

We, the undersigned, at the suggestion of the Indianapolis Association of Credit Men, Indianapolis, Ind., who have to pay and will pay cheerfully for the defense of our country, earnestly urge Congress to devote as much thought to cutting expenses as is devoted toward raising taxes. That seems only fair. We ask Congress to study the following suggested savings, which were included by Dr. George S. Benson, president of Harding College, Searcy, Ark., in his testimony before the House Ways and Means Committee, May 15, 1941:

Items that probably can be eliminated during the emergency

C. C. C.	$265,000,000
N. Y. A.	99,000,000
Soil conservation	500,000,000
Federal aid to roads	180,000,000

Items which can probably be cut in half during emergency	
Rivers, harbors, and flood control	$121,000,000
National park improvements	10,000,000
Agriculture, forests and trails	10,000,000
Rural rehabilitation	66,000,000
Food-stamp plan	100,000,000
Export bounties	100,000,000
Last year's appropriation for W. P. A	1,325,000,000
(Will not the $20,000,000,000 defense program cut employment at least in half?)	
Departmental publicity and franking	39,000,000
National Resources Planning Board and Office of Government Reports, about	3,000,000
Total	1,774,000,000
One-half is	887,000,000
Items the total of which can probably be reduced 25 percent	
Agriculture departmental expense (in addition to agriculture aids)	$114,000,000
Department of Commerce	31,000,000
Department of Interior	70,000,000
Department of Justice	55,000,000
War Department—nonmilitary activities	45,000,000
Miscellaneous independent offices	66,000,000
Refugee relief	18,000,000
Total	399,000,000
One fourth is	100,000,000
Grand total	2,031,000,000

We, the undersigned, plead for reduced expenses in the belief the national welfare is endangered, and that the Nation cannot afford to have a single dollar spent for unnecessary nondefense expenditures.

World War Veterans of the United States Merchant Marine

EXTENSION OF REMARKS

OF

HON. DAVID I. WALSH

OF MASSACHUSETTS

IN THE SENATE OF THE UNITED STATES

Tuesday, July 15 (legislative day of Monday, July 14), 1941

ARTICLE BY C. J. CORMIER

Mr. WALSH. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an article entitled "World War Veterans of the United States Merchant Marine, the History of the American Merchant Marine, Recruiting Service, During the World War of 1917–18," by Clarence J. Cormier, charter member of the World War veterans of the United States merchant marine, 1917–18.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

World War Veterans of the United States Merchant Marine—The History of the American Merchant Marine, Recruiting Service, During the World War of 1917–18

(By Clarence J. Cormier, charter member of the World War Veterans of the United States merchant marine, 1917–18)

By the Urgent Deficiencies Act of June 15, 1917, the President of the United States was given the power to use for the national security and defense a fund of $6,250,000, for recruiting, instructing and training of officers, engineers, and crews for American ships.

The President granted this power and fund to the United States Shipping Board and authorized the establishment of the recruiting service, with headquarters in the United States customhouse at Boston, Mass., under the supervision of Henry Howard.

The first school of navigation was opened in Cambridge, Mass., June 4, 1917, under the direction of the United States Shipping Board, and others were established on the Atlantic, Gulf, Pacific coasts, and the Great Lakes, until 43 schools were in operation.

Men who had some experience in seamanship were to be given a short, intensive period of training in navigation by experienced sea captains, as well as teachers from scientific schools and universities.

The next work to which attention was directed was the training of engineers. Schools were opened up and maintained in 12 engineering schools, chiefly at technical colleges.

For admission to navigation or engineering schools, candidates must be American citizens between 19 and 55 years, inclusive.

The graduates from the navigation schools from June 4, 1917, to November 9, 1918, numbered 3,300.

The graduates from the engineering schools as marine engineers from June 4, 1917, to November 9, 1918, numbered 2,960.

By the autumn of 1917 the ship-construction program of the emergency fleet had reached such a stage that the Government authorized the United States Shipping Board to establish a recruiting service for young men who wished to enlist as sailors in the American merchant marine.

To enlist in the merchant marine, a man had to be an American citizen between the ages of 18 and 35 years. It will be noticed that no other branch of the service, that is, the Navy, Army, or the Marines, during the World War, were as strict in the citizen clause.

Deferred classification under the selective-service regulations applied to regular members of merchant crews, while apprentices enroll for training in the United States Shipping Board Recruiting Service were held to be not available for military service. If such men left the merchant marine service they were liable to immediate draft.

In December 1917 the Sea Training Bureau of the United States Shipping Board Recruiting Service was ready to receive application from Americans willing to take a course which would fit them for service as sailors, firemen, coal passers, oilers, water tenders, cooks, and stewards on vessels of the American merchant marine.

Applicants were enlisted for the "duration of the war" and were trained on seven ships in Atlantic waters, four on the Pacific, one at New Orleans, and one at Cleveland, Ohio. Headquarters were established at Federal pier, East Boston, Mass., where the former Eastern Steamship Line steamers *Calvin Austin, Governor Dingley, Governor Cobb,* and later the *Meade* were stationed.

The thousands of men who were needed for this new service could be obtained only through the aid of recruiting stations in all large cities. President Louis K. Liggett, of the United Drug Co., came to the assistance of the Recruiting Service by placing 6,854 stores of his company available as recruiting stations. How effective this recruiting service was can be shown by the rate at which recruits, all of whom were volunteers, were obtained. During the first 3 months 7,500 men were enlisted, while by November 8, 1918, 3 days before the armistice, 32,014 applicants were inducted into the service.

The men enlisted were given a course of training from 6 weeks to 3 months and then assigned to merchant ships with regular prewar seamen in the proportion of four recruits to six able seamen. It is a matter of record that 75 percent of these sailors came from New England, living up to the traditions of the men who "went down to the sea in ships" from the earliest New England days.

A Sea Service Bureau was created which had charge of the assignment of graduates of the training ships and the enlisting of crews for all United States Shipping Board vessels. This shipping agency has been continued to the present day. It is interesting to note that Mr. Harrington Pike, who was in charge of the Boston office of this Service during the war, is still carrying on that position. Mr. Henry Howard was director of the Recruiting Service during the war, and it was his capable leadership that was responsible for the success of this Service.

Before the World War about 70 percent of the crews on American ships were foreign, but at its close nearly all crews were American citizens. The records show that the service rendered by the merchant marine, of its ships that were sunk and men killed or disabled is sufficient to say that a large, well-operated merchant marine was undeniably essential to bringing the war to its successful close.

Government Should Protect Defense Workers in Order To Provide Equipment for Soldiers

EXTENSION OF REMARKS

OF

HON. FREDERICK C. SMITH

OF OHIO

IN THE HOUSE OF REPRESENTATIVES

Tuesday, July 15, 1941

Mr. SMITH of Ohio. Mr. Speaker, I shall vote for section 9a in the House amendments to S. 1524, which provides for Government protection of persons who wish to voluntarily return to work in defense plants where production has been stopped "through subversive influences or otherwise."

The Nation is confronted with a condition which, in my opinion, demands that nothing be left undone in the production of defense articles.

The conscription law, against which I voted, is now forcing millions of young men into military service. They have no choice in the matter; neither have they anything to say as to how much pay they shall receive. The Government dictates that, too. The base pay is $21 per month.

The men in uniform are being trained for war. The President has already, secretly and without congressional consent, dispatched some of them nearly 3,000 miles across the sea to Iceland, which lies in the European war zone of the Eastern Hemisphere.

Since British soldiers also are in Iceland, the same is a battlefield. Therefore the inescapable fact is upon us that the President has now actually put the United States into the European war.

The public does not know but what the President has also sent come of our soldiers to other distant battlefields.

This is the condition that actually confronts us.

I feel it is now the first duty of the Government to provide the proper equipment and supplies for our soldiers.

The very least we could possibly consider to be our duty in this situation would be to make it possible for those persons who voluntarily choose to do so to work in the production of the defense articles that are vital to our soldiers.

The boys in camp have a right to expect of us at least this much. The fathers and mothers who have sons in uniform have a right to demand it.

I shall, of course, also support the provision lowering the draft age to 28 years.

Citadels of Democracy Being Undermined by Inefficiency, Mismanagement, Waste, and Probable Corruption

REMARKS

OF

HON. ROBERT F. RICH

OF PENNSYLVANIA

IN THE HOUSE OF REPRESENTATIVES

Tuesday, July 15, 1941

Mr. RICH. Mr. Speaker, this morning my office received copies of a publication entitled "Citadels of Democracy." Just a few weeks ago we received another propaganda book entitled "Arsenals of Democracy." Some day soon we may have a book entitled "Destroyers of Democracy" for in my opinion that is just what we are about to do, when we allow the funds appropriated for national defense to be spent upon useless propaganda such as the books received today.

Mr. Speaker, for some time I have been wondering just when we are going to have a real investigation of our whole defense program. An investigation, sir, that goes to the bottom of things. An investigation that will sift out the mismanagement, the inefficiency, the waste, and the corruption no doubt attached to the program.

I say that we need this investigation now, for the citadels of democracy are slowly being undermined by the inefficiency, the mismanagement, and the waste that is apparent on every side. This propaganda pamphlet is a striking illustration. No publication is necessary to tell the American people of the finer qualities of our defense effort; but, Mr. Speaker, we certainly need some publicity about the things I have mentioned. This is a wonderful effort we are making. It is an effort that requires untold sacrifices upon the part of the people, and I insist, Mr. Speaker, that it is a shame and a disgrace to ask our people to buy

savings stamps and defense bonds and to turn around and let the War Department squander the money for propaganda of this type.

Now just a word about our Army. Lt. Gen. Ben Lear, after reviewing the maneuvers of the Second Army last month, is quoted as saying:

Our troops average about 6 months' training, and a lot of polishing is needed, but today they could occupy a comparatively quiet defense sector in actual combat.

This is the commanding general's opinion of the real defenders of our democracy.

Mr. Speaker, instead of squandering the money appropriated by Congress for publicity stunts and propaganda, I believe we ought to concentrate every dollar on tooling up our Army for the day when it may be called upon to really defend democracy on the field of battle.

I do not believe the next war is going to be any flag-waving, shotgun affair. But from the purchases that have been made during the last year, I am frankly puzzled. I wonder just how we can defend our democracy with organs and hymnals, with shotguns and clay pigeons, with motion-picture theaters and recreational centers, with flags and banners.

Mr. Speaker, there are many questions that create doubt in my mind as to the quality of leadership so far exhibited in our defense effort, but I have no doubts as to the loyalty and patriotism of the men and women of the United States, whether they are in the service or out of it. It is for them I speak, in protest against the continuing waste of public moneys for propaganda, to glorify war, and to drag this Nation into a conflict which the Americans desire to keep out of.

With the lady from Arkansas I say:

We've had our share in Flanders field,
We'll stay at home and mind our own,
For we've a job to do.
We'll lick the "isms" one by one,
For old red, white, and blue.

We'll sit on our veranda, and read your propaganda,
But we won't be over "till it's over" over there.

Order of the Sons of Italy

REMARKS

OF

HON. EDITH NOURSE ROGERS

OF MASSACHUSETTS

IN THE HOUSE OF REPRESENTATIVES

Tuesday, July 15, 1941

Mrs. ROGERS of Massachusetts. Mr. Speaker, under the permission given me to extend my remarks, I submit an editorial from the Boston Post of July 10, 1941, entitled "Loyal Sons," and one from the Boston Traveler of July 10, 1941, entitled "Answering the Call."

Each of these editorials commend the Order of the Sons of Italy for the fine, patriotic example that organization has set in purchasing $20,000 worth of national-defense bonds.

The grand venerable of the Order of the Sons of Italy, Mr. Joseph Gorrasi, lives in my congressional district, in the city of Woburn. He is an outstanding example of the extremely high type of Italian immigrant who has come to our shores. At the present time Mr. Gorassi is 39 years of age. He was born in Italy and came here when a young boy. He worked hard at various jobs while earning his way through Boston University Law School, graduating with the class of 1924. He was admitted to the Massachusetts bar the same year.

Attorney Gorassi typifies the progressive type of the newer races to settle in this country. He has studied hard, worked diligently, and has made a host of friends throughout our Commonwealth of Massachusetts. He is now the city solicitor of Woburn, a post he also held in 1930. At one time he served in the capacity of claims attorney with the New England District, Public Works Administration.

In these strenuous and trying days when there is so much feeling and confusion, it is especially fine to record the loyalty and patriotism of those who came here to escape the bondage and lack of freedom in their fatherlands. It is a token of their protest against the present governments of their native lands, and it is an endorsement of the freedom and liberty of our United States of America. They are fine loyal Americans.

The editorials follow:

[From the Boston Post of July 10, 1941]

LOYAL SONS

In a day when accomplishment is far more valuable than words and far-fetched plans, the Order of the Sons of Italy in America set a fine practical example. Recently the Massachusetts grand lodge of this organization purchased $20,000 worth of defense bonds and already it has instituted an excellent system for the forwarding of gifts and for visits to its members in the various training camps.

Within a short time it will have working a plan for the entertainment of out-of-State members in training in Bay State camps with sightseeing trips and other services. Here is a loyal, up-and-coming organization really getting things done.

[From the Boston Traveler of July 10, 1941]

ANSWERING THE CALL

The most loyal American is not necessarily the oldest American; he may be a very new American. Strong confirmation of this undoubted fact may be seen in the action of the Sons of Italy in America, whose Massachusetts lodge recently purchased $20,000 worth of defense bonds.

These times are trying ones for loyal Americans whose ancestry stems from Axis countries. One may have a true and devoted love for Italy or Germany, and with it a detestation of their present governments.

Perhaps those newer Americans, whose faith in the land of their adoption is so strong that it overshadows ancestral ties, are the best Americans of us all.

Seventy-seventh Annual Convention of Benevolent and Protective Order of Elks

EXTENSION OF REMARKS

OF

HON. JAMES J. DAVIS

OF PENNSYLVANIA

IN THE SENATE OF THE UNITED STATES

Tuesday, July 15 (legislative day of Monday, July 14), 1941

ADDRESS BY JOSEPH G. BUCH

Mr. DAVIS. Mr. President, last evening in Independence Square, Philadelphia, the Grand Lodge of the Benevolent and Protective Order of Elks met in its seventy-seventh annual convention. It was a time of genuine inspiration, with patriotic music, stirring addresses, and a great gathering of warm-hearted Americans.

The spirit of the founding fathers seemed to be thoroughly expressed by the spirit of the Elks in this memorable meeting. Prominent citizens were present from practically every State and Territory of our Nation.

Hon. Charles H. Grakelow, director of supplies and purchases of the city of Philadelphia, was chairman of the meeting.

Gen. John J. Pershing from his sick room sent his greetings over the radio.

Mr. James R. Nicholson, chairman of the Elks National Defense Commission, told of the great contest conducted among 400,000 school children on the subject What Uncle Sam Means to Me. Governor Cross, of Connecticut, served as chairman of the board of judges of this contest.

Mr. President, I ask unanimous consent to have printed in the RECORD the eloquent address of Grand Exalted Ruler Joseph G. Buch, of Trenton, N. J., delivered on July 14 at Independence Hall, Philadelphia, over a Nation-wide radio chain. In over half a century of experience with fraternal leaders I have never had the honor to hear a more inspiring message.

There being no objection, the address was ordered to be printed in the RECORD, as follows:

Mr. Chairman, past grand exalted rulers, officers of the grand lodge of the Benevolent and Protective Order of Elks, members of the Grand Lodge, distinguished guests, ladies and gentlemen: As the benevolent and Protective Order of Elks prepares to meet tomorrow in its seventy-seventh annual convention, it is fitting that in these opening exercises we gather tonight at the historic Independence Hall, where the principles of free government were translated by great patriots into simple, clear, and lasting words.

And here, I know, we will be inspired by the high ideals of these early American leaders to examine into the resources and potentialities of our great fraternity so that we may make further contributions for the security and protection of the liberty they helped to establish.

In these days of uncertainty we must give careful consideration to the serious problems before us. Nowhere could this be more appropriately done than in Philadelphia, one of the world's greatest municipalities; a city characteristic of the high, patriotic, and fraternal aims of our order, not only because it is justly known as the City of Brotherly Love, but because here was cradled the very liberty we enjoy.

From the inception of our order we voluntarily entered into a partnership with America—a partnership cemented by loyalty and patriotism and by widespread civic and humanitarian services. We linked the destinies of our order with those of our country, and for over 70 years this chain of love and devotion has remained unbroken.

The Bible and the flag and the invocation of a Divine guidance have graced and adorned the teachings and the beauty of our ritual and lodge rooms throughout the development of our order from its humble beginning—with a little group of men—to its full expansion of over 500,000 loyal American citizens.

And perhaps this fully explains the unusual growth of the order from its original founders' group to over 1,400 lodges in every State of the Union, and in all our Territories and possessions; an order which spreads its benefactions to every important municipality of our great country, and which proves to the entire world that trust in God and patriotism, with an abiding love of fellow man, form a union against which no force or forces can prevail.

Our fraternity is typical of the great American family. To this annual reunion it has summoned its members from the far corners of the land, and its deliberations and decisions will be marked by a judgment and a wisdom that grows out of the philosophy and experience of life in the city and the country, the mountains and the wilderness.

Men who have mined the gold of Alaska and the coal of Pennsylvania are here.

Men who have sailed our inland waters and the high seas are here. We have represented in this convention not only the 48 great States, the island possessions, and the Territories of America—we have here men representative of every phase of American action—educational, cultural, industrial, financial, social, military, and civil.

The true American spirit is here today—eager, courageous, determined.

In the shadow of the liberty bell, whose history reaches back to the birth of our freedom, we will take under consideration matters that concern the progress of our order, the welfare of our people, the security of our institutions, and the safety of our country.

We come here conscious of a confused world but with a full and clear understanding of our responsibilities as Elks and Americans. We come, too, with the knowledge of a task already well done.

I look back to Houston where, before me, I saw a year full of hope. I review the months, that have since passed, and I see a realization of that hope and I am proud of the privilege that was given me to lead so many hundreds of thousands of loyal Americans during a year of useful service.

In every respect we have made an honest effort to fulfill our obligations to our order, to our country, and to our fellow man.

We sought the aid and cooperation of one of the outstanding men of the times, a great American, and a good Elk, Gen. John J. Pershing, and he responded by permitting us to use his name and prestige in connection with a new membership class, and the result was remarkable.

Through other mediums, with the full aid and cooperation of our subordinate lodges, we have made tremendous gains. Elkdom, however, will always remain indebted to, and honor the name of, General Pershing, for the part he played in strengthening the hand of our fraternity.

And it will afford me a deep personal satisfaction when, later in the program, as grand exalted ruler, I will have the privilege of presenting to General Pershing, through his chosen representative, a duly inscribed plaque as a token of appreciation and of the love and esteem in which he is held by every one of his fellow members of our order.

At the outset of my administration, I appointed the Elks' national defense and public relations commission. Through this body we have more than justified the prophecies of our patriotic performances of the past. With over 1,400 lodges as sponsors, we have reached out to millions of people with a program of patriotism and practical American action.

One cannot examine the work of the past year and not be inspired by the results that have been attained.

No field was left unexplored in spreading the lessons of Americanism.

An achievement worthy of special note was the national essay contest—an educational and patriotic movement—which induced thousands of the youth of our land to ponder upon and translate into writing the wealth and goodness of American resources and American institutions.

Picture, too, if you can, thousands of patriotic exercises by the subordinate lodges in which entire communities committed themselves to shoulder the responsibilities of American citizenship and to associate themselves with governmental authorities and agencies in the general movement to make America safe for democracy.

Try to vision every conceivable patriotic effort: Enlistment for service; the care of the families of the enlisted; the raising of funds for defense through the direct purchase, and by sponsoring the sale of United States national-defense bonds; the donation of ambulances to the Red Cross, and you begin to grasp the tremendous effort Elkdom put forth as it proceeded to execute its part of the patriotic partnership which has existed throughout the years.

For these things Elkdom finds its inspiration in the simple truths of life. It recognizes the principle that the strength of a democracy is in its people, and that the strength of the people must rise out of the family circle.

"Love of country and home and friends" expresses the philosophy which, based upon right thinking, and right living, prompts its every benefaction.

This philosophy spreads sunshine into the dark corners of life. It invokes the divine guidance and shapes its course around the Golden Rule. It seeks crippled children and straightens their little limbs, searches out the blind and giving them the "seeing eye", reaches out to the sick and gives them relief, finds the oppressed and gives them hope.

And, with an eye to the future, it searches out the strong and courageous youth of our land and seeks not only to arouse in these leaders of tomorrow a full appreciation of their heritage as Americans but to instill in them the love of home that must always be the strength of a God-fearing people.

It is these, the simple but fundamental things, that the war makers have all but forgotten.

We are living in a fast-changing world, when every turn of the clock produces effects that seem to alter the structure and stability of nations and long-established institutions.

It would seem that all the weaknesses of society are coming to the surface and that man, in a vain attempt to cure these weaknesses, has lost his sense of direction and balance and is slowly destroying himself.

Nations are fighting, not for ideals, but for raw materials; not to protect their homelands, but to acquire and to enslave new territories and peoples.

War appears to be gradually crushing all the fine instincts that make for culture and enlightenment. It is destroying works of man whose perfection and beauty have helped to inspire and develop our civilization.

And, with all this, hate and bitterness are creeping closer and closer to our shores and the barriers of distance and great seas are shrinking. For years America has felt herself safe from the consequence of world wars. Our people have sought peace, not strife. They have wanted to be left free to enjoy that peace, and with it to speak honest thoughts and to pursue decent impulses.

Yet as machines of speed and destruction become more numerous and perfect and the might of militaristic nations becomes more arbitrary, America senses the danger of relying upon mere geographic advantages. And, having witnessed the invasion and destruction of smaller and independent nations, she has fully awakened to the grave possibilities of an unpredictable future.

There seems to be a difference of opinion regarding the danger which now faces America. Men also differ upon the presence of this danger and the existence of a challenge. Yet our common sense and our loyalty tells us that, regardless of these uncertainties when, through the orderly processes of democracy, America makes her final decision the world must find her a strong and unconquerable nation.

Men, who have practiced charity and justice find it difficult to visualize the present plight of humanity. Shadows are slowly gathering over most of the world. Death and destruction have left many nations prostrate. Free people have been enslaved. Rich territories have been impoverished. Innocent men and women have been killed. Countless children have been made orphans. Millions of tons of shipping lie at the bottom of the seas. Blind passion and bitterness threaten to engulf civilization. Because all this is counter to the hopes and ideals of democracy, the survival of America and its way of life may soon be a matter for definite and drastic action.

There is now a great conflict between two opposite philosophies. It is said, on the one hand, that there is room in this world for both. It is also said that one must eventually destroy the other. America does not wish to destroy anything. It would rather preserve than destroy. By the same token, America itself will not be destroyed. How our national security is to be accomplished, no one can foretell in exact detail but one thing is certain—in order for America to preserve herself and her democratic ideals, she must be strong.

In order for America to acquire her maximum strength, in order that she may be able to meet any challenge and overcome any danger, and, if necessary, destroy any enemy or combination of enemies, she must be strong from within as well as from without. One fact, therefore, remains dominant and uncontradicted and that is the necessity for national preparedness.

Preparedness, however, does not mean alone the wholesale manufacture of armaments and munitions. It means, not alone the drafting of soldiers and the building of camps. Preparedness is something which calls for initiative and courage, for speed and action, for cooperation and unity, for loyalty and patriotism. Above all, it calls for a personal sacrifice by every man, woman, and child.

If rapidly moving events bring danger even closer to America, it follows, as the night the day, that any attempt at slowing up the machinery of our defense must be considered unpatriotic and treasonable.

It is here that Elkdom must play an important part for the most effective medicine that America can apply to the "fifth-column" cancer is Elkdom's creed and Elkdom's watchfulness. By the same token there is no agency through which America can better combat its enemies from within than the Order of Elks.

Nor is the patriotic action and influence of Elkdom new in American history. In the past our order has made many sacrifices in money and men, to the end that America might be strong, free, and powerful. In the present crisis Elkdom is already on the way to rerendering the patriotic services that brought us the universal commendation of all the civilized nations during the World War.

Our work as Elks is predestined. The very nature of our order and its ideals, its history and traditions, shape our course. Today our country is girding for a tremendous effort and, as your grand exalted ruler, I say to you Elkdom is again ready to do its full part.

It has been my privilege to meet my fellow Americans, in many visitations throughout the country, and I have been impressed with the fact that State lines are no barriers to American life. I am also convinced that the great family of people who now make up America is moved by the dominant thought of patriotism, of faith in our institutions and a keen desire to preserve and enjoy the sacred privileges of democracy.

While it is true that we are a mixed family of races, all reaching back to the other countries of the world for their ancestry, our people, with few exceptions, are loyal to America and its institutions and favor the American way of life above the way of life of dictator-ridden nations.

And to keep ourselves strong and secure against the world, if need be, we have but to encourage and develop the unbounded strength and loyalty we now possess. I say, then, to you my brothers, go back to your homes bearing the message of Elkdom—for that, in truth, is the message of America. Against the doctrine of hatred preach the ideals of brotherly love.

To you who help the blind or support the fight against tuberculosis, who furnish iron lungs, or assist in accumulating blood banks; to you who make the highways safe for travel or the great industrial plants safe for labor; to you who bring gladness into the hearts of crippled children and hope into the souls of the aged and weary; to you who give scholarships to spread the light of learning; to each of you and to the lodges you represent I say: Your service is not only to the order, to the community, to the State, or to our great country—your service is to mankind.

You are giving the example that the rulers of the world so sorely need. By your fraternal action you are shedding light upon a way of life that must eventually reach the darkened lands of the oppressed peoples of the world.

You are beautifying the four freedoms, that bespeak sacred rights and privileges, with the four cardinal principles that teach love of man for man. You are preaching the golden rule to a civilization that must, sooner or late, grasp the Divine significance of universal brotherhood or perish.

And I say to you, my brothers, our year has ended but the tasks to which as a free people we are committed have just begun. I go into the ranks with you again, proud of the knowledge that you have honored me with this high leadership, happy that I have been spared to work with you and to enjoy your companionship, thankful that, with your loyalty and your cooperation, we have been enabled to speed Elkdom on its course in its humanitarian and patriotic endeavors.

And so, with the hope that our next convention will find America and the world enjoying a state of peace and contentment which is based upon the principles of charity and justice, brotherly love and fidelity, and with the sincere wish that my successor in office will enjoy the same fraternal good will and faithful assistance which has been accorded me, I close by wishing you all good luck and Godspeed.

Address Before National Conference of 4-H Clubs

EXTENSION OF REMARKS

OF

HON. WRIGHT PATMAN

OF TEXAS

IN THE HOUSE OF REPRESENTATIVES

Tuesday, July 15, 1941

ADDRESS OF HON. WRIGHT PATMAN, OF TEXAS

Mr. PATMAN. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following address delivered by me before the National Conference of the 4-H Clubs on Tuesday, June 24, 1941, in the auditorium of the South Building, United States Department of Agriculture, Washington, D. C.:

Mr. Chairman, members of the 4-H Clubs, and guests, upon this occasion the words of President Woodrow Wilson are very fitting and express my sentiments exactly. President Wilson said:

"I stand here not to welcome you to the Nation's Capital as if I were your host, but merely to welcome you to your own Capital, because I am, and am proud to be, your servant."

The theme of your camp for this year, Rural Youth Responsibilities in the Present Crisis, impresses me very much. In order to know about your responsibilities, it is absolutely necessary that you have a good idea of the functions of our Government, particularly since it is the greatest democracy in all the world today.

Please do not consider that an expert on the functions of government is addressing you upon this occasion. Such is not the case. It happens that I have been serving in the Congress of the United States longer than 12 years, and during this time I have naturally become acquainted with many of the functions of our Government. Recently the Congress—House and Senate—unanimously passed a resolution providing for the printing of 177,000 copies of a booklet which I prepared on Our American Government—What Is It? How Does It Function? This I considered a great compliment, since it is the largest number of publications of its kind ever authorized by Congress. However, I hope you do not harbor the mistaken belief that I am an expert because my book was given such recognition and wide distribution. If you have not already received a copy, I shall be very glad to send you one.

DEFINITION OF AMERICANISM

In any discussion of our American Government, I believe that a good definition of Americanism should first be stated. In February 1927 the commanders in chief of the five big World War veterans' organizations met here in Washington, D. C., and agreed upon a definition of Americanism. To my mind, this definition cannot be improved upon. It is:

"Americanism is an unfailing love of country; loyalty to its institutions and ideals; eagerness to defend it against all enemies; undivided allegience to the flag; and a desire to secure the blessings of liberty to ourselves and our posterity."

That is a good definition of Americanism to remember.

VALUE OF EXTENSION SERVICE

For many years I have admired the great work that is being done by the Extension Service of the Department of Agriculture. By reason of the teaching and training one receives in an organization connected with the Extension Service, our country is made a much better place in which to live. I do not know of any group that is more helpful to our Government, in time of war or in time of peace, than the groups associated with the Extension Service. I consider each of such groups, including your own, a school of citizenship, composed of the very best American people; our American way of life is more secure by reason of the existence of your organizations.

FIRST 4-H CLUB IN TEXAS

It is very pleasing to the people of Texas to know that the first organization of 4-H Clubs was in our State. It was a corn club, organized at Graham, Tex., in 1910, by Hon. C. M. Evans, who is now director of the Farm Security Administration in Texas and Oklahoma at this time. The first livestock 4-H Club was organized by him in 1911, at Coleman, Tex. The first 4-H Club agent to be appointed was in Texas, and his name was Dr. H. H. Williamson, who is now serving as director, Extension Service in Texas, at College Station, Tex. It is interesting to note that all of the boys and girls, who pioneered this work commencing in 1910 and for several years thereafter, are now among the most prominent agricultural leaders in all the world. It makes one feel proud of his country to know the fine service that is being rendered through these great organizations.

The Government receives more value in the form of constructive, helpful, humane, and material services from the Extension Service for every dollar that it pays out than from any other Government expenditure that I am acquainted with. As an example of how far the Government is going to encourage your particular work, if a boy or girl desires to cooperate as a 4-H Club member and does not have sufficient finances to do so, the Farm Security Administration, an arm of our Government, will provide the finances.

HARD-WORKING GROUPS

It is my pleasure and privilege to know the Secretary of Agriculture, the Honorable Claude Wickard; Dr. M. L. Wilson, Director of Extension Service in that great Department; and the Honorable Grover Hill, Under Secretary of the Department of Agriculture; and other executives in that Department. I also know the officials in the A. & M. College of Texas, who have charge of the extension service in our State, as well as a large number of the county agents, county home demonstration agents, and others who are instrumental in conducting and carrying out this fine service sponsored by our Government. These people do not watch the clock; they work many hours a day and night. I have never known public servants to be so greatly interested in the welfare of our country, and the farm people especially, as the ones whom I have named and referred to. By reason of their faithful, efficient, and effective service the

groups under them, including your own—the 4-H clubs—and particularly the home demonstration clubs, are often referred to as the most conscientious, sincere, hard-working, and unselfish groups in America. They represent the "salt of the earth."

PLEASURE TO SERVE PEOPLE

Many people cannot understand why one works so hard and faithfully to serve the people, oftentimes at a great personal sacrifice and seldom receiving sufficient compensation for his labors. The answer is demonstrated by the fact that agents of our Government have plainly and unmistakably shown the pleasure they actually receive in rendering service. They do more than their assigned duties. I shall not attempt to leave the impression that Members of Congress do better work than your own, although it is different in its nature. The fact is, however, that a Member of Congress has no assigned duty. When he takes the oath of office he swears that he will faithfully perform the duties of his office; but as a matter of fact, neither the Constitution nor the laws of this country compels him to perform any duty whatsoever, yet Members of Congress work night and day trying to render the best service possible to their constituents.

KNOWLEDGE OF PARLIAMENTARY PROCEDURE

You are a leader, or you would not be at this conference here in Washington, D. C., today. As a leader, you must have knowledge of parliamentary procedure. Rules of procedure are necessary to properly conduct any meeting composed of a number of persons. Our Government is a parliamentary government, and when you acquaint yourselves with parliamentary procedure you are acquiring knowledge that will be very valuable to you throughout life, not only in your local community meetings but as members of other groups, as a member of the State legislature, or as a Member of the United States Congress. In Congress, a Member would be like a carpenter without tools if he did not possess a knowledge of parliamentary procedure. A well-directed point of order can be as effective in an assembly as cannon upon the field of battle. Without a knowledge of rules one is almost helpless in an organization. Therefore I recommend to you that you study and become thoroughly familiar with parliamentary rules of procedure.

POLITICS NECESSARY

You have heard politics, which is the basis of any democracy, criticized. You have doubtless heard the statement made, "Let us keep politics out of this or that kind of work," and "Let us not have any politics in connection with what we are attempting to do." These statements are often made, but on careful analysis they do not hold water. The truth is, politics is the masses controlling. One who is against politics is against the people ruling and, therefore, against our American way of life and our democratic form of government. One who holds a political office has been successful because he has the good will of the people who elected him. One who succeeds as a merchant, as a doctor, as a lawyer, or in any other business or profession, succeeds because he has the good will of the people. Hitler does not believe in politics; neither does Mussolini. They are opposed to the people ruling. They want a dictator form of government. Anyone who is opposed to totalitarianism and dictatorship is in favor of politics, which is our American form of government. Politics can be good or bad. Let us work to keep politics clean and our elections fair, in order properly to preserve our country.

GREECE'S PURE DEMOCRACY

On a certain day in one of the ancient cities of Greece the people would meet together and make the laws or change existing laws. That was a pure democracy. But in our country, or in any large country, obviously a pure democracy is impossible because all the people cannot assemble at any one time or place for the purpose of making their laws. We adopted the representative form of government, which means we select representatives to go to legislative bodies, either to the State legislature or to the Congress of the United States to do for the people what they would do for themselves if they could all assemble and vote personally.

When a pure democracy prevailed in this ancient city of Greece, when one went to the platform to address the assembled people to propose a law, a halter was always placed around his neck. This halter was placed around his neck for the purpose of impressing him how easily he could be hung if he proposed a law that was not in the interest of the people. Fortunately, our present-day lawmakers are not so intimidated. If they were, doubtless many laws would not be proposed that are now so vigorously advocated.

OFTEN DEPENDS ON WHOSE OX IS BEING GORED

In connection with different proposals in the forms of bills pending before a legislative body, there is almost invariably divided sentiment among the people. Some people selfishly interested will be for it, and some of them selfishly interested will be against it. In other words, it all depends upon whose ox is being gored. It is the country's good fortune that there is always a broad, enlightened, educated sentiment, which is not selfishly interested, which points out the honest and best way to the true representatives of the people. The lawmaker listens to both sides and weighs and considers what is said, whether the people are selfishly interested or not, it makes no difference.

LOBBYIST

The word "lobbyist" does not appear in the Constitution of the United States. Neither does it appear in the United States Statutes, but a lobbyist is a very important person around any legislative body. There are good lobbyists, who are helpful to the lawmakers by suggesting the good things and the bad things about every proposal, and then there is the bad lobbyist, the offensive type, that is willing to resort to any method of cheating, trickery, or undue influence in order to try to force a lawmaker to vote the way he wants him to vote.

DEMOCRATIC FORM OF GOVERNMENT MAKES NATION GREAT

Our democratic form of government is established upon the will of the people. Public sentiment controls our Government. In other words, representatives must carry out the will, the wishes, and desires of the people who elect them. Otherwise it would not be a true representaitve democracy.

I believe that it can be truthfully said that a Nation's greatness can be measured by the happiness and prosperity of the people who produce the Nation's wealth. Therefore, our country is becoming greater all the time, because the poor people, and especially the farming people, are being given greater and better opportunities. This makes our Nation great and strong.

ONE HUNDRED MILLION DOLLARS A YEAR LOSS ON LOW POSTAGE RATES DEFENDED

The lawmaker's service is made much easier by information that he receives from the people he represents and who are properly and correctly informed through our great system of dissemination of information. Our first President, George Washington, advocated the free distribution of newspapers through the United States mails in order that newspapers might be more widely distributed, and thereby encourage a dissemination of knowledge. President Washington's policy is in effect today. The postage rate on newspapers is very low. In fact, a newspaper may be circulated in the post offices and over the rural routes in the county where it is published absolutely free, and if the newspaper sends copies outside of the county, the postage rate is very, very low. The postage rate on books is very low, as well as magazines and periodicals. The Government loses almost $100,000,000 a year on account of these low postage rates, but I think it is absolutely justified and should not be changed. Such a system has enabled our newspapers and other periodicals to have a much wider distribution, and under such a system no family is so poor that it cannot afford at least one publication that will give them current information. Another famous President, Thomas Jefferson, said:

"Man may be governed by reason and truth. Our first object should, therefore, be to leave open to them all the avenues of truth."

Mr. Jefferson further said:

"Whenever the people are well informed, they can be trusted with their own government; whenever things get so far wrong as to attract their notice, they may be relied on to set them right."

The Bible says that where there is greed, there is no vision; and where there is no vision, the people perish. The people cannot be expected to have the best vision without correct knowledge and information in their possession. Without wide distribution and dissemination of current information, our people cannot be informed, so the present system of our American Government to widely disseminate the news and current information by newspapers, radio, screen, and magazines is certainly a commendable one and in the interest of our country.

LOW ELECTRIC CHARGES

Congress has never before had such difficult problems. For instance, Congress is divided on electric rates. Many people in Congress would like to have power rates high, others would like to see them as low as possible. President Franklin D. Roosevelt rendered a very fine, humane, and justified service to the American people and especially to the farmers when he established a yardstick to determine the cost of electric power and caused the creation of the agencies that have electrified millions of farm homes and whose policy is to electrify every farm home in America before they are finished.

LOW INTEREST RATES

Many people in Congress would like to see higher interest rates. Our Government in recent years has deliberately forced down the price of hiring money, or the cost of use of the other fellow's money. Now, one can purchase a $5,000 home and pay for it over a period of 20 years and expend $1,600 less than he would have expended prior to 1933, if he had purchased the same price home on the same terms.

BRIGHTER FUTURE FOR AGRICULTURE

Today, agriculture has a brighter future than any other time in the history of our Nation. Congress, through demands by reason of information possessed by the people, which caused Congress to take the necessary steps, has provided for the first time in history the payment of parity prices for farm products. This year, the five basic agricultural commodities—cotton, corn, wheat, tobacco, and rice—will bring what is known as parity prices. This is a new day in agriculture. Many Members of Congress opposed this type legislation. Unless you help keep the people informed as to its necessity and as to its fairness, such a policy will be in danger. The farmers have not won their battle with parity prices.

A fair annual income is much more important and that should be the next goal for them to strive for. Many people in manufacturing, mining, and business, who are working for good wages are now demanding a fair annual income, as well as a fair daily

or hourly wage. One group in the mining industry, for instance, is demanding that they be allowed to earn at least $1,300 per year per family. It would certainly not be unreasonable if each farm family in America were allowed to earn $1,000 per year per family, if the farm family produces sufficient products at a fair price to enable the family to acquire the $1,000 per year. Now is the time to commence working for a fair annual income for the farmers.

MAJOR QUESTIONS BEFORE CONGRESS

Permit me to suggest some of the questions that are now confronting the Congress of the United States.

1. Will we get into this war? It is my belief that when the historians 50 or 100 years from now read what happened during the last few years, they will arrive at the conclusion that our country has been very much interested in this war since it commenced in Europe. A Nation cannot furnish a belligerent nation food, supplies, and other materials, including planes, tanks, and guns, without being considered a party, either directly or indirectly, in the outcome of the battles. It is my belief that we will continue to furnish all-out aid to Britain, but that we will not send men overseas to engage in a foreign war.

The tragedy of destruction in Europe is not what happens to buildings and homes, but what happens to men. Buildings will rise again; torn cities and towns will be quickly repaired; but when men are degraded, it may be generations before the damage is undone.

2. How large will our national debt become? The answer is, it depends on Hitler. Practically everything we do here in America today is dictated or governed by what we believe Hitler has done or what Hitler expects to do. In other words, he is indirectly controlling the major affairs of our country today. If the emergency continues, our national debt will increase. There will be no way to avoid it, but there will not be national bankruptcy. A nation that has the power of creating credit or money cannot go bankrupt.

3. How will this enormous public debt be paid? It will be paid by taxation. The people are perfectly willing to be taxed to protect our liberties and our rights, and to make sure that the American way of life continues in the grand old United States of America and to make sure that no dictator or foreign desperado ever sets a hostile foot upon the Western Hemisphere.

Other questions coming up are: Will the trainees be compelled to continue to accept $21 per month, while people in industry are receiving wages from $7 to $24 per day? When will the strikes in defense industries be stopped and how will they be stopped? When will Congress adjourn, etc.?

INCREASED LAND VALUES

It is thought there will be somewhat of a land boom in this country before very long. The reasons are obvious. First, agriculture is being made profitable, and as any business becomes profitable, a few people jump in and try to buy up a large part of it. Second, people from the very large cities, and especially those who came here during the recent past from foreign countries, are considering settling in the interior, and are desirous of buying large blocks of land for cultivation and colonization. Third, people with money are buying land as a hedge against inflation. As the value of money goes down—and it is going down, down every week—the value of everything else, and especially tangible property, goes up in value. At this time, all signs point toward higher land values. Let us hope that every farm family may be permitted to buy and own a home and be given preference in land purchases over hedges and speculators.

THREE GREATEST INSTITUTIONS

A Nation's greatness can also be measured by the three greatest institutions on earth—the home, the church, and the school. Around these three institutions our civilization rests.

The home implies these things, which are the greatest things in the world. One for man, one for woman, and one for child. It implies a man who works, a woman who is good, and a child who is taught.

Only the man who works is a good citizen, for he assumes due responsibilities, keeps the peace, observes the law and his veins are the veins of wealth to any land.

Only the woman who is good is fit for mothering and the world needs mothers more than statesmen, scholars, and professors.

Only the child who is taught is fitted for citizenship.

FOUR GREATEST EVILS

Our Government is working to rid our country of the four greatest evils. They are: poverty, ignorance, disease, and crime. More has been done in the direction of ridding our country of these four major evils in the past 8 years than any other similar period or any other period of a half century preceding.

Our American Democracy is fortified by the people generally having a knowledge of and practicing the Ten Commandments and the Golden Rule. There are exceptions to every rule, but we must not pick out an exception and point to it as the general rule. Generally, the people of this country are unselfish and patriotic. They have an inborn desire to do right and keep in mind at all times to live and let live.

GREAT NATURAL RESOURCES IN UNITED STATES

Our country possesses the greatest natural resources of any country in all the world. For instance, one-half of all the petroleum in the entire world is in the United States. The people of Texas point with pride to the fact that one-half of all the oil in the United States, or one-fourth of the oil in the entire world, is in Texas alone.

More than 70 percent of all the motor vehicles, automobiles, and trucks are in the United States. Texas, for instance, has more motor vehicles than Germany, or France, or Canada. China only has 1 motor vehicle for 6,000 people; Japan has 1 to every 380 people; Germany has 1 for every 41 people; England has 1 to every 19 people; France 1 to every 17 people; but the United States has 1 motor vehicle to every 4 people. In other words, all the people in this Nation could ride in a motor vehicle at the same time.

Among the things that have been accomplished in the recent past, of which we are very proud, and are of great help to agriculture, are low interest rates, low power rates, and other benefits, such as N. Y. A., F. S. A., tenant purchase, old-age assistance.

COOPERATION

The famous poet, Kipling, writing on cooperation, duty, and working together for a common cause, truthfully said:

"It is not the individual
Nor the army as a whole,
But the everlasting teamwork
Of every living soul."

Our country faces a brighter future because of the great work through cooperation your groups are performing, and I congratulate you.

TEN SPECIFIC DUTIES RECOMMENDED BY 4–H CLUBS

Mr. Speaker, Charles Ball, of Minter, Lamar County, Tex., was the only representative of the 4–H Clubs from the congressional district I have the honor to represent. Charles, after his return to Texas, stated the following about the conference:

Each day we had group discussions about rural youth's responsibility in the present crisis. We composed a bill of duties consisting of 10 duties. They are briefly:

1. Vote in every election.
2. Keep physically fit and encourage others to do the same.
3. Don't abuse freedom of speech and freedom of press.
4. Protect religious freedom by taking part in church activities.
5. Uphold the Constitution of State and country.
6. Understand the principles of democracy.
7. Appreciate home life.
8. Criticize laws constructively—but obey them until they are changed.
9. Support community education activities.
10. Apply the Golden Rule to every situation.

Santa Claus has Changed Rules in the Middle of the Game

EXTENSION OF REMARKS

OF

HON. PHIL A. BENNETT

OF MISSOURI

IN THE HOUSE OF REPRESENTATIVES

Tuesday, July 15, 1941

Mr. BENNETT. Mr. Speaker, the farmers of America are in a rebellious mood over efforts of this administration to regiment them.

Scores of letters complaining about the 49-cent-per-bushel penalty on excess wheat have come to me. I agree with the farmers that this high penalty is not just. Farmers who overseeded Government allotments in the autumn of 1940 did so with the express understanding that if they suffered loss under a 15-cent penalty the fault would be their own. But when the penalty was increased from 15 cents to 49 cents per bushel, the crop was being harvested and there was no opportunity for the farmer to change his set-up. Further, the election came at such a busy period on the farm, and the time given was so brief a large percent of the farmers did not know about it early enough to vote. Now they face restrictions placed upon them by a minority of farmers and bureaucrats of the Department. As one who has lived by tilling the soil, I agree with the farmers that it is unjust and un-American. "So what?" say the bureaucrats. "The people will not vote against Santa Claus." But, I say, let Santa Claus beware when he changes the rules in the middle of the game.

LITTLE FARMER, THE FORGOTTEN MAN

Mr. Speaker, the little farmer is the forgotten man of the New Deal. Over $6,250,000,000 in cash farm aid has been checked out of the United States Treasury through the Department of Agriculture during the last 8 years. The spending of this huge sum sets a record peacetime spending on the part of a governmental department. Yet, while this huge

sum was being spent or loaned here at home, other millions were poured out to encourage and subsidize agriculture in other nations.

Perhaps the most recent case in point was the announcement on May 6, 1941, by Jesse Jones, Federal Loan Administrator, that the Export-Import Bank of Washington had on that day authorized a credit of $25,000,000 to the Republic of Cuba for agricultural development and diversification and public works.

Mr. Speaker, before we go further with plans to run the business of other nations, we would do well to remember that we have a lot of unfinished business at home.

I think there is a lot of merit in the suggestion of a farmer who wrote me saying that the law which created the Department of Agriculture should be repealed and the $1,068,500,063 appropriated for that Department this year be divided among those farmers in the Nation whose property has been valued at less than $2,000 for purpose of taxation. Certainly these are not the farmers who are helped by Government checks. Here are a few of those who were helped by Government checks:

Prudential Insurance Co	$133,191
Metropolitan Insurance Co	96,332
Federal Land Bank of Omaha	92,963
Mississippi State Penitentiary	52,528
Arkansas Penal Board	30,935
General American Life Insurance Co	43,441

Eleven other insurance companies received in excess of $35,000 each.

Mr. Speaker, it appears to me that these large checks to rich corporations is putting the cart before the horse. They are not the ones who are pulling the load. The fellows who deserve our attention and help are the men who live on the farms; whose hours and wages are not fixed by law, but who labor from daybreak to sunset, in rain or sun, heat or cold; who are the best customers of our factories; who burden their Government with less criminal costs than any other group and who are most dependable in peace or war. Benefit checks should go only to those who actually live upon farms and whose chief income is from the farm. The farmer is our only producer who delivers his products to town where he inquires, "What will you take for your goods and what will you give for mine?"

PARITY FOR FARMERS

Mr. Speaker, I have favored parity for the farmer. And I will say further, if it is constitutional for the Government to fix minimum wages and maximum hours for some workers, it would be constitutional to fix a minimum price on products of the American farm. Let us think less about lending, leasing, and giving to other nations and more about our own—"He that provideth not for his own hath denied the faith and is worse than an infidel."

Each year under the New Deal the number of employees in the Department of Agriculture has increased by thousands while the farmer's plight has grown worse. I ask in all seriousness, is the New Deal more interested in regimenting the farmers than in improving their condition? Thousands of Missouri farmers would answer "yes" to such question. If you want to know the reason, investigate the acts of men on the Federal pay roll who tried to force through the Missouri Legislature House bill 565. More than 1,600 farmers, representing 66 counties, quit their harvest fields on June 24, 1941, to tell the Missouri Legislature that they would not stand for the dictation provided by that bill.

It is infamously unfair for any agency of the Federal Government to say to the people of a State that "unless you do thus and so we will withhold certain benefits." Missouri is one of the States that has paid more money into the Federal Treasury than it has taken out each year under the New Deal, and Missouri is displeased over so much talk in Washington about dictators abroad while the executive department of their Government constantly demands more power. Let our leader consider the "beam in his own eye."

This administration, having miserably failed on handling domestic problems, seeks to take the Nation into war in an effort to cover up its tragic mistakes. National problems are grave and made graver because of the confusion in which so many of the people have been thrown by the synthetic war hysteria produced by artful manipulation of emotions and fears. The propaganda which is driving the country to war and to the destruction of its free political and economic system is powerfully organized, with various groups and interests willingly or unwillingly playing their part to execute the great conspiracy.

DEPARTMENT OF AGRICULTURE AN EXPANDING UNIT

Under the New Deal the Department of Agriculture has not only broken all records for peacetime spending, but its profligate waste has been attended by the most remarkable expansion of the Department as well. To illustrate the mushroom growth of the Department, the following figures are presented: In 1929 the Department's appropriation was $171,147,000, and the number of employees but 16,795. By 1939 the employees had risen to 107,712, and the expenditures for that year were $1,524,221,133. Due to the transfer of several bureaus formerly within the Department of Agriculture to other agencies and departments of the Government, employment in the Department as of December 1940 stood at 81,886, and the expenditures for the fiscal year 1940 were $1,403,500,000.

FARM INCOME BELOW NORMAL AVERAGE

While the huge outpouring of cash and credit in favor of agriculture was expected to solve most of the farmer's economic problems, the results have been extremely disappointing not only to the farmers themselves but to the gentlemen in Washington who planned it that way.

The cash farm income, which between 1920 and 1930 averaged about ten and one-half billion dollars, has averaged about $7,000,000,000 in the years from 1931 to 1940, which included benefit payments of over $3,000,000,000 during the decade.

REGIMENTATION

As the average farm income is reflected in the general prosperity of the Nation, so too have the efforts to regiment and restrict the farmer been reflected in repressive legislation applied to other phases of the national economy.

While the farmer has been the innocent victim of a blitzkrieg by the departmental bureaucrats from Washington, the rest of the Nation has been quietly taking it on the chin, thinking meanwhile that their submission to certain types of state socialism was necessary to bring order out of chaos, that the farmer might be saved. Thus it came about, that the workingman in the city had the price of his bottle of milk fixed, not by the economic laws of supply and demand, but by the Department of Agriculture's bureaucrats and the business agents of the milk-wagon drivers' unions.

BUREAUCRACY ATTENDANT WITH WASTE

The growth of the Department of Agriculture from a comparatively small department of the Government employing less than 17,000 persons, to one of the largest has been told. However, the story of the waste, lost motion, and inefficiency connected with the Department's activities will possibly never be told.

Every operation in connection with the Department is so bound up with red tape that the following news item from Greenville, S. C., well illustrates the point. A colored woman who received a 3-cent check from the A. A. A. took the check to the bank and was informed it would cost her 10 cents to get it cashed. The colored lady remonstrated, said the amount was too small and finally walked out of the bank.

Now you folks can imagine what it cost the Government to audit this colored woman's claim for benefit payments, make out the check and go through all the other formalities necessary in mailing it to her. But you have no idea of the red tape still to be gone through if, in the course of time, this check does not turn up so the books can be balanced and the account closed in Washington.

THE FARMER HAS BEEN MADE A GUINEA PIG FOR EXPERIMENTS IN SOCIALISM, INTERNATIONAL TRADE, AND POLITICS

During the last 8 years all kinds of new schemes have been tried, always with the hope that a way will be found to solve the major problems facing the farmer. Sad to say, none of the schemes so far has been generally effective. And, while some of them might have worked by a fair trial in a limited area, it will be readily understood that as long as one department of the Government is actively promoting world trade on a reciprocal basis, the farmer who is forced to compete in the domestic market with foreign producers will always be in hot water.

While we have been importing large quantities of agricultural commodities we have been exporters on only a limited scale. Much of the export business, such as our cotton trade, has been on a subsidy basis or by barter agreements as was the case last year when we exchanged cotton

for rubber and tin with Great Britain. Both our export and import business has been severely curtailed by the present war in Europe. Of food products alone our exports for 1940 totaled $240,000,000 as compared with $312,000,000 in 1939. The dollar, however, is not an accurate measure of quantities for imported foods entering the United States at the declared value of the country from which they originate. For example: If we buy $1,000,000 worth of beef or corn from the Argentine, at their low prices, the quantity is very great and the loss of market to the American farmer much larger than the sum spent indicates. In other words, $1,000,000 spent for corn in South America might mean loss of market for $3,000,000 worth of corn grown at home.

PURCHASING POWER OF AGRICULTURE

The Department of Agriculture for many years has issued bulletins and reports on price levels and indexes. In February 1941 a 1-point decline in the index of farm prices was recorded. Since that time there have been consistent advances due primarily to the increased consumer demands, resulting from public employment in the defense program and the buying of huge quantities of food products by various governmental agencies, including the Department of Agriculture. But defense spending will end eventually, and it will be found that little of a permanent nature has been done for agriculture.

AMAZING DISCLOSURE

On April 29 the Department of Agriculture issued a news release declaring that the all-commodity index as of April 15 stood at 110 percent of the 1910–14 level. However, while the price index was up to 110 percent of the 1910–14 level, the index of prices paid, interest, and taxes had also risen and stood at 129 percent of the 1910–14 level. The farmer thus was progressively approaching bankruptcy the more business he did under the present order.

FOR THE FUTURE

Mr. Speaker, if we are to maintain the American standard of living it is obvious that we must take immediate steps to protect the farmers of America in the domestic markets. The men and women who labor to produce the foods we eat and the fibers out of which our clothes are made are far too important to the Nation to be exploited or neglected for the benefit of the economic internationalists and the free-traders. I am thoroughly convinced that there is no place in the whole world, except in our own country, where it is possible now, or at any normal time in the future, that agriculture may be maintained at a high level and with a profit to those who engage in it. I personally believe that foreign trade in agricultural products can only be maintained on a subsidized or give-away basis. I believe this Nation's best course lies in reserving our own markets for our own producers, buying for cash the things we need but cannot produce, and selling our surpluses the same way. I, too, want to be a "good neighbor," but I have sense enough to know that friendship cannot be purchased. I shall support every measure which will benefit our farmers, for I believe that when we save the farmers of America from ruin we will also have saved our Republic from decay.

Mr. Hoover's Speech

EXTENSION OF REMARKS

OF

HON. ROY O. WOODRUFF

OF MICHIGAN

IN THE HOUSE OF REPRESENTATIVES

Tuesday, July 15, 1941

EDITORIAL FROM THE NASHVILLE (TENN.) GLOBE-INDEPENDENT

Mr. WOODRUFF of Michigan. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following editorial from the Nashville Globe-Independent:

[From the Nashville (Tenn.) Globe-Independent of July 4, 1941]

MR. HOOVER'S SPEECH

"There are those who argue that we are already in this war. The Constitution of the United States provides that Congress has the sole authority to declare war. It is equally their responsibility to see that this country does not go to war until they have authorized it.

"The only reason for not submitting the matter to the Congress would be that Congress cannot be trusted. Or that the people, through them, should not be allowed a voice. No President in a democracy should take that responsibility for there will be no unity or spirit in an executive war. If Congress decides to go to war, then we willingly give all; we willingly surrender all our freedom necessary to win that war. And until Congress shall by constitutional action declare war, no man in America may demand the end of debate on this issue of war or peace."

The above paragraphs are quoted from the notable and enlightening address delivered to the Nation over the radio on Sunday night, June 29, by former President Hoover. The words are as heartening to the God-fearing men and women of America, composing that overwhelming majority of the people who remain adamant to all of the attempts to get them reconciled to going to war, as they are disconcerting to the members of the blatant war party in this country.

And the war-party members need not assume that the words of Mr. Hoover do not carry weight. They carry weight not only with the great masses who do not want their sons butchered on foreign battlefields but also with thinking Americans who are aware of the downright hypocrisy and hooey in all of the arguments with which the leaders of the war party continue to insult the intelligence of the American people.

We never have had, and do not now have, any reason to be a participant in Europe's war, and as long as there are great leaders like Mr. Hoover expounding the kind of common-sense doctrine as that contained in his recent address, the people most certainly will dare to continue debating the issue of peace or war until they, through their Representatives, have taken the awful plunge into the war in Europe.

In this address of less than 45 minutes Mr. Hoover blasted away the froth and false pretense of the warmongers, showing not only that there are no ideological reasons for us to plunge into war but, what is more important, that this Nation is wholly unprepared to go into war with any hope that we either could bring the war to an early end or win it eventually. He likewise endorsed what is the contention of all Americans with ordinary common sense, that Hitler cannot invade and conquer the United States, nor can America, in cooperation with England, invade the continent of Europe and conquer Hitler.

Mr. Hoover disposed of the demagogic appeal that the warmongers make to us, urging war to prevent Hitler's new economic order from strangling the economic life of this country, by pointing to the fact that America depends upon her own people, here at home, for 93 percent of her national income. The warmongers think that we ought to send our boys to fight and die in an effort to preserve the little 7 percent of our annual trade.

The former President, impressed with the belief that a majority of Americans want to aid Britain as much as possible, thinks this can be done better by our staying out of war than going in; that we should turn over to Britain whatever ships we might have intended using to carry goods to Britain and let British people, and not American boys, run the ships for Britain.

Mr. Hoover's great speech was "played down" by the Nation's warmongering press, as was to be expected. But there was enough interest aroused in the speech, by previous announcements that it was to be made, to give the former President a great radio audience. And it was an audience that will redouble its efforts to make Congress not only retain its constitutional right to declare war but use its power to keep the Nation from drifting into an undeclared war.

If Congress fails the people in this great crisis, it is going to be terribly tough on all Senators and Congressmen who betray the trust reposed in them.

Let's Get National Defense When It Will Do Us Some Good

EXTENSION OF REMARKS

OF

HON. ROY O. WOODRUFF

OF MICHIGAN

IN THE HOUSE OF REPRESENTATIVES

Tuesday, July 15, 1941

Mr. WOODRUFF of Michigan. Mr. Speaker, charging unnecessary and inexcusable delay in the national-preparedness program, Representative JOSEPH W. MARTIN, Jr., of Massachusetts, minority leader in the House of Representatives, demanded an immediate speed-up in national-preparedness production. He called for more efficient planning, unified control, elimination of red tape, and an end to the concealment of mistakes, together with the eradication of all other causes which are hamstringing preparedness efforts.

Representative MARTIN of Massachusetts said:

The administration has been given ample power and ample appropriations by the Congress to carry out our national preparedness program. The program is not being adequately carried out.

A subcommittee of the House Military Affairs Committee, which certainly cannot be said to be hostile to the administration, has been compelled by its findings to report bad management, bureaucratic interferences, poor planning, red tape, and lack of unified control as causes of highly dangerous delays in the building of our military, naval, and air programs.

It has been stated by authoritative sources, and, so far as I am aware, has not been refuted, that the administration in a full year of armament effort has produced a volume of arms which Germany's Europe could turn out in less than 2 months, and England in about 3 months. It has further been charged, and remains unanswered, that while ships, planes, tanks, guns, and munitions are needed in vast quantities, these supplies, except for planes, "are flowing out of American factories today in a mere trickle."

The funds available for the building of the preparedness program now amount to $45,000,000,000. This $45,000,000,000, beside including aid for Britain, is for a two-ocean navy, equipment for an army of 1,400,000 men, and an adequate supply of airplanes of the proper military types. Contracts amounting to about $18,000,000,000 have been let. It also appears American industry in a year of effort has turned out $7,000,000,000 worth of production, including British as well as American orders. Of this amount it is reported less than $3,000,000,000 has been spent for guns, aircraft, ammunition, and ships, and the other implements and supplies which would be vitally necessary in a shooting war. The rest of the seven billions went into cantonments, clothing, nonmilitary construction, and other activities merely preliminary to preparedness.

Entirely aside from any question of whether or not we should participate in a shooting war, it remains a fact it would be a crime of inexpressible magnitude to send American boys overseas without adequate equipment, supplies, or even training with which to defend themselves, let alone to win any battles. It would be unspeakable to expose our boys, helpless to defend themselves, to slaughter by the murderous fire of airplanes, such as were the French, Belgian, and English boys, and the soldiers of other countries.

Every straight-thinking person must realize our first job under any circumstances and in the light of every logical consideration is to achieve impregnable national preparedness and a fully mechanized, trained, and equipped army. We must hunt down all subversive elements and "fifth columnists" and throw them out of the preparedness program. Bureaucrats cannot be allowed to impede national preparedness. The Nation should be led and guided to unity and singleness of purpose in the building of the preparedness program and an adequate supply of training and fighting equipment for our boys. Informed Members of Congress know this is not being done now. They know the lag in the production for national preparedness is a matter for grave worry. Nothing should be permitted for a moment to stand in the way of the immediate economical and efficient building of an adequate, modern military and naval force. The military and economic security of the Nation must be made the paramount consideration. Mere appropriations are not achievement.

We demand the Nation be informed of the facts concerning the real state of the national preparedness. We demand the President take such steps, under his present authority and appropriations, as will break the bottlenecks, free the log jams, and get our national preparedness program moving as it should. The Nation expects this to be done.

A Letter Which the New York Herald Tribune Refused to Publish

EXTENSION OF REMARKS

OF

HON. GEORGE HOLDEN TINKHAM

OF MASSACHUSETTS

IN THE HOUSE OF REPRESENTATIVES

Tuesday, July 15, 1941

LETTER OF ARCHIBALD F. STEVENSON, NEW CANAAN, CONN.

Mr. TINKHAM Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following letter sent recently to the New York Herald Tribune, which was rejected:

To the New York Herald Tribune:

In a stirring speech before the conference of Governors at Boston the other night, Frank Knox, Secretary of the Navy, called for immediate action on our part "to clear the Atlantic of the German menace."

"Now is the time," he said, "to put in motion the huge machine we have been building since the war began. This is true," he added, because "we can insure, beyond a shadow of a doubt, the defeat of that pagan force, and insure a victory for a Christian civilization." (New York Herald Tribune, July 1, 1941.)

There are very few who doubt that the courage of American manhood, our genius for production, and our great natural resources could ultimately win for us a military victory over the Axis Powers or any other combination of nations. But I fear only wishful thinking can make us believe that such a victory would be a triumph for Christian civilization.

As I listened to Secretary Knox, my memory evoked an almost forgotten picture. It was the slender figure of Woodrow Wilson, standing before the assembled Houses of Congress that fateful April day in 1917, when he called for a declaration of war against imperial Germany.

I could almost hear him say: "But right is more precious than peace, and we shall fight for the things we have always carried nearest our hearts—for democracy, for the right of those who submit to authority to have a voice in their own government, for the rights and liberties of small nations, for a universal dominion of right by such a concert of free peoples as shall bring peace and safety to all nations and make the world itself at last free."

These inspiring words expressed the faith which steeled the hearts of American doughboys to meet the cruel ordeal of battle in Flanders and in France. It seems almost an ironic sacrilege to repeat those words today. For after 8,538,000 soldiers died in service during the World War and some 21,000,000 more were wounded, after billions in money were expended and untold wealth destroyed, after Austro-Hungary and Turkey were dismembered and Germany rendered impotent, what was the harvest of all the suffering and sacrifice? It was military victory. But did it bring a better world to live in? You know that it did not. The net tangible results seem to have been the firm establishment of Stalin in Russia, Mussolini in Italy, Hitler in the Reich, and a host of lesser despots in the four quarters of the globe.

These were the cruel and unexpected fruits which blossomed and ripened on economic systems that had been ruined by that war. And the seeds of that fruitage are like the dragon's teeth of old, falling upon the blood-soaked soil of bankrupt Europe, have now sprung up once more as hosts of armored warriors bent on new destruction. The last World War, which most of us believed would herald a new era, ruled by justice and freedom, brought only tyranny to the greater part of Europe and painful economic depression to those countries which were fortunate enough to escape the yoke of dictatorship—our own included.

Nor should we forget that all this happened to a world in which, before 1914, public debts were almost negligible everywhere, coffers of private enterprise were filled to overflowing and the thrift of individuals had heaped up resources seemingly inexhaustible. Indeed, in those halcyon days we had enjoyed the security of peace and plenty for so long we had forgotten that human freedom is indissolubly bound to the fruits of labor held as private property. We did not realize that when a people's savings are devoured by a war, liberty is always swallowed up along with them.

In the bewilderment and despair of general poverty, factions inevitably arise and, as President Washington said, "the disorders and miseries, which result, gradually incline the minds of men to seek security and repose in the absolute power of an individual; and sooner or later the chief of some prevailing faction, more able or more fortunate than his competitors, turns this despotism to the purposes of his own elevation on the ruins of public liberty."

These words explain the triumph of every modern dictator. There could scarcely be a clearer warning to those of us who still think only in terms of military victory or defeat. For always beyond the battlefield there lies the "reconstruction" and no stable political edifice for the housing of free men can be erected without the bricks and mortar of private property.

Those among us who, like Secretary Knox, wish to cajole and frighten the rest of us into war, seem to think we can make a better fist of it this time. If the last war made the world worse, this one, they say, is going to make it better. Do you really believe that? I do not.

In 1917 America was a strong and united Nation. No shadow of doubt had crossed the minds of our citizens that our way of life was good. No collectivists then lurked in high public places, secretly at work to gather the country's political and economic power into their own hands. Our whole national debt was then little more than the annual debt service of it is now. For more than 2½ years the wealth of western Europe had been pouring into our coffers. We were rich, prosperous, and confident. By going to war then we took small risk of losing our heritage of freedom. But times have changed. Our leadership has changed. A new philosophy of personal power is loose in the world, whispering a promise of unlimited authority to every ambitious ruler, whether he be a premier or a president. We begin to see it taking root even now in Washington.

Our national debt is already more than forty times what it was in 1917, and it is growing with stunning rapidity. Our Army is as yet untrained and ill equipped. Our Navy is not large enough to defend two oceans. We are unprepared financially, morally, or physically to meet the strain of modern war. And so, if the struggle of 1917–18 brought us the worst economic depression we have ever experienced—war today may well bring on our utter financial ruin. In that wreckage of our economic system, who dares to say that the minds of men among us will not "seek security and respose in the absolute power of an individual" just as the people of Russia, Italy, and Germany did in like circumstances?

I am no pacifist. If we are set upon, come what may, we must and will defend ourselves. But we have not been attacked, though we have constantly invited it. Nor is there much real danger of it, if we arm ourselves as only we can arm when industry is free from political interference. For we must not forget that dictators, like ordinary folk, use up their strength and pass off the world's stage from sheer exhaustion. That, I think, is Hitler's ultimate destiny, whether we intervene or not. Hitler is no superman and the Germans are not supermen, either.

But if we hate Hitler more than we love freedom—if the destruction of the Beast of Berlin seems worth the utter ruin of America and the loss of every vestige of our liberty, then by all means let us enter the war now. If we do so, let it be with our eyes wide open, knowing that we are not defending democracy, we are not making the world a safer place to live in, and that our victory will not be a victory for "Christian civilization."

No—if we enter an unprovoked war, even the oldest man among us on that fatal day may well live to see freedom guillotined in America, just as liberty has already been crucified abroad.

ARCHIBALD E. STEVENSON.

NEW CANAAN, CONN., *July 2, 1941.*

Grand Coulee Dam Ready to Provide One-Sixth of Existing Power Shortage

EXTENSION OF REMARKS

OF

HON. CHARLES H. LEAVY

OF WASHINGTON

IN THE HOUSE OF REPRESENTATIVES

Tuesday, July 15, 1941

Mr. LEAVY. Mr. Speaker, we have repeatedly been told that there are two outstanding bottlenecks in our national-defense program. One is electrical energy, and the other is light metals, to wit: aluminum and magnesium.

EIGHTEEN GIANT GENERATORS AT GRAND COULEE

Out in the far Northwest, in the State of Washington, the Government is now completing the construction of Grand Coulee Dam, and the mighty Columbia River is actually harnessed. Provision has been made to ultimately install 18 giant electric generators, each with a capacity of 108,000 kilowatts. Ample water now flows and has flowed for centuries down the Columbia River at the point where Grand Coulee is constructed to drive these giant generators night and day at capacity. One generator will be in production in August of this year, and two more by January of next year. Bids have just been accepted for three additional generators, which will be installed in 1942, at which time there will be generated at Grand Coulee Dam 650,000 kilowatts of electrical energy, which will be more than one-fiftieth of all the electrical energy generated in the whole of the United States. If the 18 generators provided for at Grand Coulee Dam were installed, they would be generating more than one-fifteenth of the total electrical energy now consumed in the Nation.

ALL GENERATORS SHOULD BE INSTALLED

Through the years that I have been in Congress I have kept up the fight to secure appropriations to hasten to completion and full utilization this mighty power project on the Columbia River, which is located about 85 miles west of Spokane in my congressional district. The dam itself is now practically completed, but we are far from making full use of the energy that can be secured there.

In our frantic haste to properly prepare this Nation in its defense program we find that we will be short from 5,000,000 to 10,000,000 kilowatts of electrical energy within the next 3 years, and we have been appropriating millions and millions of dollars for the construction of steam plants and the installation of new hydro projects in various parts of the Nation, but have shortsightedly stood by and made no provision to bring in an additional 1,300,000 kilowatts of energy at Grand Coulee Dam, where all that we would need to do would be to place the generators at the foot of the dam, where the falling waters from this marvelous river would create the energy.

TWO MILLION KILOWATTS BY 1943

I am hopeful that the various agencies in the executive branches of the Government will immediately take steps to see that the Columbia River is harnessed to capacity at the earliest opportunity. This could be done if the generators were now ordered and they could be finished and installed by 1943, and it would take care of almost 20 percent of the threatened power shortage. In addition to this it would produce power at only a fraction of what it costs to build new steam or hydro plants. In fact, the sale of the power from these generators to be installed, at existing Coulee-Bonneville rates, would amortize the entire cost of the generators and their installation within 2 years.

Mr. Speaker, with these facts, it is difficult to understand why there should be a moment's hesitation in proceeding with the full development of the generating features of Grand Coulee Dam.

For the purpose of pointing out just what our electric power needs are in the near future under our present defense program, I desire to make a part of my remarks an article by Bryant Putney, which appeared in the New Republic of July 14, 1941, and which is deserving of the most serious and thoughtful consideration of every person in America.

The article follows:

[From the New Republic of July 14, 1941]

SHORTAGE IN KILOWATTS

Events of recent weeks have finally made it clear to the public that the country faces a shortage of electricity, but the extent to which this shortage threatens our whole national-defense effort is not generally realized. Even if civilian consumption of electricity is severely restricted during the next year or two, deficiencies in power supply are certain to limit the expansion of production in some of our most vital munitions industries.

Hoping to avoid plant expansion, utility officials, like their colleagues in steel, aluminum, and other monopolistic industries, have refused to admit the possibility of lack of power, and in their efforts to conceal the truth have resorted to shameless subterfuges. C. W. Kellogg's now famous speech to the convention of the Edison Electric Institute early in June, in which he declared that "an allegation of power shortage is unwarranted," was only one in a long series of attempts by spokesmen for the industry to hide the fact that the restrictive policies pursued in the hope of higher profits have brought about a situation which is so critical that it menaces the country's security. At the time of his speech Kellogg was not only president of the Edison Institute and sometime chairman of the board of Engineers' Public Service Co., one of the utility holding companies which has bitterly fought S. E. C. regulation but also "consultant on heat, light, and power" to the O. P. M. Heaven be praised, he is no longer the latter. (The New Republic of July 7.)

The story of the shortage of electric power is buried in the charts and statistics of the Federal Power Commission. It constitutes a damning indictment of the utility industry. At the same time it reveals that the F. P. C. has shown little foresight and less aggressiveness in doing the work assigned to it by President Roosevelt when the defense program was undertaken in the spring of 1940—to anticipate and to recommend action to prevent the development of power-supply bottlenecks. More than a year ago the Commission set up a national-defense-power staff whose sole duty it was to do this job. With the shortage now upon us, the Commission has at last begun to act. But a broad program to deal with the situation has yet to be announced.

The peak demand for electricity in 1940, class I utilities, including both public and private plants, was a little less than 28,000,000 kilowatts. In its most recent report, made public in mid-June, the F. P. C. estimates the peak demand for 1941 at 34,000,000 kilowatts, and the peak demand for 1942 at 37,000,000. On the basis of these estimates, the utilities must prepare for an increased demand amounting to 6,000,000 kilowatts this year and an additional 3,000,000 next year.

As might be expected, the utilities consider the Government estimates much too high. In their own reports to the Commission, they forecast a maximum demand of 30,500,000 kilowatts for 1941 and 31,000,000 for 1942—an increase by 1942 of 3,000,000 kilowatts over 1940's peak demand, or only one-third of the increase predicted by the Commission. In the same reports, however, the utilities reveal that they are planning additions to generating capacity amounting to a total of 6,500,000 kilowatts in 1941 and 1942. This gives away their hand. It is inconceivable that they would prepare for a peak demand of nearly 35,000,000 kilowatts in 1942 if they took their own estimate of 31,000,000 seriously.

Actually the peak demand by the end of 1942 is likely to be, not 31,000,000 kilowatts, as estimated by the utilities, nor 37,000,000, as estimated by the Power Commission in its published reports, but considerably more than 40,000,000. The Commission itself is well aware of this possibility. It has been careful to point out that its own estimates are subject to revision from day to day. In its June report it observes that "the defense program has been expanded so rapidly that estimates of future load cannot be kept completely up to date."

On June 5 Leland Olds, Chairman of the Commission, estimated that from 10,000,000 to 16,000,000 kilowatts of additional electric capacity would be needed to permit defense industries to attain maximum production with manpower now available. This meant that if full employment were reached by the end of 1942, the expansion of industry alone would increase the demand to between 38,000,000 and 44,000,000 kilowatts, and that the total demand would be still higher because of the growth in domestic consumption resulting from a rising national income.

Less than 3 weeks later Olds again revised his figures upward. Appearing on June 23 before the House Rivers and Harbors Committee in support of the St. Lawrence seaway and power project, he declared that the additional capacity needed to enable this country to match Germany's production of war materials amounted to from 15,000,000 to 20,000,000 kilowatts. This would increase the total demand to be planned for to nearly 50,000,000.

That the need for power may reach 45,000,000 to 50,000,000 kilowatts by the end of next year is by no means improbable. To produce 1,600,000,000 pounds of aluminum—the minimum amount which the O. P. M. estimates is needed next year for military purposes—alone would require 2,300,000 kilowatts of capacity.

The chance that we will be prepared by next year to meet a peak demand of 40,000,000 kilowatts—much less 45,000,000 or 50,000,000—is remote. Although Kellogg told the Edison Institute convention that additions to capacity planned by the industry for 1941 and 1942 totaled 7,500,000 kilowatts the utilities themselves reported to the F. P. C. that scheduled new capacity amounted to about 6,500,000 kilowatts—3,400,000 in 1941 and 3,100,000 in 1942. If planned additions were made on schedule, the utilities would be able to meet a peak demand of 35,500,000 kilowatts by 1942. Actually, however, much of the generating equipment will not be delivered by the end of next year.

The production of turbines and generators for steam-power plants is one of the most critical bottlenecks of the entire defense program. Roughly two-thirds of the electricity produced in the United States is generated by steam plants and one-third by hydro plants. Three companies—Allis-Chalmers, General Electric, and Westinghouse—produce all of the turbines suitable for major steam-power plant expansion. In addition, they manufacture most of the steam turbines that drive American ships. Because of the extraordinary demands of our naval and merchant shipbuilding program, and because of shortages of machine tools and materials like steel forgings, all three of these companies are far behind on deliveries. Production at Allis-Chalmers was further delayed by the protracted strike last spring. Deliveries for 1941 will be at least 4 months late.

Under any circumstances, the production of generating equipment is a difficult and time-consuming job. For example, a machine tool known as a boring mill, used to finish the inside of turbine casings, may be tied up as long as 6 months turning out a single casing. Under ordinary conditions orders for generating equipment must be placed 18 months ahead. Under present conditions orders placed now could not be filled for from 30 to 36 months.

Total production of steam turbines for public utilities is estimated at about 4,000,000 kilowatts during the next 2 years. In addition to this steam capacity, some 1,250,000 kilowatts of hydroelectric capacity—most of it at the T. V. A., Bonneville, Grand Coulee, and Boulder Dams—is scheduled for installation by the end of next year. Some additions to capacity can be made also without installing new generators—by bringing present turbines and generators up to capacity through increases in boiler and condenser capacity. It is unlikely, however, that total additions to capacity by the end of 1942 will exceed 5,500,000 kilowatts. By adding this new capacity the utilities can meet a demand of about 34,500,000 kilowatts.

With a peak demand next year of 37,000,000 kilowatts—the present published estimate of the F. P. C.—the shortage at that time would amount to 2,500,000 kilowatts. If, as is likely, total power requirements should rise above 45,000,000, the shortage would amount to at least 10,500,000 kilowatts. This amount of generating capacity would have supplied more than the entire demand for electricity by residential consumers in 1940. Compared with a shortage of this magnitude, savings of an estimated 350,000 kilowatts from a 12-month system of daylight time would be minute, indeed.

In rationing blame for the shortage it is only fair to say that utility officials were in no better position than anyone else to foresee the enormous production program of the Government and the resultant growth in power demands. The private utility industry is to be blamed, however, for pursuing policies for a quarter of a century which made it difficult to produce additional power once the need for it became apparent. It is to be blamed also for refusing to admit the need for a large expansion of capacity months ago, when the broad scope of the defense program become clear, and for failing to discard immediately the restrictive policies which obstructed such an expansion. The industry is to be condemned for its efforts to cover up its own shortcomings by false statements to the public and phony reports on capacity and reserves to the Federal Power Commission. These latter sins come close to treason.

Experience of the T. V. A. and its competitor, the Alabama Power Co. demonstrates that utilities can increase profits by reducing rates and increasing consumption of electricity. A 55-percent reduction in rates brought about a 252-percent increase in residential consumption in Tupelo, Miss., after the T. V. A. began supplying the town with electric energy. Nevertheless, most of the private utilities have continued to operate on the theory that maximum earnings come from high rates on a small volume of business. They have opposed expansion during the war emergency because they feared that excess capacity after the war would threaten dividend payments.

The policy of resistance to expansion—at whatever cost to the Nation's security—has been dictated, not by the operating personnel in the industry, but by the financial interests which control utility holding companies. In a recent forthright speech to the Edison Institute convention, Edward C. Eicher, chairman of the S. E. C., pointed out that "It might be fatal to our national existence if we should experience the power shortages of the last World War." In some respects, he said, the task of providing adequate power for industry is more difficult now than it was then. "Prior to 1914 few holding-company systems had been created. * * * In the last World War the problems of the increased needs of power were solved primarily by true operating men whose interest was in production for service. Today the problem is complicated by the fact that the front-line operating men, those who really know the down-to-the-earth defense power needs of their own communities, are powerless to make decisions. The decisions must come from distant holding-company executives who at best are only remotely familiar with particular power problems and who at worst are selfishly refusing to do anything which they fear might weaken their own stranglehold on a scattered system."

An analysis of the recent reports of the utilities to the F. P. C. provides additional evidence that the private power companies have no hesitation in subordinating the country's interests to profit-seeking. Besides grossly underestimating future demand, these companies have doctored up their figures on capacity and reserves, in an effort still further to conceal the desperate need for expansion of plant. Between September 1940 and March 1941 the utilities increased their reported net assured capacity some 500,000 kilowatts by the simple expedient of reducing their reported required reserves by a like amount. This brought a mild reproof from the F. P. C.: "It is of course obvious that assigning higher values of dependable capacities to existing facilities and also decreasing available operating reserves are only apparent additions to the generating capacity of the country and do not represent real increases. Such practices, if carried beyond sound judgment, may prove dangerous to the defense program and inimical to the best interests of the country."

The timidity of the F. P. C. in dealing with the utilities is of less moment than its shortsightedness and procrastination in dealing with the power shortage itself. The Commission's national-defense power staff not only failed to propose definite measures for meeting such shortages as were foreseen, but, most important of all, it failed months ago to impress upon the public and upon Congress the fact that these shortages would be serious and that effective action should be taken immediately to forestall them. Figures in the Commission's monthly reports were listed according to geographical areas; no total figures to show the power situation in the country as a whole were given. Since the story could only be pieced together with the aid of an adding machine, it escaped public notice until the effects of actual shortages recently began to be felt.

Whatever the mistakes of the past, however, the important thing is to act now to remedy them. First, we should devise methods of expanding and speeding up our output of steam turbines and generators. Second, we should immediately begin to build hydroelectric plants at suitable sites throughout the country. The bottleneck in the manufacture of hydraulic generating equipment is less serious than the bottleneck in steam-turbine production. Five companies manufacture hydroturbines and generators—including Allis Chalmers, which builds both steam and hydraulic equipment. Not all of these manufacturers are now working at capacity. If equipment orders were placed now, it might be possible to make hydropower available in a number of places in 2 years or less. Construction of the proposed St. Lawrence hydroelectric development should be authorized without delay. This project probably would take 4 years to complete, but its capacity would be second only to Grand Coulee. Third, we should extend interconnections between power systems, in order to increase the dependability of existing power supplies. Such transmission lines would serve to reduce the amount of capacity that must now be kept in reserve for equipment break-downs, and would make it possible to supply some deficient areas with surplus power from other regions. Fourth, new defense industries should be located, and defense contracts allocated, with an eye to present and future power supplies. Finally, nondefense uses of power should be rationed where necessary.

If we take these steps at once, and all others that ingenuity can devise, we can reduce the shortage in kilowatts. If we fail to take them defense production will be stalled.

Constitutional Powers and Limitations Respecting the Military

EXTENSION OF REMARKS

OF

HON. JOHN J. SPARKMAN

OF ALABAMA

IN THE HOUSE OF REPRESENTATIVES

Tuesday, July 15, 1941

ADDRESS OF LT. COL. EDWARD CHAMBERS BETTS

Mr. SPARKMAN. Mr. Speaker, under leave to extend my remarks in the REC-

ORD, I include the following address by Edward Chambers Betts, lieutenant colonel, Judge Advocate General's Department, United States Army, professor of law, United States Military Academy, before a meeting of the Alabama State Bar Association at Mobile, Ala., Saturday morning, July 12, 1941:

At the risk of oversimplification, it may be said that the military constitutes the initial power of government and the ultimate power of government—initial, as the governing power in the hostile occupation of captured enemy territory; and, ultimate, as the governing power when all other power of government is impotent, either from domestic disturbance or hostile invasion. The exercise by the military of initial governing power is in pursuance of the laws of war, which impose the obligation on the occupying army of providing an orderly government in replacement for the government overthrown by the invading forces. The exercise by the military of ultimate governing power is in pursuance of the inherent right of self-defense enjoyed by all governments without constitutional or statutory grant, though sometimes confirmed and regulated by statute. The ancient "power of the county," evoked by the high sheriff's "posse comitatus" in defending his county against the King's enemies, was itself an exercise of such ultimate power of government—through recourse to the militia.

Thus regarded, the military and the powers of government it lawfully may exercise in peace and in war, in foreign or domestic, friendly or enemy territory hold much of interest for the bar—especially in these turbulent times, which yet may be more accurately rephrased trying times. Happily, and to our professional gratification the American bar is concerning itself most helpfully with aid of the Nation's military power, under the able leadership of Col. Edmund Ruffin Beckwith as chairman of the American Bar Association's committee on national defense. Respecting this, the Alabama bar may justly enjoy a paternal sort of pride in the fact that Colonel Beckwith, now of the New York City bar, was formerly a member of this bar, at Montgomery. Further interest in the efforts of the Government to insure the proper functioning of its military power is manifest by the American Bar Association, through establishment of a scholarship prize to be awarded annually to the cadet graduating No. 1 in law at the United States Military Academy. In this connection, please let it be noted that one of the 13 departments of instruction at West Point is the department of law, staffed with a professor, an assistant professor, and 7 other instructors engaged with the entire graduating class throughout each year—to the end that the Nation's future military leaders receive broad training environmentally suited to increasing the military leverage of their lives.

The Government's object, in respect of such instruction in law, is not to make its military leaders subtle disputants on legal niceties, but rather to insure their having a fortifying understanding of the forthright manner and the justifiable and courageous pride with which the military may exercise the authority entrusted it to insure that "domestic tranquillity" and to provide that "common defense" for which the American States became united under the Constitution. Perhaps I may do no better by my subject than to highlight for you this understanding which the Government thus seeks to give to its embryo Army officers at West Point of the sources and extent of military authority, the limits within which such authority may be exercised, the responsibility upon which the exercise of such authority may be invoked, and, finally, the relation of the Military Establishment to the executive, legislative, and judicial branches of the Federal Government and to the governments of the several States.

Without further caution, please understand me as speaking to my subject as limited to the Constitution of the United States and its military and as designating the United States Supreme Court when reference is made to the Supreme Court or the Court.

This initial power of government is commonly termed "military government"—the law of hostile occupation connoting governmental authority exercised by a belligerent over occupied enemy territory, the inhabitants and property therein, established and maintained by force of arms. Such occupation is a question of fact, to be distinguished from mere invasion, subjugation, and conquest. It does not transfer sovereignty or allegiance, but simply the power and duty to exercise some of the authority of a sovereign. Also, military government is to be distinguished from (so-called) martial law and the jurisdiction there involved in domestic territory—to which consideration will be given in our discussion of the military's exercise of the ultimate power of government. As has been remarked by the Supreme Court respecting military government, such governing authority "may do anything necessary to strengthen itself and weaken the enemy. There is no limit to the power that may be exerted in such cases save those which are founded in the laws and usages of war;"[1] to which may be added, further, save as the exercise of such authority may be qualified by limiting instructions from the President, whose authority as Commander in Chief of the Army, so being exercised, is large and extraordinary.

Though the military carries the flag with it in establishing such government—the Supreme Court held in the Insular cases that the Constitution (in its entirety), to use the lay vernacular, does not "follow the flag."[2] The authority of such government is invoked by military necessity and not by constitutional mandate; though, of course, all authority lawfully exercised in the name of the United States comes from the Constitution. Nor does the Congress attempt to legislate with respect to military government administered by our Army.

Military government under the United States—subject, of course, to the limitations of the laws of war (international common law—so to speak—treaties, protocols, etc.) may be exercised in varying forms and to differing ends. This is clearly illustrated by the unique fact that California was admitted to statehood without having had a territorial form of government. Under its military government, established by the Army upon the seizure of that territory from Mexico, a form of popular government by the people was inaugurated and administered with the aid of local officials and legislators, elected by the people under the supervision of the occupying military. This government culminated in the draft of a constitution, predicated upon which California was admitted into the Union as a State.

A military government, once established, endures until the occupying force exercising it is driven out or is withdrawn from the territory over which it has jurisdiction, or the civil authority of the government of the occupying force is established, or the authority of the vanquished enemy is reestablished by treaty and takes over in fact. It is not limited, ipso facto, by the cessation of hostilities, nor even a treaty of peace.

Such of the municipal laws of the occupied territory, respecting persons and property as the military deems expedient, may be adopted, or modified, and enforced by the military government. Likewise, the military may employ and utilize such of the established courts and other agencies of the vanquished government, for administering its military government, as it sees fit. Or it may employ its own tribunals for administering civil and criminal laws in their application to the inhabitants and property in the occupied area, and, such tribunals may be created and their jurisdiction prescribed, enlarged, or diminished at the will of the occupying military. Such options are matters of right on the part of the commander of the occupying force, and the administrations and practices issuing therefrom are upon the unqualified authority of the occupying force. Obedience to military government may lawfully be exacted of all inhabitants in the occupied territory. Likewise, all property within such area is subject to the authority of such government.

Historically, it may be of interest to note that, except during the Revolutionary War, United States territory has never been subjected to military government by a foreign power, save in the one instance of such government by the British at Castine, Maine, in 1814–15. This brief regime gave rise to the unique and interesting case of *United States* v. *Rice*.[3] (Incident to the War between the States Federal forces maintained so-called military governments over areas of the Confederate States. This was a purely domestic matter, however.)

A comprehensive delineation by the Supreme Court of the powers, responsibilities, and obligations of an occupying army, and the reasons therefor, may be found in the case of *Dow* v. *Johnson*,[4] supra.

So much for that phase of our subject. Let us turn now to consideration of the exercise by the military of the ultimate power of government, more readily recognizable as martial law—to use a conventional term by way of distinguishing it from military government.

A better understanding may be had of this phase if we bear in mind that the military is an arm of the executive branch of the Government, functioning under the President as Commander in Chief, who speaks usually through the Secretary of War: "The regular constitutional organ of the President for the administration of the Military Establishment of the Nation, and rules and orders publicly promulgated through him must be received as the acts of the Executive and, as such, be binding upon all within the sphere of his legal and constitutional authority."[5]

Martial law, or, to use a more descriptive term, martial rule, connotes temporary government by the military of a civil population in domestic territory as necessity may require. This authority of the military to protect the people in the enjoyment of an orderly government is equal to the need for such protection. Necessity both invokes and determines the extent and duration of such rule by the military exercising the Government's inherent right of self-defense against all enemies foreign or domestic.

Martial rule may properly exist in a particular locality, only when and where the machinery of the civil government has broken down and the courts are no longer properly and unobstructedly exercising their jurisdiction. In such a situation, and for the time being, a substitute is necessary to take the place of the deposed civil authority; and, as the only authority remaining available to the government, the military may lawfully govern until the civil government is restored to the proper exercise of its functions. Discussion of this phase of our topic would be incomplete without special mention of the famous *Milligan case*,[6] wherein the Supreme Court, in short, held that the executive branch of the Government could

not lawfully enforce its authority by imposing punishment—in that case, capital—upon a civilian convicted by a military commission for violations of law, committed outside the sphere of active military operations, cognizable before tribunals of the Federal judiciary open and ready for the transactions of their proper functions. The dicta of both the majority and minority opinions, in this five to four decision of the Court, have occasioned much continuing discussion—tending to give to martial law a significance scarcely recognizable as the law of governmental self-defense.

Martial law is a term of convenience, and characterizes no recognizable body of law either common or statutory. It does not occur once in the Constitution and only rarely in the great body of extant Federal Statutes—for instance, in connection with special provisions for the governments of Puerto Rico, Hawaii, and the Virgin Islands.

When the military power is employed in full martial rule of a civil community, over the inhabitants of which criminal jurisdiction is exercised, the municipal law of the impotent civil government is replaced by the martial law of necessity. Of a consequence, the military may have recourse to both preventive detention and punitive detention to enforce its authority, as do civil governments. Such punishment of civilians violating the military's authority may be imposed by military tribunals, such as military commissions and provost courts.

As the powers of a government are commensurate with the needs for its defense, military rule over a civil community may lawfully extend to exercising criminal jurisdiction over the inhabitants subject to its martial law, or be limited to merely restoring order in aid of the functions of civil government—either, or both, as necessity may require. In any of such circumstances the military may lawfully be employed as a regulating force, with authority to regulate equal to the necessity to regulate. And, since the military may properly be so employed only for the purpose of restoring the civil authority of the government, it may not lawfully be employed after such restoration has been accomplished.

Within such proper limits, the government may determine the necessity for using its military power, and the judiciary will not review such acts of state.[7] Likewise, the judiciary is reluctant to review the military's determination of the necessity for and nature of preventive measures—as distinguished from punitive measures—properly to be taken under the instant circumstances.[8] Speaking to these points, Mr. Justice Holmes said of military arrest and preventive detention:

"Such arrests are not necessarily for punishment, but are by way of precaution, to prevent the exercise of hostile powers. * * * When it comes to a decision by the head of the state upon a matter involving its life, the ordinary rights of individuals must yield to what he deems the necessity of the moment. Public danger warrants the substitution of executive processes for judicial processes." [9]

Let it be noted, that this is indeed the very essence of martial law.

Use of the military as a posse commitatus or otherwise for the purpose of executing the law, except when expressly authorized by law, has been forbidden, under heavy penalties of fine and imprisonment, since the act of January 18, 1878.[10] Passage of this Posse Commitatus Act was occasioned by the liberal use made of the Federal military by the reconstruction governments in strong-arm enforcement of harassing measures of oppression throughout the area of the then late Confederacy. The military's disciplined respect for the prohibitions of this act have at times occasioned some embarrassment to the Army because of a lack of understanding on the part of an indignant public of this reason for the Army's seeming lack of self-sufficiency and readiness to rely upon the civil police to cope with emergencies.

Complementing these initial and ultimate powers of government so exercised by the military, is the military's own power of self-discipline administered through its court-martial system—transplanted prior to the Revolution from England, where it had its origin in the "Kings Court of Chivalry," the "Court of Honor."

The jurisdiction to administer military justice is derived from the Constitution, international law, and the laws of war. It is not territorially limited, as is the jurisdiction of civil tribunals, by the venue of the offense charged, the place where the alleged offense was committed being of no consequence. As to persons, jurisdiction is dependent upon military authority to require attendance of the individual at his trial.

In our Army military justice is administered through the disciplinary powers of commanding officers, courts martial, and courts of inquiry in accordance with statutes (articles of war, etc.) enacted by the Congress pursuant to its constitutional authority to make rules for the government and regulation of the Army [11] and under the executive power of the President as Commander in Chief of the Army.[12]

Military courts martial, though no part of the Federal judicial system provided for in the Constitution, have a constitutional entity and a sphere of operation equal in dignity to and coextensive with tribunals of the Federal judicial system—to the full extent of their jurisdiction—and share with these tribunals the immunities of the Federal Government and its instrumentalities from subordination to authority of the States.

Courts martial are not courts of record, have no fixed places nor times of session, no inherent powers to punish for contempt, or to issue judicial writs or mandates, as in the case of civil tribunals. In legal contemplation, the judgment of a court martial is merely a recommendation until approved by the revisory authority—unless the finding is not guilty, when approval is not necessary to its effectiveness. Courts martial being parts of a self-contained system for the administration of military justice, it follows that, properly approved judgments of courts martial are not reviewable by civil tribunals of the Federal judicial system—save, only, when void for absolute lack of authority to try the individual or to inflict the punishment imposed, and this, because courts martial have limited jurisdiction as to persons, offenses, and punishments.[13] For, as has been observed by the Supreme Court, an army is not a deliberative body. Its law is that of obedience. No question can be left open as to the right to command or the duty to obey.[14]

The primary object to be served through military justice is the proper discipline of the military in aid of its training and administration. If patriarchal discipline by the commanding officer under the one hundred and fourth article of war, commonly known as company punishment, proves inadequate as a corrective, recourse may be had to courts martial—as a final resort.

In addition to such procedural and other differences inhering in and peculiar to military justice, the legal consequences of military status are to alter materially the individual's rights and obligations. Just how unique may be the change inhering in such status is emphasized by the fact that, as an army officer, one is liable to criminal punishment by civil courts for violations of the criminal statutes of the several States and of the United States and, in addition to punishment by the States, liable to punishment by military courts for conduct unbecoming an officer and a gentlemen—as adjudged by his contemporaries.

As we all know, justice as administered by civil tribunals in accordance with law is not always in harmony with the moralities involved—because, unhappily, the standards of measure established by the law are inadequate. In contrast, justice as administered by military tribunals is more nearly in harmony with the moralities involved—because, happily, "In military life there is a higher code, termed honor, which holds its society to a strict accountability, and it is not desirable that the standards of the Army shall come down to the requirements of a criminal code."[15]

As qualifying for the responsibilities of passing judgment and imposing punishment in aid of the proper discipline of the Army, in the instruction given in law at the academy, emphasis is placed upon exemplification of law as the science of human wisdom, the ability to judge soundly and deal sagaciously with facts, especially as related to life and conduct; and, as a rational philosophy, "founded upon principles of moral rectitude, modified, it is true, by authority and the habits of mankind, but never failing to do justice equally to all parties, without reference to the power and dignity of either." [16]

In conclusion, let us be reminded that, from the highest to the lowest, all ranks in the Army exercising military authority do so under the executive power of the President; and, of a consequence, it is especially important that military men be ever mindful that they do not exercise an absolute authority innate in the military, but rather that they only representatively exercise authority as trusted public servants.

Nevertheless, let it not be doubted that such initial and ultimate powers of government may be exercised by the military in peace and war, in domestic and foreign territory, in friendly and enemy territory, with entire reliance upon legal justification and supporting sanction of public opinion, if exercised in good faith (without apologetic timidity) with courageous caution, and a high-minded conscience for the just preservation of the authority of the United States and the integrity of its institutions. Finally, it is imperative that those of us so empowered exercise such vast authority with dignity becoming a sincere conviction that it imposes obligations rather than bestows privileges—noblesse oblige.

Proposed Joint Tax Returns of Husband and Wife

EXTENSION OF REMARKS

OF

HON. MARTIN J. KENNEDY

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Tuesday, July 15, 1941

LETTER OF BISHOP WILLIAM T. MANNING, OF NEW YORK, IN NEW YORK TIMES, TUESDAY, JULY 15, 1941

Mr. MARTIN J. KENNEDY. Mr. Speaker, under leave to extend my re-

marks in the RECORD, I include a letter written by Bishop William T. Manning, of New York, with reference to the provision of the pending tax bill to require the filing of joint returns by a husband and wife. I take this opportunity of bringing to the attention of the House the statement of this distinguished churchman because it is my opinion that the proposal presents a subject for most serious consideration, especially since it is a radical departure from all previous procedure. My mail in this connection further prompts me to note the opinion of Bishop Manning who undoubtedly speaks out of his broad experience as a high churchman and patriotic citizen.

The letter is as follows:

[From the New York Times of July 15, 1941]

TO THE EDITOR OF THE NEW YORK TIMES:

In this day of crisis for our country and for humanity, we must all of us, whether our incomes are small or large, be willing to bear our full share of whatever increase in taxes may be required for our defense measures and for the defeat of Hitlerism. We are paying now the heaviest taxes in the history of our country and we shall have to pay much more.

In the new tax bill as proposed by the Ways and Means Committee of the House of Representatives, however, there is one proposal which is so manifestly unfair, which is so reactionary in its implications, and which would be so harmful in its social and moral effects that I hope it will be eliminated at once.

I refer to the proposal that husbands and wives shall be compelled to file one joint income tax return instead of two individual tax returns as at present. This proposal turns its back upon all the progress that has been made in the status of women in recent decades and belongs to the age when women were not regarded as people and a married woman was not allowed to hold property in her own right.

This provision of the tax law would produce some additional money for the Treasury, but that is no defense for its flagrant injustice or for its antisocial influence and effects. This proposal is plain discrimination against those women, and today there are many who have or earn incomes and are married. It gives the unmarried woman or the divorced woman who has an income a definite advantage over the married woman who has an income. It forces the husband and wife to make a tax return which will carry them up into a higher bracket than each one as an individual would be in and thus greatly increases the amount of the family tax.

As has been truly said, "the joint return mandate tends to encourage divorce, celibacy, a mercenary attitude toward intended marriage, and in general a lower birth rate." If Congress retains this provision, those who have been divorced or who have refrained from marriage perhaps for selfish reasons, or who live in immoral sexual relationship, will be called upon to pay far less to the Government than the married couples who in their faithfuness to the obligations of the home and family are the strength and mainstay of our life as a nation. It is the policy of all enlightened peoples to favor and encourage marriage, but if this proposal is enacted the United States will be found discriminating against the stability of the family and the home.

In its resolution adopted on June 12 the Ways and Means Committee specifically expreases its approval of mandatory joint returns for husband and wife, "if living together." The quotes are mine, but the sinister implication of the words is plain enough. This provision, if enacted, will say to married couples that their tax burdens will be lighter if they break up their homes than if they live together.

If there are some husbands who will seek to reduce their tax by ostensibly giving part of their property to their wives, meet this by fair measures—not by penalizing all the married women of our land who have or earn incomes of their own.

Let us call upon all our people to do their part and to bear their full share of the tax burden which Hitler and his partners in crime are forcing upon us. But let us not enact a law which will compel a man and woman who are married—and who stay married—to pay a heavier tax than they would have to pay if they were unmarried or if they were divorced.

This proposed measure is contrary both to moral principle and to public policy.

I hope that the leaders of all churches, and the people of all churches, Catholic, Protestant and Jewish alike, will express themselves in opposition to this retrogressive, inequitable, and indefensible proposal.

WILLIAM T. MANNING,
Bishop of New York.

NEW YORK, *July 14, 1941.*

Improvement of Navigation on the Ouachita and Red Rivers

EXTENSION OF REMARKS
OF
HON. NEWT V. MILLS
OF LOUISIANA
IN THE HOUSE OF REPRESENTATIVES

Tuesday, July 15, 1941

STATEMENT BY THE CHAMBER OF COMMERCE OF MONROE AND WEST MONROE, LA., THROUGH G. D. HOLLAND, SECRETARY

Mr. MILLS of Louisiana. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following statement of the cities of Monroe and West Monroe, La., relative to the Ouachita and Red Rivers submitted before the Board of Engineers for Rivers and Harbors of the War Department in Washington, D. C., on Monday, July 14, 1941:

To the RIVERS AND HARBORS BOARD,
War Department, Washington, D. C.

GENTLEMEN: The Chamber of Commerce of Monroe and West Monroe, Ouachita Parish, La., requests your honorable body to make immediate authorization for the expenditure of $7,830,000 for the construction of a series of locks and dams on the Ouachita River to provide a 9-foot navigable channel on the Red, Black, and Ouachita Rivers from a point where the Red River intersects with the Mississippi River to Felsenthal, Ark., as stipulated in a report filed recently with the War Department by the Army engineers office in Vicksburg, Miss., and if possible to do so to erect additional locks and dams to provide an extension of this 9-foot channel to Camden, Ark., present head of navigation on the Ouachita River.

We are informed by the staff of engineers of the Vicksburg Army engineers office that a report on the Ouachita and Red Rivers filed by this office recently with your honorable body makes the following statement: "It is recommended that a project for modification of existing and authorized navigation projects on Ouachita River to provide a 9-foot navigable depth to Felsenthal, Ark., with an estimated construction cost of $7,830,000 to be classed as meritorious; that such a project be given further consideration in connection with the preparation of the authorized river report on Red River and tributaries; and that it be authorized only as a similar coordinated project for Red River proves feasible and justified."

The business, commercial, and industrial interests of Monroe, West Monroe, and in fact all of northeast Louisiana, are very much pleased with this report and recommendation. On February 3, 1939, the Chamber of Commerce of Monroe and West Monroe, La., filed a brief and offered oral testimony at a hearing held before representatives of the Army engineers office in Vicksburg, said hearing having been held in the city hall of Monroe, La., which alleged that House Document No. 196 of the Seventy-third Congress, second session, re the Ouachita River and its tributaries in the States of Arkansas and Louisiana, was seriously in error in making the following statement: "Extension of the existing navigation project is not economically justified" (p. 9, sec. 5, par. (b)).

The chamber of commerce held at that time that a channel of 9 feet in depth for the Ouachita River from the present head of navigation at Camden, Ark., to the mouth of said river was badly needed and was economically justifiable, and requested that immediate steps be taken to provide such a channel to meet present and future navigation needs.

The present channel of the Ouachita River of 6 feet in depth is entirely inadequate to meet present and future navigation needs on this river. A very large tonnage not now being handled on the river would move via water if the channel depth was adequate to handle through barges in connection with barge lines operating on the Mississippi River and its tributaries. The Mississippi River and all its tributaries on which navigation is maintained the year round are equipped with 9-foot channels with the exception of the Ouachita River. The natural result is all of the equipment used on the Mississippi River and its tributaries is constructed to operate in 9-foot channels at a maximum capacity load. The fact that the Ouachita River has only a 6-foot channel prevents the through movement of tonnage on the Ouachita River north to the Mississippi River and its tributaries to such destinations as St. Louis, Chicago, Pittsburgh, and other ports without unloading and reloading in New Orleans.

The cost involved in unloading and reloading from one size barge to another is of such an amount to block the large through-tonnage movements. It is economically unsound to load a 1,200- or 1,500-ton barge with 500 tons for a long trip of this kind.

If there were a 9-foot channel in the Ouachita River it would be possible to handle through-barge loads of paper and pulp to points like St. Louis, Chicago, Cincinnati, Pittsburgh, and other ports which are the large consuming centers of this product without the cost of unloading and reloading. The Mississippi River barge-line operators would then be in a position for their barges to move through the Ouachita River loaded to capacity, while a 6-foot channel which we now have will not permit an operation of this kind.

The Brown Paper Mill Co., Inc., manufactures pulpboard, paper, and other products at West Monroe, La., and must find a market therefor. This is principally in the northern part of the United States, including the eastern seaboard. To reach the latter territory, and meet competition, it is necessary to ship a considerable part of their products via barge on the Ouachita River to the port of New Orleans and transshipment via ocean steamers to North Atlantic ports.

There is also a considerable amount of potential tonnage consumed in Memphis, St. Louis, Chicago, and Cincinnati territories, which could be shipped via barge from West Monroe to points on the Mississippi and Ohio

Rivers. Present navigation on the Ouachita River makes this impossible, because the load of the barges is limited to 500 tons with the present 6-foot channel

If a 9-foot channel is provided and maintained the year round, it would be possible to operate larger barges with heavier loads, which would facilitate the movements of large amounts of paper at substantial savings over the present movement via water.

The establishment of a 9-foot channel on the Ouachita River would open up a development of a very large oil movement from the Arkansas field south and permit the movement of finished petroleum products north from Baton Rouge and other points on the Mississippi and Ohio Rivers. One large oil company has purchased the necessary site for a water terminal in Monroe but has withheld improvements on this site because oil cannot be profitably moved on the small barges now used on the Ouachita. A 9-foot channel would insure the completion of this project, which would be of benefit to the entire northeastern district of Louisiana.

The present locks and dams system on the Ouachita River has been in use for a number of years. There is no provision on the Ouachita River for making necessary repairs to the locks and dam equipment without closing the river to navigation, with a disruption of service, which is seriously detrimental to the use of the river. The creation of a 9-foot channel would, no doubt, create a secondary set of locks and dams on the river which would make it possible to maintain navigation even at a period when it is necessary to work on the locks and dams. Further, the present locks and dams are in a serious state of deterioration and considerable expense will be involved in repairing and modernizing them. This expense, if directed toward converting the system to a 9-foot channel, would be a long-range program of economy in maintaining navigation on the Ouachita River.

The River Terminals Corporation, which has operated barge service on the Ouachita River for a number of years, averages receiving from 50 to 100 inquiries per year on the handling of through barge-load movements from the northern points on the Mississippi River and its tributaries to Monroe. Due to the draft of the barges with the load involved, these movements could not be brought to a successful conclusion because of the cost involved in unloading and reloading for the complete trip. The fact that the 6-foot channel would not permit enough tonnage on the large barges used in the 9-foot channels to justify the partial loading of this equipment further precluded this movement. Another factor involved was the additional time required for this exchange from the large barge equipment to the smaller.

The size of the present locks in the Ouachita River are 55 by 267 feet. They are too small and too shallow to accommodate large-type barges. Too, they cause too much delay in breaking tows when any appreciable tonnage is being moved. The chamber recommends that, in addition to a 9-foot channel, the locks be made a minimum of 84 by 450 feet to take care of present-type barges used in standard 9-foot channels. This is not an excessive size when it is considered that locks on the Ohio, upper Mississippi River, and the Illinois waterway are 110 by 600 feet.

The present navigation facilities on the Ouachita River, when compared with its parent, the Mississippi, may be likened with an old-time narrow-gage railroad as compared with the present wide-gage railroad. The narrow-gage railroads lost their value and usefulness with the advent of the wide-gage road. The Ouachita, in its present condition, is practically useless save for small amounts of local tonnage. There cannot be any interchange of shipments with the Mississippi and Ohio Rivers which penetrate the heart of the East and Midwest, those areas with which we engage in traffic intercourse.

The chamber of commerce raises the question as to the plausibility of the logic employed in arriving at the conclusion that the past movement of tonnage on the Ouachita River has not resulted in savings which would create a reasonable rate of return on the investment of the United States Government in navigation facilities of the Ouachita River. The method of computation employed, we are reliably informed, in arriving at the resultant savings to the general public through the use of navigation on the Ouachita, was arrived at by subtracting the cost of freight moving by river and which was charged by the barge companies from the then current all-rail rate. The chamber holds that the correct method of computation which would reveal the real and intrinsic value in resultant savings to the general public should be to deduct the then current barge rates on commodities affected by river navigation from the former all-rail rate before navigation on the Ouachita River, assuming that the former all-rail rates were reduced by virtue of river navigation. These tremendous savings to the general public are not reflected in the calculations used by Army engineers in the determining of savings to the consuming public in transportation costs in the Ouachita River area.

A 10-year average of 1928 to 1938 shows that not less than 250,000 bales of cotton are produced per year in the area whose rate structure is affected by Ouachita River navigation. Before the barge line was inaugurated on the Ouachita River the all-rail rate on cotton from Monroe to the port of New Orleans was $4.05 per bale. This has been reduced to $1.15 per bale due directly to barge-line competition. This shows a saving to the farmers within a radius of 60 to 75 miles from Monroe of $2.90 per bale or more than $600,000 annually. Similar savings have been affected on other commodities. The chamber of commerce holds, therefore, that saving already affected to this area by the Ouachita River justify, from an economical standpoint, the Government's further expenditure to provide a 9-foot channel in the Ouachita River. This further thought, namely, that based upon the engineers' method of computing savings resulting from river transportation, the establishment of a 9-foot channel on the Ouachita River would result in increased tonnage on the Ouachita River to show the proposition to be fully justified from the standpoint of economic feasibility.

The President of the United States, after reading the report of the National Resources Committee on the economic conditions of the South, made the statement that this area, of which northeast Louisiana is a part, was the Nation's No. 1 economic problem. With Federal legislation leveling off and making uniform labor costs throughout the Nation, and with economic forces functioning to add uniformity to raw-material costs, the cost of transportation in the future is, more so than in the past, going to exercise a tremendous influence in the future location and maintenance of industry. With the South's present handicap as revealed in the National Resources Committee report, with high transportation costs, it needs, more than any other section of the United States, lower transportation costs.

It is common knowledge that the basic rate structure is higher west of the Mississippi River in the southwest freight-rate area than east of the Mississippi River in the southeastern freight-rate area. The Ouachita River penetrates an integral part of the southwest area, suffering tremendously now from a relatively high basic rate structure. To provide this area with the enormous benefits accruing from deep-water transportation of a 9-foot channel on the Ouachita River would be of tremendous benefit to this section, which needs it much more badly than sections of the country which already enjoy these benefits.

The chamber of commerce understands that the President of the United States has instructed the National Resources Committee to prepare a list of projects which are needed in the public interest, and which will be eligible to receive the expenditure of public moneys from the Federal Treasury at such time as the present national-defense effort of the Federal Government is terminated, to prevent a serious economic crisis in the immediate post-war period. In view of this fact and in view of the further fact that the erection of locks and dams on the Red, Black, and Ouachita Rivers to provide a 9-foot channel to Felsenthal, Ark., has been deemed economically feasible as the result of an exhaustive suvey by the Army engineers of the War Department in this connection, it is recommended that your honorable body make immediate authorization for the expenditure of necessary funds to provide these badly needed facilities. We understand that before appropriations can be made by the Federal Congress to provide necessary funds for these improvements that such an authorization is a necessary requisite.

We believe that your honorable body can be well justified in making these authorizations at this time. The survey referred to above has been made and definitely establishes the economic feasibility and justification for these proposed improvements. In the light of these facts we urge that you make this authorization at this time. We feel that we can depend upon the wise discretion of the Federal Congress as to whether or not immediate appropriations to provide these facilities at an early date are in the public interest. If the Congress decides that these appropriations should be delayed until the immediate post-war period, our position will be to support the Congress in this connection, and we propose not to press for these appropriations to provide these facilities until the present national crisis is passed.

The Chamber of Commerce of Monroe and West Monroe holds that immediate authorization for these proposed improvements will be in line with the expressed policy of our President, and also to be in line with the program and purposes and present efforts of the National Resources Committee.

In 1939 the Louisiana State Flood Control and Water Conservation Commission, under the direction of the Honorable Wade O. Martin, chairman of this body, a resolution was passed through Congress which consolidated for the first time in history the Ouachita with the Red River as regards future improvement of navigation facilities and flood control improvements of these two rivers. The motive behind this action was a plan to divert water from these rivers through specially constructed canals to certain rivers traversing the southern part of the State to provide irrigation for the rice-producing section of southern Louisiana. We are reliably informed that this proposal was based upon certain rice-producing interests of the southern part of this State, and that it was not based upon any basis of sound engineering feasibility, and that no accurate study to determine the economic justification of this proposal had been made by reputable engineers. It is the considered judgment of the Chamber of Commerce of Monroe and West Monroe that a serious error was made in the consolidation of the Ouachita and Black Rivers with the Red River for the purpose of joint future consideration for navigation for flood control improvements. We, therefore, urge and strongly recommend the complete severance

of the Ouachita and Black Rivers from the Red River by the War Department in future consideration of flood control and navigation improvements of the Black and Ouachita Rivers.

In taking this position we desire that it be expressly understood by both the War Department and the interests of our friends located on and in proximity to the Red River, that we did not take this position to discriminate in any way against the interests of the Red River. Frankly, we are of the opinion that such a connection with the Red River would be detrimental to the future interests of the Black and Ouachita Rivers. It is common knowledge that the Black and Ouachita Rivers lend themselves admirably to navigation improvements because of certain physical characteristics of these rivers. With a statement of further frankness in this connection, we believe that this statement cannot be made of the Red River. We further believe that the engineering difficulties involved in providing navigation facilities on the Red River will prove a handicap to our interests in bringing about the desired improvements on the Ouachita River should our river continue to be linked with the Red River. We prefer to have the Ouachita and Black Rivers stand, figuratively speaking, on their own feet and allow the Red River to do likewise.

The Ouachita Valley Association, an organization of individuals, firms, and corporations in South Arkansas, has been interested for a number of years in having the War Department construct dams, create reservoirs on the upper reaches of the Ouachita River and certain of its tributaries with the view of impounding waters in these reservoirs to create numerous hydroelectric, recreational, and flood-control benefits to that area and also to all of the area in Louisiana drained by the Ouachita River. The Chamber of Commerce of Monroe and West Monroe desires to support the position of this association and also the position of the El Dorado and Camden, Ark., Chambers of Commerce in urging that your honorable body give serious consideration to the needs for these proposals.

It is quite obvious that flood hazards will be greatly minimized throughout the entire watershed of the Ouachita River in Louisiana if flood waters of the Ouachita River and its tributaries are impounded in reservoirs at the headwaters of these streams. We desire to magnify the fact that all of the water which falls in north Louisiana and southern and southwestern Arkansas converges upon the cities of Monroe and West Monroe, creating flood hazards which have dealt devastating economic blows to our section in the past. While the cities of Monroe and West Monroe enjoy levee protection against flood hazards at the present, which we have not had in the past, at the same time we feel that it would be definitely to our interests to have these flood waters impounded at their source rather than to be allowed to descend upon us in the future.

In conclusion, we desire to submit the following two specific recommendations. First, that immediate authorization for funds be made to Congress to create locks and dams to provide a 9-foot channel on the Red, Black, and Ouachita Rivers from the intersection of the Red River with the Mississippi to Felsenthal, Ark., and, if possible to Camden, Ark. Second, that the Ouachita and Black Rivers be completely separated from the Red River for future consideration by the War Department for navigation and flood-control improvements.

Respectfully submitted.

CHAMBER OF COMMERCE,
MONROE-WEST MONROE, LA.,
G. D. HOLLAND, *Secretary*.

The American Way of Life

EXTENSION OF REMARKS
OF
HON. NOAH M. MASON
OF ILLINOIS
IN THE HOUSE OF REPRESENTATIVES

Tuesday, July 15, 1941

ADDRESS OF J. B. JOHNSON, OF THE NATIONAL MANUFACTURERS ASSOCIATION

Mr. MASON. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following address by Mr. J. B. Johnson, of the National Manufacturers Association, before the Ohio Federation of Women's Clubs at Lakeside, Ohio, on Wednesday, July 9, 1941:

I am very much pleased to have the privilege to address you briefly this afternoon on the subject, The American Way of Life. Our way of living is something we have always had, so we have always taken it for granted, something like fresh air and sunshine, but there is nothing self-perpetuating or automatic about it. It is like everything else that is inherited; someone had to work and fight for it originally, and we who have it now must likewise work and fight to keep it just like we must do everything else that is worth while. I believe it is time now, while we still can, to examine it and see what it is made of, because we may lose it if we don't all do something individually and collectively to keep it.

Our first great heritage is the principle of free government. More than 13 years before our Constitution was adopted the Assembly of the Colony of Virginia adopted this resolution: "No free government or the blessings of liberty can be preserved to any people but by a firm adherence to justice, moderation, temperance, frugality, and virtue and by a frequent recurrence to fundamental principles."

Certainly we could all profit by them if we put those principles to work and compared our actions now to those standards. There is the cornerstone of the American way of life that our forefathers laid.

Responsibility to our country in the minds of many people is a great thing as long as it remains in the abstract and doesn't affect them individually or interfere with business or the enjoyment of their daily life. That kind of patriotism does not meet present-day requirements because our responsibilities to our problems now must become individual, specific, and concrete if our country is to be kept on the map as the greatest Mecca of freedom of the ages and the emblem of that freedom kept floating in the sky till the end of time.

We as a nation seem to be confused about where we are, so it is time we stopped to think and take a good look at our position instead of rushing blindly around in circles hoping that somehow or other things will come out all right because we all know, if we stopped to think, that nothing can succeed unless everyone individually cooperates and participates to make it succeed. The point here is that under our American way of life and the system of free enterprise we have developed we must know what the principles of free government are and how to make our system of free enterprise work, and that's a serious job, because self-government is the most delicate mechanism ever placed in the hands of man. We have not yet proven that we know how to handle it or that we know how to operate it.

Nearly 25 years ago a prominent American said in the troublous times before the first World War, "A man is not a pessimist who, when he hears the roar and sees the funnel-shaped cloud, directs his children to the pathway that heads to the cyclone cellar; but the man is worse than a pessimist—he is a fool—who stands in front of a cyclone rejoicing in the manifestation of the forces of Nature, or faces a war-torn world expatiating on the greatness of his country and the patriotism and prowess of his countrymen and recognizes no personal responsibility to do something about it." Nature has a peculiar and an effective way of rewarding foolishness whether it finds it in men or in nations. Make no mistake about it, we are in a race between wisdom and destruction, and wisdom at the moment is behind. The thinking industry needs to go to work. That is absolutely necessary to keep our American way of life.

"About the only subject which vitally affects us all—and yet to which few give serious thought—is the science and the functions of government. Our farms and our factories, our mills and our mines, together with current news, much of it frivolous and little of it thought-inspiring, engages our attention, but statecraft as distinguished from partisan politics is accorded scant consideration. In the first place, we are too busy, and, secondly, we do not improve even our available time." It is my humble judgment that many of our problems have arisen because we have not taken time to think them out by the fireside and in the family circle of the home, where character and good citizenship must always begin. May I say to you in all seriousness that right now we need more mothers who will teach their children the Ten Commandments and more fathers who will teach their sons to work and spend less than they earn. That kind of people laid the cornerstone for the American way of life, and only that kind of people will perpetuate it.

Let's pause a moment to ask, "what is the American way?" In a nutshell it's this: Religious, political, and economic freedom. We worship as we wish, we vote as we wish, and there is no limit to our material accomplishments so long as we respect the rights of others. Simple, isn't it? But most of the world doesn't seem to understand it, and sometimes I wonder if we understand it ourselves, even though we talk a lot about it.

When I was asked to present this subject, I did not do it from any expectation that its preparation would solve any of our problems, but in the hope that some thinking might be started that will be worthy of the importance of these problems. I have long been convinced that a great many Americans have been thinking so much about their own business that they have forgotten to think about the very things that make their business possible. If our American way of life should be destroyed, it is not going to be destroyed by forces coming down the street with lethal weapons, but from the obvious neglect of principles and things which make our way of living possible, and by forces so subtle that they may not be seen until it is too late.

You may have a safe-driving record for as many years as you have driven an automobile, but you can lose it by going to sleep for a fraction of a second at the wrong time. The moral of this homely bit of philosophy is "Stay awake and keep interested in what's going on around you." The technique of the Trojan horse has vastly improved since the fall of Troy and the expression, "Beware of Greeks bearing gifts," has to be enlarged to include the subtle cunning of the twentieth-

century politician and the propaganda of the multitudes who are clamoring for selfish gain. It's time for us to think and watch. We have all too many alleged Americans who have no use for the American way unless it serves their own selfish purpose; it's fine only so long as they get theirs. You all know some of them, and so do I. The time has come when our motive must be not how much money we can make but how much we can do; the plus effort is what will keep the American way of life and keep us strong enough to defend ourselves.

We have been performing in this country a vast experiment in government which Lincoln so beautifully described in his Gettysburg address as "a Government of the people, by the people, for the people." That kind of government rests on a tripod of representative democracy, civil and religious freedom, and the institution of free enterprise. These institutions go hand in hand; they are inseperable. When one goes they all go. When one falls they all fall. All we have we have because we have had them. Our country has endured and will continue to endure as long as the people support these three theories of their Government and do not expect their Government to support them. "Allegiance to our flag and to the country for which it stands" does not state nor imply a responsibility on the part of the Government to feed and clothe the people and look after them. If it ever does, the moral fiber of this Nation will be so far destroyed that no recovery of freedom will ever be possible. The fundamental principles on which democratic government is founded are described by Montesquieu as "manliness, ability to carry our own burdens, and to dare to say what we think." If they no longer remain, nothing resembling freedom is possible. Self-reliance is the spring from which all greatness comes, and personality and integrity are the measure of that greatness.

Some of you may still think it can't happen here. That's just whistling in the graveyard, because it can happen here and it will happen here if all of us don't start to think seriously about other things than merely watching the wheels go round. Some time prior to the outbreak of the present war, Premier Daladier, of France, stated in a report as follows: "Actually that part of the French population which creates wealth, which labors for the future, is continually diminishing, while that part which directly or indirectly lives on the state is constantly growing. There is a steady fall in the number of Frenchmen who are ready to bear the risks of enterprise and creation." After it was all over and France had fallen, Marshal Petain said: "The spirit of pleasure has prevailed over the spirit of sacrifice. The people have demanded more than they have given. They wanted to spare themselves effort. Now, misfortune has come."

When the siren blows and the fire department goes down the street, we never pay much attention to it because it's always going to somebody else's home, but some day it will be ours if we never take any precaution to prevent the hazard of fire. It is just good sense to do that. Is it any less sensible to protect the right that we have to build a house when and where we want to, to have and to operate a business, and to work when and where we want to as long as we do it honestly, and to have and to do all the other things that as a free people we can do under our American system of free enterprise, which is the American way of living?

Is it sensible to protect a system that in our short history made it possible to use 69 percent of the world's petroleum in 1938 and 42 percent of its pig iron, 36 percent of its coal, 72 percent of its silk, 21 percent of its sugar, 56 percent of its rubber, 53 percent of its tin, and 48 percent of its coffee when we have only 6 percent of the world's area and only 7 percent of its population? The United States operates more than 60 percent of the telephone and telegraph facilities of the world, owns more than 80 percent of the motor cars in use, operates more than a third of the railway mileage. We produce 70 percent of the oil, 60 percent of the wheat and cotton, 50 percent of the copper and pig iron, and 40 percent of the coal and lead of the world. We own more than three-fourths of the monetary gold of the world and about the same of the world's banking resources. We have more than 14,000,000 home owners, 45,000,000 savings accounts, and more than 130,000,000 insurance policies. But, "What shall it profit a man if he shall gain the whole world and lose his own soul"? (Mark viii:36.)

Now that we have all these things we seem to be confused and divided. Why? Here's why. We accomplished all this under a certain set of rules of government and conduct. We are trying to hold our position under a different set of rules and we are confused because the rules have been changed and no one knows what all the new ones are going to be. We used to have a motto in this country, "United we stand, divided we fall." It's still a good motto to think about once in a while.

Let's be specific. Suppose you personally owned a business that had an excellent product, had a potential market for everything you could make and had the most ample supply of working capital for every need, and still went deeper in the red every year. Wouldn't you ask somebody "Why?" and wouldn't you do something about it? Permanent prosperity can never be attained or the American way of life can never be retained by government fiat.

We engaged in a titantic program of defense production that is going to tax our manpower, machines, and accumulated wealth to the uttermost. We are confronted with one of the most serious situations in our national history and we must face it and must surmount it, but most of all we must realize what the cost and the consequences are going to be. We must examine first, ourselves, and then all the people and all the things with which we have to work. This is an "all out" emergency for all of us.

This emergency is using up the wealth we have already created at an alarming rate instead of creating any new wealth, because all the money being spent on our defense program, necessary and vital as it most certainly is, is borrowed money that must be paid back from future effort in the form of ever-mounting taxes that everybody must help to pay. Make no mistake about this, what we are spending now will have serious and lasting effect upon everyone of us directly because the money that is being spent is the same kind of money for which we have to work and with which to buy food and clothes. Therein lies one of our greatest dangers, because our system cannot survive the strain of putting too many people on work which produces no new wealth, and the more dependence we have upon that kind of work the more control by government we can expect. Also, since all wars cause waste of accumulated wealth, we can expect our standard of living to be reduced, because the accumulated wealth that supports it is being siphoned away beneath us to the point where government may own and control everything. The American way of life will then have been lost.

We want to be very sure that in making the world safe for democracy we don't lose it at home. Whether we do or not depends upon how well and how wisely we think and act in this emergency. This is the acid test of the American people, American institutions, and of the American way of life. Other nations have been dissolved because they couldn't stand the test. It's time we returned to fundamental principles and to be sure we have what it takes and that nothing happens to us and to our system of living.

If more people had made a real study of history the problem might not be so difficult because history is an ever recurring but ever changing pattern of cause and effect with infinite variations of human emotions, but the main point is this—that civilizations have always traveled in the same direction and have always fell for the same general reason—confusion within the body politic brought a relaxation from the stern duties of life and citizenship and weakened patriotism. Look at France for one of the most terrifying examples in all history. When people forget the very things that made their prosperity and improved condition possible, and forget their religious freedom because there are too many other things that provide more amusement, they have arrived in the danger zone. The fingers of the world are on the pulse of our Republic right now; it's time for us to swear off on riotous living and make some new resolutions—and keep them if we expect to recover and preserve what we have. On January 4, 1941, the French Republic officially ceased to exist because they didn't see the danger until it was about to overwhelm them and then it was too late.

Let's now see how some of these things work and how they have always worked to undermine what has been created by struggle and sacrifice by a free people.

Mr. Henry Thomas Buckle, one of the most able historians of all time, suggested nearly a century ago that progress of mankind depends upon certain propositions, one of which is that it is necessary to develop and maintain a spirit of inquiry by which is meant that people develop and progress only as they inquire and investigate before they accept any statement or theory as fact. Let us inquire for a moment into this proposition and see how it affects us today and then think about our own situation.

First on the list and probably the greatest obstacle to free thinking is the systematic propaganda constantly carried on by pressure groups who want to get something done, or by others urging the subjects to do something without thinking. The urge to act without thinking fills almost every radio program, most advertising, and tons of it are circulated through the mails every day. There is so much of it that clear analysis is exceedingly difficult and yielding becomes a habit. Under such a condition almost anything can happen. Systematic propaganda is one of our greatest dangers today because it undermines the thinking power of the individual and it is then a short step to where the individual is told what to think. One of our great national faults is that people have gotten out of the habit of thinking and asking questions before they act. Let me say to you in all seriousness that one of the things that is a definite responsibility of our citizenship is that we must think and ask questions or propaganda will destroy our power to do so. There is no way to beat propaganda except by thinking for ourselves. It would be a great thing if we could vastly enlarge the State of Missouri of which Commonwealth it is said that the inhabitants thereof have to be shown. It is said that Aristotle, the great philosopher, in reply to a questioner who asked how he became so wise replied, "By asking questions." Present-day America could profit by his example. We must do it if we expect to retain our freedom.

The second proposition suggested by the historian I mentioned is that the protective spirit, by which is meant the notion that the people cannot prosper unless all their affairs are watched over and protected by the Government, is an enemy of civilization. If this theory is an enemy, and I am sure every thinking person is convinced that it is, that enemy is battering at the gates right now and right here at home. Maybe we had better look it over and see how it will work if it is permitted to.

I am sure you will recognize as the protective spirit some of the old perpetual-motion schemes—to get something for nothing.

The protective spirit is a subtle device of demagogues to gain control of accumulated treasure by the propagation of a species known as the "Gimmes" and we can see them already at work all over America. Historians and archeologists are still looking over the ruins left by the "Gimmes" in Egypt, Greece, and Rome, and the technique is always the same; it starts with the protective spirit, sugar coated with a promise of something for nothing and is put over because people don't think and ask questions. It is all done for the purpose of staying in power to distribute the largess. The whole scheme is so simple that a child ought to see through it but, unfortunately, it too requires just a little thinking. Maybe we ought to paraphrase the old nursery rhyme with this one: "The 'Gimmes' will get you if you don't watch out." It might then have a wider acceptance than an appeal to reason and wouldn't require as much thought and it might gain time—reason acts slowly.

The hope of getting something for nothing or reward without effort is sapping the moral fiber of the American people and self-reliance is giving way to the protective spirit because so many people seem to think that freedom comes from plenty. It doesn't. Plenty comes from freedom and no people can remain free if they depend upon someone else or upon government to keep them. Too many people want freedom from work instead of freedom to work.

Have I made the picture clear to you? If not, is it any clearer when it is pointed out that the wave of credulity, which is the direct opposite of the spirit of inquiry, and the culmination of the protective spirit in this country, up to 1941 has cost over $25,000,000,000 in the last 10 years, or about $200 for every man, woman, and child in the country? Suppose you figure out how much it has cost you. Or does it mean anything that the cost of government has increased over 1,000 percent while the population has been increasing 25 percent and there is no end in sight? How long do you think our system of free enterprise can last or how long can free America last with that kind of business going on? How long can any of us stand it or how long can any business stand it? Ask yourself seriously if this didn't happen because we didn't ask questions when we should have done so. In other words, we lost the spirit of inquiry. The next thing we did was resort to the protective spirit to cure the trouble in the hope that if the Government took over the job we wouldn't have to do it ourselves. The stronger government becomes doing that kind of a job, the weaker the people become in the supervision of their own affairs. If this continues long enough the people become so weak they lose all control of their government. All we need to do to see this process at work is to read the newspapers about events in Europe. We don't even need to depend on history to warn us because history is being made now for our benefit if we are wise enough to observe.

The protective debacle has put us in a position where we must charge off nearly $25,000,000,000 that prepared us neither for peace nor for war and as a result we are starting our defense program from a relatively weaker fiscal position than in any similar emergency since the Revolutionary War. Let us hope we really wake up in time.

When the confiscation of our accumulated wealth begins our type of civilization is passing out and can only be saved by a strong military government like Germany, and then liberty passes out. There is yet time for us if we think and act and learn from the disastrous experience abroad and that means to really think and work like hell. No nation or no man ever became great or stayed great by working only 40 hours a week and spending the rest of the time sleeping and playing; it just can't be done. The fourth commandment says: "Six days shalt thou labor." Longfellow, the poet, had rare wisdom when he wrote:

"The heights by great men reached and kept,
Were not attained by sudden flight,
But they, while their companions slept,
Were toiling upward in the night."

Floors and ceilings are great things, and we need them, but we need to be sure the floor is not something that keeps us from getting down to earth and the ceiling is not the top of a cage that stifles genius and ambition. Business and people will grow only when they can accomplish and accumulate; and it is a law of nature that when growth stops decay begins. For nearly 150 years we added to our national wealth about 5 percent per year, a growth unparalleled in the history of any nation, and then we stopped. Why? Here is an excellent place to begin an inquiry, and let it be an inquiry and not an inquest.

We need to refer to the principles that made us a great nation and to repent our political indifference if we are to survive, and I can think of no group more able, or in better position, to do it than you who are engaged in managing the American home. If you all take your job of being citizens and makers of citizens as seriously as we take the job of keeping our business or profession running we will never lose our American way of life. Let's all devote some time to the study of public questions and about the men in public office who carry on the business of the people and spend the people's money—our money; let's ask "Why?" once in a while when somebody wants something and teach your children to do the same thing. Also ask—as we businessmen do in our own business—"How much is it going to cost?" and "Is it worth it?" "Can we afford it?" That, it seems to me, is the way to help keep America free, and is the very essence of patriotism. Raising the stars and stripes on the Fourth of July is only the emblem of patriotism, not the proof. There is too much of this that compares with going to church on Sunday and forgetting every Christian principle the other 6 days of the week. Real love of country helped along by some conscientious effort at public service that will compare with the service devoted to private business and we can leave an America to our children that is a going concern that will reflect credit upon us instead of debts and taxes. What we need to do is to work and prosper instead of waste and suffer.

If the American system ever loses the confidence of its people to the professional politicians we're sunk; because politicians can never maintain our American way or our standard of living. Only a productive people under wise statesmanship can do it. This is because politicians produce no wealth, they only spend it, but wise statesmen operate like wise businessmen who spend less than they earn and build for the future. Confidence in, and support of, our system of living can perpetuate it if we observe instead of just look, if we act instead of just sit, and if we think instead of just hope. Our country can be held together so tightly by every one of us by taking our responsibilities of being a part of it so well that no one will ever try to bind us together by force because we are starting to fall apart, but we've got to hurry and we've got to know what to do and be industrious enough to do it if we want to keep our American way of life.

We must both know and act if we are to preserve America and the American way to ourselves and our posterity, but when dogmatic faith in the theory "Let the Government do it," and government and bureaucracy replaces leadership of wise citizens, when business can only operate during breathing spells or on borrowed money, the eleventh hour has arrived and our working capital and our American way is being liquidated. If our heads cannot guide our hearts and our acts, if we can't see that political freedom has made this great land of ours possible and with it our economic freedom that has made our standard of living possible, we will lose both of them and the Plymouth Rock of religious freedom will have to be discovered all over again. We must decide whether, in the words of Lincoln, "We shall meanly lose or nobly save this last best hope of earth."

What Kind of Social Security?

EXTENSION OF REMARKS

OF

HON. JERRY VOORHIS

OF CALIFORNIA

IN THE HOUSE OF REPRESENTATIVES

Monday, July 14, 1941

LETTER FROM WILLIAM ANDERSON

Mr. VOORHIS of California. Mr. Speaker, I include herewith a letter from a man who is blind. His words will be more powerful than mine as an argument for the principle of permitting people who receive blind pensions or old-age pensions to make small earnings by their own efforts without penalties being levied against them. California used to permit earnings up to $15 before deductions were made from the regular pension payments. She can do that no longer because the ruling of the Social Security Board intepreting language inserted by Congress in 1939 is to the effect that no State can permit any blind or aged person to make any additional earnings at all unless the amount of such earnings is deducted from the pension payments. The reasons this is wrong are given in the following letter more forcefully than I can give them. I want only to add that the passage of H. R. 4041 and H. R. 4042 would correct the situation for people like Mr. Anderson.

PITTSBURG, CALIF., *June 4, 1941.*

Congressman JERRY VOORHIS,
House Office Building,
Washington, D. C.

DEAR CONGRESSMAN VOORHIS: I am a blind man and am typing this letter with my own fingers.

At present I am receiving the California State aid for the blind and, along with a few pianos I tune each month, I make a respectable living. It is hard for a blind man to make a living by just piano tuning alone, as I have been doing this work for about 15 years, and such has been my experience.

I understand that unless the Social Security Act is amended by your bill that each State of the United States will cease receiving assistance from the Federal Government.

It is also my understanding that unless the act is amended by your bill that Senate bill 608 at the California Legislature will be passed prohibiting a blind person from making anything over the $50-per-month pension which they already receive.

Now, my problem is this, Congressman VOORHIS, I would be forced to receive the $50 per month aid and not have an opportunity to carry on with my piano tuning or to disregard the $50 per month aid and carry on with my piano tuning which falls a lot short of $50. I am a fellow of 39 years of age

and still have the spirit of doing my very best to improve myself at all times and with the California State aid and my allowing to make my $33 by tuning, I am able to live a decent life.

I have a number of blind friends who are also making a few dollars in addition to their State aid and will be in the same position that I am in unless your bill passes amending the Social Security Act. These people, like myself, desire being independent as far as it is possible to be so and unless we are all helped along this line, it is very hard. Even under the very best of conditions it is very hard for any blind person to compete with the sighted.

As you know, there are very few blind who need no assistance financially and the majority of us struggle along the best we can to get by in a respectable way. If we are helped to be more independent, the world would be much brighter to us.

I understand that your bill is before the Ways and Means Committee, and I believe that if each Member would realize the actual position of we blind that they wouldn't hesitate one moment but what they would pass upon it and right now.

I realize that you and all the Members are very busy people, and I know that every one of you are friends of the blind, and if you will realize our need I am sure that your hearts as well as your judgment will help by your bill being passed and amending the Social Security Act.

In closing, I wish you and all Members of Congress the best of health and kindness as well as success in all difficult problems which confront you.

Respectfully yours,

WILLIAM ANDERSON.

Addresses Rally of the Committee for a Jewish Army

EXTENSION OF REMARKS

OF

HON. JOHN D. DINGELL

OF MICHIGAN

IN THE HOUSE OF REPRESENTATIVES

Wednesday, July 9, 1941

ADDRESS OF PIERRE VAN PAASSEN

Mr. DINGELL. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following speech by Pierre Van Paassen, delivered at a rally organized by the Committee for a Jewish Army, in Manhattan Center, N. Y., on June 25, 1941:

We are living in what is unquestionably the most critical hour in the history of the United States since Valley Forge and the desperate winter of that year when the fate and the future of this Commonwealth swayed precariously in the balance. On the surface there are no indications of danger; the fields are green and the grain is ripening as it has ripened every year, the trains run on time, the church bells ring out on Sunday, and the laughter of little children is heard in the land. We may even say that prosperity has returned to the United States. The highways are crowded and everywhere there is a bustle and activity, an animation and a rush that makes us feel encouraged.

And yet something is wrong. And yet we cannot deny that we are living as under a somber cloud.

The consciousness that we are passing through a very grave crisis of western civilization has become well-nigh general, we may well say universal. True, there have been grave crises before. But always, when darkness was greatest there appeared men who came to announce the return of better things and better times: reformers and prophets, bearers and adherents of renaissance, rebirth, renewal, and reawakening. But these men, in those critical periods of history, pointed, without an exception almost, to past happiness as the symbol and goal of their present striving. They urged a restoration of former purity of morals, former respect for authority, former norms of well-being.

We do not deny the past. We know that we are the product of the past. But we know also this: A general return to the past is impossible. We cannot go back. There is only one road and that is the road ahead.

What is going on in the world today is first of all this: Hitler is conquering the British Empire. The European Continent has been subdued and is being integrated into the new economic order of nazi-ism. But the forces of Germany are beginning to spill over into Africa. The capture of the island of Crete means that flocks of bombing planes have been brought within close proximity of Egype and of the Suez Canal. There will be a terrific battle, but certain German newspapers have boasted that Hitler expects to be in Cairo and Jerusalem and in Morocco and Algiers before the fall. This would mean that the British will lose the Mediterranean and that their Empire is cut in twain. But it would mean a good deal more. The Mediterranean is a stepping stone, a springboard for new attacks in new directions. The road Hitler will take is known. He and his planning commission have announced it time and again with precision, with accuracy. Austria's capture was the first step to take. Czechoslovakia was the removal of a bastion on Germany's eastern flank to give her freedom of movement in the west. The invasion of the Scandinavian countries was the removal of a threat on Hitler's right flank for an attack on the Netherlands and France. Rumania was a preliminary step for the capture of Bulgaria and Yugoslavia and Greece. Crete is to be the jumping-off place for Egype and Palestine. The war against Russia is to capture an arsenal for totalitarianism prior to an attack in the Anglo-Saxon world.

If Egypt and Palestine fall in Hitler's hands, the march goes on. Where? To Irak and Persia and India in one direction. To Ethiopia and South Africa in another. In India, it is expected to form a juncture with the Japanese Army, now stationed in French Indo-China. From there the march will go southward, for an attack on the Singapore base from the landside. In Africa, with the collaboration of the Vichy Frenchmen and Spain, the objective is the two coastlines of that continent, at least the occupation of great bases, such as Tangier, Dakar, and Capetown.

Hitler has no power to engage the British Navy in a duel for the hegemony of the sea, so he does the next best thing, he marches around the oceans. He occupies the bases contiguous to the great Atlantic and Pacific shipping lanes.

In other words Hitler is defeating the British Navy with a land army. This is what is happening. You say: Well, so long as he has not beaten the British Navy, he will not control the seas. What use are navies when there are no ports to go to for munitions, and repairs?

More swiftly than most of us realize, a crisis—perhaps the final crisis—is nearing the armed conflict between the Nazi forces and those who resist that new order into which the Nazis plan to strait jacket us. With the entry of Russia into the war the anti-Nazi cause has overnight received reinforcements in manpower which, if fully utilized, may—I say "may" advisedly—tip the scale in our favor. Yet before we shall fight on even terms with the mighty Nazi war machine in the east or west, we will have to endure new disappointments and much suffering, and, as Winston Churchill puts it, blood, sweat, and tears.

I have always, ever since the very initial stages of this second World War, held the view that the decision of the war will be fought out in the Near East, over the evangelic hills of Galilee. There, on the historic plains and rocks and mountains whence has come much of the wisdom on which our threatened civilization is based, there will take place the ultimate clash between us and the evil forces of our time. There the fate of the British Empire may well be decided, and the very outcome of the present struggle thus hang in the balance.

And that is why the appeal for a strong, well-equipped Jewish army in Palestine is not a matter of concern for the Jewish people alone. For Jewish Palestine it is, of course, of vital concern. For the Jewish people Palestine is a matter of life and death. Everything that was built and rebuilt through years and years of toil and sacrifice, despite the many obstacles and much destructive interference, now stands in danger of being overrun and wrecked by Hitler. The very existence of the Jewish people is involved in that battle of Jerusalem.

But even more than this is at stake. Humanity, Christianity, the very ideals for which we are said to be fighting, are embodied in the hills of Palestine. Should the swastika men crash through this Biblical land and succeed in conquering the Suez Canal, the gateway to world conquest will be wide open for them. They will be on the very threshold of their final goal.

Yes, Palestine is in danger. The great work of redemption of the land and the regeneration of the Jewish people is threatened with disaster. And the cry is already being raised in those Jewish circles which are fanatically and almost psychopathically anti-Zionist that since the Axis threatens the Jewish homeland there is no more use in sending money to Palestine, for it is a wasted effort. Is it? Who is in greater danger, the Yishuv, the Palestinian Jewish community, or American Jewry? I do not know. But I know that if Palestine goes down will that not be a staggering blow to the British Commonwealth of Nations and hence to the United States? Is there not a clear sequence of relations between the position of Palestine and national position of America? Palestine is the key to the defense of the Suez Canal and the goal to the Far East. The Suez Canal is the key to the Mediterranean. The Mediterranean is the "to be or not to be" of the British Empire. The British Empire is the last bulwark between the United States and the Axis in its march to world power, which means in the word of Hitler himself and his brain trusters also control of the Western Hemisphere. Palestine, you say, is a long way off. The general staff of the United States Army does not think so. To America's military experts Palestine is a very vital element in their defense plans of this hemisphere, of this country, just as vital and important as the Panama Canal, or Alaska, or Hawaii. The military staff in Washington is today more concerned with the preservation of Palestine than the Jews of America.

No, this is not the time to slacken the effort to build Zion. This is the time to accentuate and increase and stimulate the work. For Palestine we must redouble, treble, and quadruple our efforts. We must show an intensity of feeling, a unanimity of sentiment that will overcome the obstacles that stand in the way.

Oh, that American Jews would understand what Palestine means to them, to all of us, to Christians also, that the rebuilding of Zion is for the surest instrument of their own regeneration and for the preservation of their children. I know there are Jews who know what Palestine means. They carry it there in their hearts. And they are the Sherith Israel, the saving remnant, the sacred root. But there are many who shrug their shoulders now, even now, after Czechoslovakia and Poland and Germany and Rumania and France and Holland. Forty years ago Herzl was offered Palestine by the Turkish Sultan for a million pounds sterling, the price of many a reformed temple or Jewish center, or Jewish club in this country. Herzl could not raise the money. Of what concern was Palestine to the German Jews who were as German as the Prussians, that klein Asiatisches Land over there in the backward Orient. And yet that little country, that despised land, that Asiatic backyard became a haven of refuge for 50,000 of the children of those German Jews. Had we listened to Herzl and bought Palestine when it was a wilderness and empty—at least we could have told Adolf Hitler to go to hell now and what's more we could be sure by now that the barbarians would not pass up their way to the Suez Canal which is the way to America. Is it any different today than in the days of Herzl? American Jewry is as apathetic as were the German Jews of 30 and 40 years ago.

Palestine, a haven of refuge. Yes; it is that, the only haven of refuge on that side of the water, a haven which took in more Jewish refugees than all the other countries combined in the last 2 years.

But Palestine is more than a haven of refuge. If it were not more than that, I for one would not be here today, nor have ever labored in the strengthening of its defenses. Yes; Palestine is more than that. The purpose and intention of creating a national home for the Jewish people in Palestine was and is—this was the view of the great philosophers of Zionism, Achad Ha'am, Aleph Beth Gordon, Bialik, Herzl, Vladimir Jabotinsky—the purpose was to have one place on earth where the Jew will be absolutely free, untrammeled in carrying out his social, economic, and religious and national aspirations, unafraid, not as Jews in America are of what the goyim will say. One place on earth where the Jew could not only live as a total human being but also set the stamp of his native Hebraic genius in all the manifestations of life.

And then the hope was and still is that in response to that free, unhampered Hebraic life in Palestine, Judaism all over the world, and especially in America where it is rapidly disintegrating and sinking to the level of a mere credal or denominational difference, that Judaism all over the world would reawaken and become once more a contributing factor to the sum total of our western democratic civilization.

That hope has not been dimmed. No; that hope, in spite of everything, is still being fulfilled. Bialik said to me one day in his home in Tel-Aviv, "So much love, so much sweat, so much blood has been poured into this soil of Eretz Israel that one of these days the womb of the earth will grow pregnant again and a prophet will issue. And it is a prophet we need in our time."

Yes, I understand the things that go on in Palestine make some Jews in America tremble, those Jews who are shamed and afraid of their own name. They are afraid to be identified with a national effort, a national home. They are afraid; the Irish are not afraid to be identified with the pathetic attempt to regenerate Eire, nor are the Dutch afraid to let themselves be heard in defense of Holland. The Jews are afraid. They have been following a policy of hush-hush. In nearly every large American city that I visited I have seen the same phenomenon, a handful of assimilationist Jews, haters of Zionism, rich men generally, taking up the role of the medieval batlonim and decide what is to be done in Jewish communal life, what causes are to be supported, with a niggardly, condescending attitude toward Palestine.

They would have us believe that Zionism is a dangerous thing; that to be a Zionist may lay one open to the charge on the part of goyim of dual allegiance, of un-Americanism, of divided loyalty. This said by Jews who consider themselves 100-percent American; who pound their chest in patriotic fervor; who are generally to be found in all the organizations and greeter clubs; and who imagine that they understand the gentiles and that the gentiles understand them and consider them fully equal, similar except for a none too different credal affiliation and for circumcision.

But I say to you, friends, no Jew is so un-American as the non-Zionist Jews. The gentile has ever formulated those accusations, not even Coughlin or the anti-Semites of the so-called Christian Front. Divided allegiance and divided loyalty. Don't they understand that the Jew who is a Jew foursquare, who says yes, the center of my cultural and national life is in Palestine. I am a Jew and a son of the Hebraic tradition that that Jew is infinitely more respected by the gentiles than the Jew who denies his past, his national spirit, himself, who pretends to be something which he is not. The gentiles know the Jew is different. They feel it. They would like to know why. Oh, yes; there are bad non-Jews who do not want to know anything about the Jews. But there are also millions of good goyim, good goyim whose holy land is also Palestine, who owe a deep and abiding spiritual allegiance to the Hebrew Scriptures and to the land of the Book. They are not ashamed of it.

Un-American I call the Jew who withholds from the growing civilization in America the contribution which he as a Jew, as a son of the Hebraic past, as a representative of a great religious civilization, could but does not make. In other words, I call un-American the Jew who impoverishes our American democracy by keeping silent on the subject of the new Hebraic civilization in Palestine, of which he should be the transmitter, the conveyor, the instrument of enrichment to our American people.

For what assimilationist Jews think democracy is? A conglomeration of animated Ford automobiles, turned out on the conveyor belt, all of the same pattern and design; human beings behaving as automatons, as puppets pulled by the string of a manipulator. Does not the greatness of a democracy consist in the very fact of diversity, in respect for diversity, in every group contributing to the sum total according to its own character, its own national genius, its own God-given talents?

To build Palestine, to build a new Hebraic civilization in Palestine, is a task patriotic and American not only because every President and the Houses of Congress have expressed themselves in the most favorable terms for the idea, although that would be enough, but because American civilization needs the beneficent influence and penetration of the ideals of Judaism. Have Jews nothing to give to America; nothing but negative values? What of the spiritual treasures you hold? Jews can enrich America, but not as imitation Unitarians or Kiwanis, but as Jews, sons of the prophets, blood kinsmen and spiritual heirs of Herzl, of Amos, of Akiba, of Jabotinsky.

The Jews of America must learn to lose their fear. They must cease apologizing for their existence. They must stand forth manfully as citizens, sure of their rights, sure of their position. They must give proof to the world that the Jew is still here and that he has a contribution to make, a contribution in the Hebraic fashion, the prophetic way, that he represents a civilization, a great tradition, and that he can fight.

I have raised my voice for a Jewish army from many platforms. This is the first time—through no fault of mine—that I do so from a Zionist platform. I would have been happy if such a platform had been provided for me before. For at this time there can be no Zionist work more important—at this hour there can be no Jewish cause more important—at this moment there are few British tasks more important than the effective arming of as large a Jewish force as is available, to defend the life line of our civilization.

Palestine unquestionably is one of the most important bastions of democracy in the world today. Its defense by those who have built it is not a political question, nor can it be a subject to debate.

I have no patience with those who tiptoe around this subject of a Jewish army and use complicated diplomatic language to present the Jewish claim. I take no stock whatsoever in that whispering which buzzes all around us and which says: "There are many things that must be considered * * * this is the wrong time to speak out * * * hasty action may spoil negotiations * * * the subject is too delicate for mass meetings * * *," and so on and so forth.

I refuse to listen to that kind of superdiplomacy. It smacks too much of appeasement—and appeasement has proved itself to be but synonymous with surrender.

I refuse to recognize in the appeal for a Jewish army any factional views within the Zionist movement. Those who cannot rise above petty partisan squabbles while Palestine is in danger are betraying the Zionist ideal. If Churchill can bury his differences with Stalin and march shoulder to shoulder with him against the common foe, the Zionist factions should, it seems to me, be able to find a common platform. And that common platform must be the defense of Palestine. Everything else dwindles into insignificance when measured against that cause.

There can be no valid objection to a strong Jewish army in Palestine from any source, British, Arab, or otherwise. Those who oppose it are sabotaging Britain's war effort, President Roosevelt's defense program, the very cause of humanity itself. If British officials have difficulty in understanding this, it is for the Jewish and Christian leadership to speak out, openly and fearlessly.

Until a few days ago I was very pessimistic, I confess, about the time element in the organization of a strong Jewish army. I could not repress a feeling that the discussions concerning a Jewish army were fast approaching the academic stage. There seemed to be insufficient time for the effective training and arming of the Yishuv. The Nazi hordes were hammering down the British defenses threatening to launch a giant pincer movement from the Syrian and Libyan sides toward the Suez Canal. It looked indeed as if the Battle of Jerusalem were on the way. Today, however, thanks to the British initiative in Syria and due to the establishment of a huge new war front along the Russian border, there is time to make this Jewish army a reality.

Now it can be done. Now it must be done.

If in wartime, under pressure, on the very brink of defeat, the British Government refuses the Jews the most elementary recognition of nationhood, an army, then the future of the Jewish homeland, even in the event of a Nazi defeat, looks dark indeed.

No; Churchill and Roosevelt can be depended upon to realize the strategic importance, the historical justice, the human significance of a Jewish army for Palestine. It is only up to you to demand it in unmistakable language and to prepare for it and augment its numbers from all corners of the world.

We demand from the British Government the right for Jews to go and die for freedom under the walls of Jerusalem. We demand that they not be slaughtered as helpless children, but that they will be trained and will be given arms in their hands. Arms—airplanes, tanks, and guns.

We demand that the Jewish people be heard; that the Jewish people take their place in the ranks of the free nations of the earth. If Russia can liberate the Poles, free France declare Syria independent, Great Britain can say to the Jewish people, "Come help us fight. Fight for a Palestine that is yours."

We can say this to the British: Whatever friends you think you have in the Near East, of the Jewish people you can be sure—sure of their holy fervor to defend the land, Eretz Israel. No power on earth, no matter what happens, can alienate the Jew from his homeland. In this hour of darkness, let us stand up as men. Let us, as Zionists, show that our love of Zion is a living fire. Let us, in this hour when all hangs in the balance, go to the grave of him who sleeps there in Long Island and say, "Vladimir Jabotinsky, you were right. Let your spirit guide us." Then we will march to victory. In this dark hour, let the Yishuv know that there are millions of unseen brethren who stretch out their hands to them. Tel Chai Israel!

The Power Shortage

EXTENSION OF REMARKS

OF

HON. WALTER M. PIERCE

OF OREGON

IN THE HOUSE OF REPRESENTATIVES

Tuesday, July 15, 1941

Mr. PIERCE. Mr. Speaker, I venture a prediction, that, when the history of these times in our country is written the story will be full of incidents demonstrating how selfish interests have, for personal gain, jeopardized national security. I have been intimately connected with the northwestern power and light-metal situation, and can speak on this subject from factual knowledge and experience. Over 3 years ago, I pointed out the role of power in national defense in a speech on this floor and before House committees, and prior to that time, I had a part in writing the basic Bonneville power legislation, in which provision was made against monopolization.

I have also pointed out for the record how the negligence of our defense organization has impaired the national airplane production program. A year ago, in company with Senate and House Members from the Pacific Northwest, I discussed the aluminum and magnesium problem with the then newly appointed defense heads, and urged that the Columbia River power be immediately put to work in such production. We were then told that sufficient light-metal capacity existed in the country or was provided to take care of these needs. Everyone now knows the true situation as to the shortage of this supply.

Over two months ago, O. P. M. publicly admitted the facts and proposed a start on the early utilization of around 400,000 kilowatts of Columbia River power to meet such deficiencies. In spite of this announcement, hazardous delay still menaces our security. No construction has been started on these 400,000 extra kilowatt light-metal plants. Defense heads still debate over details, evidently being again prompted by selfish motives. We should not allow these delay tactics to be continued. Immediate remedial steps must be taken by the Administration to meet the defense crisis.

Much has been said and written on this aluminum situation, including Senate and House committee reports, but unfortunately the true story has not been been fully recited. Those of us who long ago pressed the matter, in advance of any official analysis, and have since followed it in detail, have not been questioned as to the factual narrative. Too much effort has been spent on an attempt to whitewash those responsible for the critical situation and the essential facts have been neglected.

A NEW DISTURBING DEVELOPMENT

The recent proposal to pool Pacific Northwestern public and private power facilities, using national defense as a subterfuge, is disturbing to those of us who have piloted through Congress the basic power legislation and supporting appropriation measures. Such proposals may jeopardize adequate defense supplies and can be operated to circumvent the protective provisions placed in the original Bonneville Act. It would seem, from press accounts, that a little group, which has heretofore had no part in Bonneville legislation or growth, is now urging a course which will bring about a repetition of the scandalous course followed in regard to our aluminum supply. Such a course will curtail the effectiveness of the Columbia River project so far as public use is concerned.

I have previously pointed out how the private power companies, in the last war, used emergency conditions to lay the foundations for a vicious program of manipulation which has financially ruined thousands and created a distrust of private power management. Power pooling was then attempted, and resulted in the creation of barriers which hampered public power-plant development. This plan for unsound interchange must, in the light of experience, be strongly opposed by those of us who have sponsored the public power program.

I do not question the sincerity of some of those who propose a belated interconnection program, but I do question their knowledge of past attempts to sabotage the Columbia River program, their judgment as to the proper course to follow, and above all, their authority to take such action as they are now publicly proposing. These matters were all considered in connection with the policy provisions of the original Bonneville Act, and safety limitations on the Bonneville interconnections were written into the law.

BONNEVILLE LEGISLATIVE HISTORY

In the early days of the development of the Bonneville legislation, our colleague from Mississippi, the Honorable JOHN E. RANKIN, suggested that, for strategic reasons, I introduce a Bonneville bill. This I did, after detailed discussion of principles and provisions with congressional associates, engineers experienced in the power business, and public power advocates. During the time that I was at work on this bill, I was asked to consider a draft of a bill that gave the Federal Power Commission a full measure of operating jurisdiction over the Bonneville project. This idea was rejected on the grounds of questionable and confusing administrative practice. It was clearly recognized that the Federal Power Commission was judicial and regulatory in character, rather than an operative organization. Therefore, when my bill was written, the jurisdiction of the Commission was strictly limited to rate approval and cost allocations between navigation and power. These limitations are contained in the legislation adopted by Congress. Therefore, it is apparent that the jurisdiction of the Commission does not extend over Bonneville interconnections and interchanges. This legislation was in process during the heated discussion over the ill-advised pooling proposal for the T. V. A., and, as a result of that unfortunate experience, no pooling authority was included in the Bonneville Act.

THE COULEE PROJECT TIE-IN

Shortly after the passage of the Bonneville Act and the appointment of the late Administrator, J. D. Ross, our colleague, Representative RANKIN, an experienced power engineer, and myself suggested to and urged on Mr. Ross the advisability of constructing the Coulee transmission tie. We found that Mr. Ross visioned the future just as we did. He followed our suggestion and made an application for a P. W. A. allotment for this purpose. Secretary Ickes wisely approved the application and recommended Presidential approval, which was given. This has turned out to be a very fortunate defense investment.

THE ELECTRIC BOND & SHARE ("EBASCO") ENTERS CONGRESS

It was at this stage of the development that the Electric Bond & Share representative entered the picture with tactics designed to sabotage the Bonneville transmission program, and to prevent construction which would bring low-priced power to the farmers and domestic consumers of Oregon and Washington.

When J. D. Ross requested $14,000,000 appropriation for transmission construction in the spring of 1939, Mr. Kinsey Robinson, president of "Ebasco's" Washington Water Power Co., moved to Washington, D. C., and started lobbying activities against Bonneville appropriations. News articles adverse to these appropriations, undoubtedly inspired by this private holding company, appeared in the New York Times and other papers. Members of the House Appropriations Committee were circularized against Bonneville transmission-line appropriations. Finally a fight was made on the House floor against this appropriation. "Ebasco" lost this fight in the House. This debate is a matter of record, and it can be shown that "Ebasco's" misrepresentation was then challenged and their arguments exploded. After this House defeat, Mr.

Robinson transferred his activities to the Senate and appeared before the Senate Appropriations Committee in an effort to curtail Bonneville transmission-line construction. He failed in the Senate also.

In the spring of 1940 this private utility lobbyist again came to Washington and appeared before the House and Senate Appropriation Committees in a second effort to kill Bonneville transmission appropriations. House friends of Bonneville were forced into a second fight for these appropriations, and corrected, in debate, misinformation circulated by Mr. Robinson operating through the Utility Information Bureau. Thus, once again "Ebasco" was defeated on the House floor when hamstringing amendments were offered. When Mr. Robinson appeared before the Senate committee, after this second House defeat, Senator BONE cross-examined him thoroughly and placed in the committee record an exposé of this company's wrecking activities. Naturally, after this exposure, Mr. Robinson was turned down by the Senate.

"EBASCO" CONTINUES SABOTAGE

After these four defeats in Congress Mr. Robinson again appeared in Washington, D. C., and let it be known that, although defeated in Congress, he would finally come out on top by circumventing congressional action, either through some type of negotiation or by astute planning. During his 1940 sojourn in Washington, D. C., he remarked that he would defeat, in the 1940 election, those northwestern Representatives who led the floor fight against him. He even went so far as to threaten personally one of these Representatives.

"EBASCO'S" NEXT MOVE

It is currently reported in congressional circles that the present outcry for interconnection interchange, and the fulmination against public power reservations in the Bonneville Act is just another phase in "Ebasco's" carefully planned attack on the public-power program in the Columbia River section. Under the voluminous cloak of national defense "Ebasco" and other self-seeking and sabotaging interests are endeavoring to circumvent congressional action. I therefore consider it my duty to utter words of caution, based on the record, for the benefit of those officials who may not be informed on the past record and may be taken in by siren calls for interconnection.

I might add, at this point, that, if Electric Bond & Share efforts had succeeded in 1939, our country's present aluminum production capacity would now be reduced over one-third, probably one-half.

It seems strange that those whose past activities were so adverse to a program that has become a life saver in our defense preparations should now become prominent in this interchange movement which would still further delay defense production.

In the early part of 1941, over 6 months after our group's warning to the Defense Commission of a light-metal shortage, we found Mr. Robinson's friends opposing the Coulee-Spokane transmission lines on the ground that the Federal Power Commission was convinced that there was a power surplus in eastern Washington. Some of the statements even went so far as to convey the inference that the Commission would convince the Budget Bureau and Congress that there was no need for the Spokane lines, because of this surplus.

THE FACTS ABOUT NORTHWEST POWER SUPPLY

In all Mr. Robinson's appearances before congressional committees he contended that there was a surplus of private plant and transmission capacity in the Bonneville area east of the Cascades.

This same statement about "surplus power" was made, during the hearings on the original Bonneville Act, by speakers from Oregon, including Governor Martin, Mayor Carlson, of Portland, and the President of the Portland Chamber of Commerce, Mr. Hamilton Corbett.

I answered these absurd but subtly calculated allegations before the committee and in debate. I presented a statistical analysis which demonstrated a threatening power shortage and pointed out that it was folly to claim adequate line capacity for the then-existing lines. I compared the plan for limitation to existing lines with an attempt to supply water to Washington, D. C., through a garden hose.

What has happened in aluminum shortage has happened also in power shortage. In order to curtail Federal expansion, private-utility interests have asserted that there was a surplus when the country was actually facing a shortage. They had so often misrepresented facts that they failed to keep ahead of load growth. Either through a deliberate plan to grab, for their own use, capacity provided by Federal expenditures, or because, like Hitler, they repeated their misrepresentations so often that they themselves believed them, they were afraid to expand, in contradiction to their own false allegations.

"INTERCHANGE" DEMAND IS A SMOKE SCREEN

With the pressing need for defense production, these private interests are up against a power shortage and are now clamoring for interconnection interchanges. From the analysis I have made it appears certain that there is an acute private power shortage east and west of the Cascades, except in the area served by City Light of Seattle. With these facts now before them, the private utilities are clamoring for interchange power instead of outright purchases from Federal plants. They evidently hope to get in ahead of power allotments to aluminum plants and to avoid the statutory requirements of outright purchase of power from Federal plants at Coulee and Bonneville. They hope to "get the camel's nose under the circus tent" and thus short-circuit congressional action.

POWER INTERCHANGE

Interchange of electric power is usually a trade of kilowatts rather than an outright purchase of capacity. It is used, as I pointed out before the Rivers and Harbors Committee in 1937, as a means to augment, with storage capacity, "run of the river" plant hydro-capacity. It is also used for break-down or emergency relief, to avoid duplicating and keeping idle the spare capacity. It is most generally used to take advantage of a lack of coincidence of maximum load occurrences, or what is known in the electrical business as "diversity." When loads operate, as most of the defense light-metal loads do, continuously, every hour in the month, the principal advantage of diversity interconnection is lost, and there is no ground for investments in interconnections under such conditions.

During very short periods, a few percent of a long-time flow record, Bonneville will lose capacity approximately equivalent to the capacity of one Coulee spare generator. Such a short lapse in aluminum production capacity is insignificant, and can be entirely compensated by a few extra pots in any aluminum plant. In addition, Coulee Reservoir has storage capacity equal to three times the plant capacity authorized. Interconnections have been authorized, and funds appropriated, therefore, for tie-ins at Coulee, and with the public plants at Seattle, Tacoma, and Eugene. These tie-ins will balance storage with Bonneville's "run of the river" capacity; therefore, the first cited need for interconnection has been supplied.

The economics of high-voltage transmission lines does not permit of many taps. Therefore, break-down relief must be supplied at the terminals, which appears to be adequately taken care of by the authorized ties which I have cited. Interchanges, when used in a limited way, as I have indicated, are beneficial, but when overused they become revenue reducers for the Government plant rather than revenue producers.

PRIVATE COMPANIES SHOULD BUY, NOT BORROW

It is very bad financial practice to substitute interchange for outright energy contract sales, as required by statute. If the private companies are short of power, let them make outright purchases under the terms laid down in law, provided these purchases do not interfere with light-metal defense production and with the rights of public power plants. If the private companies have a surplus, as generally they do not, let them sell this power the same as all merchants have to do, under like conditions. Because of manipulation tactics the private power interests have failed in their duty to the communities they serve. This is no excuse for Federal plant capacity being diverted from the vital light-metal defense production to make good such manipulated deficiencies.

All of these technical and financial facts were considered when Bonneville legislation was being formulated and the necessary safeguards were written into the Pierce bill and finally into the act.

Through interconnections the private power companies can borrow kilowatt-hours, and there is no way to force a return if the companies are short of power. This has happened.

THE LAW GOVERNING BONNEVILLE POWER

In order to protect and limit the Federal investment, to provide a return to the Federal Treasury, and safeguard the future interests of the ratepapers and the taxpayers, restrictions were placed in the Bonneville Act. It might be well at

this time to restate them for the information of all concerned.

Section 2 of the Bonneville Act provides that the project shall be operated for the benefit of the general public. In this section the only transmission facilities authorized for construction, purchase, lease, donation, operation, and maintenance or improvement are those connected with the outright sale of power or serving potential markets or interconnections with other Federal or public plants. No authority exists for constructing straight interchange interconnection with private companies. Section 7 of the act requires sales on terms that will insure the recovery of the Federal investment. Obviously no authority exists for any power loans to private interests.

If some of the private companies are sincere in their proffer of power defense contributions, section 2c of the act gives them an opportunity to lease or donate facilities, and authorizes the Administrator to condemn them.

Section 5b of the act authorizes contracts with private as well as public systems for the mutual exchange of unused excess power on suitable exchange terms for economical operations for emergency or for break-down relief. This section applies only to unused power and gives no authority for Federal investment in nonrevenue producing exchange interties with private companies. Clearly, taxpayers' funds cannot be used to provide nonrevenue capacity back-ups for the private systems. If the Columbia River power is put to work on defense metals, as it should be, there cannot now be any unused power to make section 5b operative.

The act contains no authority for pooling of private and Federal resources, nor does it authorize Federal transmission circuits to become common carriers for the benefit of the private companies. At no time has Congress appropriated funds for private interchange connections, and obviously funds appropriated for other purposes cannot be used for the construction of such connections.

RESERVATIONS FOR PUBLIC POWER PLANTS

As part of this same program for sabotage of public power, these self-styled patriots are arguing that the reservation of power for public plants, required in the Bonneville Act, is interfering with defense. There is no foundation for such a charge. At no time has defense load been rejected because of these provisions. To raise such a point is gross misrepresentation, as section 4 (b) of the act specifically provides that this reserved capacity not actually contracted by public agencies can be temporarily sold. This has been done.

The public preference provision is a policy established by Congress over 70 years ago. Furthermore, the reservation clause does not apply to Coulee energy. I was responsible for the reservation clause in the original act. It was inserted in order that the farmers and home owners could be protected from the retarding tactics used by the private companies in the T. V. A. regions. I was also responsible for the extension of the 50-percent reservation period from 1941 to January in 1942 as made in the 1939 amendment. It must be remembered that the act contains permanent general reservation clauses protecting the public interest. I was also partly responsible for initiating the Coulee transmission tie.

To advocate at this time rejection of the public reservation provisions along with the advocacy of private interconnections exposes the motive behind this recent drive. All of this is plainly an effort to strangle public power under the name of defense, as was done in the last war. It is also a Nazi type of effort to enslave our farm people and domestic power users and to place them under the domination of the self-appointed financial overlords.

JURISDICTION

The Federal Power Commission, both under the acts of 1920 and 1935, has jurisdiction over companies engaged in interstate commerce. The amended act of August 1935 gives the Commission power over interconnections and coordination of facilities, including temporary connections and exchange of facilities during a war or an emergency. This authority applies only to companies engaged in interstate commerce, and does not apply to the United States Government, which is specifically exempted in this 1935 act.

Congress, since passing the 1935 amendments to the Water Power Act, has established congressional policy for the Federally owned Bonneville plant and did not see fit to include the emergency powers of the Commission over interconnections in this piece of legislation.

It is evident that the Commission has authority to hold hearings on emergency interconnections involving interstate private companies, but by no stretch of the imagination can it be conceived that these hearings can be extended to include Federally owned plants, as the private power interests would lead us to believe. To avoid confusion, this distinction should be kept in mind.

Obviously, the Oregon State Utilities Commissioner has no jurisdiction in Federal matters. The cited circumstances in the T. V. A. area have no bearing in the Bonneville instance, and in no way can be used as a precedent Congress has laid down the Bonneville power policy.

Nearly 2 years ago, all were publicly advised as to an impending power shortage in case of an emergency. Over a year ago, the Federal Power Commission established a defense power unit, but in spite of these indications of shortage the Commission did not come to Congress with any suggestion for a remedial program. It looks as if the utilization of the cited emergency powers of the 1935 act might be an effort to cover up a lack of vision and aggressive handling of the private power companies in the pre-emergency period. This unfortunate record furnishes no ground for attempting to upset policies fixed by Congress. The power supply defense bottleneck, which I predicted on this floor in the spring of 1938, is now upon us, as is the serious light-metal situation. It is high time for the Nation to call a halt to the subordination of national security to the profit motive.

The remedy for this dangerous situation lies not in the creation of hypothetical "interchange nonrevenue-producing interconnection" but rather in placing more generators in the blank flumes at Coulee, and selling this power outright to the regions of acute shortage. If this is not done early, the Northwest will lose industry. Five manufacturing companies have large partially used hydraulic turbine and generator shop capacity. No bottleneck exists in this type of manufacture. The remedy as applied to the Pacific Northwest is easily discernible.

THE PROPER PROCEDURE

Oregon Utilities Commissioner Bean suggests that 100,000 kilowatts additional capacity can be added to the Northwest supply by interconnection. From my own analysis and observation over the past few years, I doubt the accuracy of this figure especially when applied to base defense loads. His figure, like mine, is of course an estimate largely tempered by judgment. But since this possibility has been raised, power estimates for a low-water year should be presented for each private system. This is easy to obtain from the low-output logs of the last dry year and a comparison with snow and rainfall records. This record is the starting point for a comparison with projected peak demands. The private power company hydro plants, for cost reasons, have been located on the smaller streams with resultant greater fluctuations. There are possibilities for some storage gains from water flow and lower load factor diversity load in such plants, but this is the sole problem of the private companies over which either the F. P. C. or State commission has complete jurisdiction. It is outside of my consideration in this speech.

After the comparison of low-flow records and demands has been worked out, the larger and vastly more important determination is necessary, and that is, How many more units are needed for direct power sales in the 12 blank flumes at Coulee, and what additional Federal lines are needed to place this power in the deficient market areas? This is a problem calling for the very early joint efforts on the part of Bonneville Administration, Reclamation Service, and the Federal Power Commission. Necessarily, these estimates have to go first to the Budget Bureau and then to Congress. Likewise, authority and funds for private utility interconnections with Bonneville lines have to follow the same course and these will later be closely scrutinized in Congress, for the reasons I have indicated.

The record I have cited clearly shows that it will be extremely dangerous for any attempt to short circuit Congress on power policy, where congressional expression has been given. In closing I wish to strengthen the hand of Administrator Raver in his reply to Commissioner Bean's demands dated July 3, 1941, as it coincides generally with my own observations. For purposes of preserving the facts I am inserting a copy of this letter. The record of advancing Bonneville development has been written in Congress, and not elsewhere. The

wisdom of congressional action has been demonstrated by the defense contribution Bonneville has made and will continue to make.

DR. RAVER'S REPLY TO ILLEGAL DEMANDS

The following letter from Bonneville Power Administrator Paul J. Raver was mailed to Mr. Ormond R. Bean, Public Utilities Commissioner of Oregon, on Thursday, July 3, 1941:

JULY 3, 1941.

Mr. ORMOND R. BEAN,
Public Utilities Commissioner
of Oregon, Salem, Oreg.

MY DEAR COMMISSIONER BEAN: Your letter concerning power supply, which was published in last Sunday's papers, was received by my office on the following Monday, June 30, 1941.

We believe the implications in the original newspaper stories and subsequent articles are answered completely by the record of our activities. The entire staff and resources of the Bonneville Power Administration have been and are now dedicated without reservation to the all-out effort of this country for national-defense production. The Bonneville-Grand Coulee interconnection, which was so bitterly fought by private interests, has now become a vital link in the supply of power both east and west of the Cascades. Our interconnection with Puget Sound is resulting in the conservation of the water resources of the region. Our program for advancing installation of generation and transmission facilities has made the Northwest region one of the most important sources of power for the Nation in this time of national emergency, and has made possible a development of industries which will continue to grow beyond the war period.

My staff has been making continuous studies of possible interconnections with other power systems in the area, and we have already established such interconnections as are currently useful in meeting national defense and other power requirements of the region. Several local utility companies, for what seemed to be political purposes, have recently made extravagant and unwarranted claims of the supposed benefits of additional interconnections. We are not impressed by these claims. However, if and when our engineering analyses show that further interconnections should be made in order to assure the supply of power to defense industries, we will be prompt to demand that such interconnections be made.

As you mentioned in your letter, the Federal Power Commission held a regional conference in Portland on June 12, 1941, on the subject of power supply. You and representatives of the Washington and Idaho public-utility commissions, as well as officers of all power systems in the area, participated in this conference. At this conference, Bonneville made a careful presentation of engineering data, and the Federal Power Commission is now analyzing these data, as well as other material submitted at the conference. Presumably the Commission will release its recommendations in the near future. If you have any new facts which were not revealed at the conference, it seems to me you should submit them to the Federal Power Commission. I would not expect that there would be a great deal to be gained by undertaking the consideration of the same matter in smaller groups.

However, as I have previously indicated to you, I am always glad to confer with you at any time on any matter in which you are interested. If you feel that we should proceed with a further conference without awaiting the results of the Federal Power Commission's analysis, I shall be glad to meet with you. In that event, I hope you will call me by telephone so we can arrange the conference in an informal manner.

Very truly yours,

PAUL J. RAVER,
Administrator.

Wolves in Sheep's Clothing

EXTENSION OF REMARKS
OF
HON. EUGENE WORLEY
OF TEXAS
IN THE HOUSE OF REPRESENTATIVES

Tuesday, July 15, 1941

EDITORIAL FROM THE BORGER (TEX.) DAILY HERALD

Mr. WORLEY. Mr. Speaker, I take pleasure in presenting for the consideration of the membership of the House an editorial which appeared in the Borger Daily Herald, Borger, Tex., on Wednesday, July 2, and which, in my opinion, is very timely and appropriate under present international circumstances.

I might say that the writer of this editorial, Mr. J. C. Phillips, editor and publisher of this paper, is one of the closest students of international affairs of my acquaintance. His editorials are consistently keenly analytical and appropriate.

The editorial follows:

[From the Borger (Tex.) Daily Herald of July 2, 1941]

WOLVES IN SHEEP'S CLOTHING

We wonder if top-ranking Communist Joe Stalin ever heard this one: "It is better to have a friend and never need him, than to need a friend and never have one."

It seems that "Big Joe" didn't figure on fighting Hitler; therefore, he kept right on doing Hitler's dirty work in America up to the very minute the Nazi Army started its bloody march into Russia. Then, it seems, "Big Joe" decided that, after all, America might be useful as a friend.

"Big Joe" isn't too dumb. He knows that politics makes strange bedfellows. Isn't it true that he and Hitler have been sleeping in the same political hog trough since the war against Poland began in the fall of 1939? Hitler and "Big Joe" even shared the loot, at very little cost to "Big Joe," so he thought.

So now we have the Moscow radio broadcasting the Star-Spangled Banner and the Communist Party in America making an immediate about face, changing from pro-Nazi to pro-Russia (and America). The "red" bigwigs in the United States who have been fighting all of our national-defense efforts in Congress, suddenly declare themselves in support of the lease-lend-aid bill—for Russia.

Funny how a word from Moscow changes the entire character of the Communists in the United States. First they fought Nazism. Then, in September 1939 they followed Moscow's lead by helping the Nazis in this country. Now they switch back to anti-Hitlerism.

It is not because they are becoming American or because they have any deep-seated sense of right and wrong, but because Russian and Moscow-dictated communism is their religion, and they are in no sense American except for the purpose of getting out of our Nation (actual control by bloodshed if possible) all they can to further the greedy aims of the would-be world-ruler in the Kremlin.

The Bible warns us to beware of wolves in sheep's clothing. "Big Joe" and his Communist subjects in America know that no one has a better chance to stick a knife in your back than one's best friend. Uncle Sam had better watch out and keep an eye peeled on these "friends" who don't stay hitched. The old western code isn't so bad to follow. Strangers must first prove themselves. Friendship follows a certain period of time that develops the character of one's neighbors. Communist "friends" have openly declared themselves opposed to our democracy. What more of a warning do we need?

The American people should bear in mind that the Communist Party in America—notwithstanding a recent claim that it severed relations with Moscow to avoid listing its membership with the State Department at Washington—takes its orders from Moscow, and it does not look to Washington for leadership and a better understanding of democratic procedure.

If the "reds" look to Washington, it is with the thought that, by bloodshed, they might some day control the destiny of the American people. The "reds" dream of the day they can make everybody equal—equal to the lowest among them, rather than to permit the individual liberty to aspire to higher things and to merit the best that honest toil and ability can acquire. In communism, the only ones that can rise above the lowest level, are the Red politicians who rule with a bloody hand and an iron will.

No one wants to see the Communist hordes pour across Germany to the English Channel; nor does anyone want to see the Nazi hordes pour across Siberia to within a few miles of Alaska, in North America. Let the international highjackers bleed themselves white. Then we may have peace and only then.

If Americans are to trust communism, it must be after Moscow has withdrawn its saboteurs and political agents from America. Any friendship that we may come to feel for Russia must be after the Communist Party in America has been dissolved.

Red agents, posing as union organizers who go around the country telling you about Soviet power and the wonders of communistic Russia, are not our friends. They will not admit that they are Communists. They never do. They come to you as wolves in sheep's clothing. They only suggest that you read this and that communistic literature and they either have it with them or tell you where you can send and get it.

Americans—beware of anything that is not 100 percent American. Surely we should look to Washington, not to Moscow, for political and social leadership.

Shipbuilding and National Defense

EXTENSION OF REMARKS
OF
HON. ALBERT L. VREELAND
OF NEW JERSEY
IN THE HOUSE OF REPRESENTATIVES

Tuesday, July 15, 1941

RADIO INTERVIEW BETWEEN HAROLD J. ADONIS AND MAYOR VINCENT J. MURPHY, OF NEWARK, N. J.

Mr. VREELAND. Mr. Speaker, under leave to extend my remarks in the RECORD, I wish to include the following

radio interview between Harold J. Adonis and Mayor Vincent J. Murphy, of Newark, N. J., on July 2, 1941, on the subject of shipbuilding and national defense.

I have continually striven to bring to the attention of some of our governmental agencies the facilities now available at Port Newark to further our shipbuilding program and thereby to better prepare our national defenses. The remarks of Mayor Murphy are very pertinent, and it is my sincere desire and hope that Port Newark might be engaged in the construction of the vessels so vital to our program of preparedness.

The interview follows:

Mr. ADONIS. Good evening, ladies and gentlemen.

Tonight we are again privileged to present as a guest speaker, Mayor Vincent J. Murphy, of Newark, N. J., who will deliver his second regular monthly report on Newark's state of progress. The subject of his address, in the form of an interview, is Shipbuilding and National Defense.

To those of our listeners who may not have had previous occasion to hear the informative and authoritative opinions of Mayor Murphy, may I say that Mayor Murphy has achieved State and National attention for his tireless efforts in behalf of public accomplishments.

Mayor Murphy, I know your message this evening is of vital importance to the City of Newark, the State, and the Nation.

Mayor MURPHY. Thank you, Mr. Adonis. I am sure that everyone, both within and without New Jersey, will soon agree with that statement.

Mr. ADONIS. I know they shall, Mayor Murphy. Meanwhile, you intend to emphasize the importance of shipbuilding and its major role in an adequate defense program of national preparedness?

Mayor MURPHY. Yes; with especial reference to the part that the City of Newark can and should play in the field of shipbuilding and as a submarine base. At the present moment, the Nation's naval-construction program is the largest in our history. As the first line of our defense, it is admittedly imperative that we use every means at our command to safeguard our National interests.

Mr. ADONIS. There can be no question with your contention, Mayor Murphy. In the meantime, what do you imply by your statement that the city of Newark "can and should play a major part in the Nation's shipbuilding program"?

Mayor MURPHY. It is my firm belief that we in the city of Newark have the essential advantages and facilities to add form and scope to the naval-construction program.

Port Newark, as you know, is ideal as a site for drydocks and shipyards. As a matter of record, the Federal Government in 1917 selected this location as one of its greatest Army base and shipyard centers along the entire Atlantic coast. The official files show that 20,000 workers were employed there, completing 118 steel ships of 5,000 tons each, 420 feet in length. In addition to that, 10,000 other workers were engaged at the Army depot. Today shipbuilding firms throughout the Nation would find Port Newark an ideal location.

Mr. ADONIS. Mayor Murphy, that is a record of accomplishment the city of Newark should well be proud of.

Mayor MURPHY. Yes; it is. However, I am more concerned with the current national emergency and what we in Newark can do to aid our defense program, with its 4,000 feet of northern waterfront; with its 25,000 creosoted piles intact, inspected, and reported to be in excellent condition; with its land fill rising 10 feet above mean low water, firmer and in better condition than in the past, Port Newark offers improvements and outstanding possibilities which should commend it highly to the War Department, the Navy Department, and the Port of New York Authority, which, incidentally, is approved as an accredited agency for locating and selecting a site for a drydock and repair yard, one large enough to accommodate the Navy's plane carriers and battleships.

Mr. ADONIS. Mr. Mayor, is there any move under way at the present designed to expedite your plan to utilize Port Newark as such a center?

Mayor MURPHY. Congressman ALBERT L. VREELAND, of New Jersey, on May 13, 1941, introduced in the House of Representatives House Resolution No. 207, which states:

"Whereas Port Newark, N. J., was in 1917 during the World War selected by the Federal Government for the construction of the largest Army base and shipyard on the Atlantic coast, and during the period of its operation completed the construction of 118 steel ships; and

"Whereas the Federal Government at that time installed 25,000 creosoted piles at the approximate cost of $500,000, which are still in good condition, and would thereby save 3 to 6 months' time in the construction of ways; and

"Whereas Port Newark is ideally located for transportation of supplies by rail water, and air, being in close proximity to the city of New York, and served by three railroads as well as adjacent to the Newark Airport, the once world's busiest airport, and yet of sufficient distance from the Atlantic Ocean and well protected by coast defense to be strategically safe from hostile attacks: Now, therefore, be it

"*Resolved*, That the Navy Department take immediate steps to negotiate with the city of Newark, N. J., for the use of this area for the contemplated Navy Department's program to provide shipyard facilities to construct vessels to push the two-ocean navy program ahead of schedule."

Mr. ADONIS. What action was taken on Congressman VREELAND's resolution, Mr. Mayor?

Mayor MURPHY. House Resolution No. 207 was referred to the Committee on the Merchant Marine and Fisheries. Mr. VREELAND, I understand, took this step because the Maritime Commission was demanding ships, ships, and more ships. It is my further understanding that Congressman VREELAND is now awaiting word from the said committee. He will notify me as soon as there are any developments in this matter.

Mr. ADONIS. Mayor Murphy, how would you summarize the advantages of port Newark?

Mayor MURPHY. Briefly, the Newark Bay shipyard property commends itself for the following reasons:

1. Its near vicinity to the heart and core of the steel supply in the States of Pennsylvania and Ohio.

2. Its unlimited labor market, which ranks as one of the best in the country.

3. Its outstanding service by three trunkline railroads.

4. Its provisions of unexcelled transportation for workers, both by railroad and busses.

5. Its ideal housing facilities.

Mr. ADONIS. Mr. Mayor, you plead your case well, and I am sure the authorities in Washington will give serious consideration to your proposal.

Mayor MURPHY. Thank you, Mr. Adonis. I sincerely hope they do. The city of Newark has a genuine concern with the progress of the national-defense effort. In offering its property to the Federal Government for use as a drydock and shipbuilding center, and as a submarine base, the city of Newark has no selfish motives and no designs to capitalize on the national emergency. It is my firm conviction that our offer, if and when it may be accepted, will prove to be a substantial contribution to the defense program.

We are all aware that the Nation's shipyards are now working at top speed and virtually at capacity operation. This includes construction on both naval and commercial vessels.

We know, too, our desperate need for ships, and the role we, at home, must play to insure an adequate supply. Time being the vital factor, Newark's facilities can and should be utilized in the ship-construction program.

Mr. ADONIS. Mayor Murphy, are you planning any other move or moves to bring about the completion of your plans?

Mayor MURPHY. Yes; I have several plans in mind. First, I intend to solicit the cooperation of the Governor of New Jersey, the Honorable Charles Edison. As former Secretary of the Navy, Governor Edison displayed his keen interest in, and desire for, adequate naval expansion. I am sure the Governor will lend a willing ear to the city of Newark in its present efforts to aid the naval-expansion program.

In the meantime, I also propose to communicate with New Jersey's entire congressional delegation, and urge its membership to support my proposals, already initiated by Congressman VREELAND. Finally, I shall invite Governor Edison to join me in requesting President Roosevelt for a personal appointment. If this can be arranged, I am inclined to believe that our Chief Executive will be impressed with the advantages port Newark presents as a possible shipbuilding and drydock site.

Mr. ADONIS. Mayor Murphy, our time is now rapidly drawing to a close. Would you care to emphasize anything else in this connection?

Mayor MURPHY. At this point I would like to stress a statement made on June 21, 1940, by Mr. Raymond J. Dempsey, who, during the first World War, was in charge of personnel at the Army base in Port Newark, and who said in part:

"There is no rail bottleneck here, as there is in other places where sites have been recommended. Our site is served by the Jersey Central Railroad, the Pennsylvania, and Lehigh Valley, all leading directly to the centers of the steel industry and supply centers for other materials needed in shipbuilding and repairs.

"Since speed is one of the major considerations in an emergency, any possibility of congestion is a hazard and a possible source of delay."

Meanwhile, other competent authorities, including Mr. Dempsey, have pointed out that the 30-foot depth of the present channel could be increased to 40 feet by the War Department, at an estimated cost of from $750,000 to $1,000,000 for the removal of 3,000,000 yards at a cost approximating 25 cents per yard. This dredging expense would, of course, be much lower than any place else in New York Bay. The reason for this is because the fill could be piped to the Elizabeth Meadows. Incidentally, there would be no need to build timber or steel bulkheads; sod dikes would be ample.

I also wish to stress that the shipbuilding site proposed by the city of Newark lies at the juncture of Port Newark's ship basin, high-speed highways, trunk-line railways, and adjacent to Newark Airport.

The 40-foot channel required to accommodate the largest ships of the Navy could be dredged during the interval of completing the ways or drydock.

As mayor of the city of Newark I shall continue my efforts to establish Port Newark as one of the Nation's leading drydock and shipbuilding centers.

I thank you.

National Unity

EXTENSION OF REMARKS

OF

HON. ROBERT B. CHIPERFIELD

OF ILLINOIS

IN THE HOUSE OF REPRESENTATIVES

Tuesday, July 15, 1941

Mr. CHIPERFIELD. Mr. Speaker, when President Roosevelt addressed a joint meeting of the Congress on January 6, 1941, he not only urged the Congress but the people to unite and stand as one behind the policies of the Government during this national emergency. When he made this plea I was pleased. I felt the President was pleading for a united nation 130,000,000 strong to get behind his foreign policy during this critical period. There came to my mind the many stirring pleas for peace that he had made during the recent campaign and before. I also thought of the many promises the President made that our boys would never be asked to fight on foreign shores. I quote only a few:

July 10, 1940, message to Congress:

That we are opposed to war is known not only to every American but to every government in the world. We will not use our arms in a war of aggression; we will not send our men to take part in European wars.

October 30, 1940, public address at Boston:

And while I am talking to you, fathers and mothers, I give you one more assurance. I have said this before, but I shall say it again, and again, and again, your boys are not going to be sent into any foreign wars.

December 29, 1940, fireside chat:

There is no demand for sending an American expeditionary force outside our own borders. There is no intention by any member of your Government to send such a force. You can, therefore, nail any talk about sending armies to Europe as deliberate untruth.

At last, I thought, we have a President who intends to keep his promise concerning peace; one who is calling for a united nation to make every effort to remain at peace with the whole world. Here was an opportunity for all to unite, regardless of party, behind a policy that both Presidential candidates and both the Republican and Democratic platforms in no uncertain terms had emphatically declared.

Now, let us examine the record. Memory is not so fleeting that every one of us does not remember when the lend-lease bill was first proposed. What happened? The President called to the White House several of the prominent Democratic Members of Congress and told them of his plan. But not one Republican was called to the conference.

That was the President's first action after calling for national unity. Should not our foreign policy be far greater than partisan politics?

We all remember that the President did not consult Congress before he gave away 50 destroyers and only told Congress about it after it was all over. This action was taken in spite of the fact the Foreign Affairs Committee, of which I am a member, had previously appointed a subcommittee with the objective in view of obtaining island bases for our defense. It was not even consulted.

Under the lend-lease bill the President has transferred Coast Guard cutters, mosquito boats, and other huge amounts of matériel to England, but the Congress cannot obtain definite information as to just what action has been taken except in the most general terms. Yet we are asked to be united behind a policy the details of which we are not permitted to know.

This same policy of not consulting Congress until after the course of action determined upon by the President has been taken is still continued. President Roosevelt called to the White House last week several prominent Democratic Members of Congress and told them troops had been landed in Iceland. Again he did not call in one Republican. Again let me say the issue of our foreign policy should be far beyond party politics. Next day he informed the House of the action he had taken.

Over a year ago I called the attention of the House to the fact that Iceland is half in the Western and half in the Eastern Hemisphere; and we all know we have passed laws prohibiting sending our soldiers beyond the Western Hemisphere. But this did not prevent the President from sending our troops to areas prohibited by law.

But I am not trying to emphasize that point. The point I am trying to emphasize is the fact the President did not consult Congress, the representatives of the people, until the act was completed, and then only called in Democrats—completely ignoring the Republicans. And then he asks for national unity.

He never admitted that Americans were building bases in Ireland until confronted with the facts as presented by Senator Taft.

In all fairness, however, I do wish to say President Roosevelt has contributed to national unity by returning Thanksgiving to its original date.

In the last few days it has been urged that our laws be amended so as to permit our soldiers to be sent beyond the Western Hemisphere, and our guardsmen and selectees to remain in our armed forces beyond the 1-year period.

President Roosevelt called in prominent Democratic leaders for the usual conference, and evidently sensing the strong opposition to these proposed measures and perhaps the need of Republican help to secure sufficient votes to pass them, he asked two very able and distinguished Republicans to attend. One is an outright interventionist and the other the author of the conscription bill in the House.

These two gentlemen have a perfect right to their views on foreign policy but certainly their views are not in harmony with the majority of the Republican Members of Congress or the smaller group of Democrats who have been opposed to many of the steps taken by the Congress which they believe are leading us to war.

If we are so anxious to have national unity why was no one invited to this conference who would express the opposition to these measures? It seems to me if we are to have real national unity minority views should at least be heard and considered. I hope we have not reached the point when in the name of national unity everyone must be a "yes" man to the President.

Before you can stand behind anyone he must stand still long enough so that you can get behind him. Before we should be asked to stand behind the President we should have the right to rely on his solemn pledges, solemnly arrived at.

I am ready and willing, as you are, to stand squarely behind the President and his many pledges to keep this country at peace. What I am unwilling to do is to back the President in a policy that will get this country into war when the vast majority of our people do not feel it is to our best interests to become involved.

This is a country of majority rule. That has always been our policy from the days of our founding fathers. Now, how does the vast majority of our people feel on this vital issue? Every poll which has been taken clearly indicates the overwhelming majority are against our entry into this war. This not only includes the Gallup poll but every poll that has been taken. The New York News, in the midst of a so-called interventionists territory, shows 69 percent of the returns received are opposed to entering the war; the Fish poll, in the President's own district, shows a ratio of 9 to 1 against war; a recent poll in Indianapolis shows 92 percent opposed; the Chicago Tribune poll for Illinois shows 80.66 percent opposed to war. This poll includes Galesburg, Ill., which is in my district, with the following result: 87.89 percent opposed and 12.11 percent favor entry.

Why not unite for a policy that the vast majority of our citizens desire rather than for a policy desired by about 20 percent of our people? Why try to wag the dog by wagging the dog's tail? Why should this country be lead into war by the back door? If the President, after considered judgment, feels it is for the best interests of the country to enter the war, why should he not carefully and frankly present such facts to the Congress, and after free and open discussion let it decide that issue?

If the Congress, after full and open discussion, decides it is for our best interests to enter the war, then, realizing they are the elected representatives of the people, whether we as individuals agree or not, right or wrong, we should then all unite as one person in an all-out effort to win the war.

But if, on the contrary, the Congress should decide that we should not enter the war, we should just as freely get behind such a policy and present a unified country devoted to that purpose.

A Layman's Guess Versus Engineering Facts

EXTENSION OF REMARKS

OF

HON. JOSEPH J. MANSFIELD

OF TEXAS

IN THE HOUSE OF REPRESENTATIVES

Tuesday, July 15, 1941

Mr. MANSFIELD. Mr. Speaker, on pages A3332 and A3333 of the Appendix of the RECORD appears the speech recently delivered over the radio by the gentleman from Pennsylvania [Mr. VAN ZANDT] opposing the St. Lawrence seaway.

The third paragraph of his speech, on page A3332, is as follows:

> When you view the project in two parts, namely as a seaway and power project, the natural question arises, What is the total cost? Those in favor of such a project are ultraconservatives in arriving at a cost figure, while those opposed to the project are unable to accept the modest cost claims of the advocates of the St. Lawrence project. On the other hand, leading and reliable industrial engineers in Canada and the United States place the cost in excess of $1,000,000,000, some contending that $1,350,000,000 is a sensible and sane estimate.

As I am only a layman, I shall not presume to criticize the estimates of cost said to have been made by alleged "leading and reliable industrial engineers in Canada and the United States." Some of these engineers, it is said, have contended "that $1,350,000,000 is a sensible and sane estimate." I will only say that this is approximately six times the cost as estimated by General Robins, Assistant Chief of Engineers of the Army.

In Mr. VAN ZANDT'S speech on page A3332 appears the following:

> In estimating the cost of construction there has been nothing said concerning the cost of defending the St. Lawrence project. Military experts are of the opinion that it will require $1,000,000,000 to erect the necessary defenses at strategic locations along the 1,677-mile front.

Here we are forcefully reminded of the failure on the part of Congress to provide for the defense of our great industrial and commercial enterprises. No fortifications have been erected for the defense of 15,000 miles of river improvements. Many billions for this purpose are necessary as measured by the estimated needs of the Great Lakes-St. Lawrence channel made by Mr. VAN ZANDT. His speech says:

> Military experts are of the opinion that it will require $1,000,000,000 to erect the necessary defenses at strategic locations along the 1,677-mile front.

All but a few miles of this front have been in operation for many years. The channel now extends from Duluth to Ogdensburg. On it we have the channels and locks absolutely essential to our great steel industry and without which we would now be powerless in our efforts of national defense. On it we have the great hydropower works at Niagara, where 56,000 cubic feet of water are utilized every second of time in the production of power, now so essential in our national defense. Not a dollar's worth of fortifications have been erected for their defense.

We are now told that when the one additional dam is built it will necessitate the expenditure of $1,000,000,000 for defenses along "the whole 1,677-mile front." If that be true, then we will certainly be in need of another billion to protect the T. V. A.

The Grand Coulee and Bonneville Dams on the Columbia are producing much more power than is contemplated for the St. Lawrence. Ocean ships ply on this river through the Cascade Range, passing through the huge locks at Bonneville, where we also have the famous fish ladders for the preservation of the salmon industry. Perhaps much more than $1,000,000,000 will be necessary for the defense of the Columbia.

The Ohio River watershed embraces more than 100 locks and dams, with a commerce of 50,000,000 tons. No fortifications have been erected for their defense. Even the old fort Duquesne near Pittsburgh has long been abandoned, and cotton bales are no longer used for breastworks at New Orleans. As measured by the needs estimated for the Great Lakes-St. Lawrence, certainly, at least $2,000,000,000 should be appropriated at once for the protection of this great region.

All these suggested fortifications are absolutely essential, if any of them are. Furthermore, we have 250,000 miles of railroad engaged in transportation which are not fortified. Probably another hundred billions would be sufficient for that purpose.

But, the half has never been told. On the Susquehanna, we have the great Conowingo Dam and hydroelectric power plant. It furnishes light and power to Philadelphia and power for the operation of trains on the Pennsylvania Railroad. It, too, is undefended. Perhaps a half billion would be ample for this purpose. If it should be destroyed, Philadelphia might experience a black-out, and the "Pennsy" might be forced to use more coal and less water power and thus give greater patronage to the coal industry, as she is now advising the Government to do.

Pennsylvania is our foremost State in the production of coal. The Pennsylvania Railroad has hauled many millions of tons of coal at great profit. Yet it is using hydroelectric power in the operation of many of its trains.

Representatives of the Pennsylvania Railroad have been telling the Committee on Rivers and Harbors to promote the use of steam power instead of water power for purposes of national defense. This is urged as an aid to the coal industry. They have told us that coal is far cheaper than falling water in the production of power. Then why Conowingo power?

On the question of maintenance of the seaway, the gentleman from Pennsylvania [Mr. VAN ZANDT] in his speech says:

> For the maintenance cost of the channels and locks alone, $20,000,000 will be expended annually for the seaway part of the project.

The maintenance of the seaway on the long stretch from Duluth to Ogdensburg is paid out of the annual lump-sum appropriations made by Congress. There will be but little change in that maintenance cost. The additional cost will be principally on the short section between Ogdensburg and the international boundary line where the new locks and dam are proposed. We are told in the speech of the gentleman from Pennsylvania [Mr. VAN ZANDT] that the additional maintenance cost will be $20,000,000 annually.

As a general proposition the cost of maintaining our concrete dams under water is infinitesimal. The principal cost has been in the operation of the locks, rather than maintenance. The locks are electrically operated by power afforded by the river itself. Several men will be required for the 24-hour day operation. These men would receive the major portion of the $20,000,000.

In these circumstances the Budget would be expected to approve the $20,000,000 allowance, and ED. TAYLOR and JOHN TABER expected to be found asleep. Believe it or not, Ripley.

For the current year the Budget made an allowance of $41,723,000 for the maintenance and operation of our entire waterway system. Included in this, are our Atlantic, Gulf, and Pacific ports; the ports and channels in Alaska, Hawaii, and Puerto Rico; our canals and intercoastal channels; our river systems of approximately 15,000 miles, and including the operation of several hundred locks and dams; one port each on the islands of St. Thomas, Midway, and Wake; and our Great Lakes system of more than 60 ports, and including all the so-called seaway except the short stretch below Ogdensburg. We are now advised that the inclusion of that stretch will add approximately 50 percent to our maintenance cost.

Bureau of Mines Has Discovered a New Process for Producing Magnesium From Magnesite Ore

EXTENSION OF REMARKS

OF

HON. CHARLES H. LEAVY

OF WASHINGTON

IN THE HOUSE OF REPRESENTATIVES

Tuesday, July 15, 1941

Mr. LEAVY. Mr. Speaker, in recent months the importance of magnesium in

our defense program has become known to all of us. This very superior light metal not only takes the place of aluminum and is susceptible of being alloyed with aluminum, but it has numerous advantages over aluminum in airplane production.

MAGNESIUM ESSENTIAL

Magnesium is an absolute essential in the manufacture of munitions, in making tracer bullets, and as a principal ingredient in explosives. As a metal it is one-third lighter than aluminum, has an equal or greater tensile strength, and is used not alone in the production of airplanes, but also, because of its lightness, is used as material for casings for the great bombs that the bomber planes carry. Germany has been manufacturing and using this wonderful metal most extensively, and as near as we can learn today, is producing many times as much of it as we are.

MONOPOLY

By reason of monopolistic control, particularly in the field of patents, the Aluminum Co. of America, together with the Dow Chemical Co., have permitted no other person nor concern to enter the field of production in magnesium. Practically all the magnesium produced in the United States is produced by the Dow Chemical Co. from chlorines at Midland, Mich., and Freeport, Tex. The price of magnesium fixed and controlled by the Aluminum Co. of America and the Dow Chemical Co. has always been just one-third higher than aluminum, which strangely enough is the same differential that exists in the weight of these metals, aluminum being one-third heavier than magesium.

While in this country we produce magnesium from salt brines through secret patented processes controlled by the Dow people and the Alcoa people, in Germany they produce it from Austrian magnesite, and actually a better grade of metal, being less subject to corrosion, since its base is ore rather than salt.

WORK DONE AT WASHINGTON STATE COLLEGE

The United States Bureau of Mines, cooperating with the State of Washington at its school of mines at Pullman, Wash., 5 years ago entered upon a program of research in connection with the tremendous magnesite deposits located a short distance north of Spokane, Wash., in Stevens County. It was known that there were large magnesite deposits running into millions of tons, almost in the shadow of Grand Coulee Dam, where billions of kilowatt-hours of electrical energy would be generated. This research work has been carried on by Dr. H. A. Doerner of the United States Bureau of Mines, and Dr. A. E. Drucker, Dean of the State school of mines. The Congress has been generous in its appropriations to carry this work forward, and as a result of these appropriations a small pilot plant was constructed at the State college at Pullman, Wash., to ascertain the possibilities of producing this marvelous metal from our great ore reserves by electro-thermic methods. This work has been carried forward until today it has reached the point where those in charge of the research have announced the success of their new methods and processes.

Mr. Speaker, I cannot refrain from expressing a genuine gratification in this announcement, because of the faith that I have had in these experiments from the beginning, and the profound belief that a practical discovery of a method of producing metallic magnesium from magnesite ore would result in giving to our Nation, both for wartime and peacetime, an unlimited amount of the most wonderful metal that man has ever known, and at a price within the reach of all.

If the Office of Production Management and others who have the responsibility of making available magnesium metal, now that we have proven how it may be produced from the ore, see fit to give immediate consideration to this process, there will need to be no shortage of light metals to carry forward our airplane-production program and our other normal activities wherein we require great quantities of light metal.

ORE AND POWER AVAILABLE

Nature has been exceptionally kind in placing these mountains of magnesite ore in the immediate proximity of the greatest hydroelectric-power development in the whole world, and electrical energy is the major essential in reducing the ore to metal. One kilowatt of electrical energy produces 1,000 pounds of metallic magnesium. Grand Coulee Dam, when developed to capacity, will produce 2,000,000 kilowatts of electricity. This translated into metallic magnesium would be 2,000,000,000 pounds of metal. Of course, we realize that we would not use all the energy for this purpose, but the fact remains that every anticipated shortage of this magic metal can now be cared for by merely taking advantage of what we have and what we know in connection with power development and plant construction, using as a model the pilot plant at the State College of Washington at Pullman, and using as a process the discovery made by Dr. H. A. Doerner and his associates.

MAGNESIUM PROCESS PROVEN

Mr. Speaker, as proof of the fact that this is not merely a burst of local pride nor a fanciful vision or dream, but a cold practical fact, I append hereto a telegram received today from Dr. A. E. Drucker, dean of the School of Mines, at the State College of Washington, at Pullman, and commend it to the serious consideration of my colleagues and every person who has the responsibility of seeing that this Nation is amply prepared in this great crisis.

The telegram reads as follows:

PULLMAN, WASH., *July 13, 1941.*

Hon. CHAS. H. LEAVY,
Congressman,
House of Representatives,
Washington, D. C.

First uninterrupted test run of pilot plant marking success of this intermediate step between new process and production on a commercial scale. Feel assured now that the equipment and process will function. Ingot metal of surprisingly high degree purity produced exceptionally resistant to corrosion. Impurities found in this electrothermic magnesium are of different kinds and less conducive to corrosion than impurities present in usual electrolytic magnesium. Doerner feels the process being carried out by pilot plant is best possible for magnesite of this State. He feels recent results as gratifying and best thus far. A definite step forward in development of equipment for recovery of magnesium from Washington magnesite has been accomplished at Pullman.

A. E. DRUCKER, *Director.*

You Can Save Missouri

EXTENSION OF REMARKS
OF
HON. WALTER C. PLOESER
OF MISSOURI
IN THE HOUSE OF REPRESENTATIVES

Tuesday, July 15, 1941

EDITORIAL FROM THE WATCHMAN-ADVOCATE, CLAYTON, MO.

Mr. PLOESER. Mr. Speaker, it is with intense interest for the preservation of the scenic natural beauty and resources of the State of Missouri that I extend in the RECORD an important editorial, published by the outstanding weekly journal in the Twelfth District, the Watchman-Advocate of Clayton, Mo.

I call to your particular attention that I am in full agreement with the position of this comment.

The editorial follows:

[From the Watchman-Advocate, Clayton, Mo., July 11, 1941]

YOU CAN SAVE MISSOURI

The State of Missouri has long been known for fine streams and scenic beauty. Likewise, its people have always been noted for their ability to defend their interests, to campaign for a desirable program, or to fight against any loss of their rights or liberties. At this moment these characteristics of Missouri and its people are closely related. There is a movement on now to ruin our fine streams and scenic beauty and at the same time deprive Missourians of some of their liberties.

The proposed plan to erect 30 flood-control dams in Missouri is making slow but steady progress. While the people of this State are absorbed in other affairs, the plans of those who would dam the State out of existence are being put into effect. High flood-control dams mean higher taxes, fewer schools, lost farms, and ruined counties. Their construction will mean the creation of health hazards and biological deserts. Their construction will result in fewer recreational places, the ruination of some of Missouri's finest scenic beauty, and the total destruction (for all practical purposes) of some of our most beautiful streams.

The only benefit to be derived from these proposed dams is a temporary control of a minute portion of the flood waters that now affect the lower Mississippi River States. The only other benefit to be found in their construction will be in the increased profits of the already wealthy engineering and construction companies who erect them.

There is one way to thwart the schemes of Army and private engineers who are so dam crazy. Only a concerted action of the people of this State can the State of Missouri be saved from the impending fate of being dammed to destruction.

If you believe Missouri is worth saving, if you believe that what was your natural heritage is worthy of being passed on to your children, then write a letter or postal

card today to your Congressman and Missouri's two United States Senators in Washington. Voice your opposition to this unnecessary, unwarranted, untimely, and un-American violation of our liberties!

Protecting the American Sugar Industry

EXTENSION OF REMARKS

OF

HON. WILLIAM S. HILL

OF COLORADO

IN THE HOUSE OF REPRESENTATIVES

Wednesday, July 16, 1941

RADIO ADDRESS OF HON. WILLIAM S. HILL, OF COLORADO

Mr. HILL of Colorado. Mr. Speaker, last week I delivered an address over radio station KFKA, at Greeley, Colo., on the subject Protecting the American Sugar Industry. The Mountain States Beet Grower published this article in their July issue, and I ask unanimous consent to have the address included in the Appendix of the RECORD.

The address follows:

By the end of 1941, unless a new Sugar Act is passed by Congress, sugar producers of the United States will no longer have any protection against the importation of foreign sugar, except that provided by an inadequate rate of tariff. Without effective protection it is impossible for producers of sugar beets and sugarcane to operate profitably or efficiently. This is a matter which concerns not only the producer of sugar beets and sugarcane, but the consumer of sugar as well, because the existence of a healthy domestic sugar industry is the consumer's only guaranty against excess prices and the manipulation of our sugar markets by foreign interests.

That sugar prices have been low during the 7 years of quota control is generally recognized, and it was mentioned several times during the recent debate on sugar questions in the United States Senate. In 1940 the average retail price of sugar in the United States was 5.2 cents a pound. In 1939 it was 5.4 cents, in 1938 it was 5.3 cents, so that the Sugar Division was able to report just a few days ago—July 9—that the average price paid for sugar by consumers was less during the 7 years of control than in the 7 years preceding.

Making further comparison of sugar with other foods, we discover that in the last 20 years potatoes have increased in price by 71 percent, lard by 50 percent, butter by 45 percent, steak by 180 percent. In 1921 the average retail price of sugar was 8 cents a pound, so that the reduction in sugar prices between 1921 and 1940 was 32 percent. This in the face of the sharp increases in the price of other basic foods.

Even a casual glance at these figures should convince the most skeptical person of the fallacy of the arguments advanced by eastern cane refiners and other selfish groups that the present sugar program has been a burden to consumers. It is not a fact. The consumer has actually benefited in price under the present sugar program.

While the present price of sugar is slightly higher, there is nothing in the picture to indicate that sugar prices will increase out of proportion to the rise of other food commodities. Sugar could increase in price considerably and still be the cheapest of food on the basis of its caloric content. One pound of sugar has nearly six times the calories of a quart of milk; one and one-half as much as a pound of ham or a pound of eggs; six times more calories than a pound of potatoes, and one and one-half more than a pound of bread. Thus, figuring on a basis of calories, sugar is the cheapest food produced.

The farmers of the United States were forced by the Sugar Section of the Department of Agriculture to reduce their beet and cane acreage for 1941. The beet growers accepting a cut of 170,000 acres. All this reduction came in spite of a world situation no man could fathom, and at a time when it was becoming more and more difficult to get ships to bring offshore sugar to our markets. Now to keep their ridiculous regulations from swamping them completely, the Secretary of Agriculture "upped" his estimate of sugar consumption by 273,672 tons for a total of 7,125,561 tons—more sugar than has ever been consumed in any previous year in the history of the United States. With our sugar acreage cut, with ship bottoms getting harder and harder to obtain, with a world situation that will probably consume all our sugar reserve, the short-sighted policy of the men in charge of the sugar program becomes obvious, and it seems high time that Congress should begin working on sugar legislation to save us from the same situation that maintained in the last World War.

The beet and cane growers of every section of our country protested the sharp cut of acreage forced on them this spring by the Department of Agriculture backed by a Department of State determined to make the farmer pay for much of their good-neighbor policy. The Agriculture Department was heedless of the importunities of the sugar-beet and cane-producing areas, but it can be hoped that these two Departments now realize the error of their ways, and that neither will oppose the writing of a new Sugar Act that will give back American markets to our American producers.

The opposition of eastern seaboard cane-sugar refiners to the extension of the Sugar Act may be expected, but with present lack of shipping their arguments should fall on deaf ears. We must have sugar. The beet and cane sections employ 10 men for every 1 employed by eastern refiners. So, when we curtail beet- and cane-sugar production we not only directly create unemployment in domestic producing areas, but indirectly we reduce the employment of railroad men, miners, livestock producers, and dozens of other related industries and enterprises. Add to this the sharp cut in consumers' goods because of this unemployment and you can begin to understand the vast and the far-reaching effect of such narrow-minded regulation.

New sugar legislation should be enacted at once. Congress should begin the study immediately and permit every interested party to present his side of this sugar question. This is not just an issue for cane and beet growers to argue over with the Federal Government. This is a question that affects the purchasing dollar of every member of our commonwealth. The proper relation of our Government to offshore producers of sugar must be carefully considered but when interests conflict the deciding weight must be with our own farmers and consumers. No one doubts the ability of our Department of Agriculture to assist in solving this difficult problem. Let them be fair to the farmer, laborer, consumer, and to the capital invested in these great mills. Leadership can and must be found to solve not only the problems of the beet and cane growers, but also the problems of the producers of other major crops who are now in serious condition.

To further enlighten you on the sugar situation, it is well to recall that during all the period of quota control, not a single cent has been paid to the industry out of the Federal Treasury. On the contrary, the producer and the processor have paid their way and left a surplus in the United States Treasury. This is quite different from the Government assistance given to other farm crops.

Even if the present World War should continue for many years to come, it is hard to conceive of a situation wherein sugar would become so scarce as to cause an extreme increase in price, or the rationing of its use. Plenty of sugar should be available at reasonable prices, unless the bungling methods of the Agriculture Department, unduly influenced by a free-trade State Department, cause such a curtailment of acreage that we fail to have an opportunity to grow sufficient acreage of sugar crops.

New sugar legislation must take into consideration all our experience of the past, coupled with a vision and foresight into the future, all based on the abnormal situations existing in this world of revolution facing us. A proper evaluation of the condition of the farmers of our country, now and in a post-war world, must direct all deliberation on agricultural legislation at this session of Congress.

In closing, let me say that the Congress faces a serious situation, and one that needs careful thought and sound deliberation. In the discussion of the various phases of this problem, we need men that can think in terms of the United States, men that can understand the ramifications and the interrelation of the sugar problem with other agricultural production. I believe there is a correct solution to every problem. Therefore, if men with brains and vision set out to find a proper answer to the sugar problem, it will be found.

"Peace, Be Still"

EXTENSION OF REMARKS

OF

HON. LOUIS LUDLOW

OF INDIANA

IN THE HOUSE OF REPRESENTATIVES

Tuesday, July 15, 1941

Mr. LUDLOW. Mr. Speaker, about 1,900 years ago a great storm arose on the Sea of Galilee. While the lightning flashed, the thunder roared, and the angry waves churned the foaming sea, a little boat battled bravely with the elements. On that boat was the Son of God. And He was sleeping the sleep of the just.

The situation was supremely tragic. It seemed that at any moment the frail craft would be broken apart or washed under by the furious waters and all on board would be lost. With blanched faces the horror-stricken disciples awakened the Master.

What happened then is graphically told by three competent reporters—St. Matthew, St. Mark, and St. Luke.

St. Matthew:

And He saith unto them: "Why are ye fearful, O ye of little faith?" Then He arose and rebuked the wind and the sea, and there was a great calm.

St. Mark:

And He arose, and rebuked the wind and said unto the sea: "Peace, be still." And the wind ceased and there was a great calm. And He said unto them: "Why are ye so fearful? How is it that ye have no faith?"

St. Luke:

And they came to Him and awoke Him, saying: "Master, Master, we perish." Then He arose and rebuked the wind and the raging of the water, and they ceased, and there was a calm. And He said unto them: "Where is your faith?"

In my opinion Christianity is today facing the most supreme test in all of its history. A world tempest is going on and civilization is in the same precarious situation as the little boat that was rocked by the winds and the waves on the Sea of Galilee. The violence of men's hatreds, one toward another, is almost inconceivable. The ideal of the fatherhood of God and the brotherhood of man is being shot to death on a hundred battlefields on three continents. The word "mass" used to stand for sweet communion with God, but with paganism sweeping a large portion of the earth the only mass great numbers of people understand is mass murder. The very fundamentals of home, religion, and social security are being warped and twisted by the destructive elements at work. The whole world is seething in the grip of a storm of unimaginable virulence and magnitude. In my judgment the only force that can rescue civilization, the only force that can say, "Peace, be still," is the same force that calmed the turbulent waters of Galilee—the Son of God. I plead, meekly and humbly, that the problem of calming the world waters may be submitted to Him.

In presenting this suggestion I quote an illustrious authority:

"No greater thing," said President Roosevelt a few years ago, "could come to our land today than a revival of the spirit of religion—a revival that would sweep through the homes of the Nation and stir the hearts of men and women of all faiths to a realization of their belief in God and their dedication to His will for themselves and for their world. I doubt if there is any problem—social, political, and economic—that would not melt before the fire of such a spiritual awakening."

It seems to me—and I say it almost with tears in my eyes—that Christianity of today is doing very little to meet the challenge imposed upon it by this greatest of world debacles. Where are the leaders of the Christian church and what are they doing? With the exception of two outstanding churchmen, one a Catholic and the other a Protestant, Cardinal William H. O'Connell, of Massachusetts, and Rev. Harry Emerson Fosdick, of New York, I know of no eminent leaders of the church who have declared themselves in a forthright manner against American involvement in the orgy of butchery that is going on in foreign lands, or who have indicated a belief that Christianity has a present and imperative duty to perform in proposing mediation to end the war. Because these two great men stand out like mountain peaks on the Christian horizon I quote again, as I have many times heretofore, telegrams which I have received from them, as follows:

BRIGHTON, MASS., *May 22, 1941.*
Congressman LOUIS LUDLOW,
House of Representatives,
Washington, D. C.:

Read your letter and enclosures with deep interest. There is no doubt in my mind that the American people desire a cessation of this stupid and brutal war, and I may add that no one can doubt their desire to keep out of the conflict.

Cardinal O'CONNELL.

NEW YORK, N. Y., *May 26, 1941.*
Hon. LOUIS LUDLOW,
House of Representatives,
Washington, D. C.:

I strongly commend your resolution to promote peace by calling a conference of the American republics to offer the nations now at war the services of the Western Hemisphere as a mediator. This is the only hopeful and constructive way I see out of the present crisis.

HARRY EMERSON FOSDICK.

It would seem to me that if the church of Christ were as militant as it should be to meet this supreme test of its efficiency, it would be leading a great moral and spiritual resurgence to lift the world out of hell and sweep it back to safety and sanity.

I speak as a humble member of the Methodist Church and as one who believes in a living Christ, and I say with sorrow that I do not think the Son of God is getting the support he should receive from Christians in performing the task of saving the world, which must be saved by Christianity, if it is to be saved at all. What is the Council of the Churches of Christ in America doing? What are other great religious organizations doing? What are our religious publications saying? Some ministers are openly interventionists and think the United States should become an active belligerent, just as if adding to the already too many consuming hatreds of the world is the way to peace and concord, and as if pouring oil on a fire is the way to put out the fire. Others appear to have succumbed to an apathetic laissez-faire and defeatist philosophy, so that it is difficult to say whether they are paralyzed or petrified. To such Christians I can imagine hearing the Son of God saying from behind the shadows, as St. Luke records Him saying to His disciples on the boat:

Where is your faith?

Christians who are under the defeatist spell should reconsecrate themselves in the faith that made martyrs, shake off their paralysis and get into action, for the world is crying to be saved.

I believe that a practical way for our Christian forces to proceed to do their part in the greatest task ever undertaken or imagined as a Christian objective, the saving of the world from physical and moral destruction, is outlined in the mediation resolution I have introduced in the House, which is as follows:

Whereas it is the overwhelming desire of the American people that the United States shall remain at peace with the world and free from foreign entanglements, while it faithfully performs its duties as a good neighbor; and

Whereas if the world ever needed a peacemaker it needs one now; and

Whereas with war engulfing a large portion of the globe and threatening to draw other nations into its vortex, there is a real opportunity for the United States to demonstrate its sincerity as a good neighbor by assuming the role of a peacemaker; and

Whereas there is a possibility, faint though it may be, that the New World under the leadership of the United States, might be the means of freeing the Old World from the miseries of war and reestablishing peace and tranquillity on earth: Therefore be it

Resolved by the House of Representatives (the Senate concurring), That it is the sense of the Congress of the United States that the President shall be requested to invite the American republics to send delegates to a conference to be held at the earliest practicable date in the city of Washington to offer to the nations now at war the services of the Western Hemisphere as a mediator, to the end that the blessings of peace may be brought to a distraught world.

SEC. 2. This concurrent resolution shall be known as the peace resolution of 1941.

The introduction of this resolution is predicated on the belief that the best thing that could happen to the world now would be successful mediation to stop the war, to be followed by reconstruction on a basis of fundamental justice. There is enough land lying uncultivated and fallow to support all human beings on the earth if they would but forget their hatreds, put down their guns, and go to work.

High among the snow-crowned Andes Mountains the face of Christ shines in the bright sunlight. To my imaginative mind, the heroic statue of the Prince of Peace, on the borderland between Chile and Argentina, sends out on the ether waves of love and friendship its mute appeal for the mediation resolution I have introduced. That statue is deeply rooted in the sentiment of the American republics, because it was erected by the two nations to celebrate an accord that was reached after long and intense bitterness. It stands in towering majesty on a spot 13,000 feet high. It can be seen for a hundred miles and all who come near it are enthralled by its beauty and grandeur. The story of the Christ of the Andes has been told many times, but to a world stricken with war, or living in constant fear of war, it cannot be told too often. The statue bears this inscription:

These mountains must crumble to dust before the Argentines and the Chileans shall break the peace which they have sworn to maintain at the feet of Christ, the Redeemer.

Would it not be a grand thing if the moving hand of history were to write into the record of civilization this memorandum:

In the year 1941 a great Christian President of the United States, with the assistance of the 21 American republics, brought a warring world to the feet of Christ, the Redeemer.

Is it not worth trying?

Communism in the Merchant Marine

REMARKS

OF

HON. NOAH M. MASON

OF ILLINOIS

IN THE HOUSE OF REPRESENTATIVES

Wednesday, July 16, 1941

Mr. MASON. Mr. Speaker, I have talked today with a jobless seaman. His name is Joseph J. Doyle. Until a few days ago he was a member of the crew of the steamship *Ancon*. That vessel is operated by the War Department of the United States Government. When the steamship *Ancon* puts out to sea tomorrow, Joseph J. Doyle's name will be missing from the list of the ship's crew.

Why is Doyle jobless today? For the simple reason that he dared to call for an investigation of the alleged Communist control of the National Maritime Union. As a member in good standing of the National Maritime Union and as a properly accredited delegate to the union's annual convention in Cleveland last week, Doyle asked for an open hearing within the union on the charge of Communist control. Immediately the Stalin-Curran machine, which absolutely dominates the National Maritime Union, put Mr. Doyle in his place; that is, in the ranks of the unemployed—the place reserved for all those seamen who dare lift their voices against Moscow's strangle hold upon the shipping of the United States.

The case of Joseph J. Doyle dramatizes an issue which has been facing the United States Government for several years. That issue will not down. It must be met, and I propose—I demand—that we meet it without further delay. For years, the Dies committee has been turning up the evidence which shows conclusively that a vicious and subversive machine of Communist-racketeers controls the National Maritime Union. Our committee agents inform me that there is a great deal of new evidence concerning this machine which controls the N. M. U. Today that machine demonstrates that it is so confident of its power over American shipping, that even the War Department of the United States must knuckle down when it gives the command. I put the issue up to the War Department today: I ask the Department headed by Mr. Henry L. Stimson if it intends to follow the policy of letting Moscow dictate the personnel aboard our ships. I ask the War Department if it intends to connive with Joe Curran and his Moscovite bosses in depriving any patriotic American seaman of his livelihood if and when he challenges the Communist control of the National Maritime Union.

I want to say in closing that the Dies committee has placed Mr. Doyle under subpena, and I intend to see that our committee brings him before us to give the facts and that we probe to the very bottom of this issue which has been dramatized by the case of this seaman. I shall favor bringing the responsible officials of the War Department, by subpena if necessary, before the Dies committee so that we may learn at the earliest possible moment where the Department stands on this issue.

Accomplishments of Farm Security Administration in Stark, Tuscarawas, Wayne, and Holmes Counties, Ohio

EXTENSION OF REMARKS

OF

HON. WILLIAM R. THOM

OF OHIO

IN THE HOUSE OF REPRESENTATIVES

Monday, July 14, 1941

Mr. THOM. Mr. Speaker, not many persons in cities and towns are acquainted with the program of the Farm Security Administration and therefore the information herein is intended chiefly for them. To the farmers, however, the actual results of the Farm Security Administration program in Stark, Tuscarawas, Wayne, and Holmes Counties, comprising the Sixteenth Ohio Congressional District, will be of outstanding interest.

This Administration has for its purpose the extension of loans to small farmers who find credit unavailable elsewhere, with the hope of increasing their incomes so that they may be kept from appealing to the W. P. A. or relief organizations.

Secondly, the Farm Security Administration goes to the relief of the farmer overburdened by debt, and by skillful negotiation arranges a scaling-down of debts or reduction of interest—all voluntary on the part of the creditor.

Thirdly, in certain counties the Administration buys farms for tenants, supplying them with all the needed funds at a rate of interest of 3 percent and providing for easy payments, thus adding to the number of farm owners of a community.

A review of what has been accomplished in the Sixteenth Ohio Congressional District by the Farm Security Administration is contained in the following letter I have received from Mr. C. B. Baldwin, Administrator:

HON. WILLIAM R. THOM,
House of Representatives.

DEAR MR. THOM: Since the beginning of the present emergency it has been generally recognized that the health, welfare, and morale of our people are vitally important to national defense. Providing for these needs among low-income farm families has been one of the essential contributions of the Farm Security Administration to the Nation's defense efforts during the past year.

We have just completed a special survey undertaken to measure the progress being made by borrowers from the Farm Security Administration. It indicates the gains in terms of money, living standards, and capacity for self-support which have been made during 1940 by handicapped and low-income farm people all over the country. It occurred to me that you might be interested in seeing the figures for your district.

In the Sixteenth District of Ohio there were 502 active standard rehabilitation borrowers at the end of 1940. The survey showed that the average borrower earned a net income of $926 during the year, as compared with $745 in the year before he borrowed from Farm Security. In other words, the typical family increased its annual net income by 24 percent.

Also significant are the gains which these people made in net worth, since that is one of the best measures of permanent improvement in living standards. Borrowers in your district increased their average net worth—over and above all debts, including their obligations to the Government—from $1,156 before they came into the Farm Security program to $1,427 at the close of the 1940 crop year. This is a gain of 23 percent.

These figures mean that farm-security borrowers in the Sixteenth District have added a total of $135,967 to the wealth of their communities, and have increased their total annual incomes by $90,802. Naturally this growth in prosperity and purchasing power has been reflected on the books of merchants and other businessmen of the district.

We were pleased to find that borrowers in your district are rapidly repaying their rehabilitation loans. Already $108,784 has been repaid on loans totaling $454,370, although much of the money does not fall due for 4 or 5 years. Throughout the entire country, rehabilitation loans totaling $420,865,050 had been made as of December 31, 1940, and $149,626,442 of this sum had been repaid. As you know, loan funds currently are advanced by the Reconstruction Finance Corporation, instead of coming from direct appropriations.

In view of the fact that none of the borrowers from farm security was able to get adequate credit anywhere else, and that many of them formerly were on relief, we feel that this repayment record is a tribute to the honesty and industry of these needy farm people. There is ample evidence that the great majority of them are getting back on their feet and becoming permanently self-supporting. In large measure, this progress is due to the advice and technical guidance in sound farm and home management which accompanies each farm-security loan.

For example, we encourage our borrowers to get away from one-crop farming—particularly of surplus crops, such as cotton, tobacco, and wheat—and to raise as much as possible of their own food and feed for their livestock. During 1940, the average farm-security family in your district produced $266 worth of goods for home consumption, as compared with $212 before they came into the F. S. A. program. This produce for home use included 405 gallons of milk per family, 431 pounds of meat, and 354 quarts of vegetables and fruit canned for the winter. This increased production of food did not, of course, add to the supply in the commercial markets, since virtually none of it was offered for sale. It simply meant a better diet, better health, and a rising standard of living for these families.

Often it has been necessary to work out an adjustment of the family's old debts, before rehabilitation could be successful. Local farm debt adjustment committees have been set up for this purpose. They have no legal authority to compel adjustments, but by bringing the farmer and his creditors together for a friendly discussion, they usually are able to arrange a scale down of the obligations, reduced interest rates, or extension of the payment period. Such adjustments frequently save the farmer from foreclosure, and at the same time, enable the creditors to get substantial payments on what might otherwise have been bad debts.

This service is available to all farmers, whether or not they are rehabilitation borrowers. Altogether, debt reductions totaling $100,288 have been negotiated for the farm-

ers in your district. This represents a scale-down of 14.6 percent. As a direct result of these adjustments, $10,985 in back taxes has been paid to local governmental agencies.

In making this special survey, our field employees reported that there are 830 families in your district who are eligible and in need of rehabilitation loans but have been unable to get them because of the limited funds available.

In addition to the rehabilitation program, Farm Security is carrying out the Bankhead-Jones Farm Tenant Act, which provides a limited number of loans to competent tenants to enable them to buy family-type farms.

During the first 3 years of this program we made 20 such loans in your district, totaling $153,090. This year we expect to make 5 Bankhead-Jones loans in the Sixteenth District, amounting to approximately $36,856. Throughout the country delinquencies of these loans have amounted so far to only 2.6 percent, or $23,658, and this has been more than offset by the fact that other borrowers have been able to make advance payments totaling $196,765 as the result of good crops and management.

I am hopeful that this rather detailed report may be useful to you; and if you would like to have any further facts about our program, I shall, of course, be glad to supply them. Sometime during the year I hope that you may find an opportunity to visit some of the borrowers from F. S. A. in your district and see for yourself the efforts they are making to get a new start as independent, tax-paying citizens.

Sincerely,

C. B. BALDWIN,
Administrator, Farm Security Administration.

Answering Jackson Daily News

REMARKS
OF
HON. JOHN E. RANKIN
OF MISSISSIPPI
IN THE HOUSE OF REPRESENTATIVES

Wednesday, July 16, 1941

Mr. RANKIN of Mississippi. Mr. Speaker, one of the leading newspapers of Mississippi, the Jackson Daily News, edited by Hon. Fred Sullins, hardly lets a day go by without an attack on me for some cause—or without cause.

One of his latest blasts was because of my efforts to do belated justice to the disabled veterans of the World War and their widows and orphans. At the same time, however, he is clamoring for us to plunge into the European war, which means, we are now told, that we must prepare to send an army to Europe. I do not know where we could land them, nor do I know who would take care of the maimed, blind, wounded, and disabled ones when they returned from such a war, or who would care for their unfortunate dependents.

He seems to be trying to convince the people of Mississippi that I ought not to run for the United States Senate. He seems to fear that, if elected, I would spread T. V. A. power rates all over the State—as well as rural electrification.

His fears are well-founded. If I should ever be placed in that position, I would not rest until everyone who uses electricity in Mississippi enjoyed T. V. A. rates, and until we electrified every farm home in the State.

Mississippi cannot remain "half slave and half free."

July 4 Address at Columbus Junction, Iowa

EXTENSION OF REMARKS
OF
HON. THOMAS E. MARTIN
OF IOWA
IN THE HOUSE OF REPRESENTATIVES

Wednesday, July 16, 1941

ADDRESS OF HON. THOMAS E. MARTIN, OF IOWA

Mr. MARTIN of Iowa. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following address I delivered at Columbus Junction, Iowa, July 4, 1941:

My friends of Columbus Junction and the First Congressional District, it is a pleasure indeed to get back to Iowa and to meet and talk with home folks again. I am convinced more than ever not only that Iowa leads the Nation in grade 1 farm land and in agriculture but also that Iowa leads the Nation in stable thinking in these perilous times.

Iowa has furnished some of the outstanding leaders of the Nation in the matter of clear thinking and determined efforts to bring our defenses up to date. One of your honored citizens, Hon. Floyd Pine, has distinguished himself through his leadership in our State legislature as chairman of the special defense committee created by our State legislature. Within recent weeks we have also been brought to the realization that the sons and daughters of Iowa are in the forefront of our defense efforts throughout the land. This fact has been brought home to us not only by the great work of Floyd Pine but also through the untimely death of Pvt. Charles Edward Bidwell, of Washington, Iowa, in Texas; of Lt. Howard Abbott, of Osceola, in the submarine *O–9;* the death of Lt. Theodore Holsteen, of Burlington, in the Army bomber in Wyoming; and the tragic fate of Betty Streiff, of Albia, in Washington.

As Americans view this challenge today, we can well afford to look to our personal obligations, to the obligations and responsibilities of our Government and to the responsibilities of our Nation. My own obligation as your Representative in Congress carries with it a solemn responsibility. I can only hope to serve you to the utmost of my ability and to do everything within my power to help our Nation achieve its proper place among the nations of this earth. My experience in Congress has been one of facing unpredicted emergencies and decisions continuously. As I face these problems I am reminded of Abraham Lincoln's statement:

"I am not bound to win, but am bound to be true. I am not bound to succeed, but I am bound to live by the light that I have. I must stand with anybody that stands right, stand with him while he is right, and part with him when he goes wrong."

My own limitations also remind me of the following quotation from Edward Everett Hale:

"I am only one,
But I am one;
I can't do everything,
But I can do something;
And what I can do,
That I ought to do;
And what I ought to do,
By the grace of God, I will do."

As to the responsibilities of our Government, I think I should at this time confine my comments to the responsibility of the legislative branch. The greatest job before Congress today is to bring into being an adequate armament and training program, without plunging our Nation into economic and fiscal disaster. With a spending program estimated at some $22,000,000,000 for the coming year, and the prospective increase in our national debt of approximately half that amount, Congress is today facing a challenge far greater than any challenge in history in the matter of fiscal policy. The tax problem will be very dramatically brought home to each of us when the new tax bill becomes effective, and yet there is little likelihood that a new tax program can raise more than half of the governmental spending program for the coming year.

I was assigned to a special national-defense committee of my party in Congress about 18 months ago and our conclusion after a long and careful study was that a sound national economy is of vital importance in our national defense. Briefly, Congress' job is to raise the revenue we need without endangering the very life of industry and agriculture, and also Congress' job is to bring into being a national-defense armament and training program sufficiently strong to meet the dangers that confront us.

As I said before, I will not attempt to outline for you at this time the full duties and responsibilities of the President and executive branch of Government in the determination of policies and the administration of them with the funds made available by Congress. I will first briefly, however, state that the President and the executive branch of Goverment are just as obligated to carry out your will as Congress is so obligated, and, in my opinion, the President and his Cabinet should no more stoop to secret propaganda to influence your views than should any Member of Congress. We are all elected by your votes in our representative form of government, and you voters should not hesitate to tell us all what to do. In my judgment, the only report I should bring back to you should be in the nature of accounting to you as your Representative in Congress.

From this view of the duties of your governmental representatives and officials and because of my view that the Iowa farmer is the greatest thinker in our land today, you can imagine my astonishment when recently the Farm Security Administration of the United States Department of Agriculture sent out instructions to its employees who were qualified as information advisers, setting out that the British shipping situation is much more serious than Americans have realized and then proceeded with the following:

"Department experts emphasize that these facts do not mean that England has lost the war. There is some doubt, however, whether England can hold out through the winter if we do not take immediate and positive measures to see that American food and war materials are delivered at British ports.

"What a British defeat would mean to this country should by this time be obvious to all of us. Many of the best-informed people in Washington predict an invasion of the Western Hemisphere within 90 to 120 days if Britain is defeated.

"The Department feels that the American people—particularly the America. farmers—do not understand these facts, and that vigorous action of the type needed cannot be taken until this lack of understanding is remedied.

"For this reaso.. every agency in the Department has been asked to do all it can to get these facts before the people.

"We cannot issue formal press releases or radio speeches on the subject for two obvious reasons—it is not the official job of the Department to discuss international affairs, and indiscriminate broadcasting of these facts might play into the hands of the appeasement propaganda groups.

"We are requested, however, to carry these facts by word of mouth to as many as possible of our own officials and other key people in Agriculture, such as Farm Security Administration committeemen, etc."

I do not believe I need to emphasize further that such secret efforts to influence your opinion in our present crisis is not a proper function of government.

Our Nation's responsibility involves the responsibility of each and every citizen and resident within our land. The answer of the colonists at Bunker Hill on June 17, 1775, the Declaration of Independence on July 4, 1776, and the adoption of our flag on June 14, 1777, are inspiring examples to us today. Time has ticked off 166 years of history since Bunker Hill, and we are face to face as surely today, as then, with the fact that the things we place most highly—liberty, equality, the right to happiness and security in our homes and persons—are not merely a heritage to be taken as a matter of course. They are ours, not to squander and dissipate but ours to maintain and hold in trust for generations of Americans yet unborn.

We can all agree with R. H. Markham in that:

"The flag of the United States of America has developed step by step as the Nation has developed. It is a living symbol. Each feature of this flag represents a grand deed and a high ideal; represents men and women trying to create a better way of life. It symbolizes the daring devotion of the past, the gigantic efforts of the present, triumphant faith in the future. It is an emblem of frontier hardships and struggles, of peaceful fields, and wonder-working factories, of churches, schools, and love-filled homes. In its colors are reflected the brightest hopes and noblest visions that the good men of every age have cherished. The honoring of this flag is a solemn pledge that these hopes and visions shall be realized."

Throughout the challenge immediately confronting us in the matter of peace or war I wish to emphasize that being peace-minded is not a defense against war. We are all in favor of fair weather, but that does not save us from being blown to kingdom come by a tornado. There is only one way to defend the America we love against the "isms" that are now running rampant throughout the world, and that way is to make our Nation so strong that all the bullies of the world put together dare not pick a fight with us. In so building our arms we must also safeguard our spirit of freedom and recognize that America cannot survive without spiritual faith. With Russia and Germany locked in combat, we are confronted with a real challenge whenever we undertake to visualize either side in that conflict marching arm and arm with us and the other democracies of the world singing Onward Christian Soldiers for the freedom of speech, freedom of religion, freedom from want, and freedom from fear.

Our American system of Government is in striking contrast to national socialism. We have seen national socialism in Italy develop into fascism, and then into dictatorship under Mussolini. In Russia we have seen national socialism develop into communism and sovietism, and then into dictatorship under Stalin. We have seen national socialism in Germany develop into nazi-ism and then into dictatorship under Hitler. In contrast to all these our American system of government exalts the individual and subordinates the Government and all Government officials to the position of servant of all the people, and that government derives its just powers from the people, who are supreme.

I do agree wholeheartedly with Acting Secretary of State Welles speaking in behalf of President Roosevelt when he told a press conference:

"That to the people of the United States * * * principles and doctrines of communistic dictatorships are as intolerable and as alien * * * as * * * doctrines of Nazi dictatorship. Neither kind of imposed overlordship can have, or will have any support or any sway in the mode of life, or the system of government, of the American people."

In facing our Nation's challenge in addition to spiritual faith the great weapons that will successfully meet the challenge confronting us today are courage, economic strength, and work. Those three factors, coupled with spiritual strength need still another factor to carry us forward and that factor is national unity.

We are today torn between our emotional impulses on the one hand and our logical conclusions on the other. One of my distinguished colleagues Hon. KARL STEFAN, of Nebraska, in a speech to his constituents and which speech appears in the Appendix of the RECORD at page A3005, made a very effective statement of the situation confronting us. This is the time that divides the thoughts and feelings of men, that ruptures friendships, and that may even divide families, and that situation must not happen in America today. With a united America and with our unequaled capacity for mass production and with the unequaled courage and bravery of American youth, America can move forward with a unity of purpose and a spiritual unity to out-build any nation or combination of nations on this earth in the luxuries of peacetime or the armaments of war. Under the benign influences of a free government, of a free economy, of a free enterprise, free speech, and free religion and free politics, the men of America of different races and different tongues have learned to modulate and to adjust their suspicions and their desires, so that in this great free land, each man, woman, and child can have equality of opportunity.

However, until we have carefully planned and prepared and built adequate armament, America today must face probably what is the greatest challenge of all, and that is to expend all of our strength and effort and economic resources and labor to building our armament and training program. We must not plunge hastily and thoughtlessly headlong into an unnecessary war, even when fully armed, and above all I know that the people of Iowa are strongly opposed to plunging into that kind of a war unprepared.

Let us turn to the state of our unpreparedness. It is here that I wish to bring to you an accounting of my work as your Representative in Congress. I have been very fortunate in my assignment to the Committee on Military Affairs, whereon I have served for the past 2½ years. I only wish that I had time to discuss in detail the work of my committee and especially the subcommittee on which I have been serving in the study of strategic materials. You have no doubt seen the newspaper accounts of the report of my committee to the House of Representatives. This report was written after many weeks of intensive study and hearings through the most incongruous, ill-assorted, overlapping entanglement of agencies you can imagine. Notwithstanding that situation in Washington, and the inherent danger brought about by the scarcity of strategic materials which we cannot produce in this country, industry and labor have responded marvelously to the appeal made by our Federal Government during the past year.

I must conclude, however, by saying that America is today far from adequately prepared to join in as an active belligerent in the war now raging in Europe. To plunge in at this moment would mean little less than the slaughter of uncounted thousands of our sons through lack of adequate armament. A few months of time will change this picture somewhat, and 18 months will change it so greatly that it is well-nigh impossible to imagine the difference in our position then and now. I have nothing but praise for the response of American industry and labor to the challenge that came to them only 1 year ago, and I can say truthfully that American industry and labor have gone further in the past 12 months than the industry and labor of any nation in a like period of time in history, but we cannot demand the impossible of them. We have known ever since the World War of 1917 and 1918 that it requires 2 years or more to arm our Nation. The sad part of it is that it requires only a few hours to plunge headlong into armed conflict. But inasmuch as we are situated as we are, my hope is that we can forestall any attack upon our own Nation and that we can at the same time unite in expending our full effort to preparation rather than to hastening our entrance into armed conflict. If America pulls together unitedly and energetically for all-out preparedness during the months immediately ahead and if our Nation also judiciously avoids armed conflict insofar as possible to do so, I can assure you that our Nation will never bow to a foreign master.

From my mail and the newspapers and from my visits with you, I know that the people of Iowa are united and determined to go forward together unconquered and triumphant.

Dedication of the Stonington Post Office, Stonington, Conn.

EXTENSION OF REMARKS

OF

HON. WILLIAM J. FITZGERALD

OF CONNECTICUT

IN THE HOUSE OF REPRESENTATIVES

Wednesday, July 16, 1941

ADDRESS OF HON. WILLIAM J. FITZGERALD, OF CONNECTICUT

Mr. FITZGERALD. Mr. Speaker, under leave to extend my remarks, I include the following speech which I made at the dedication of the Stonington post office at Stonington, Conn., on Friday, July 4, 1941:

Mr. Warden, Mr. Postmaster, distinguished guests, ladies and gentlemen, I wish to express my appreciation for the privilege of being with you today to take part in the dedication of this splendid building which marks another milestone in the history of your town.

Every man likes to feel that as he goes through life that here and there he builds a sort of monument whereby in the years to come some few people may remember him. Some men give vast sums of money for a school, an art gallery, or a church. Some men construct with their hands and minds priceless works of art and literature. Some men

leave their mementos through important engineering works. I have no gifts which would enable me to leave such a trace of my having lived. Yet I do like to feel that here and there during my lifetime I have been instrumental in the accomplishment of a few worth-while things.

And so I try on occasion to build through politics the sort of memorial which will give me a measure of satisfaction as well as satisfaction and enjoyment to others. This structure was the only post office I recommended.

I want to add in passing my appreciation to your postmaster, William Farnan, who cooperated with me in securing this building.

It probably will be the last post office to be built in New London County for many years to come. All money now is being devoted to projects which will strengthen our national defense. Post offices are the gift of a Government at peace to its communities at peace.

A post office is more than a convenience. It is the central nerve of the town's activities and of the Nation's activities, too. For the mail reaches and connects every individual, every business establishment, and every home with every other. The post office is the center of the connecting link. When a town develops from a stamp window set-up in a home to a separate building, devoted solely to the post office's activities, then that town, although it may be far from being a metropolis, takes on the status and dignity of the largest city in the country.

It is on that score that I congratulate you. It is on that score that I share the honor and the felicitations, which today are being given to you.

Stonington has rich, historical traditions which go back to 1649 when William Chesebrough of Rehoboth in Plymouth colony came here to settle. His home on the west bank of the cove was the first, and he was quickly followed by Thomas Miner, Walter Palmer, and Thomas Stanton with their families. No organized company settled this borough but individuals who came here independently because they liked the land.

Stonington is, therefore, one of our oldest Connecticut towns. There is much in the Stonington of the past 282 years that captures the imagination. There is the loveliness and quiet beauty of the only Connecticut town bordering on the Atlantic Ocean; there is the fact that it is the home of two famous explorers of the nineteenth century, the 22-year-old captain of a sealing vessel, Capt. Nathaniel B. Palmer, who discovered the Antarctic Continent, and Capt. Richard Fanning after whom the Fanning Islands are named; there is the romantic history of Stonington as a port from which Stonington-built vessels in the early part of the nineteenth century went forth in commerce or on whaling and sealing expeditions. Your seafaring history is part of that great tradition of New England's close connection with boat building, and I have aided every effort for a revival of ship construction in this section of the country, particularly in your neighboring town of Groton.

Nor can I forget the Stonington of today, a community that is making a determined comeback after a period of depression and despair. This beautiful post office, I hope, will symbolize the Stonington of the future and reflect the pride and high hopes of this community for the days to come.

There are several things in your history that I think are both interesting and important. For the first, I go back to your earliest history. When the Pequot Indians, who inhabited this area, were defeated by the colonists under Capt. John Mason in 1637, the Indian lands were claimed by both Massachusetts and Connecticut. In 1657, when Stonington—or Mystic and Pawcatuck as the town was then called—had been settled for 8 years, the small community petitioned the General Assembly of Connecticut to be set off as a town. Connecticut refused, and since the colonists doubted the right of Connecticut to the territory, they asked the Massachusetts general court, which also turned them down.

The small group of colonists then in 1658 did something which I believe is worth noting. In the absence of any town government, they set up a miniature republic to govern themselves as best they could under the name of the Association of Poquantuck People. In their compact they promised (and I quote) "to maintain and defend with our persons and estate the peace of the place and to aid and assist one another according to the law and rules of righteousness." True, the self-governing group did not last long, as the royal commissioners later in the year settled the dispute about the Pequot lands, setting up the Mystic River as a boundary and changing the name to Southertown.

I call attention to that early association of Poquantuck people because I think there is an interesting parallel to be drawn. Stonington, even back in 1658, displayed an old-fashioned American trait—to "defend with our persons the peace of the place and to aid and assist one another according to the laws and rules of righteousness."

In the world of today, when we see the forces of brutality and barbarism rampant, it is a good thing to look back nearly 300 years to our early beginnings and find that Americans have always said that they will stick together and fight for the peace of the place.

Today America reams and waits. "The arsenal of democracy," our beloved President has called this country, and not far from here I know the weapons of war are being forged. This is the Fourth of July. Perhaps the most significant anniversary in our national history. And all of us, I know, are trying to get a glimpse of the future to ask the question: "Where are we going?" I do not know the answer, even though in Washington I am closer to the gigantic problems this country faces than most of you. I do know this. Just as Stonington displayed a deep sense of sticking together in the cause of righteousness, so I have faith that we as a people will show that quality of unity and high sense of endeavor in the days to come. Whatever we must face, we, like the pioneers, can endure.

There is one other glorious side of the history of your borough that I want to mention, because it fits in so well with present events. I go back to the Revolutionary War, when Stonington was the only Connecticut town which was the scene of an American victory over the British. New London and Groton were ravaged by redcoats under Arnold, but Stonington repelled a naval attack. It was August 30, 1775, that this happened while the British, besieged in Boston, had sent out vessels along the New England coast to forage for supplies. At Stonington were many cattle sent over by the inhabitants of Block Island.

The British hove to and issued a demand for the cattle, and the townspeople promptly refused. A landing party from the vessel was repelled at Browns wharf by the militia with their antiquated Queen Anne muskets. Thereupon began a naval bombardment by the British for several hours. As the metal poured upon the community, the townsfolk, like Londoners during an air raid, took refuge behind rocks and in cellars. Finally the British, unable to take the town, sailed away.

Another vivid page in Stonington history deserves mention. During the War of 1812, the British again, on August 9, 1814, attacked Stonington unsuccessfully. This time a squadron of 4 vessels, commanded by Capt. Thomas M. Hardy, Lord Nelson's aide at Trafalgar, appeared and issued an ultimatum, giving the people 60 minutes to get out of the town. The townspeople had 3 cannons and little ammunition to pit against 160 guns on the British ships. But they had courage aplenty, and the British demand was refused.

The British then let loose a 3-day bombardment, when 60 tons of metal were dropped on the little port. When the ammunition for Capt. Jeremiah Holmes' cannon gave out, a timid citizen among the defending militia proposed surrender. "No," shouted Captain Holmes; "that flag shall never come down while I am alive." And it never did come down, nor will, I hope, because the British vessels, in the face of cannon manned by courageous Americans, were forced to withdraw to give the Stonington militia victory over the pride of the British Navy.

The defenders of Stonington in 1775 and in 1814, by their courage and fortitude, bring pride to our hearts. I do not have to point out the resemblance to our own times, as we face a world torn by forces of upheaval. Your Stonington ancestors, it seems to me, set up the tradition for all of us to follow—a resolute and courageous attitude in the face of any impending danger. Just as your navigators in their small sailing vessels set their course by the stars, so shall we go forward with faith and trust. And the heritage of your ancestors will be reflected in all of us, come whatever may in the future.

Representative Hamilton Fish

EXTENSION OF REMARKS

OF

HON. HENRY C. DWORSHAK

OF IDAHO

IN THE HOUSE OF REPRESENTATIVES

Wednesday, July 16, 1941

LETTER FROM NEWBURGH (N. Y.) NEWS

Mr. DWORSHAK. Mr. Speaker, I deplore the vicious attacks being made against Representative HAMILTON FISH, because he has the courage to champion the cause of peace and seeks to prevent involvement of the United States in the war. Since a Member of the upper body on July 7 inserted in the RECORD an article from the Poughkeepsie Eagle News impugning Mr. FISH's motives, I insert herewith, under leave to extend my remarks, the following reply, written by a secretary of Mr. FISH, during the latter's absence at Fort Bragg, N. C., and which appeared in the Newburgh (N. Y.) News:

[From the Newburgh (N. Y.) News of July 11, 1941]

ANSWERS FOR FISH

TO EDITOR, THE NEWS:

As a result of the postal-card poll taken by Representative HAMILTON FISH on the vital question, the United States should enter the war, stay out of war—which went 9 to 1 to stay out—some of the interventionists and war makers in his district are raving and gnashing their teeth and bursting into print.

Among those is a certain Bennie W. Frazier, of Garrison, a graduate of Harvard, unmarried, and 31. This young fire-eater and "eat 'em alive" patriot, who is so anxious to send others to do the fighting for him, belongs to the category of those superpatriots invincible in peace and invisible in war. What is to prevent Mr. Frazier from volunteering his services in the Canadian or British Armies? Or he might, if he tried hard enough, qualify for our own, as I did back in 1917, and am still suffering from the results of being badly gassed in action overseas.

No; Mr. Frazier prefers to bellow for war and attack such real American patriots as Congressman FISH, who knows what war is and is determined to keep this country out of war unless attacked. He has repeatedly said that he knows of only one yardstick to be guided by in this crisis, and that is what is best for America.

The poll taken by Representative FISH was not whether we should like to stay out of war, but whether the United States should go in or stay out. The question was simple and clear-cut and any American schoolboy could easily understand it.

Mr. Frazier, who voted to enter the war, which was his right, showed he understood the question perfectly. However, knowing Congressman FISH was at Fort Bragg, N. C., for 4 weeks training with the armed forces, he rushes into print asking for "Yes" or "No" answers on a dozen or more rehashed questions, all but one of which have been answered by Mr. FISH in the Congress and in public speeches. Time has shown that he was right, for example, in demanding, when the original conscription bill was being considered, that the age limit be set at 28 instead of 35.

Mr. FISH has voted for every appropriation for national defense in the last 5 years except for one in 1938 when he advocated spending more on airplanes rather than on superdreadnaughts. When Mr. FISH asked for 2,000 modern full armed combat airplanes 2 years ago, we did not have any; today we have less than 500. However, Mr. FISH has voted for all airplane and aviation appropriations amounting to $7,000,000,000. He also voted for all military appropriations and has been urging for a long time the equipment with modern weapons such as tanks and antiaircraft guns. There are few Members of Congress who know more about defensive needs of the Army than does Colonel FISH.

Mr. Frazier presented only one new or unanswered question to Mr. FISH: "Did you have an audience with Rudolph Hess while in Berlin?" This question, published when Colonel FISH is in military training and unable to answer, was aimed to impugn his motives, patriotism, and Americanism and is a part of the smear campaign of the warmongers against three out of four Americans who believe it is for the best interest of America to stay out of war. No; Congressman FISH does not know Mr. Hess, never saw him, nor communicated with him.

My advice to Mr. Frazier, as a disabled veteran of the World War and as a fellow townsman, is to stop agitating for war against the will of 90 percent of the people of our own town and to show his devotion to war in more concrete action than words.

GEORGE HILL,
Commander, Military Order of the Purple Heart.

COLD SPRING, *July 9.*

Mr. Hill is also secretary to Congressman HAMILTON FISH, "silenced" during July by reason of his tour of Army duty at Fort Bragg.—*Editor.*

Sending Men Anywhere

EXTENSION OF REMARKS
OF
HON. THAD F. WASIELEWSKI
OF WISCONSIN
IN THE HOUSE OF REPRESENTATIVES

Wednesday, July 16, 1941

EDITORIAL FROM THE MILWAUKEE JOURNAL

Mr. WASIELEWSKI. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following editorial from the Milwaukee Journal of July 14, 1941:

[From The Milwaukee Journal of July 14, 1941]

SENDING MEN ANYWHERE

The administration is asking authority to retain national guardsmen and draft selectees beyond the 1-year training period the law provides, and removal of the ban against sending these troops anywhere outside the Western Hemisphere and United States possessions. The country will accept this if it is convinced of need. Short of being convinced, and it is not now convinced, there are grave objections to both extensions of power.

There are two proposals. The first is to retain men who were called for 1 year, with the understanding on their part and on the part of the country that after 12 months other men would take their place in training.

That was a bargain with the men who were drawn, unless Congress should declare the national interest imperiled.

A sense of fairness dictates that one group should not make all the sacrifice, while their fellows who were not taken profit by increased employment at home at good wages. Many of these men in training have been benefited and many would doubtless volunteer for a further period. Unless we are imperiled, they ought to have their choice.

The other authority asked to send men anywhere in the world instead of only within the Western Hemisphere and our Territories, raises the even graver question of accepting at this time the chance of being in total war any day, without declaration by Congress. Senator REYNOLDS says that to grant this would be tantamount to a declaration of war. That is going pretty far, for a declaration of war is directed against a particular nation.

For practical purposes, however, it would be a grant of authority to the President to make war at any time and then present Congress with the accomplished fact. It could be very different from landing in a country which, as Iceland did, willingly accepted our occupation.

Before Congress reaches any such decision, the country is entitled to hear more of the situation. Unless the public is misinformed, production of arms and equipment is not large enough to supply anything like our present Army. Production, though gaining rapidly, is still the bottleneck if land warfare is in question.

What is the situation which faces the United States in this month of July which requires lifting the ban on sending men outside this hemisphere? It is the gravest decision we have been asked to make. It is almost, if not quite, the final point at which Congress can retain any control. For if men are sent, there is no question of the unity of this country in backing them up with everything we have.

Chairman MAY of the House Military Affairs Committee says he has been convinced of the need of such legislation by General Marshall, Chief of Staff. He says: "Information given by Marshall would be enough to knock the hats off Congress, if it could be released."

If that is so it would be enough to convince the country, too. And not all the facts are military secrets. Laymen all over the country see the need of keeping military secrets. They do not want Senators or anyone else even hinting that troops are on the tide. Or giving away our plans of defense to Axis Powers.

But this tremendous power should be granted only if the country is taken into the confidence of the administration more than it has been. The people are not to be treated as children when the question is one of asking them to pay for whatever may be done and back it up with sons and brothers.

A Bundle From Britain—Decomposed and C. O. D.

EXTENSION OF REMARKS
OF
HON. PAUL W. SHAFER
OF MICHIGAN
IN THE HOUSE OF REPRESENTATIVES

Wednesday, July 16, 1941

ARTICLE FROM THE WASHINGTON DAILY NEWS

Mr. SHAFER of Michigan. Mr. Speaker, in view of the fact that a vast army of British propaganda agents are now in this country, operating with the full knowledge and approval of the President and the Department of State, trying to push this country into the war, and even calling for American volunteers to fight for Britain while America is at peace, I think it will be interesting to Congress and the country to know what treatment is accorded such American volunteers after the propaganda agents have enticed them to fight under a foreign flag. Orlando Davidson, of the Washington Daily News, reveals the sordid facts in this connection in the following article clipped from the News of July 12, 1941.

THE CADAVERS COME HOME COLLECT

Mr. Speaker, the gratitude of the British agents who induce American boys to volunteer for service under the Union Jack seems to cease just the minute these poor boys cease to serve. The sad spectacle of the case of Joseph Anthony Alsop, age 25, which is reported in this article should give serious cause for reflection to every American citizen inclined to put the interests of any other nation ahead of those of the United States of America. Sending dead American heroes home to their final rest, "decomposed and c. o. d.," is just about the most heartless and brazen act of ingratitude that has yet been foisted upon Uncle Sam who seems well on the road to finding himself rechristened in the eyes of the world as "Uncle Sap."

I hope every American citizen who still believes that the Declaration of Independence was not a mistake will read and reflect upon the accompanying article most seriously.

[Article from Washington Daily News of July 12, 1941]

HE DIED TO SAVE DEMOCRACY—BODY COMES HOME C. O. D.

(By Orlando Davidson)

The body of a young Washington father who offered his life for the British cause came home yesterday—decomposed and c. o. d.

And his family does not know yet where or how he met death in the Canadian Army except that he was "accidentally killed by a rifle shot while on active duty July 2."

The young man, who leaves three little children, was Joseph Anthony Alsop, 25, a lumber shipping clerk here until his disappearance after separation from his wife last February. His family has not heard from him since then and did not know of his whereabouts until informed by Canadian officials of his death.

ONE HUNDRED AND NINETEEN DOLLARS TO BRING BODY HOME

The initial wire from the Army commandant at St. Johns, Newfoundland, said young Alsop was killed "here." A later letter of condolence from the Canadian Government spoke of "reports cabled from overseas."

The wire from St. Johns said the body would be buried there or returned to Washington "at your expense." (The United States War Department says the United States Army returns soldiers to places designated by relatives at Government expense.)

"I had to pay $119 to bring Joe home," his puzzled grandmother, Mrs Annie C. Alsop, of 1400 Montello Avenue NE., said today.

'And the body was in such bad shape we couldn't take it in the church," said a brother. The family was not bitter, just surprised.

A member of the family, in contact with the United States State Department, is seeking further information.

CHILDREN DON'T KNOW

Not quite understanding what it's all about and probably unaware they will never see their dad again, Joe's well-scrubbed little family frolicked happily about the grandmother's house today, enjoying all the excitement. Joe, Jr., and Jo Ann, twins, are 5, and Timothy is a handsome 3-year-old.

A former member of the Washington National Guard, the dead man also leaves five brothers—Bernard, of Worcester, Mass.; and Lawrence, Thomas, John, and Ernest, of Washington—and two sisters—Grace and Rita Alsop, of Washington.

Yesterday, Joe was laid to rest beside his father in Mount Olivet Cemetery. A huge wreath from the men of the Victoria Rifles went with him to his grave.

A. A. A. Penalties on Marketing Excess Wheat

EXTENSION OF REMARKS

OF

HON. FOREST A. HARNESS

OF INDIANA

IN THE HOUSE OF REPRESENTATIVES

Wednesday, July 16, 1941

ARTICLE FROM THE FRANKFORT (IND.) MORNING TIMES

Mr. HARNESS. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following article from the Frankfort (Ind.) Morning Times of July 11, 1941:

[From the Frankfort (Ind.) Morning Times of July 11, 1941]

FARMERS FORM ORGANIZATION TO PROTEST A. A. A. WHEAT MARKETING—HUNDREDS AT MEETING HERE ON WEDNESDAY—LOCAL OFFICERS NAMED AND AFFILIATION MADE WITH STATE ORGANIZATION

A large group of representative Clinton County farmers met Wednesday evening at the courthouse to protest the lately established A. A. A. penalties on marketing excess wheat. The meeting was held under the auspices of the Indiana Marketing Quota Protest Association which is affiliated with the National Marketing Quota Protest Association. The latter was organized Tuesday night in Indianapolis with Lamont O'Hara, of Newcastle, being named national president.

The local gathering filled the courtroom to overflowing, and an estimated crowd of 350 was present. The meeting was called to order by Oscar B. Smith, member of the state organizing committee of the Indiana organization. He outlined the history, policy, and objectives of the organization, stating the purpose was to remove the increased quota penalty which was placed on wheat after the Government had agreed to keep the penalty at 15 cents per bushel at planting time. He charged that this was a breach of faith with the American farmer to which insult to injury was added when the Government permitted Canadian wheat to flow into the United States under an import duty of 42 cents per bushel, while levying a domestic tariff of 49 cents per bushel against homegrown wheat. If a quota is established against corn, he stated that Argentine corn would be only subject to a 25-cent duty and the American grower would have a quota penalty of 35 cents a bushel.

Mr. Smith then called an open-forum session and asked that Clinton farmers express themselves. William Coapstick was first to respond and gave a forceful talk which drew a large round of applause from the crowd. He was followed by Fred Elston, Mat Hardesty, Silas Wynkoop, Ward Mundell, Sam Mohr, and Sam Bollinger.

Mr. Smith announced that Mr. O'Hara sent his greetings to the gathering but was unable to attend because of his membership on the Henry County draft board, which was in session during the time of the Frankfort meeting. However, Mr. Smith announced that Mr. O'Hara had sent his official spokesman, Stanley Williams, chairman of the Rush County Association, to make a few remarks.

Mr. Williams spoke, in part, as follows: "I bring Clinton County greetings from your State organization and urge you to form a militant, progressive, and constructive chapter in Clinton County. Although this latest penalty imposed on farmers is deeply irritating, yet, in a way, it is beneficial, in that it has aroused the farmers. The noose was put on the farmers in 1933 with the establishment of the A. A. A., and now it is being drawn tighter as the farmer becomes more and more regimented. Mr. O'Hara has sought to avert this thing for years, and hoped that existant farm organizations would find a happier solution. Mr. O'Hara has been a member of the Indiana Farm Bureau since its inception, and begged them to take steps to remove the quota penalty. Early in June he telegraphed Hassel E. Schenk, president of the Indiana Farm Bureau, as follows:

" 'Did our organization support the increase on excess wheat from 15 to 49 cents per bushel? Did our organization endorse the manner in which the wheat referendum was conducted?

" 'LAMONT O'HARA.' "

Mr. O'Hara then received the following wire:

"Mr. LAMONT O'HARA,

"Newcastle, Ind.:

"Farm Bureau initiated and secured passage A. A. A. amendment increasing loan value to 85-percent parity. See my article in July Hoosier Farmer. Please drop in at our office your earliest convenience.

"HASSEL E. SHENK."

Even then Mr. O'Hara was in hopes the penalty could be averted, but no other way was left open other than to form an independent farm organization. He wants the farmers of Clinton County to know that he is working for your interests and that he will continue his efforts until justice is obtained. Let us not only be critical but let us be constructive until legislation is secured that this cannot happen again.

After Mr. Williams concluded his remarks, Robert Spencer, of Monticello, was presented to the audience. Mr. Spencer is president of the National Farmers Guild and also of the Indiana Farmers Guild. He gave his customary colorful and inspiring talk and was abundant in his praise of Mr. O'Hara and his motives. He urged all farmers to support the new organization and write their Congressmen a vigorous protest against quotas and insist that H. R. 1101 be enacted to avert a repetition of the present chaos.

A motion was made from the floor to organize the Clinton County Marketing Quota Protest Association and that it affiliate with the State body. It was unanimously carried. The meeting was then declared open for the election of officers, and the following were elected: William A. Irwin, chairman; Fred Hurless, vice chairman; and Mrs. L. R. Young, secretary-treasurer.

A vote of thanks was given the county officials for use of the courtroom and also to George M. Spahr for acting as temporary secretary of the meeting.

FARMERS ADOPT RESOLUTIONS PROTESTING WHEAT QUOTA RULES

Following are the resolutions adopted by the farmer group present at the wheat marketing protest meeting held in the Clinton County courthouse Wednesday night. The resolutions were introduced by William Coapstick:

"Whereas Congress passed an act in May 1941, amending an act known as the Agricultural Adjustment Act of 1938, which permitted farmers to participate in the A. A. A. program or to refrain from doing so; and

"Whereas said amendment was made compulsory and made to apply to the planting of wheat in the fall of 1940, and fixing a fine or penalty on farmers who were not members of the triple-A program and who had sown their wheat in 1940 in good faith, believing they were freemen and within their rights; and

"Whereas said amendment fixed a fine or penalty of 49 cents per bushel on all wheat grown by farmers outside of the triple-A program and to be sold over the allotment fixed by the triple-A program; and

"Whereas said amendment provided for an election by farmers on a wheat quota and the election was held at the end of the month of May 1941, and which election was held and conducted by members of the triple-A program, and said election program disqualified and disfranchised over one-half of the farmers in Clinton County, Ind.; and

"Whereas said election failed to show a majority of votes cast in favor of the wheat quota and also failed to show the required majority in the State of Indiana; and

"Whereas the provisions set up in said amendment passed in May 1941 were retroactive and ex post facto; and

"Whereas the Department of Agriculture is now asking farmers to produce more pork, dairy products, poultry and eggs, and also are requiring less production of wheat, of which it is proposed to reduce the surplus and at the same time prohibit farmers from reducing this surplus by feeding wheat to produce more pork, lard, poultry, and dairy produce; except they pay a penalty of 49 cents per bushel for doing so on wheat that was sown in the fall of 1940.

"Whereas this amendment placed heavy burdens and great hardships on agriculturists: Therefore be it

"Resolved by the farmers of Clinton County, Ind., in mass meeting assembled in Frankfort, Ind., this 9th day of July 1941, That the Secretary of Agriculture in Washington, D. C., be requested to abrogate these penalties and the Congress of the United States of America be requested to repeal the above said amendment and return to the farmers of America the freedom and rights as set forth in the Bill of Rights and in the Constitution of the United States of America; and be it further

"Resolved, That a copy of these resolutions be recorded in the records of the meeting and a copy be distributed by the chairman and secretary, and a copy mailed to Claude R. Wickard, Secretary of Agriculture in Washington, D. C., and to Congressmen from Indi-

ana, and to the United States Senate, also a copy of these resolutions to be furnished the Frankfort Morning Times."

Loyalty to America the Outstanding Trait of Congressmen Who Oppose War

EXTENSION OF REMARKS

OF

HON. LEWIS D. THILL

OF WISCONSIN

IN THE HOUSE OF REPRESENTATIVES

Monday, July 14, 1941

Mr. THILL. Mr. Speaker, many Members of Congress are opposing the move toward war. These men, most of them members of the Republican minority, have voted against the war bills brought in by the New Deal administration, such as the bill repealing the arms embargo, the $7,000,000,000 lend-lease bill, the foreign-ship seizure bill, and others.

The outstanding trait of these Congressmen who oppose war is their loyalty to America. The interests of the United States are placed above those of any other nation; the welfare of the American people over those of any other people; the security of this country over that of any other country.

Those who argue that we should enter the war do not say how we can land an invading force on hostile European soil. They do not tell us by what method and in what manner we can drive the despicable Nazi hordes back to Berlin. They do not tell us the method by which the war can be won. They also fail to tell us the horrors that war would bring to the United States; the black-out of towns, cities, and villages; the nights spent in bombproof shelters; the rationing of food and clothing; the hardships, suffering, and death which war would carry to our land. Nor do they tell us that aid to England would be lessened by our entry into war, because we would then be forced to turn our energies toward building bombproof shelters, antiaircraft guns, and a tremendous amount of defense equipment for the immediate protection of our own shores and homes.

The peace-loving people of this Nation who oppose the moves of the warmongers can be thankful for that loyal opposition in Congress which has acted with zeal and fervor to preserve and protect this Republic against the horrors of war.

The following editorial from the Washington Times-Herald is worth while reading:

[From the Washington Times-Herald]

HIS MAJESTY'S LOYAL OPPOSITION

The minority party in the British Parliament is spoken of as His Majesty's loyal opposition. Where the phrase originated, we don't know.

We have a notion that the general idea began back in the time of King Edward I (who reigned 1272–1307), organizer of the first Parliament that had many of the characteristics of the Parliament of modern times.

SIR EARL; SIR KING

Anyway, Edward I once said to the Earl of Norfolk, who didn't want to lead any soldiers outside England to pay his feudal debt to the Crown: "By God, Sir Earl, you shall either go or hang"—to which the doughty Earl retorted: "By God, Sir King, I shall neither go nor hang," and got away with it.

The idea that the sovereign should have a fearless, critical opposition which is at the same time completely loyal to the Crown and the country is an old idea in England, and is as strong today as ever.

We think a loyal opposition to the majority party is as necessary in Congress as it is in the British Parliament.

OUR LOYAL OPPOSITION

In the present dispute over whether we should go into or stay out of the European war, the stay-out-of-it crowd qualifies, we think, as the loyal opposition.

This crowd is being cursed by the interventionists as a bunch of Hitler dupes, potential or actual Nazis, real or unwitting "fifth columnists," and traitors or would-be traitors. Its loyalty to the United States is continually questioned; and if the interventionists had their way, the isolationists would be labeled the disloyal opposition.

In our opinion, the loyalty of the isolationists is one of their outstanding traits.

AMERICA FIRST; AMERICA SECOND

They are thinking first, last, and all the time of the best interests of the United States of America. Many of the interventionists, judging from their speeches and writings, think first of the welfare of some other country, and how the United States can best serve same.

Fate has brought us to a point where we have a chance to make this country one of the greatest countries in history.

Since 1933, when the New Deal began, we have been redistributing a lot of too concentrated wealth by various means; attacking our malnutrition problem on an ever-larger scale by means of the food stamps; improving our highways, forests, waterways, etc., by large public-works projects of varied kinds; easing tensions between capital and labor; strengthening the banks and straightening out the stock exchanges, and so on and so forth.

This process was well begun when the World War crisis began coming too close to us for comfort.

For the last 14 months or so we have been engaged in a tremendous effort to arm ourselves. The details are too well known to retell here.

What it all amounts to is that we are now well on the way toward becoming a great military and naval power, plus a nation whose social-welfare machine has been modernized and streamlined.

WHY RUIN THE UNITED STATES

If we equip ourselves with a permanent army of, say, 1,500,000 men under arms at all times, plus a two-ocean Navy and a powerful unified air force, we should be able to defy the world.

When this war is over, all the other hitherto first-class powers in the world are going to be in bad shape. If we stay out of it, we shall be in the best shape of any nation in the world. If we throw our big and growing defense machine into it, we'll come out of it in bad shape, too. If we send an A. E. F. II on some wild invasion adventure we are likely to take a terrific scratching from an Axis fighting tigerlike for its life.

Why chance ruin for ourselves? Especially why chance it now that Hitler has attacked Russia and the Axis pressure on the British is relieved, at least for the time being? And why commit ourselves to underwriting Britain's wars for all time to come?

This, as we see it, is the attitude of His Majesty's loyal opposition in the Congress of the United States. If there is a trace of disloyalty in that attitude, we can't detect it. It seems a high order of patriotism to us.

Revenue Act of 1941

EXTENSION OF REMARKS

OF

HON. RICHARD M. DUNCAN

OF MISSOURI

IN THE HOUSE OF REPRESENTATIVES

Wednesday, July 16, 1941

RADIO ADDRESS OF HON. RICHARD M. DUNCAN, OF MISSOURI

Mr. DUNCAN. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following address I made during the National Radio Forum, arranged by the Washington Evening Star and broadcast over the blue network of the National Broadcasting Co., Monday evening, July 14, 1941:

Within the next 60 days the Revenue Act of 1941 will likely have become a law, and the American people and American business will be called upon to pay more taxes than ever before in our country's history. The foundation for that demand upon the taxpayers is the fact that our country is facing the most serious situation in its history.

Before discussing the provisions of the proposed revenue act, may I take a few minutes to tell you about the preparation of such an act. Of course, you know that under the Constitution all revenue measures must originate in the House of Representatives, and under the rules of the House jurisdiction is conferred upon the Ways and Means Committee, made up of 25 members—15 Democratic members and 10 Republican members. And may I say here that during the 6½ years of my membership on that committee I have never seen its deliberation so entirely free from partisan considerations. There were many differences of opinion among the members, but in settling those differences party lines were absolutely ignored.

Beginning on April 24, open public hearings were held, and all who desired were given an opportunity to be heard. Those hearings extended over a period of about 5 weeks. Two hundred and two witnesses appeared and testified, and a total of 301 briefs, letters, resolutions, telegrams, and written statements were incorporated in the record. Thereafter, the committee, with the aid of Treasury Department officials and the committee's own corps of experts, spent several weeks working out the various schedules.

No more complicated and technical problem faces any committee of Congress than the preparation of a revenue measure. It not only requires the combined efforts of tax experts, but the utmost ingenuity of economists, statisticians, and lawyers with special training in the field of taxation must be summoned to the task. Our dual form of government and the highly complex nature of our business structure necessarily complicate the preparation and drafting of such a measure.

Since ratification of the sixteenth amendment to the Constitution in 1913, and passage of the income-tax laws, our system of taxation has been based, as far as possible, upon the theory of ability to pay. This theory presupposes that incomes below a fixed amount are consumed in necessary living

costs, and that such necessary living costs should not be subject to an income tax. It seems to me that this reasoning is entirely justified when we realize that such incomes are subjected to all forms of taxation, with the possible exception of State income taxes, for the support of the States, the counties, the municipalities, and the public-school system As a matter of fact, there are about 180,000 separate and distinct tax-collecting units in the United States. They are also subject to State sales taxes and nearly all forms of excise taxes imposed by the Federal Government, which I shall discuss later.

Under the present law, exemptions are $800 for single persons and $2,000 for married persons, and an additional exemption of $400 for each dependent or child under 18 years of age. The same exemptions are retained in the proposed bill.

There has been included by the committee a propcsal to require joint tax returns by husband and wife, which means that where a husband and wife each has an income, it would be added together for the purpose of determining the rate to be applied, and when the amount of tax has been determined, it would be levied and assessed against each party in the proportion that the income of each bears to the whole. Under the present law both husband and wife may make a separate return, one of them taking the exemptions as head of the family and the other reporting individually, thus obtaining considerable benefit in the amount of tax paid.

There are a great many instances where a husband has transferred to the wife large sums of money and paid a gift tax so that the wife might make a separate return upon the income from such property and the husband avoid payment in the higher brackets. A gift tax is paid but once and the income tax recurs each year.

Considerable opposition has arisen to this provision from those affected, but unless it remains in the bill it will be necessary to raise approximately $300,000,000 from other sources to take its place.

Many persons insist that these exemptions should be lowered so that every person earning any sum, however small, should pay an income tax in order that they may become tax-conscious, and thus probably refrain from making demands up their Government for huge expenditures from public funds for the benefit of various groups.

We must meet practical problems in a practical manner. In preparing a revenue measure, we must determine as nearly as possible how much revenue a particular tax will raise, how much it will cost to collect it, and what its effect will be upon the taxpayers and the general economy of the country.

In addition to the ability to pay income taxes, there must be considered also the large sums collected from excise taxes, which are consumer taxes, and therefore fall upon everybody, but most heavily upon those whose entire incomes are consumed by necessary living expenses. These lower-income groups bear approximately 75 percent of the excise or consumer taxes.

Those earning $500 or less—and there are more of them than we should have—pay as great a percentage of their income in taxes as those in the $5,000 to $10,000 group, and those earning between $500 and $1,000 pay as great a percentage as those earning between $3,000 and $5,000. So, if you will look at the record you will see that these citizens are paying their just share of the cost of government.

There is yet another reason, it seems to me, why broadening the base by lowering exemptions is not desirable. It costs the Bureau of Internal Revenue approximately $1.50 to handle each return upon which a tax is paid and 50 cents for a return upon which no tax is paid. Therefore there must be faced the very practical situation that it may cost more for administration than the amount received from these low-income earners. That is particularly true if the rates are in the same ratio of percentages as are imposed upon higher incomes, and certainly it would not be just to impose upon them higher percentage rates.

Excise taxes, which are imposed in various forms upon many commodities and many of which cannot be justified except during a period of emergency, are usually imposed upon commodities which are classified as luxuries, or at least not essential to a reasonable standard of living. In normal times such taxes should not be imposed. They are definitely regressive, and curtail, to a greater or lesser degree, production and consumption. During periods of national emergency, such as we now face, an entirely different situation exists. It not only becomes desirable to impose excise taxes on many commodities to raise revenue, but also to act as a brake on run-away and inflationary prices, which not only protects the average consumer but also tends to minimize the competition between these commodities and national-defense supplies for the materials and labor needed in the manufacture of both.

In considering these problems we must not lose sight of the problem of maintaining our normal economy, as well as providing for the emergency economy. From what I have said it will be seen that in the preparation of a revenue measure during the present period, consideration must be given, not only to the problem of raising revenue, but also to its economic effect upon the people and upon business. Not only the present must be considered but also the future. Destructive taxes may raise revenue now, but next year their destructive influences may greatly reduce the returns and the amount of revenue.

I believe the people of our country are fully aware of the dangers we face, of the uncertainty of our future, and are willing to pay whatever is necessary for our defense and to preserve the American way of life. We would rather give up every dollar of our wealth than to find ourselves subjected to the will of a foreign dictator. Many other countries in the world today are the best proof of what that would mean. Our wealth is nothing compared to our liberty and the right and privilege of those who are to come after us to enjoy the opportunities that we enjoy. We are spending huge sums of money to make that possible. Soon, it is expected, expenditures will reach the staggering sum of $2,000,000,000 a month. The amount ultimately to be reached is impossible of prediction at this time, but whatever it may be the future of America is worth it.

The proposed revenue measure is designed to raise slightly more than three and a half billion dollars in excess of the present law. This is a small amount compared with our expenditures. But in times of great national emergencies countries cannot balance their budgets—a large part of the expense must be passed on. If we are right in our defense policy, and I believe a majority of our citizens are convinced we are, financing it is just as much the problem of those who are to come after us as it is our problem. Liberty and opportunity will be just as dear to them as it is to us and they will have to bear a part of the expense of preserving the old homestead.

In this talk tonight it is not possible to discuss in detail all the provisions of the proposed measure. While the committee has tentatively agreed on the items to be included in it and the rates which are to apply, it will be subject to change until it is finally reported out by the committee in about 2 weeks. A brief discussion, while technical, may be of interest to the many of you who are directly affected.

Respecting individual incomes, the present exemptions and deductions are retained, as well as the present 4-percent normal tax and 10-percent earned-income credit. The principal change lies in the reduction of the amount before applying the surtax rates. Under the present law the surtax begins at $4,000, and increases in percentage on each $2,000 bracket. Under the proposed law a surtax rate of 5 percent—and that is in addition to the normal 4 percent—will apply on the first $2,000 above exemptions and deductions, and will be graduated on each $2,000 of income above that. For example, under the present law a single person earning $900 pays 44 cents; under the proposed law he will pay $5.94. A person earning $2,000 now pays $44, under the proposed law he will pay $110. On an income of $5,000 he now pays $171.60, under the proposed law $437; $10,000 he pays $686.40, under proposed law $1,469.60; $1,000,000 he pays $718,404, under proposed law $737,340.

A married person with no dependents, earning $2,500, under present law pays $11, under proposed law $38.50; $5,000 he pays $110, under proposed law $308; $10,000 he pays $528, under proposed law $1,166; and $1,000,000 he pays $717,583.60, under proposed law $736,519.60.

It must be borne in mind that all State income taxes are in addition to these amounts. This will give you some idea as to the increased amounts you will be called upon to pay, and, while the bill will likely not become law before September 1, it will be retroactive to January 1, 1941, and due on March 15, next year.

The levy of corporation taxes is necessarily much more complicated than individual income taxes. The record shows that during the last war there were about 22,000 millionaires made. It is hoped that during this emergency, when it is necessary for all of us to make sacrifices, there will be no repetition of that fact. With this in mind, rather steep excess-profits taxes are proposed.

The principle of the present law is retained which gives corporations the option of computing their earnings for excess-profits taxes upon the average-earnings basis or upon the invested-capital basis, whichever is the more advantageous. However, there has been a reversal of the method of computing the excess-profits net income. Under the present law the normal tax is allowed as a credit in computing excess-profits net income, whereas under the proposed measure the excess-profits tax is allowed as a credit in computing the normal tax. The proposed measure reduces the invested capital credit from a straight 8 percent to 8 percent on the first $5,000,000, and 7 percent on the excess thereof. The rates are increased. The rate for less than $20,000 will be 35 percent and ranging to 60 percent of amounts over $500,000.

The normal tax on corporations, like individuals, has not been increased, but it is proposed to levy a 5-percent surtax on corporate net incomes of $25,000 or less, and 6 percent on net incomes in excess of $25,000. The reason for levying the surtax instead of increasing the normal tax applies both to individuals and corporations. There are billions of Government bonds which are either totally or partially exempt from the payment of a normal tax, but, in accordance with this provision, are not exempt from surtaxes. By levying the surtax the income from such tax-exempt bonds will be reached.

It is also proposed to increase the capital stock from $1.10 to $1.25 per $1,000, and to give special treatment to new capital.

With respect to excise taxes, it is suggested by the committee that such an additional tax be levied upon distilled spirits in the sum of $1 per gallon. In the case of wines, liqueurs, and cordials, the tax is based upon the alcoholic content and is increased.

The present rate on automobiles is 3½ percent, and that rate is proposed to be doubled. This also applies to trucks and trailers. It is suggested that the rate on tires and tubes be doubled. The tax on mechanical refrigerators is increased from 5½ to 10 percent, which includes air-conditioning equipment. The latter is not now taxed. The rate on radios is increased from 5½ to 10 percent, and there has been added to the list automobile radios.

A few years ago there was a tax of 3 cents per 1,000 on matches. It was repealed in 1938, and it is suggested that that tax be renewed.

It is suggested that the tax on toilet preparations be materially increased.

Until 1938 there was a manufacturers' excise tax on jewelry. It was repealed at that time and it is now recommended that a 10-percent retail tax be imposed. The same is true of furs, and it is now recommended that a 10-percent tax be imposed upon their retail price.

Other items include phonographs and phonograph records and sporting goods, as well as trunks, musical instruments, electrical appliances, business machines, optical equipment, except eyeglasses, rubber products, metal signs, commercial washing machines, and cutlery. A tax on soft drinks, candy, and chewing gum is also reenacted. The excise tax will produce more than $540,000,000.

A tax on admissions to places of amusement will also be increased by reducing the exemption from 19 to 9 cents. Service men in uniform will not be required to pay this tax.

The discussion of the items in the proposal has necessarily been brief. It has been to some extent technical, but tax bills are technical and there is no other way to discuss them. An analysis of our present and proposed expenditures, together with a realization of what we are going to be required to pay in taxes, must certainly convince us that absolute economy, not only in our private affairs but in nonessential governmental affairs must be rigidly practiced. And that all nonessential appropriations should be cut to the absolute minimum. The burden will not become less but rather greater. We have always been a great, self-reliant Nation. That spirit must continue. We are ready to make every necessary sacrifice, but the results of that sacrifice must be utilized to the best possible advantage for our country's future.

Questionnaire on War

EXTENSION OF REMARKS

OF

HON. PAUL W. SHAFER

OF MICHIGAN

IN THE HOUSE OF REPRESENTATIVES

Wednesday, July 16, 1941

LETTER AND BALLOT MAILED TO VOTERS OF THE THIRD CONGRESSIONAL DISTRICT OF MICHIGAN

Mr. SHAFER of Michigan. Mr. Speaker, I am today mailing a questionnaire to every voter of the Third Congressional District of Michigan to ascertain the true sentiment of my constituents in regard to the entrance of the United States in the European war. I plan to reveal the results of this poll to the Congress at an early date.

The letter and ballot are as follows:

CONGRESS OF THE UNITED STATES,
HOUSE OF REPRESENTATIVES,
Washington.

To the People of the Third Congressional District:

As your Representative in Congress, I want to be guided by the thoughtful opinion of my constituents as to whether the United States should go into or stay out of the European war. I am therefore conducting a poll of the registered voters of my district to ascertain the exact sentiment of the people. I have no faith in commercial polls, which cannot be checked and which, in my opinion, do not reflect the true wishes of the people.

I shall appreciate your cooperation by marking and returning within 3 days the enclosed post card.

Thanking you, I am
Sincerely yours,
PAUL W. SHAFER,
Member of Congress.

P. S.—All that is necessary is to mark and mail the enclosed card. You do not have to sign the ballot; sign only if you wish. No postage necessary.

BALLOT

The United States should
Enter the war---------- ☐
Stay out of war---------- ☐
Please return this ballot within 3 days.

H. R. 1036

EXTENSION OF REMARKS

OF

HON. WILLIAM G. STRATTON

OF ILLINOIS

IN THE HOUSE OF REPRESENTATIVES

Wednesday, July 16, 1941

JOINT RESOLUTION BY THE ILLINOIS STATE LEGISLATURE

Mr. STRATTON. Mr. Speaker, under leave to extend my remarks in the RECORD, I include a copy of House Joint Resolution No. 42, passed by the House of Representatives and Senate of the Sixty-second General Assembly of the State of Illinois, memorializing the Congress of the United States to give consideration to H. R. 1036 and other similar measures without delay:

House Joint Resolution 42

Whereas a crisis exists and millions of once self-sustaining citizens in this Nation have lost their jobs and all their possessions; and

Whereas millions of once self-sustaining citizens of this Nation are wholly dependent upon charity or Government relief in order to provide themselves and their families with the bare necessities of life; and

Whereas as a people we need a more liberal distribution and increase of purchasing power, retiring our aged citizens from gainful employment while improving and stabilizing gainful employment for other citizens, thus stimulating agricultural and industrial production and general business and alleviating the hazards and insecurity of old age and unemployment; and

Whereas there is pending in Congress a measure known as H. R. 1036 and other similar measures introduced to correct these conditions: Therefore be it

Resolved, That the House of Representatives of the Sixty-second General Assembly of the State of Illinois, the Senate concurring herein, that the General Assembly of the State of Illinois memorialize the Congress of the United States to give consideration to H. R. 1036 and other similar measures without delay so that the present emergency of our Nation may be speedily ended while providing employment for our citizens, stabilizing industry and business with real social security for all of our citizens; and be it further

Resolved, That a copy of this resolution be sent by the secretary of state to the President of the United States Senate and the Speaker of the House of Representatives, and to each United States Senator and Member of Congress from Illinois.

Adopted by the house, June 25, 1941.

ELMER J. SCHNACKENBERG,
Speaker of the House of Representatives.
R. P. RANDOLPH,
Clerk of the House of Representatives.

Concurred in by the senate, June 27, 1941.

HUGH W. CROSS,
President of the Senate.
EDWARD H. ALEXANDER,
Secretary of the Senate.

The "Commies" Are Coming

EXTENSION OF REMARKS

OF

HON. PAUL W. SHAFER

OF MICHIGAN

IN THE HOUSE OF REPRESENTATIVES

Wednesday, July 16, 1941

Mr. SHAFER of Michigan. Mr. Speaker, I have here a handbill being distributed in Washington today announcing an open house of the Communist Party of the District of Columbia at the National Press Club auditorium tomorrow night. All members of the party and fellow travelers are invited to attend at 25 cents per head, with no war tax.

Robert Miner, acting general secretary of the Communist Party, will be the principal speaker at tomorrow night's meeting. His subject will be What Does the Nazi Invasion of Soviet Russia Mean to America?

I think I can answer that question to the satisfaction of most Americans. It means that the Communist Party will now invade Washington in an attempt to use every pressure device to secure aid for Russia and recognition for the Communists as allies in our fight to extend the four freedoms to the four corners of the earth.

Mr. Speaker, the American people, and particularly the Members of Congress, will not be deceived by the hegira of Robert Miner to Washington to rally the scattered ranks of the Moscow-line followers hanging on to our Federal pay rolls.

Tomorrow night's meeting will be an interesting one. I can picture the audience now. The "reds," the "pinks," the "fellow travelers," the misguided young folks, Negroes and whites, who attend this meeting will not only be compelled to

pay their quarter to get inside, but before they get out they will be subjected to the usual vacuum-cleaning process that is used at all Communist meetings to extract anything from a dime to a $10 bill—or even a promise to pay—from the suckers who would prefer the godless poverty of the Russian system to the Christian plenty possible only under the American system of government.

Farm Belt Volunteers Top Those From East and South

EXTENSION OF REMARKS

OF

HON. CLIFFORD R. HOPE

OF KANSAS

IN THE HOUSE OF REPRESENTATIVES

Wednesday, July 16, 1941

ARTICLE BY JOHN DONNELL IN WASHINGTON TIMES-HERALD

Mr. HOPE. Mr. Speaker, the warlike press of the East and South is wont to refer with mild contempt to the Middle West as isolationist territory.

It is true that the people of the Middle West are not in favor of our participation in foreign wars, a sentiment which seems to be somewhat general, if current polls are to be believed. They are, however, very much interested in national defense.

It is interesting to note from an article by John Donnell appearing in this morning's Washington Times-Herald that the percentage of volunteers from Kansas and Iowa far exceeds that from typical States in the East and South. Under leave to extend my remarks, I include herewith the article in question:

[From the Washington Times-Herald of July 16, 1941]

FARM BELT VOLUNTEERS TOP WARLIKE MALES OF SOUTH—EASTERN STATES LAG IN MARTIAL TREAD, DRAFT VERSUS ENLISTMENT QUOTAS SHOW

(By John O'Donnell)

The cold, matter-of-fact adding machines over in the selective-service headquarters are destroying a colorful tradition of American folklore—the accepted belief that the male of the South is more warlike than his cousins along the Atlantic seaboard and responds to a martial tradition more eagerly than the boy from the Midwest Corn Belt.

This might be true back in the days of the War between the States, but now, take it from the experts who are compiling the data on the potential fighting manpower of the Nation, the maxim has now gone with the wind of yesteryears.

HOW THEY RUN

In the present national emergency, the Wheat Belt of the Midwest is contributing more voluntary enlistments in the armed forces of the Nation than such typically Southern States as Alabama and Georgia, or those fighting feudists of the border States of Kentucky and Tennessee.

New York, followed by Illinois, lags behind the four Southern States in the martial tread of enlistments—but so closely runs the ratio of volunteer to draftee in all States studied that the experts in the selective service headquarters have decided:

"Actual records now being compiled destroy the old theory that certain sections of the Nation in a national emergency could be counted on for a higher percentage of volunteers than other sections.

"Actual enlistments in the armed forces and corresponding credits against the selective-service quota in a given State apparently bear no relation to the isolationist or interventionist sentiment of the political spokesmen for the given States."

"SENSITIVE NUMBER"

What the selective-service statisticians call "the most sensitive number" is the service credit figure. This is the number of men in every draft board zone in the Nation who are "actually accountable to the armed forces of the Nation and subject to military law."

These are the men who are in service or are on the Reserve list of the Army, Navy, Marine Corps, National Guard, or Coast Guard.

The draft quota for each district is whittled down by one man for every man whose name is added to its "service credit list" through a commission or enlistment.

Into the national headquarters of the selective-service system is the daily deluge of cards bearing "names and home addresses" of these volunteers and newly commissioned officers. The home district is given a credit for each new enlistment.

DRAFT BOARD "DEBITS"

In another pile are the cards announcing "separation" from the services—discharges honorable or dishonorable, reports of death or retirement for age or disability. For each of these the local draft board is given a "debit"—one more man must be produced to fill their quota.

By comparing these ever-shifting "service credits" with the potential manpower of the State as revealed in the registration for the selective service, an accurate check can be constantly kept on the flow of men from a given area in the Regular Army, the Navy, or the Marine Corps.

"If these ratios mean anything, they mean that a lot of accepted beliefs aren't true any more so far as volunteering in time of emergency is concerned," one of the officials explained.

Back in the World War days there were counties in Kentucky and Tennessee—"feuding counties," they were called—from which came no conscripts. Enlistments exhausted the draft quotas. That hasn't happened in the emergency of World War No. 2.

PUERTO RICO TOPS LIST

As a matter of fact, Uncle Sam's Caribbean ward—little Puerto Rico—tops the list with the highest number of service credits. From a coldly practical standpoint, this patriotic gesture from Puerto Rico was spurred in part by economic pressure—the wage scale of the Army and Navy is far ahead of the average Puerto Rican income.

Taking the island as a whole, the entire quota could have been filled easily by voluntary enlistments. In certain draft boards, the illiteracy test brushed aside enough volunteers to necessitate the calling up of a small number of selectees.

The revelation that typical noninterventionist Farm Belt Iowa has more "service credits" than belligerent Tennessee was one of the surprises of the study. In Tennessee, 367,346 registered for the draft. Iowa's man power was 285,792. But as of today, there are 29,033 enlistments to build up Iowa's service credits on her quota. Tennessee, with greater manpower, has 28,128 credits.

VOLUNTEER ENLISTMENTS, SECTION BY SECTION

This is the way typical States line up in their parade of volunteers into the armed services of the Nation—enlistments and commissions in the Army, Navy, Marine Corps, National Guard, and Coast Guard—in proportion to their potential manpower as disclosed in registration for the draft.

State	Registered for selective service	Service credits ratio	Service credits to total registration
Farm Belt:			
Kansas	192,558	31,135	0.1095
Iowa	285,792	29,033	.1016
New York and Illinois:			
New York	1,714,374	107,534	.0627
Illinois	1,011,986	62,438	.0616
Southern States:			
Kentucky	331,547	30,616	.0923
Georgia	397,212	35,976	.0906
Tennessee	367,346	28,128	.0766
Alabama	346,429	24,635	.0711

The General Lear Incident

EXTENSION OF REMARKS

OF

HON. FRANK CARLSON

OF KANSAS

IN THE HOUSE OF REPRESENTATIVES

Wednesday, July 16, 1941

LETTER WRITTEN BY ROBERT W. HEMPHILL, OF NORTON, KANS.

Mr. CARLSON. Mr. Speaker, under leave to extend my remarks, I wish to include a letter written by Robert W. Hemphill, of Norton, Kans. Mr. Hemphill is a World War veteran and one of our State's most active and prominent members of the American Legion. His letter expresses the views of a large portion of the citizens of my district.

The letter follows:

HARMONSON-REDD POST, No. 63,
Norton, Kans., July 12, 1941.

EDITOR OF THE DAILY TELEGRAM,
Norton, Kans.

DEAR EDITOR: I was pleased to note in one of the Topeka papers received this morning that some Congressman has had the good sense to take in after General Lear. Generally speaking, it has been my impression that politicians did the Army and their country an injury when they attempted to interfere with military affairs. Some military or Navy man makes an honest statement according to his convictions, and a politician sees a chance to make political timber of it and puts the poor soldier or sailor in bad, which is unquestionably ruinous to Army morale.

On the other hand, we have always boasted in America that our Army was not Prussianized, but was in some sense at least a democratic army, and we felt that that fact was in part responsible for our men being able to vanquish Kaiser Wilhelm's goose-stepping legions. We are told that even Germany of today has had the good sense to do away with something of its old caste system in its Army. To me General Lear's disciplining a whole outfit because a few boys let off a little steam smacks of the type of discipline that most Americans disapprove of. I wonder if the old boy was not just trying to show off before his golf-playing girl friend in shorts. If so, there is plenty good enough excuse for some Congressman to show off before their constituents and show up an old goose-stepping general, if that is what he is, and that is what accounts I have read would indicate.

Most of us who were in the service in 1917 and 1918 had a little fun along with it, and I think that we, along with the rest of the Nation, feel that the soldiers of today are entitled to some frivolity, too. I do not mean to condone any actual obscenity. The accounts I have read of the General Lear incident reported none, but there is something wrong with the general and his golf-playing girl friends if they could not take a little doughboy razzing.

Very truly yours,

ROBERT W. HEMPHILL.

The Lear Incident

OF

HON. CLYDE T. ELLIS

OF ARKANSAS

IN THE HOUSE OF REPRESENTATIVES

Wednesday, July 16, 1941

ARTICLE FROM ARKANSAS LEGIONNAIRE AND RESOLUTION BY UNITED STATES ARMY MOTHERS' CLUB, LITTLE ROCK, ARK.

Mr. ELLIS. Mr. Speaker, I insert in the RECORD an article from the Arkansas Legionnaire of July 11 and a copy of a resolution which I have received from the State:

[From the Arkansas Legionnaire of July 11, 1941]

GOLFING GENERAL MAKES EXHIBITION OF HOW TO DISCIPLINE SOLDIERS—SUNDAY GAME DISTURBED BY FRIENDLY GREETINGS BETWEEN MANEUVER-WEARY MEN AND SHORTS-CLAD LASSIES, GENERAL LEAR SHOWS 'EM WHO'S BOSS

Shades of Captain Flagg and Mademoiselle from Armentieres.

These lusty veterans of World War I would conclude they had fought and comforted in vain, if they could know that things have come to such a pass in this new army that a man in khaki can't even yoo-hoo at a lass in shorts.

Why, in the first World War—but never mind that. Those were the days when a soldier was a man and generals knew when to look the other way.

It seems that a bunch of the boys from the Thirty-fifth Division were returning to Camp Robinson from Tennessee where they had spent 6 long, hot, dusty weeks chasing mythical enemies over the hills and dales.

They hadn't seen anything in skirts in weeks, and now, as they passed a park in Memphis, they spied a bevy of pretty girls—not in skirts, bless their hearts, but in shorts. You know—l-e-g-s.

WHY WEAR SHORTS?

So the boys yoo-hooed, and whistled, and saluted, and otherwise manifested the pleasure of the male animal when he sees a comely specimen of the opposite sex.

And did the girls burst into tears and run, blushing, to the nearest bush to hide themselves in shame and chagrin? They did not. They smiled and waved back, in fact, some reports had it that they waved first, the hussies.

Nearby a man in golfing clothes witnessed this scene with a bilious eye. Some of the soldiers, wasting a glance or two, are said to have inquired if he needed a caddy.

Little did they dream that this sour puss was the biggest brass hat of them all—Lt. Gen. Ben Lear, commander of the entire Second Army.

BEN HADN'T NOTICED 'EM

The general waxed exceedingly wroth. How dared these dusty young whippersnappers even look from their passing trucks at the bare legs of the flower of Memphis womanhood. Of course, the general hadn't even been aware of their skirtless presence. It was a degrading exhibition of unmilitary, uncouth, and ungentlemanly behavior. And, besides, it interrupted his golf game. Well, he'd show 'em.

He showed 'em. The convoy continued to Little Rock where, on orders from General Lear (or is it Leer?), the trucks refueled and turned around and went back to Memphis. There the entire battalion made another practice run through the city, averting their eyes from the possible dangers of parks and playgrounds, listened to a lecture on the evils of yoo-hooing, and then alternately marched and trucked in the broiling sun from West Memphis to Forrest City.

That's what they got for peeping in broad daylight (the Peeping Toms). Of course, after a mile or two of footwork with full packs, they wouldn't have looked up if Lady Godiva had ridden by on her way home from a barber shop. Or, if they had, they'd have said, "Good afternoon, sir."

WHAT—NO POWDER PUFFS

Well, that's the new order of things in modern military training, as administered by a general who doesn't like to have his Sunday afternoon golf interrupted by a convoy of lechers in khaki.

Look out for a general order for regular issue of ruffled shorts for Ben Lear's second army h..llions.

It is rumored that hereafter when the soldiers at Camp Robinson get passes to come to Little Rock they will be required to turn in their gas masks and take out blinders.

Any man caught winking at a girl will be detailed to 2 weeks of K. P., where he and the potatoes can make eyes at each other.

Holding a girl's hand will cost the offender a round-trip hike to St. Louis, on the double and pushing a jeep.

A kiss will sentence the soldier to carry General Lear piggy-back throughout the war maneuvers in Arkansas and Louisiana.

And—well, if the Second Army is sent to Iceland, it's an even bet that the intrepid general will not be caught out in front yelling, "Come on men, let's give 'em hell."

RESOLUTION ADOPTED BY THE UNITED STATES ARMY MOTHERS' CLUB, LITTLE ROCK, ARK., CONDEMNING LT. GEN. LEAR'S PUNISHMENT OF 350 SOLDIERS LOCATED AT CAMP ROBINSON, ARK.

The public has not been apprised of just what the boys were punished for.

Only one thing is clear and certain—they were cruelly punished on the hottest day in several years. As a result of the punishment, we are informed that a dozen or more are in the hospital. All have suffered and some may pay with their lives for violating no law or military regulation known to them; but on the contrary, for exhibiting the national exuberance of healthy young American men.

Before any punishment, much less cruel and unusual punishment, is imposed upon soldier or civilian, in peacetime or war, it appears to us that the American system requires that the law or regulation allegedly violated should be specified. The accused should have an opportunity to defend themselves against the allegations. This is the system which these same boys are being conditioned to defend with their lives.

If General Lear was irritated by the boys in the course of his golf game, then it is only natural to suggest that it might be more significant to national defense if he would get his exercise as our boys are doing.

It has been reported also that General Lear punished the boys for evidencing an interest in girls. We know of no power existing to punish boys who are not in the Army for manifesting an interest in feminine charms. If they must eschew such interest upon being conditioned to defend their country, then God help America. Being of the feminine sex, we hazard the guess that the attention shown the girls was not half so offensive as indifference to their charms would have been.

We regard General Lear's action as capricious and ostentatious of his authority, not to say downright tyrannical.

Even if our Nation were at war, it would be unjustified. It is surely inimical to civilian morale and cannot be conducive to military morale. It was perilous to the lives and health of the boys involved, and civilized people are accustomed to the imposition of physical punishment and the death penalty only for the most heinous crimes, and after careful deliberation.

If General Lear's action is a fair sample of what the American soldier may expect at the hands of superior military authorities in peacetime, then what shall we tell our boys to fear under any other system?

Should discipline be necessary, it should be meted out to the guilty parties rather than to punish all for the conduct of a few. The incident is regrettable and it is felt that a congressional investigation should be made.

UNITED STATES ARMY
MOTHERS' CLUB,
POST NO. 1 OF ARKANSAS,
Mrs. TOM ALFORD, *Commander.*

The President's War Versus People's Mandate

EXTENSION OF REMARKS

OF

HON. KARL E. MUNDT

OF SOUTH DAKOTA

IN THE HOUSE OF REPRESENTATIVES

Wednesday, July 16, 1941

Mr. MUNDT. Mr. Speaker, we have recently seen many big and expensive advertisements in the Washington newspapers in which the Fight for Freedom Committee and the Committee to Defend America by Aiding the Allies have been urging the President to take steps putting this country into a shooting war. Occasionally these committees, which are spending such vast sums in newspaper and radio advertising in an effort to involve America in the war, mention the word "Congress" or refer to the common people of America, but the main theme of their incessant demands for "war now" is that the President should "take action." Apparently what they want is a President's war.

Mr. Speaker, whether the President is planning to put this country into its first President's war is not yet clear. Some say he is resisting the New York City war crowd in its campaign to get our men and our materials in the fighting. Others say he is not adverse to taking risks and making gambles with our national safety which would result in "a Roosevelt war." The next few months

will clearly show whether President Roosevelt desires to keep his campaign pledges or whether he is determined to involve this country in the fighting despite his oft-repeated pledges to the contrary. I personally refuse to condemn him for bad faith until the evidence is a little clearer. I am among those who continue to hope that he will not betray the public trust reposed in him when the Nation elected him for a third term on his platform of repeated promises to keep America out of the War.

POPULAR RESISTANCE TO WAR IS STIFFENING STEADILY

On June 30 I inserted in the CONGRESSIONAL RECORD an exchange of correspondence which I have had with Dr. George Gallup, the director of the American Institute of Public Opinion, commonly referred to as the Gallup poll. That correspondence revealed that Dr. Gallup was presently polling America on its reaction to a question which I proposed to the Institute of Public Opinion and which Dr. Gallup agreed to use in making a test poll of public opinion. That question was, Should the United States enter the war now? The first tabulations on that question were recently released to the public and I have a letter from Dr. Gallup under date of July 10 in which he advises me of additional results obtained in the use of this question and mentions plans which he is making for checking them with other questions. He will keep me advised of the results obtained from these tests and tabulations will continue to be made public on the findings obtained in my specific question of Should the United States enter the war now since the word "now" is a traveling date line which is always in harmony with current developments in the international situation. Dr. Gallup is also perfecting plans in cooperation with Professor Childs of the Public Opinion Quarterly for utilizing a committee of outstanding educators to formulate other questions on the war problems and for auditing results obtained by these polls. In so dong it is my opinion that Dr. Gallup and the American Institute of Public Opinion is rendering a great public service in continuing to probe public opinion in an impartial manner on one of the most vital decisions ever to confront America.

I am sure, Mr. Speaker, that neither President Roosevelt nor this Congress will ignore the findings of these polls. It seems improbable that the noisy and financially powerful 20 percent who clamor for war and spend millions of dollars to involve us in it will be successful in convincing either the President or the Congress that money speaks louder than human beings and that we should enter a conflict overseas to which 80 percent and more of our people are persistently opposed.

Surely the road to national unity is not the one reached when out of a company of 100 men, the will of the 80 is ignored while the wealth of the 20 is implemented into defining a national course of action. The only type of unity we can secure under the American system of life and government is for the minority (in this case only 20 percent) who favor war to cease disrupting public opinion by joining with the majority (in this case 80 percent) who oppose our entrance into war and who support all steps short of war to aid Britain, to protect the Western Hemisphere, to make America impregnable, and to stamp subversive groups out of America regardless of whether they propose to reduce us to puppets under the hammer and the sickle of Russia or the swastika of Germany or whether they try to seduce us to forego our independence by tearing up the Declaration of Independence and accepting the Union Jack as the standard under which we would operate if the Unionists Now had their way with things.

If the noisy interventionists, representing only 20 percent of the people by the returns of every poll that has been taken, will follow the American method of securing unity by responding to majority sentiment, America can have 100-percent unity the American way, and our peace will be protected and preserved. For the 80 percent to join with the 20 percent, as is brazenly asked for in innumerable newspaper advertisements and in repetitious radio broadcasts, is the Hitlerian method of securing unity—by compelling the people to forego their convictions and to yield to the demands of a few men in high places. Such a method is not the American approach to unity of action.

ALL POLLS POINT TOWARD PEACE

Mr. Speaker, not only did the last Gallup poll show a 3-percent increase in the antiwar sentiment in America but the Chicago Tribune and New York Daily News polls, recently completed, substantiate these findings by showing that 80 percent of all Americans are opposed to war. Also the President Hutchins poll of the University of Chicago, the findings of which were released to the public yesterday, confirm these figures precisely, and once again show 80 percent of all Americans united in their opposition to the involvement of this country in the fighting of this war.

Under leave extended to me, I now call attention to an editorial in yesterday's issue of the New York Journal-American entitled "The Mandate Against War," in which this metropolitan newspaper comments upon the fairness and impartiality of the question which Dr. Gallup included in his poll at my request and calls attention to the prevailing majority sentiment in this country against our entrance into war:

THE MANDATE AGAINST WAR

Has Nazi Germany's campaign against Communist Russia made the American people more willing or less willing than they were before to enter the European war?

This is a vital question that Congress should be glad to have answered; for Congress, under the Constitution, has the sole power to declare war, and Congress is elected to represent the will of the people.

An answer to the question has been obtained, and it is a direct, unequivocal answer which nobody can pretend to misunderstand.

Here is the answer:

Our people are emphatically less willing at this time to become embroiled in the foreign conflict than they have been in the past, and more than 70 percent have been opposed to going into the war ever since the war began.

This information has been procured by the Gallup poll in another of its Nation-wide surveys, a survey which was started 1 day after the German invasion of Soviet Russia began and which, therefore, can be accepted and interpreted only as reflecting American opinion in the light of actual events.

The exact query used in the poll was, "Should the United States enter the war now?"

That query cannot be discredited as a trick question; obviously, there is no trick in it.

Neither can the query be disparaged by glibly remarking that everybody is against war on principle, just as everybody is against sin.

The query is plain and explicit—and the public response that it elicited was not less so.

Out of the "representative voting population" interviewed, extending "from Maine to California," 79 percent replied that America should stay out of the war.

The total represents a gain of 3 percent in antiwar sentiment within a period of 1 month, the Gallup poll having reported in June, before the Nazi-Communist warfare, that 76 percent of the American people were then opposed to our entering the war.

Or, in terms of the minority figures compiled, a mere 24 percent of our people thought we should go to war in June, and this pro-war minority has since declined to a meager 21 percent.

There is no reason whatsoever why the credibility and reliability of the Gallup poll should be doubted in this survey.

Newspaper polls which are being taken independently in two most populous States—New York and Illinois—provide confirmation.

In New York, out of 64,000 registered voters canvassed, more than 68 percent oppose our getting in the war.

In Illinois the percentage is more than 80 percent opposed.

These unassailable facts and figures ought to convince even Harold Ickes, Secretary Knox, and Wendell L. Willkie that, if the American people do get into the war, it will be because they are betrayed into it, contrary to their own will and judgment, as well as in flagrant violation of the solemn pledges of both Presidential nominees in the 1940 electoral campaign.

American Interpretation of McCormack Act by Judge Letts

REMARKS

OF

HON. CHARLES KRAMER

OF CALIFORNIA

IN THE HOUSE OF REPRESENTATIVES

Thursday, July 17, 1941

Mr. KRAMER. Mr. Speaker and Members of the House, I feel it of some importance to call to your attention a decision which was handed down yesterday in the District Court of the United States for the District of Columbia, committing three defendants, namely, Raphael Rush, Norman Weinberg, and Morris Liskin, in a conspiracy. The decision was made by the Honorable F. Dickenson Letts. Judge Letts was formerly a Member of this body, coming from the State of Iowa.

I particularly desire to call to the attention of the Members of the House the charge to the jury by the court, in which Judge Letts points out to the jury the

basic reason for the indictment, having to do with an act passed by Congress, which in this instance was commonly known as the McCormack Act. The McCormack Act had its origin by a resolution which was introduced in the House directing the then Speaker of the House, the late Henry T. Rainey, for the appointment of seven Members to investigate Nazi and un-American activities and propaganda, which was then being spread in the United States.

The charge to the jury is quite interesting in that it does, throughout the entire proceeding, refer to the proceedings and testimony which resulted from the investigation of the then committee, known as the first committee conducting un-American activities, and known as the McCormack committee. The act which the court had particular reference to was the McCormack Act, which the judge charges was an act which was the result of the public hearings and activities of the committee, and was designed to remedy some of the ills which that committee had reported to the House, and as a result of the act another law was enacted providing that unofficial agents who are in the United States for propaganda purposes must register with the Secretary of State, and is known as Public Act 583 of the Seventy-fifth Congress, and Public Law 319, of the Seventy-sixth Congress.

The charge to the jury is somewhat lengthy; however, I hope, by reason of the benefits which will inure to the House and the public, that no objection will be made to its publication in the RECORD.

May I at this point also comment on the publicity which the press, particularly the New York Times, gave to the decision in this case, wherein they refer to the hearings of Ida Lee, who testified before our Committee on Un-Americanism, of which I was then a member, wherein a great deal of the money was procured. The investigation resulting in the indictment here was brought about by the Federal Bureau of Investigation, under the very able direction of Hon. J. Edgar Hoover. The Government was represented by Benjamin M. Parker, special assistant to the Attorney General, and this is the first prosecution in the courts of the United States under this act. I had the pleasure of collaborating with Mr. Parker on many occasions preliminary to the trial of this case in giving him facts and data from the records of the hearings of the McCormack committee. He likewise is entitled to a great deal of credit with Judge Letts, who has handed down one of the most outstanding opinions, setting out his reasons for the commitment and conviction.

This is one of the finest examples of judicial utterances that I have ever read. Moreover, it discloses a great amount of learning, and is the type of learning which is made manifest only by a former Member of Congress who has full appreciation of the meaning of congressional committee hearings, reports of congressional commitees, and debates in Congress. I know of no writings which could more justifiably present the work of the McCormack committee: I know of no utterances which could have given more meaning to the work of the McCormack committee: I know of no judicial statement which could more accurately reflect the intent of the McCormack Act. Judge Letts has carried forward the work of the McCormack committee. Judge Letts, by his scholarly charge, has given notice to the world that the people of America will not tolerate propagandists in this country who seek to work underground. I know you will be delighted when you read the charge of Judge Letts. I think the people of America will be delighted with it, and I am sure that you and the other Members who served with me on the first Committee on Un-Americanism who gave so much to their country in the course of the investigation will be pleased to know that their work has not been in vain.

The publicity that has been given by the press to this conviction, especially by the New York Times of this morning, highly praises Justice F. Dickinson Letts, who presided at the trial and in imposing sentence says:

"You have been convicted of a very grave offense. After listening to the trial it is my conclusion that the defendants were all so anxious to make money that they forgot their obligations to their country. That being true, they must all have substantial punishment."

The case of the Bookniga Corporation, which conducted a book store specializing in Soviet propaganda literature at 255 Fifth Avenue, New York, was in the nature of a test of the McCormack Act, it being the first prosecution brought under the law, which was passed in 1938.

The instructions to the jury on law and facts by Honorable Judge Letts, and the verdict of the jury in adjudging the defendants guilty is a powerful message that subversive forces in our beloved country will not be tolerated in their vicious efforts to undermine and destroy America.

Justice Letts' instructions to the jury follow:

[In the District Court of the United States for the District of Columbia. Criminal action No. 65,043. *United States* v. *Raphael Rush, Norman Weinburg, Morris Liskin.* Washington, D. C., Tuesday, July 1, 1941]

The above-entitled cause came on for trial before Associate Justice F. Dickinson Letts and a jury heretofore impaneled in criminal court No. 3, at 10 o'clock a. m.

Appearances on behalf of the United States: Benjamin M. Parker, special assistant to the Attorney General.

On behalf of the defendant Raphael Rush: Isadore Englander.

On behalf of the defendant Norman Weinberg: Leo A. Rover.

On behalf of the defendant Morris Liskin: David A. Hart.

CHARGE TO THE JURY

The Court (Letts, J.). Members of the jury, in the consideration of the indictment and of each count thereof we are concerned with an act of Congress, commonly known as the McCormack Act.

It may be helpful to the jury for me to make brief reference to the legislative history of the McCormack Act. The House of Representatives, in the Seventy-third Congress, passed a House resolution which, as pertinent, provided:

"*Resolved*, That the Speaker of the House of Representatives be, and he is hereby, authorized to appoint a special committee to be composed of seven members for the purpose of conducting an investigation of (1) the extent, character, and objects of Nazi propaganda activities in the United States, (2) the diffusion within the United States of subversive propaganda that is instigated from foreign countries and attacks the principle of the form of government as guaranteed by our Constitution, and (3) all other questions in relation thereto that would aid Congress in any necessary remedial legislation."

The special committee appointed by the Speaker of the House of Representatives became known as the McCormack committee, the committee taking the name of its chairman.

After extensive hearings in many cities which are reported in many pages of testimony before the McCormack committee, that committee, after investigating over 9 months, in its final report, dated February 15, 1935, found that this country has been flooded with propaganda material, and with much propaganda literature from various alien organizations outside of the United States which were engaged in un-American propaganda activities, in an effort to gain adherents, and to influence the political opinions of many of our people and also to influence, if necessary and possible, our Government policies.

It further found that all kinds of efforts and influences, short of violence and force, were used by foreign governments and their various agencies to obtain their desired objective, which was to consolidate persons into one group, subject to dictation from abroad, in distinct violation of every known American principle.

Furthermore, according to the McCormack committee, this foreign political propaganda was not directed merely at adults, but also at children, who were taught to believe that the principles of government taught by the foreign dictator were superior to the principles of our Government. Moreover, the McCormack committee found that American firms and American citizens as individuals sold their services for express propaganda purposes, making their contacts with and accepting compensation from business firms.

The McCormack Act, with which we are now concerned, was the result of the public hearings and the recommendations of the McCormack committee and was designed to remedy some of the ills which that committee has reported to the House of Representatives.

The purpose of the legislation was to require unofficial agencies who are in the United States for propaganda purposes to register with the Secretary of State. It was intended that the legislation should relate to political propaganda, to persons who were engaged by foreign companies, foreign agents, or connected with a foreign government engaged in political propaganda and to those who are engaged in propaganda in this country connected with some particular country, or political party of a country, or some firm, some group or business of the particular country who is using this as a means for that particular country or political party to hide its identity.

The committee maintained that the Congress and the people of the United States are entitled to have notice of any person who is in the United States or who employs any person for the purpose of disseminating political propaganda in the United States. The committee sought through its bill to deter through the instrumentality of registration with the Secretary of State those activities of persons who are engaged by foreign governments directly or indirectly to advise them on what methods or what is the best method to employ public propaganda or who are engaged for the purpose of disseminating political propaganda in the United States.

It was the purpose of Congress to bring out in the open information as to who is disseminating political propaganda in the

United States and the purposes of such propaganda—information which the Congress thought the American public is entitled to have.

The bill as enacted into law was designed to accomplish the ends and aims of the McCormack committee. You are now told, as a matter of law, that through the passage of the McCormack Act the Congress sought:

(a) to force propaganda agents representing foreign agencies to come out in the open in their activities;

(b) to make known to the American people those who are so engaged in this country by foreign agencies to spread doctrines alien to our democratic form of government;

(c) to make known to the American people the sources of any such efforts, the sources that promote and pay for the spreading of such foreign propaganda, and to label the sources of such propaganda;

(d) to publicize the nature of subversive or other similar activities of such foreign propagandists;

(e) to deter the spread of such pernicious propaganda by the spotlight of publicity resulting from the registration with the Secretary of State.

In seeking to attain these ends it was the intent of Congress, therefore, that the following persons should be required to register with the State Department and to supply information about their political propaganda activities, their employers, and the terms of their contracts:

(a) All persons who are in the United States for political propaganda purposes;

(b) Aliens coming to or in the United States for propaganda purposes of a political nature;

(c) American citizens who accept foreign political propaganda employment.

You are further told as a matter of law that the terms "foreign political propaganda," "propaganda purposes of a political nature," and "political propaganda," mean:

(a) Propaganda aimed toward establishing in the United States (1) a foreign system of government; (2) group action of a nature foreign to our institutions of government.

(b) Propaganda for the purpose of influencing American public opinion on a political question.

Furthermore, "propaganda" and "foreign propaganda" are implicitly defined as—

Spreading doctrines alien to our democratic form of government.

Spreading by word of mouth, or by the written word, the ideology, the principle, and the practices of other forms of government and the things for which they stand.

Arbitrarily aiming to inculcate persons in the United States with those principles and teachings which seek to foster un-American activities, to influence the external and internal policies of this country, and to violate both the letter and the spirit of international law, as well as the democratic basis of our own American institution of government.

Accordingly, it is clearly apparent from the foregoing legislative history what type of activity Congress intended should be public information through registration.

The defendants are charged in the first count of the indictment with willful violation of section 2 of the McCormack Act, which reads as follows:

"SEC. 2. Every person who is now an agent of a foreign principal shall, within 30 days after this act takes effect, and every person who shall hereafter become an agent of a foreign principal, shall forthwith file with the Secretary a registration statement, under oath, on a form prescribed by the Secretary, which shall set forth:

"The name, business address, and residence address of the registrant;

"The name of the foreign principal or other person or organization for which such person is acting as agent;

"A copy of all contracts of employment under which such person acts or agrees to act as such agent, if written, or a full statement of the terms and conditions thereof, if oral;

"The date when each such contract was made, the date of commencement of activity thereunder, and the period during which such contract is to be in effect;

"The compensation to be paid, if any, and the form and time of payment under such contract;

"The name of every foreign principal or other person or organization which has contributed or which has promised to contribute to the compensation provided in such contract; and

"If the registrant be a partnership, association, or corporation, a true and complete copy of its charter, articles of incorporation, copartnership, association, constitution, and bylaws, and any other instrument or instruments relating to its organization, powers, and purposes."

The McCormack Act provides that as used in the act:

"The term 'person' means an individual, partnership, association, or corporation;

"The term 'United States' includes the United States and any place subject to the jurisdiction thereof;

"The term 'foreign principal' means the government of a foreign country, a political party of a foreign country, a person domiciled abroad, or any foreign business, partnership, association, corporation, or political organization;

"The term 'agent of a foreign principal' means any person who acts or engages or agrees to act as a public-relations counsel, publicity agent, or as agent, servant, representative, or attorney for a foreign principal or for any domestic organization subsidized directly or indirectly in whole or in part by a foreign principal. Such term shall not include a duly accredited diplomatic or consular officer of a foreign government who is so recognized by the Department of State of the United States, nor a person, other than a public-relations counsel, or publicity agent, performing only private non-political, financial, mercantile, or other activities in furtherance of the bona fide trade or commerce of such foreign principal.

"The term 'Secretary' means the Secretary of State of the United States."

Section 5 of the McCormack Act prescribes punishment for any person who willfully fails to file with the Secretary of State any registration statement required to be filed under the act.

Count 1 of the indictment alleges that each of the three defendants committed the crime of violating the McCormack Act which, by section 2, requires registration with the Secretary of State of every "agent of a foreign principal" within the meaning of the act.

The indictment states that the defendants Morris Liskin, Raphael Rush, and Norman Weinberg were president, vice president, and secretary-treasurer, respectively, and were also the sole stockholders of Bookniga Corporation, a corporation organized and formerly existing under the laws of the State of New York. Count 1 recites that the said Bookniga Corporation, on or about the 8th day of September 1938 and continuously thereafter to the 6th day of April 1939, in the District of Columbia, and within the jurisdiction of this court, willfully failed to file a registration statement as an agent of a foreign principal, as required by the McCormack Act. Count 1 also charges that the defendants "at all times between the 8th day of September 1938 and the 6th day of April 1939 willfully aided, abetted, counseled, commanded, induced, and procured the said Bookniga Corporation in the District of Columbia, and within the jurisdiction of the Court willfully to fail to file the registration statement required by the McCormack Act as the duly authorized agent and representative of the Mezhdunaradnaya Kniga of the City of Moscow, United Soviet Socialist Republics, for the sale and distribution in the United States of America of books, magazines, periodicals, and pamphlets of a political and propagandist nature, and for political and propaganda purposes." The indictment further charges that in order to prevent the filing of such registration statement the defendants did, on or about the 6th day of April 1939, procure the dissolution of the said Bookniga Corporation and the organization of another corporation known as Bookniga, Inc.

Count 2 of the indictment charges the three defendants, together with divers other persons to the grand jurors unknown, with the violation, within the jurisdiction of this court, of section 37 of the Criminal Code of the United States, by unlawfully and feloniously conspiring, confederating, and agreeing together and with the Bookniga Corporation so that the said Bookniga Corporation would willfully fail to file with the Secretary of State a registration statement under oath on a form prescribed by the Secretary of State, as required by the McCormack Act, the said defendants well knowing that the said Bookniga Corporation was the agent of a foreign principal. A few of the overt acts are then set forth.

To the indictment each of the defendants has entered his plea of not guilty.

You are told at this point that at the outset, as in all criminal cases, there is a presumption in law that the person who stands accused is not guilty of the offense with which he is charged. That presumption should remain in the minds of the jurors for the benefit of a defendant until it is overcome by proof which satisfies the jury beyond a reasonable doubt that he is guilty.

The burden of proof is upon the Government. This means that before you will be warranted in finding these defendants or any of them guilty, the Government must prove, and you must find from the evidence, beyond a reasonable doubt, the truth of the allegations of the indictment as to all essential elements of the crime charged, and this proof, as I have indicated, must be to your satisfaction beyond a reasonable doubt.

A reasonable doubt, as the words themselves import, is a doubt in reason. It means such a doubt as will leave the juror's mind, after a full, fair, candid, and impartial investigation of all the facts and circumstances shown in the evidence, so undecided that he is unable to say that he has an abiding conviction of the defendants' guilt; or such a doubt as in the graver and more important transactions of life would cause a reasonable and prudent man to hesitate and pause. The words "reasonable doubt" must be given their usual and ordinary meaning. The doubt must not be trivial or whimsical or based upon groundless conjectures. The doubt must not be sought after; for when it is such a doubt as the law recognizes, it arises fairly and naturally in the mind of the juror upon a full and fair consideration of all the facts and circumstances in evidence in the case. This doubt must arise out of the evidence, or from a lack of necessary evidence, and it must be a doubt which appears to you to be reasonable under the facts and circumstances of the case.

The Government does not claim that these defendants were required to file registration statements with the Secretary of State but it is the theory of the Government that Bookniga Corporation was required by the McCormack Act to file the registration statement therein required of an agent of a foreign principal. It is claimed by the Government that Bookniga Corporation did not file the statement required of it by the McCormack Act and willfully failed so to do; and that the defendants are in law chargeable and criminally liable for such willful failure of Bookniga Corporation to file the registration statement required of an agent of a foreign principal by the McCormack Act.

The Government charges that these defendants between the 8th day of September,

1938, and the 6th day of April, 1939, willfully aided, abetted, counseled, commanded, induced, and procured Bookniga Corporation willfully to fail to file the registration statement required of it by the McCormack Act, and in order to prevent the filing of such registration statement did procure the dissolution of Bookniga Corporation and the organization of another corporation known as Bookniga, Inc.

This contention by the Government seeking to hold these defendants criminally liable for the willful neglect, failure, and refusal of Bookniga Corporation to file the registration statement required of it by the McCormack Act arises out of a statute of the United States which I shall now read to you, as follows:

"Whoever directly commits any act constituting an offense defined in any law of the United States, or aids, abets, counsels, commands, induces, or procures its commission, is a principal."

The essential elements of the offense charged in the first count of the indictment are:

First, that Bookniga Corporation at some time between September 8, 1938, and April 6, 1939, was an agent of a foreign principal within the meaning of the McCormack Act.

Second, that at such time Bookniga Corporation willfully failed to file a registration statement with the Secretary of State.

Third, that the defendants on trial willfully aided, abetted, counseled, commanded, or induced Bookniga Corporation to willfully fail to file a registration statement with the Secretary of State.

If the Government has established each of such propositions against any individual defendant, and you so find beyond a reasonable doubt, then you will by your verdict find such defendant guilty on the first count of the indictment.

If the Government has failed to so establish any one of the three elements as stated as against any defendant, your verdict as to such defendant will be not guilty on the first count of the indictment.

You will be asked for a separate verdict as to each of the defendants.

The McCormack Act does not in any way impair the right of freedom of speech, or of a free press or other constitutional rights. The American public may not be deprived of political information, even though it be propaganda. There is no law to prohibit its dissemination among the people, but as a matter of public policy our Government and the people of the United States are entitled to know the sources of foreign political propaganda and the person or persons or agencies carrying on the work and bearing the expense incident to its dissemination in the United States.

In addition to their general pleas of not guilty, and to maintain such pleas, the defendants claim that Bookniga Corporation was not the agent of Mezhunaradnaya Kniga and that it was not required to file a registration statement with the Secretary of State. It is their further contention that Bookniga Corporation was engaged in a nonpolitical, bona fide mercantile business, and was excused from filing a registration statement with the Secretary of State by virtue of the provision of the McCormack Act which provides that the term "agent of a foreign principal" shall not apply to any person performing only private, nonpolitical, financial, mercantile, or other activities in furtherance of the bona fide trade or commerce of such foreign principal.

With respect to such contention by the defendants you are now given the following definitions of the several terms used in the provision of the law so relied upon by the defendants:

The term "private activities in furtherance of bona fide trade or commerce" means activities ordinarily and customarily performed by persons for private livelihood or profit, as distinguished from activities of a political or other character, whether or not in the guise of trade or commerce.

The term "nonpolitical activities in furtherance of bona fide trade or commerce" means such activities as are religious, educational, professional, scientific, or related to the fine arts, which do not in any essential respect relate to the conduct of a government.

The term "financial activities in furtherance of bona fide trade or commerce" means activities in which exchange of money or its equivalent is involved through the normal channels of finance and includes the normal incidents of such transactions.

The term "mercantile activities in furtherance of bona fide trace or commerce" means activities directly concerned with the business of procuring, buying, selling, merchandising, warehousing, forwarding, transporting, or processing goods, products, or property of any kind.

The term "other activities in furtherance of bona fide trade or commerce" as used in subsection (d) of the first section of the act means services rendered in connection with private activities, nonpolitical activities, financial activities, or mercantile activities as herein defined.

The term "furtherance of bona fide trade or commerce" means engaging in good faith in the lawful exchange of goods, products, services, or property of any kind, or in any business, occupation, or employment. Such term shall not include any political activities.

To be excused from filing a registration statement it is not enough that a part or even the major part of one's activities as agent for a foreign principal are nonpolitical; on the contrary to be excused from filing such registration statement with the Secretary of State one who is an agent for a foreign principal must have no political propagandist activities either independent of or incident to a bona fide mercantile business.

Perhaps I should give you one other definition. The failure of Bookniga Corporation to register under the McMormack Act was not criminal unless it was willful, and anything done by these defendants or any of them to aid, abet, counsel, command, induce, or procure Bookniga Corporation to fail to register with the Secretary of State was not criminal unless such conduct was willful. You are, therefore, told that "willful" as so used implies knowledge that Bookniga Corporation was an agent of a foreign principal and was required by the McCormack Act to file a registration statement with the Secretary of State, and having such knowledge Bookniga Corporation had the deliberate intention of avoiding the requirements of the law and that the individual defendants with such knowledge deliberately intended to and did aid, abet, counsel, command, or induce Bookniga Corporation to fail to file a registration statement as required by the McCormack Act.

With respect to count two of the indictment you are told that it is provided by statute that if two or more persons conspire to commit any offense against the United States and one or more of such parties do any act to effect the object of the conspiracy, each of the parties to such conspiracy shall be punished.

The second count of the indictment in this case charges the defendants Rush, Weinberg, and Liskin jointly with the crime of conspiracy as defined in the statute which I have now brought to your attention. I have earlier in this charge given you the substance of the charge against the defendants as stated in the indictment. Briefly stated, it is this: That continuously from September 8, 1938, to April 6, 1939, the defendants now on trial and others unknown to the grand jury did unlawfully and feloniously conspire, confederate, and agree together and with Bookniga Corporation so that Bookniga Corporation would willfully fail to file with the Secretary of State a registration statement, under oath, on a form prescribed by the Secretary of State, as required by the McCormack Act, the defendants well knowing that Bookniga Corporation was the agent of a foreign principal within the meaning of the McCormack Act.

There follows as a part of the indictment a list of overt acts, which it is not necessary for me to read to you, but you are told that they are alleged to be acts which the Government charges were done by these defendants at various times to effect the object of the conspiracy which is charged in the indictment. When you retire to your jury room, the indictment will be placed in your hands.

You have noticed that the indictment charges these defendants with a conspiracy to commit an offense against the United States. You are now told that the offense described in the indictment is an offense against the United States.

You are instructed that a conspiracy within the meaning of the statute is a combination or agreement of two or more persons by concerted action to accomplish an unlawful object or a lawful object by unlawful means.

The jury are further instructed that the words "any act to effect the object of the conspiracy" mean any act done after the formation of the agreement or combination and before its termination, with the purpose and intention of putting it into execution.

The jury are instructed that in a prosecution for conspiracy the Government is not required to produce direct evidence of a formal agreement between the conspirators. It is sufficient if, from all the facts and circumstances shown by the evidence, the jury find and believe beyond a reasonable doubt that the defendants named in the indictment acted in concert and mutual understanding in the furtherance of a common design, intent, and purpose, substantially as alleged in the indictment.

Looking again at the statute defining conspiracy, it will be remembered that it provides that if two or more persons conspire together to commit any offense against the United States and one or more of such parties do any act to effect the object of conspiracy, each of the parties to such conspiracy shall be punished.

You will notice that this statute has a double aspect. It contains two essential elements. In the first place, before you will be warranted in finding a verdict of guilty on the second count of the indictment you must find that there was a conspiracy substantially as alleged in the indictment, between some of the defendants now on trial. The second element in the statute is that when a conspiracy by two or more persons to commit an offense against the United States is shown, you must further find that one or more parties to the conspiracy did some act to further the object of the conspiracy.

The statute does not mean that each of the conspirators shall do some act in furtherance of the object of the conspiracy, but that one who is a conspirator has done some act to further the object of the unlawful enterprise.

Looking at the indictment you will find that it is charged that these defendants on trial conspired unlawfully, within the meaning of the statute which I have defined, to commit an offense against the United States; and that they so conspired continuously throughout the period of time extending from September 8, 1938, to April 6, 1939. With respect to that allegation you are told that any combination or agreement found to have existed in violation of the statute under which the indictment is drawn will meet the requirements of the law if the conspiracy was in force at any time between the 8th day of September 1938, and the 6th day of April 1939.

The jury may now have a 5-minute recess.

(Thereupon there was a brief informal recess, at the conclusion of which the proceedings were resumed, as follows:)

The COURT. Members of the jury, I now have before me certain instructions asked by the Government and asked by these various defendants which have been allowed by the Court. With respect to these prayers you are told that each prayer states the law of the case insofar as it goes, but that no one instruction states all of the law of the case. In order to have a comprehensive understanding of the law of the case, it will be necessary for you to have in mind what is here said in these several prayers in connection with all matters mentioned by the Court in its general charge.

I shall first read the Government's prayers.

Government's prayer No. 1 reads as follows:

"Members of the jury, the indictment in this case is in two counts. Each of these counts constitutes a separate and distinct charge the same as if each were contained in a separate and distinct indictment, and in your deliberation you are to consider each count separately. You may, after considering the evidence in this case, find any or all of the defendants guilty or not guilty on both counts or you may find any or all of them guilty on either count and not guilty on the other count."

Prayer No. 2:

"The indictment alleges that the Bookniga Corporation, from September 8, 1938, until April 6, 1939, was the 'agent of a foreign principal' known as Vsesojuznoje, Objedinenie, 'Mezhdunarodnaya Kniga,' of the city of Moscow, Union of Soviet Socialist Republics, and referred to both in the indictment and throughout this trial as Mezhkniga."

Prayer No. 3:

"The first count charges, and this is not denied by any of the defendants, that the defendants Rush, Liskin, and Weinberg, during the entire period involved—that is, from September 8, 1938, until April 6, 1939—were stockholders of the Bookniga Corporation and its officers; that the defendant Liskin was its president, the defendant Rush its vice president, and the defendant Weinberg its secretary and treasurer.

"As the evidence has disclosed, the Bookniga Corporation was dissolved on April 6, 1939, and it is not now a defendant."

Prayer No. 4:

"The indictment charges that Bookniga Corporation willfully failed to file a registration statement as 'agent of a foreign principal' with the Secretary of State of the United States.

"The first count then charges that the defendants Liskin, Rush, and Weinberg willfully aided, abetted, counseled, commanded, induced, and procured the said Bookniga Corporation willfully to fail to file the said registration statement."

Prayer No. 5:

"You are instructed that any person who willfully aids, abets, counsels, induces, or procures a corporation to commit an offense is guilty of the offense the same as if such person had himself committed it."

Prayer No. 6:

"It is for the jury to determine whether Mezhkniga was a foreign principal within the meaning of the act. The court charges that if you find that Mezhkniga was a person, or a group of persons, domiciled abroad, acting for a common purpose, or a corporation, partnership, or association, domiciled abroad, and having its principal establishment or place of business in a foreign country, or that if Mezhkniga was a government of a foreign country or any subdivision of such foreign country to which authority or functions are directly or indirectly delegated or permitted, or any political party of a foreign country having for an aim the administration of a government, then Mezhkniga is a foreign principal within the meaning of the McCormack Act."

Prayer No. 7:

"If the jury should find that Mezhkniga was a foreign principal, the jury must then determine whether the Bookniga Corporation was an agent of a foreign principal within the meaning of the act."

The meaning of the term "agent of a foreign principal" as it is used in the McCormack Act is a question of law to be determined by the Court and not one of fact to be determined by the jury.

Hence I shall soon define and explain to you the meaning of the term "agent of a foreign principal" as used in the act in question. Thereafter, based upon such definitions by the Court, it is the duty of the jury to determine whether the Bookniga Corporation was an agent of a foreign principal within the meaning of the McCormack Act.

Prayer No. 8:

"The term 'agent of a foreign principal' as used in this statute includes any individual or corporation who acts or engages or agrees to act as a publicity agent for a foreign principal."

I charge you that a publicity agent of a foreign principal is an individual or a corporation, which, on behalf of a foreign principal, directly or indirectly engages in placing or disseminating within the United States, written or pictorial information, through advertisements, books, periodicals, and newspapers which spread doctrines alien to our form of government; which spread the ideology, the principle, and the practices of other forms of government and the things for which they stand; which spread principles and teachings which foster un-American activities; which violate both the letter and spirit of international law as well as the democratic basis of our own American institution of government; which spread subversive propaganda that is instigated from foreign countries and which attack the principle of the form of government as guaranteed by our Constitution; and which spread propaganda aimed toward establishing in the United States a foreign system of government, or which spread other foreign propaganda of a political nature.

Therefore, if you find that the advertisements, books, periodicals, and newspapers either published by Mezhkniga or exported by Mezhkniga and imported and disseminated by the Bookniga Corporation were of the character which I have just described, you should find that the Bookniga Corporation was an agent of a foreign principal within the meaning of the McCormack Act.

Prayer No. 11:

"If you find that the Bookniga Corporation was an agent of a foreign principal within the meaning of the McCormack Act, you should find that it was necessary for and mandatory upon the Bookniga Corporation to register with the Secretary of State."

Prayer No. 13:

"You are instructed that the question of the good faith of Bookniga Corporation, or of the defendants, in failing to file a registration statement, is not an issue in this case. If you find that Bookniga Corporation was an agent of a foreign principal within the meaning of the statute and if you find that these defendants deliberately, intentionally, and voluntarily caused Bookniga Corporation to fail to file a registration statement with the Secretary of State, then you must find the defendants guilty even though the defendants, in good faith, thought that the filing of such a statement by Bookniga Corporation was not required by the law."

Prayer No. 14:

"Mistake of law is no defense if you find that Bookniga Corporation as an agent of a foreign principal was required under the statute to file a registration statement, and if you find that the defendants deliberately and intentionally caused Bookniga Corporation to fail to do so, then you must find the defendants guilty, even though the defendants in good faith believed that the law did not apply to Bookniga Corporation."

I will now take up certain prayers offered by the defendants. I am not sure whether each defendant has adopted each of these prayers or not.

Mr. ROVER. Do you want me to tell your Honor what Liskin prayers we have adopted?

The COURT. Yes.

Mr. ROVER. Prayer No. 1, your Honor, and No. 2. The names would have to be transposed, your Honor. Also, No. 3. I believe that covers that, your Honor.

Mr. ENGLANDER. That applies to the defendant Rush as well.

The COURT. Yes.

Mr. ENGLANDER. Also as to the general prayers submitted by Mr. Rover, with the exception of the last one, which is not applicable, as to character witnesses.

Mr. HART. As to the defendant Liskin, we adopt 1, 2, 3, 4, 5, 6, 7, 8, 13, 14, 15, 16, and 17.

The COURT. You adopt 1 to 8?

Mr. HART. Yes.

The COURT. Does that include 8?

Mr. HART. Yes, your Honor. One to 8, and 13 to 17.

The COURT. And 13 to 17?

Mr. HART. Yes.

The COURT. All right.

The prayer which I shall now read is offered in behalf of the three defendants. It reads as follows:

"The jury are instructed that the only object and purpose of an indictment in a criminal case is to inform the defendants of the nature and cause of the accusation against them; that it does not amount to evidence against them in the slightest degree whatever and the only purpose for which it can be considered by the jury is to determine the charge with which the defendants are accused."

Prayer No. 2 is likewise offered on behalf of the three defendants:

"The jury is instructed that the defendants are presumed to be innocent and that this presumption remains with the defendants throughout until and when the jury becomes convinced of their guilt beyond a reasonable doubt."

Prayer No. 3 is likewise offered for the benefit of each of the defendants:

"The jury are instructed in weighing the evidence in the case that if the acts and conduct of the defendants, or any of them, are just as consistent with innocence as with guilt, then the defendants are entitled to the benefit of the presumption of innocence."

No. 4 likewise is offered in behalf of each of the defendants, and reads as follows:

"The jury are instructed that if after considering all the evidence in the case it feels that all the evidence is just as consistent with the innocence of the defendants, or any of them, as with their guilt, then its verdict should be not guilty as to all the defendants, or any of them, as the case may be."

Prayer No. 5 is offered on behalf of each of the defendants:

"The jury are instructed that the defendants are presumed to be innocent until proved guilty, and this presumption continues and attends them throughout the trial until overcome by testimony establishing beyond a reasonable doubt each and every material element of the charge against them as those material elements are defined and explained to you by the court; and it is your duty, if you reasonably can, to reconcile the evidence in the case with this presumption."

Prayer No. 6 is offered in behalf of each defendant:

"The court instructs the jury that in this case the law raises no presumption against the defendants, but that the presumption of law is in favor of the innocence of the

defendants, and in order to convict them of the crime alleged in the indictment, every material fact to constitute such crime must be proved beyond a reasonable doubt; and if the jury entertain any reasonable doubt upon any single fact or element necessary to constitute the crime, it is their duty to give the defendants the benefit of such doubt and render a verdict of not guilty."

Prayer No. 7 is also offered in behalf of each defendant:

"The jury are instructed that the burden is not upon the defendants to prove their innocence, but upon the United States to prove their guilt beyond a reasonable doubt; and unless you find the defendants' guilt to be established beyond a reasonable doubt, you should find them not guilty, and if you can reconcile all the testimony in the case with any reasonable hypothesis of the defendants' innocence, it is your duty to do so, and in such event you should find the defendants not guilty."

Prayer No. 8 is offered in behalf of each defendant:

"The court instructs the jury that a reasonable doubt may be defined to mean such a doubt as will leave the juror's mind, after a candid and impartial consideration of all the evidence, so undecided that he is unable to say that he has an abiding conviction to a moral certainty of the defendants' guilt, or such a doubt as, in the graver and more important transactions of life, would cause a reasonable and prudent man to hesitate and pause."

The prayers which I shall now read are offered on behalf of each of these defendants:

Prayer No. 13:

"The jury is instructed that the business Bookniga Corporation was engaged in was entirely lawful.

"That the only crimes charged are that Bookniga Corporation was required to register and that, under the first count of the indictment, the defendants knowing that the corporation was required to register, one or more of the defendants willfully aided it in willfully failing to register and that, under the second count of the indictment, one or more of the defendants feloniously conspired and agreed that the corporation would willfully fail to register, and that at least one of the defendants committed an overt act for the purpose of carrying out the object of the conspiracy."

Prayer No. 14:

"The jury is instructed that unless it is convinced beyond a reasonable doubt that the defendants, or any of them, willfully and intentionally did some act designed to cause the Bookniga Corporation to willfully fail to register, then its verdict should be not guilty as to all the defendants or as to such defendant or defendants concerning whose conduct in that regard they have a reasonable doubt."

Prayer No. 15:

"The jury is instructed that before it can convict the defendants, or any of them, on either count of the indictment, it must be convinced beyond a reasonable doubt that they or one or more of them, as the case may be, knew that Bookniga Corporation was required to register, namely, that it was the agent of Mezhkniga for political and propaganda purposes.

"If it is not so convinced, beyond a reasonable doubt, or if it has a reasonable doubt, as to such knowledge on the part of any defendant, or as to all of them, then its verdict should be not guilty as to all the defendants, or as to such defendants concerning whose knowledge it has a reasonable doubt about."

Prayer No. 16:

"The jury are instructed that the word 'willful' as used in the statute and the indictment in this case implies not only a knowledge that Bookniga Corporation was obliged to register, but deliberately intended to cause it to willfully fail to register."

You have 17 marked on your program.

Mr. HART. That would be the next one, your Honor.

The COURT. Seventeen was not allowed.

With respect to No. 20, I am not sure whether you adopted it.

Mr. HART. I will adopt it now.

The COURT. This is offered on behalf of each of the defendants (prayer No. 20):

"The jury are instructed that it may find one or more defendants guilty and the other defendant or defendants not guilty, depending upon its view of all the evidence in the case."

Then I have this prayer which is offered in behalf of the defendants Weinberg and Liskin:

"The jury is instructed that an established reputation for good character may alone create a reasonable doubt."

I have certain prayers here now. No. 1 is offered on behalf of each of the defendants and reads as follows:

"The jury are instructed that the mere fact that a conspiracy has for its object the doing of an act which may be unlawful, followed by the doing of such act, does not constitute the crime of conspiracy, and unless the jury find that the defendant Liskin was actuated by a criminal intent, or if the defendant Liskin acted under a misconception or in ignorance, without any actual criminal motive, then a conspiracy has not been established by the evidence as to him, and the jury should bring in a verdict of not guilty as to the said defendant Liskin."

Now, the principle of law announced in that prayer has been adopted by the other defendants.

Mr. ROVER. Yes.

The COURT. And it has the same force and effect as though I repeated the prayer by putting in the names of the other defendants, which is not necessary.

Prayer No. 2:

"The jury are instructed that if the defendant Liskin did not have a criminal intent, in union with either Rush or Weinberg, or both, then they should bring in a verdict of not guilty as to the defendant Liskin."

That would be a correct statement of law as to the other defendants if their names were used instead of Liskin's.

Prayer No. 3 reads as follows:

"The jury are instructed that mere suspicion or possibility that the defendant Liskin participated in an alleged conspiracy with the other defendants or either of them, is insufficient to constitute the crime of conspiracy as to him, and before they can convict the defendant Liskin on the second count of the indictment they must find beyond a reasonable doubt that there was an agreement, combination, or confederation with Rush and Weinberg, or either of them, to do an unlawful act; that mere passive cognizance of the crime or unlawful act to be committed or mere negative acquiescence is not sufficient to convict Liskin."

That principle of law might be stated in the same manner as relating to the defendants Rush and Weinberg with the same force.

Prayer No. 4:

"The jury are instructed that any statement, declaration, or admission made by the defendant Rush to the Department of Justice agent, about 8 months after April 8, 1939, at the time of his arrest, or by the defendant, Weinberg, to the grand jury, or to anyone else, is not binding on the defendant Liskin, and must not be considered as evidence against Liskin that he participated in any alleged conspiracy as charged in the second count of the indictment."

Mr. ROVER. That same rule applies to Weinberg as to anything that Rush said.

The COURT. I will cover that later. That relates only to the defendant Liskin.

Defendant Liskin's instruction No. 5:

"The jury are instructed that if they find from the evidence that the defendant Liskin had no knowledge or information of the Registration Act, nor of the correspondence concerning the same with the State Department, then in that event the defendant Liskin would not be guilty of any conspiracy with the other defendants, and their verdict should be not guilty as to the said defendant Liskin."

The COURT. Liskin's prayer No. 7:

"The jury are instructed that the mere fact that the defendant Liskin was the president and director of the Bookniga Corporation does not in and of itself render him criminally responsible for the alleged criminal acts of the other officers of the said corporation, and if the jury finds that the defendant Liskin had no knowledge of any criminal acts or intent of such other officers or directors, then the jury should bring in a verdict of not guilty as to the defendant Liskin."

Liskin's prayer No. 9:

"The jury are instructed that the defendant Liskin was under no obligation to testify in his own behalf, and the fact that he did not testify does not create any presumption whatever against him."

Have I read this character prayer on behalf of the defendants?

Mr. HART. Yes.

The COURT. Another part of the indictment names or describes a number of overt acts. By that is meant acts which it is alleged were done by the conspirators named to effect the object of the conspiracy. As I have indicated, it is not necessary that any particular number of these acts should be proved before you can find the defendants guilty. It is only necessary that at least one overt act was done by at least one member of the conspiracy to effect the object of the conspiracy, and that at least one of those overt acts was done between the 8th day of September 1938 and the 6th day of April 1939.

In our jurisprudence we divide the responsibility in cases of this kind between the court and the jury. It is for the court to direct the orderly proceedings of the trial, to rule upon questions of law as they arise in the conduct of the trial and upon the admissibility of evidence and to declare the law of the case. It is the duty of the jury to take the law as stated by the court and to apply that law to the facts and circumstances shown in the evidence.

It is the exclusive province of the jury to determine matters of fact and the questions of guilt or innocence. In coming to your conclusion you should do so with an understanding of the law, and your deliberations should be orderly to the end that your verdict reached at the end of the case will be a just verdict.

You are the sole judges of the credibility of the witnesses and of the weight you will accord the testimony of each of them.

You should accord to individual witnesses and the testimony given by them that degree of credibility and effect which, in your honest judgment, you think they ought to have, taking into consideration insofar as you are able to do so, from the manner and appearance of the witness on the stand, whether the testimony of that witness is frankly and honestly given, the apparent intelligence or lack of intelligence of the witness, his ability and opportunity to observe the facts that transpired within his presence, and his ability to remember what at a prior time he has observed, and his ability to express accurately and communicate to you through the medium of words that which passed within his observation; also what, if any interest the witness has in the outcome of the case and whether or not on that account he has colored in any way the facts related in his testimony, and again whether or not there is manifested by any witness any bias, preju-

dice, or feeling for or against the defendants, or any of them; and if so, whether or not that has colored the testimony of such witness one way or the other.

Furthermore, you are told that if you find that any witness has knowingly testified falsely with respect to any matter material to the issues of this case, and concerning which such witness might not reasonably be mistaken, you may, if you wish, reject all or any part of the testimony of such witness. The rule of law, however, does not prevent you from giving weight to such parts of the testimony of such witness as you may find to be trustworthy or reliable. Thus you may find parts of the testimony of the witness to be supported or corroborated by other evidence in the case which you may believe to be true, and thus, even though you might find other parts of such testimony to be untrue.

In weighing the evidence you are not reminded that there was received in evidence certain conversations, admissions, or declarations of one or more of the defendants, made after April 6, 1939, the date fixed in the indictment as the time limit within which Bookniga Corporation was required to register as the agent of a foreign principal, and the termination of the time when the conspiracy is alleged to have existed. With respect to any such evidence of conversations, admissions, or declarations by any one or more of the defendants you are told that any such conversations, declarations, or admissions made before September 8, 1938, or after April 6, 1939, were admitted in evidence and may be weighed by the jury only as against the defendant who made same; and you are further told that they do not bind any other defendant and may have no weight in determining the guilt or innocence of any other defendant, and this proposition of law relates to the issues of the case as made by each count of the indictment.

The case to a large extent involves what is known as circumstantial evidence. Circumstantial evidence consists of disconnected and independent facts which give rise to a logical inference as to the existence of the main or principal fact in issue. Direct evidence is that which proves the fact itself. A conviction may be had upon circumstantial evidence alone; but there are certain rules of evidence which you should bear in mind in weighing evidence of this kind. It is the law that circumstantial proof, in order to justify a conviction, must not only be consistent with the guilt of a defendant but it must also exclude every reasonable hypothesis of his innocence. It is for you, and you alone, to say whether the logical inferences and deductions from the facts established by the evidence exclude every reasonable hypothesis of defendants' innocence and lead you to the conclusion beyond a reasonable doubt that these defendants, or any of them, are guilty as charged in the indictment.

You may now take the case and consider your verdict. You will be asked for your separate verdict on each count of the indictment as to each of the several defendants.

(Counsel for all sides approached the bench and conferred with the court in a low tone of voice, as follows:)

Mr. HART. I thought Your Honor might have overlooked the fact that you were going to tell them they could bring in a verdict of guilty on the second count.

The COURT. I will take care of that when they come back.

Mr. ROVER. May I except to Your Honor's describing the legislative history of the act and the purpose of the act?

The COURT. Yes.

Mr. ENGLANDER. I join in that exception.

Mr. PARKER. Both Mr. Englander and Mr. Rover referred to the fact of advice by counsel. That was in their argument, and both of them referred to advice of counsel. Advice of counsel is no defense.

Mr. HART. I thought you had.

The COURT. I don't know whether I did or not.

Mr. HART. Could Your Honor instruct them as to that, if they determine the guilt of the defendant Liskin on the second count, if they take into consideration the testimony on the first count?

The COURT. I think I will take care of that when they come in.

Mr. ROVER. If Your Honor is going to tell them that advice of counsel is no defense, I take an exception to that.

The COURT. Yes.

(At the conclusion of the foregoing conference, counsel returned to the trial table and the trial proceeded as follows:)

The COURT. There is just one further word. Advice of counsel is no defense.

You may take the case now.

The alternate jurors have served their purpose and have done it well. Thank you for your attendance and your service. You will be excused. The alternate jurors will step aside, and the regular jurors will retire to the jury room.

(Whereupon, at 3:55 p. m., the jury retired to consider their verdict.)

Place of United States in the World Situation

EXTENSION OF REMARKS

OF

HON. HAROLD H. BURTON

OF OHIO

IN THE SENATE OF THE UNITED STATES

Thursday, July 17, 1941

ADDRESS OF HON. HAROLD H. BURTON, OF OHIO

Mr. BURTON. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an address which I delivered at the Summer Institute for Social Progress, Wellesley, Mass., on July 15, on the place of the United States in the world situation.

There being no objection, the address was ordered to be printed in the RECORD, as follows:

In order to speak briefly on the place of the United States in the world situation I must choose between discussing our place in the immediate future and our place in the distant future. Coming, as I do, from the governmental forum where the "immediate future of the United States" is discussed day by day, I shall limit myself to the following three aspects of our immediate future: Our war policy, our hemispheric policy, and our internal policy. I shall deal with each only as it affects our place in the world situation.

Our war policy is to preserve America's freedom and ideals at all costs and, if possible, to do it without fighting. On this much of a war policy America is substantially united. This calls for the preservation and defense of our 48 States, our Territorial and insular possessions, and the Western Hemisphere. This does not mean that we will fight some one else's war. It does not mean that we will fight to impose our program, even of "the four freedoms," upon unwilling people. The essence of our independence from domination by others carries with it a recognition of the right of others to a like independence from domination by us.

To make this policy effective Congress passed the Lend Lease Act and appropriated $7,000,000,000 to implement it. To understand our war policy, it is necessary to understand this act. It is an act for the defense of this Nation. It carries no additional powers for the use of convoys or of combatant troops. It does not grant authority to give aid to any other nation, as such. What it does do is to grant the President the authority, and the implied duty, to supply defense articles to the government of any country the defense of which he deems vital to the defense of the United States. This may mean aid to Britain, China, or Russia, or to any other nation, if, but only if and when, the President deems the defense of that nation vital to the defense of the United States. It involves no alliance with any government. It implies no support of the policies of any nation to which our defense materials are supplied.

The doctrine of the Lend Lease Act is a doctrine authorizing aid to be given in defense of the United States "short of war." It does not authorize acts of war, although the acts which it does authorize may be seized upon by others as causes for declaring war upon us. Under this policy we have ceased to be strictly neutral. We have become nonbelligerents guided by the actual needs of the defense of our own Nation against outlaw aggressors.

Our policy is to stay out of the fighting if it is possible to do so and still to preserve our freedom and our ideals. Such a policy not only is to our own advantage and responsive to the instincts of our people but it also is to the advantage of humanity.

Every day that we stay out of the war and still maintain our freedom and ideals yields gains of many kinds. It gives added time during which the outlaw nations may collide, collapse, or explode from within. Their organization rests largely upon force and fear as does that of any outlaw group. It may break up suddenly, at any time. The flight of Hess from the Nazis was an example of its peculiar instability. The war between the Nazis and the Soviets is weakening both.

Every day that we stay out of the fighting gives us needed time to increase our long-delayed production of defense materials. We are far behind in providing either the needed equipment, or the men trained to use the equipment that is called for by even our most conservative plans of defense.

Every day that we stay out of the fighting permits us to keep a strong fleet in the Pacific, whereas actual fighting in or near the Atlantic might soon require most of our Navy to be on the Atlantic Ocean, thus leaving the Pacific Ocean open to aggressive action against our interests.

Every day that we stay out of the fighting helps to stabilize industrial and economic conditions not only in America but in the world, by preserving much of the standard of living which would have to be abandoned if our facilities were destroyed by war or if our productive agencies all were turned from cooking utensils to warplanes, from automobiles to armored tanks, from refrigerators to artillery shells, from homes to warships, and in countless other ways were devoted to destructive purposes.

Every day that we stay out of the fighting it saves American men and money. Heavy as our taxes are and will be under our present program, they might well be doubled in war, thereby threatening the entire financial stability of our Government, of our private investments, and of the world.

Finally, every day that we stay out of the fighting enables the people of America to learn more about the needs and the facts so that when and if a crisis presents itself we shall act with that understanding and unity that is vital to the success of a self-governing nation at war.

America never has failed to fight when that has been necessary to preserve her freedom

or ideals. We must not hesitate to fight now if that need appears again. As yet that need does not exist. We cannot rely on treaties with the Axis Powers for they have adopted the methods of outlaws. They have shown no more regard for a law or a treaty than does the outlaw who robs and kills in obvious violation of the laws of his nation and community. Outlaws rely on force and cunning to make good their escape and their defiance of law. Treaties are still of value between our allies and ourselves, but our relation to the Axis Powers must be that of a policeman to an habitual and hardened outlaw. Just as an outlaw may dominate his immediate family by force, nevertheless many members of his family often are deeply opposed to his course of life and are glad to be freed from it by his capture. So we hope that many of the people now dominated by the Nazi outlaws, will, when freed from that control, respond again to the principles of freedom and of respect for the individual which have formed the basis of the world's progress.

This war policy of the United States helps the forces of law and order and of freedom throughout the world. It is the soundest possible military policy to permit us thus to prepare ourselves, while also supplying materials and aid to those whose defense is vital to our own. It is important also to preserve here, as much as possible of the world's peacetime civilization coupled with a demonstration of the feasibility of self-government. If worse comes to worse the United States will be the last line of defense of the world's free civilization. We must be so well prepared that that last stand shall never fail. Our defense policy not only makes us the arsenal of the free nations of the world, it also prepares us to serve as the last and invincible line of defense for those personal freedoms for which man has struggled for ages and from which springs his hope for the future. It is better for us to make absolutely sure of the success of our final defense than to risk the danger of an earlier and more hazardous test of strength which might leave us with no further final resort.

With our progress under this program there is ample ground for criticism today. Instead of moving at the rate of a $17,000,000,000 program we are moving scarcely at that of a ten- or twelve-billion-dollar program. We are not well equipped. Our production is not moving as smoothly as it should. The program needs greater unity of action and more complete Nation-wide support. The program needs improved organization in the structure of its Government; it needs the elimination of every interruption of production from any source whatsoever. To improve this program we must each lend a willing, vigorous, helping hand at every point.

Turning to our hemispheric policy. This has descended to us from the Monroe Doctrine, but it has been greatly developed in recent times. Through it and the pan-American agreements we are committed to the defense of and to friendly cooperation with the Western Hemisphere. Central and South American nations are exporting and importing nations. They depend upon the ocean and the air highways of the future, especially on the Atlantic side. For many years the control of the Atlantic Ocean has been, and it is now, held by Britain and the United States, and today the government of each of the 20 republics south of us is friendly toward us. If, however, the Axis Powers should seize or seriously threaten to seize control of the ocean or air highways of the Atlantic, then the governments of some 8 or 10 of these southern nations would face serious danger of overthrow by organized opposition parties within their own borders friendly to the "new order" of Europe rather than to the United States. Such opposition governments springing up within our hemisphere and using the already existing Axis-controlled air lines and bases would bring us face to face with danger within our own walls. This means that the hemispheric policy of the United States, emphasizing the control of the ocean and the air, and the development of genuine, strong, and friendly commercial, cultural, and governmental relations with the central and southern republics of America should be a keystone of our policy for both our immediate and our distant future

Finally our internal program is important to the world. It is impossible in these uncertain days to plan in detail, long-term world-wide relationships, but the very cornerstone of any world-wide program that is to be based upon justice and freedom and upon respect for the individual citizen, requires that the United States itself be an outstanding justification of such a program. To qualify as such a cornerstone of the world of the future, we must seek at once within our own borders, at least the following results:

1. Preservation by us of that genuine respect for individual personality that is the foundation of our governmental, social, and religious philosophy. This calls for a rededication to, and a deep understanding of, the principles of the Declaration of Independence. The doctrine was there stated in the following familiar language, the essence of which we need to make again a living faith, expressed in our own terms:

"We hold these truths to be self-evident that all men are created equal, that they are endowed by their Creator with certain unalienable rights, that among these are life, liberty, and the pursuit of happiness. That to secure these rights, governments are instituted among men, deriving their just powers from the consent of the governed * * *."

This calls for practice of the great freedoms of religion, press, speech, assembly, and opportunity.

2. Demonstration by us of the capacity of a self-governing nation to set the standard for the people of the world, in living conditions and social security.

3. Demonstration by us of the capacity of a self-governing nation to meet the economic pressure of modern problems of production, distribution, money, taxation, rising standards of living and scientific advances.

4. Demonstration by us of a governmental restraint upon our own expansion of Federal powers, and the performance of our governmental duties with exemplary efficiency, economy, and upon sound financial principles.

5. Development by us of a genuine spirit not only of tolerance, but of genuine brotherly love, evidencing an understanding of the brotherhood of man and the Fatherhood of God which has been the great drawing power of genuine religion and of the development of human happiness since human life began.

America's strongest weapon is her own example.

Chicago Tribune War Poll

EXTENSION OF REMARKS

OF

HON. C. WAYLAND BROOKS

OF ILLINOIS

IN THE SENATE OF THE UNITED STATES

Thursday, July 17, 1941

ARTICLE FROM CHICAGO TRIBUNE

Mr. BROOKS. Mr. President, I offer an article from the Chicago Daily Tribune of July 15, containing the total final tabulation of the war poll taken in the State of Illinois. It will be noted that 80 percent of the people expressing themselves on this question voted "No," emphatically expressing themselves against our active participation in the war.

I request that this poll, because of the importance of the subject, be included in the proceedings of the CONGRESSIONAL RECORD, and I would recommend that similar polls be taken in the various States, for I confidently believe that a vast majority of the people of America, if given an opportunity, would express themselves, as have the people of Illinois, as being opposed to our entering the present war.

The VICE PRESIDENT. Without objection, it is so ordered.

The matter referred to is as follows:

[From the Chicago Tribune of July 15, 1941]

FINAL WAR-POLL VOTES COUNTED—80 PERCENT SAY "NO"—77,229 BALLOTS CAST IN STATE SURVEY

(By Percy Wood)

Final returns in the Chicago Tribune's war poll show an 80-percent opposition to war among the 77,229 Illinois voters who replied to the question: "Shall the United States enter the war to help Britain defeat Hitler?"

The number of ballots received from the 50 Chicago wards, the 30 country townships in Cook County, and from 9 election-board cities down-State constituted about 30 percent of the total of 257,484 mailed—1 to every tenth voter on the polling lists.

The 77,229 State-wide ballots break into the following percentages:

Yes (for war): 14,176, or 18.36 percent.

No (against war): 62,394, or 80.79 percent.

Spoiled ballots totaled 659, or 0.85 percent.

The poll was conducted by post-card ballots printed, mailed, and counted under Tribune supervision by the Buckley-Dement Co., 1300 Jackson Boulevard, the largest concern in the direct-mail-advertising field.

Coincident with the announcement of complete results of the Tribune's poll last night was the announcement of final returns in the poll of New York State on the same question by the New York News. In the Empire State the result was 51,507 for entering the war and 122,802 against.

ANTIWAR RATIO GROWS

Starting with a 3 to 1 trend against intervention in the European conflict, the antiwar percentage in the Illinois poll crept upward daily until it reached 80 percent, or 4 to 1. First returns were printed on July 3, and additional results on each succeeding day, save for the issue of July 5. No count was made on July 4 because of the national holiday.

Down-State sentiment was obtained by sampling one-tenth of the registered electorate in the following cities: Aurora, Bloomington, Cairo, Danville, East St. Louis, Galesburg, Peoria, Rockford, and Springfield.

PERCENTAGE OF RETURNS

Returns from Cook County were 31 percent of the ballots mailed, and by coincidence this figure applied both to the city wards and the country towns. In the city 191,246 ballots were mailed, and 59,314 were marked and returned. The suburbs returned 11,312 of the 36,491 sent out.

Down State, 6,603 of the 29,757 ballots mailed were sent back. This was a 22.2 percent return. The State-wide return was 30 percent.

Only one city ward—the twenty-fourth—voted consistently for war, the final percentage being 53.3. Coincidentally, the twenty-fourth also returned the smallest percentage of ballots mailed—19.2 percent, or a little less than one of every five mailed to voters there.

SLIGHT WAR MAJORITY

The twenty-fourth has an extremely heavy Russian Jewish and Polish population, a great many residents being foreign-born. From the second day of the poll it has cast a slight majority for intervention.

The banner ward in percentage of returns was the forty-seventh on the North Side, where 41.8 percent of all ballots sent were marked and mailed back. It was also one of the strongest antiwar wards, voting 89.4 percent against intervention.

The banner ward for peace was the forty-fifth, also on the North Side, which has many voters of German descent. Noninterventionist sentiment in the forty-fifth stayed above 90 percent almost continuously and closed at 90.9 percent.

Next highest in antiwar strength was the ninth, on the far South Side, including the Pullman district, where the noninterventionist percentage was 90.12. The ninth has many Italian and Polish voters in the Pullman section, and there are also Swedish and Dutch families in the Roseland district.

RESULTS IN OTHER WARDS

The twenty-sixth ward ran next to the twenty-fourth in interventionist strength, turning in a final prowar percentage of 36.3. It has a large Polish majority, with some Russian and a few Italian residents.

Comparatively high prowar percentages were found in the largest colored wards, the second and third, where interventionist strength ran 30 percent. This was a greater prowar sentiment than in most of the other subdivisions of the city.

The neighbors of Senator WAYLAND BROOKS in the forty-ninth ward upheld the noninterventionist position he has taken in Washington, voting 24.2 percent for war and 75.2 percent for peace. In Gov. Dwight H. Green's old ward—the forty-sixth—the percentages were 19.7 for war and 80.3 against war. Mayor Kelly's ward is the forty-second, where interventionist strength was recorded at 27.3 percent and sentiment for peace at 72.7 percent.

CONGRESSMEN'S HOME WARDS

The home wards of Chicago's Congressmen cast the following percentages against war: ARTHUR W. MITCHELL, second, 70.1 percent; RAYMOND S. MCKEOUGH, eighth, 88.4 percent; EDWARD A. KELLY, eighteenth, 89.9 percent; HARRY P. BEAM, twelfth, 79.1 percent; A. J. SABATH, twenty-first, 74.4 percent; LEONARD W. SCHUETZ, thirty-fifth, 84.1 percent; LEO KOCIALKOWSKI, thirty-second, 63.7 percent; and CHARLES S. DEWEY, forty-third, 83.7 percent.

Congressman A. F. MACIEJEWSKI lives in Cicero, where the antiwar sentiment was recorded as 78.5 percent, and Congressman GEORGE A. PADDOCK lives in Evanston, whose voters turned in 83.7 percent against intervention. Both men have Chicago territory in their districts. All of the above, with the exception of DEWEY and PADDOCK, are Democrats.

Down State, Aurora returned the largest number of ballots mailed, sending back 28 percent, while Springfield, the capital made the smallest showing, with a return of only 15.5 percent.

AURORA 90.1 PERCENT ANTIWAR

Aurora was also the top antiwar city, recording 90.1 percent against intervention. Galesburg was next, with 87.4 percent, and Rockford third, with 85.5 percent.

The only city to vote for war was Cairo, 400 miles from Chicago and the southernmost point in the State, separated from Missouri by the Mississippi River and from Kentucky by the Ohio. Cairo is more of a southern town than any other Illinois municipality and is farther south, geographically, than even Richmond, Va. The final prowar percentage in Cairo was 54—about what it has been in the daily totals.

East St. Louis cast the closest vote of any city, finishing at 50.9 percent against war after jumping across the line within the last few days.

INDUSTRIAL CITIES RECORDED

East St. Louis and Rockford are industrial cities. The former virtually straddled the fence throughout the poll, but Rockford, with a large population of Swedish descent, plumped hard against war from the start. Peoria, seat of the State's distilling industry and a principal tractor-manufacturing center, registered its sentiment between East St. Louis and Rockford, turning in 71.6 percent against war.

Galesburg, Bloomington, Danville, and Springfield dot the corn belt in central Illinois. The first three recorded antiwar strength in the 80s, but Springfield registered only 72 percent against intervention.

FINAL WAR POLL RESULTS IN CITY, SUBURBS, AND DOWNSTATE

Final results are given below in the Chicago Tribune's war poll conducted on the question, "Shall the United States enter the war to help Britain defeat Hitler?" Every tenth voter on the polling lists in Chicago, Cook County, and nine downstate cities was sent a ballot.

DOWNSTATE CITIES

City	Vote yesterday		Total vote		Percentage vote	
	Yes	No	Yes	No	Yes	No
Aurora	4	82	76	693	9.88	90.12
Bloomington	3	33	88	469	15.80	84.20

Senator Tydings' Attitude on Jackson Nomination

EXTENSION OF REMARKS

OF

HON. MILLARD E. TYDINGS

OF MARYLAND

IN THE SENATE OF THE UNITED STATES

Thursday, July 17, 1941

EDITORIAL FROM FORT WAYNE NEWS-SENTINEL

Mr. TYDINGS. Mr. President, I ask unanimous consent that there be printed in the CONGRESSIONAL RECORD an editorial from the News-Sentinel of Fort Wayne, Ind., of the issues of July 12, 1941.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

[From the Fort Wayne (Ind.) News-Sentinel of July 12, 1941]

SO JUSTICE ALSO GOT A BRASS RING?

For some very strange reason, the various brief news stories covering the objections of Senator TYDINGS to confirmation of Robert E. Jackson as Supreme Court Justice seemed well calculated to conceal the real basis of the Maryland Democrat's objections.

Some of them seemed deliberately designed to create the erroneous impression that it was a sort of trivial personal feud that had been aired on the Senate floor in connection with the important question as to whether Jackson should be elevated to the Supreme Court bench.

The News-Sentinel believes that the people are entitled to a clearer appreciation of what was actually at issue in that controversy—largely because of the light which Senator TYDINGS' disclosures threw upon the character of a certain pair of presumptuously pontifical New Deal columnists who, often and artfully mask wanton smear with the superficial appearance of giving the low-down on the news of the day.

The whole thing began in the summer of 1939, when Messrs. Drew Pearson and Robert S. Allen, coauthors of a syndicated newspaper column called The Washington Merry-Go-Round, included in their Nation-wide radio broadcast these statements:

"BOB ALLEN. And don't forget Senator TYDINGS, of Maryland, Drew.

"DREW PEARSON. That's right, Bob. Senator TYDINGS has promised us a poke in the eye. I'd forgotten.

"ANNOUNCER. Well, what's the Senator sore about?

"PEARSON. Well, we suddenly became interested in checking up on Government works and discovered that the Senator had put through a very interesting little deal. Just to help keep the W. P. A. workers busy, he had them build a road and yacht basin on his private estate."

In other words, these highly touted columnists were telling the world that Senator TYDINGS had used the funds of the Government of the United States for his own private purposes—that he had committed fraud, thievery, larceny—that he had stolen funds from the needy unemployed and used them to improve his private property.

Senator TYDINGS immediately called up the broadcasting authorities and asserted that this statement was utterly false. And those authorities straightway got in touch with Colonel Harrington, W. P. A. Administrator, who informed them that this charge had been thoroughly investigated by the W. P. A. and that "never had a cent of Government money been spent on the property of Senator TYDINGS."

This finding was duly carried by the radio officials in a broadcast the week following. But Pearson and Allen have never, on their own account, retracted the charge against the Maryland Senator.

When the radio officials had delivered their apologies, however, Columnist Bob Allen sat down and wrote a nasty letter to Colonel Harrington, a photostat copy of which Senator TYDINGS recently read to his fellow solons:

"DEAR COLONEL: Your letter to Senator TYDINGS and the National Broadcasting Co. was certainly a gracious item. * * * It was very fitting that we, who had defended and fought for W. P. A. from its inception, should be kicked in the teeth by the Administrator in the interests of a man who has done nothing but heap fire and brimstone on W. P. A. and vote to gut it.

"We particularly appreciate your action because you didn't even have the decency to get in touch with us about it or to be frank about it and the real facts of the case. When I was an officer in the Army some years ago, it was the custom for an officer to be a gentleman, but, apparently times have changed."

That little exhibit is highly significant:

It is remarkably typical of the technique of the administration's smear brigade. "Never mind whether somebody is guilty or innocent of a particular charge; hang that charge on him and smear him with might and main—if he has ever been a political enemy!"

Senator TYDINGS looked up the law and found that House and Senate and President, acting together, had placed on the books a Federal law which provides:

"Whoever publishes a libel shall be punished by a fine not exceeding $1,000 or imprisonment for a term not exceeding 5 years, or both."

And so he went to the United States District Attorney for the District of Columbia, who, he says, commented: "All right, Senator, we will proceed with it. But I would like the F. B. I. to investigate it."

Senator TYDINGS said he had no objections to an F. B. I. "prowl." And in good time the F. B. I. returned a report saying: "There has never been a dollar of public money spent on the property of Senator TYDINGS."

By this time the district attorney was "already to proceed." But, said the "D. A.," he had a letter from Attorney General Jackson ordering him, in effect, to dismiss the case, although the Senator had not yet had even an opportunity of appearing before a grand jury.

Jackson is reported by Senator TYDINGS as having then informed him:

"Yes; it is true you were charged with using public funds on your private estate. Yes; it is true that after Colonel Harrington, the head of the W. P. A., said that was a lie, Mr. Allen showed his malice by giving Colonel Harrington a call-down for telling the truth. Yes; it is true that I then had the F. B. I. investigate this matter, Senator, and your connection with your own property, and they exonerated you. Yes; that is all true, and it is likewise true there is a statute, which you have cited, pertaining to libel, and this case is libel; but, just the same, I have ordered the district attorney not to prosecute it."

Jackson declared that "no important question of policy" was involved.

On a most flimsy, unconvincing pretext the Attorney General, on his own responsibility, prevented action by the Government in a case involving charges of serious libel.

In the face of findings by W. P. A. authorities and by his own F. B. I., the Attorney General sent down a letter saying, "Do not prosecute this case."

So Senator TYDINGS asked his colleagues: "Is there one Senator, just one, on the floor of the Senate, who will say that Robert Jackson acted with the dignity that becomes the great office of the Attorney General of the United States? I do not hear any Senator reply to that question."

But very shortly afterward he watched the Senate grant its approval to the elevation of this same Mr. Jackson to the lofty eminence of a place on the bench of the United States Supreme Court.

But even so, the courageous and conscientious gentleman from Maryland remained, not surprisingly, convinced that in his handling of the Pearson and Allen affair Robert E. Jackson had shown that he "has not the character, has not the judicial temperament to fit him to sit on the highest court in the world."

Electric Rate Reductions in Southwest Washington

REMARKS

OF

HON. MARTIN F. SMITH

OF WASHINGTON

IN THE HOUSE OF REPRESENTATIVES

Thursday, July 17, 1941

Mr. SMITH of Washington. Mr. Speaker, the constituency which I have the honor to represent in Congress is rapidly becoming one of the most public-power-minded constituencies in the United States. Starting in 1933, I have actively participated in the fight which we have carried forward successfully to bring low-cost electricity to the citizens residing in the urban and rural communities of southwest Washington. Our development of the Bonneville hydroelectric project on the Columbia River has been an important factor in the progress which we have made.

When I came to Congress in 1933 we did not have a single P. U. D. district in my entire congressional district. After meeting with several defeats and setbacks, we now have P. U. D. districts functioning successfully in every one of the nine counties of my district and we have R. E. A. projects in five counties. We are hooked up with Bonneville in six of my nine counties and in the very near future we will be using Bonneville power in every one of the nine counties.

In addition to the establishment of numerous new industries and pay rolls as a result of this public-power development, we have obtained electric-rate reductions which cause savings to our people of more than $624,374 annually. It is with genuine pleasure and some degree of pride that I insert in the RECORD at this point the statement showing these savings to the citizens of my district.

The statement is as follows:

Estimated annual electric rate reductions, southwest Washington counties, Jan. 1, 1939, to May 1, 1941

County and companies	1938	1939	1940	1941 (first 4 months)
Clark:				
Northwestern Electric Co		$37,000	$26,919	
Portland General Electric			26,812	
Western Light & Power Co			200	
Total		37,000	53,931	
Cowlitz:				
Puget Sound Power & Light Co		3,600	4,600	
Northwestern Electric Co		2,500		
Washington Gas & Electric Co		2,750	38,352	
Public utility district			21,200	
Total		8,850	64,152	

Estimated annual electric rate reductions, southwest Washington counties, Jan. 1, 1939, to May 1, 1941—Continued

County and companies	1938	1939	1940	1941 (first 4 months)
Grays Harbor:				
Puget Sound Power & Light Co		$4,200	$5,200	
Twin Harbors Electric Co	$1,500	2,000		
Public-utility district			150,367	$70,000
Total	1,500	6,200	155,567	70,000
Lewis:				
Puget Sound Power & Light Co		8,600	10,500	
Washington Gas & Electric	600		3,180	
Packwood Electric	600		600	
Centralia Municipal		18,000		
Public-utility district				5,497
Total	1,200	26,600	14,280	5,497
Mason:				
West Coast Power	600	10,277	13,717	
Puget Sound Power & Light Co		12,000	15,200	
Public-utility district (no figures available)				
Total	600	22,277	28,917	
Pacific:				
Puget Sound Power & Light Co		330	400	
West Coast Power		1,519		
Public utility district			51,521	
Total		1,849	51,921	
Skamania:				
West Coast Power	3,200	1,875		
Northwestern Electric		500		
Public-utility district			2,707	
Total	3,300	2,375	2,707	
Thurston: Puget Sound Power & Light Co		26,300	33,100	
Wahkiakum:				
West Coast Power		2,651		
Public-utility district			4,000	
Total		2,651	4,000	
Aggregate	6,600	134,102	408,175	75,497

Recapitulation

1938 reductions	$6,600
1939 reductions	134,102
1940 reductions	408,175
1941, 4 months	75,497
Total	624,374

Planning for Defense

EXTENSION OF REMARKS

OF

HON. ALEXANDER WILEY

OF WISCONSIN

IN THE SENATE OF THE UNITED STATES

Thursday, July 17, 1941

ARTICLE BY E. D. CANHAM

Mr. WILEY. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD a very challenging article entitled "Down the Middle of the Road," by Erwin D. Canham. It calls to the attention of the reader the difference between planning and improvisation and following through. I think it is worthy of reading by all our citizens, so I ask that it be printed in the RECORD.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

DOWN THE MIDDLE OF THE ROAD: WISHES AREN'T HORSES, AND STILL LESS TANKS

(By Erwin D. Canham)

As an old Washington correspondent, perhaps this writer may be permitted to give readers a word of caution. It is important, in reading news of the Roosevelt administration, not to confuse the hope or the plan with the deed or result. This was a mistake we tended to make during all the early years of the New Deal. It is a mistake that is being made during the defense effort.

It was the reporter's job, during the early New Deal years, to give an objective picture of what the administration announced it was about to do. Such news occupied the "honeymoon" period. If some of us doubted whether the fine plans would all come to fruition, it was not exactly our job to raise the question until various experiments had had a fair trial. This produced for some time an unduly favorable press for the administration. Passing of this period led to the President's later break with the press.

And perhaps one who reported Roosevelt news in the White House for 7 years may also record his impression that President Roosevelt himself tends to confuse his hope or plan with an ultimate achievement. That is the great flaw in his statecraft. It is the glaring error in his administrative ability. Mr. Roosevelt is a great planner and improviser. He is not a great follower-through.

FAMILIAR SOUND

For a year now, just as in early New Deal days, we have been hearing of great plans and projects. It has been an exciting time, just as it was back in 1933–34. And we have all tended to confuse the blueprint with the dwelling house. The very latest dispatches from Washington must be scrutinized with this vital distinction in mind.

Now we are beginning to wake up. The report this week of the House Military Affairs Committee is a dash of cold water to our hope-bleared eyes. The time has come when we can ask, "How are the plans working out?" The committee report answers, "Very badly, indeed." And now that we have awakened, real and speedy action must follow.

But once again we must beware that just another set of glittering plans isn't substituted for those which have gone awry. That used to be the way of it with New Deal plans that didn't work. Failures were speedily blanketed beneath plans of such grandiose scope that nobody had breath left to criticize. Little plans that didn't work out became, often, big plans that didn't work out either.

Some, perhaps many, of the New Deal projects were carried through to successful completion. But the failures were often as stupendous as the successes. And none of us, not even the administration officials, for their own protection or the opposition for its political benefit, ever adequately checked up on things.

SAND UPON SAND

Today almost precisely the same thing is happening. The defense effort began with a faulty organization. Instead of the faults being rectified, as the House committee points out, new and more complicated boards and agencies and liaison officers were brought into being until confusion was a good deal worse.

There is at this moment a vigorous national demand for reorganization of the defense set-up. The Washington dispatches, just as they did in the old days, are beginning to record that changes are "in the making." But it will require a positive mobilization of public opinion to force President Roosevelt to go to the root of the evil with his changes. As of old, the tendency will be to patch things up and to assume that just because everybody means well, and the objectives are right, that they are thereby automatically attained.

In short, we need—if democracy is to be saved—more delegation of authority by President Roosevelt, who for 8 years has palpably held altogether too many reins in his own hands for sound administration. Friends of the President have quoted him as saying that history's harshest verdict on him will be that he was an exceedingly bad administrator. If he isn't careful, the verdict will be a great deal harsher than that. It will not be pleasant to be the man who saw what should be done and then deliberately refused to do it. Wishes are not horses, not in war times they aren't, and good intentions pave the very worst of roads.

The Congressional Front

EXTENSION OF REMARKS

OF

HON. EVERETT M. DIRKSEN

OF ILLINOIS

IN THE HOUSE OF REPRESENTATIVES

Thursday, July 17, 1941

TRIP THROUGH AN AIRPLANE FACTORY

Mr. DIRKSEN. Mr. Speaker, a trip through a large airplane plant is revealing. It reveals how completely the imperatives of war and defense can dominate the life scheme of a vast industry. First, one encounters brilliant young executives wrestling with problems of securing the necessary materials and coordinating a huge industrial process for

the production of instruments designed to kill. Next, one encounters a host of young engineers skilled in the science of flight, who sweat their agile brains to secure constant improvement in winged machines to be used for destruction. Next one encounters a huge throng of trained production supervisors fussing and stewing over each little difficulty which delays the production of these engines of destruction for a single moment. Finally, one encounters thousands upon thousands of able and alert young mechanics and assemblymen who doggedly scan blueprints and, piece by piece, give form and life to these mechanical birds that shall fly through the air with messages of death. Here in a single industrial plant one finds a far-flung combination of the best executive, engineering, and mechanical skill in the world joined with an endless array of the most delicate and precise machines ever devised by human brain to produce slim, trim, speedy, and effective death birds. Suppose this vast aggregate of brain power and skill could be applied to the science of flight for peaceful rather than destructive purposes? What amazing progress we would then see in the field of air transportation.

FAITH AND INTEGRITY

Military experts come forward with a request that Congress change the provisions of the Draft Act so that the inductees might be kept longer than a year. Two reasons are assigned. The first is that the situation demands that they be retained. The second is that they first begin to take on real value as soldiers after the first year of training. Nobody quarrels with this reasoning. But other profound and important facts cannot be ignored. During the first week of September 1940 when the Draft Act was under debate in Congress, its enactment was quite doubtful. There were hours and hours of debate. Time after time it was emphasized that the service would only be for 1 year. Time after time it was pointed out that 1 year would not materially disrupt the life of a college student, a young professional man, a young man preparing to marry or other groups that would be affected by the draft. This time limit of 1 year proved genuinely persuasive in securing passage of the act. To extend that time now that thousands are in the service seems like a breach of faith not only with the young men but as between the prime movers for the draft and those Members of the National Legislature who voted for its adoption because it was only for a year. Can anything better destroy the usefulness and morale of a soldier than to diminish his faith in the integrity of the Government which he is expected to defend?

DAKAR IS EVEN CLOSER

This significant phrase appears in the President's message on the occupation of Iceland by the Navy. He said the United States cannot permit the occupation "of strategic outposts in the Atlantic to be used as air or naval bases for eventual attack against the Western Hemisphere." Iceland, on the twenty-third meridian of west longitude, is 2,600 miles from New York. Dakar, on the seventeenth meridian of west longitude, is 1,600 miles from Brazil. Logic dictates that the Commander in Chief may next undertake the occupation of Dakar in the light of his Icelandic message.

PRIVATE AID TO FOREIGN LANDS

Between September 6, 1939, and May 31, 1941, 338 organizations have reported to the State Department as provided by law their activities in soliciting and disbursing relief to belligerent countries. One organization, known as the Union for the Protection of the Human Person, collected nothing and expended nothing. In terms of results, the most effective group was the Greek War Relief Association, which collected nearly $5,000,000 and expended only 5 percent of that amount in administrative publicity and campaign costs Total amount collected by all organizations was $36,716,273.50, of which $3,701,882.30 was disbursed for collection and publicity expenses.

BLONDES FOR DEFENSE

Weather is enemy No. 1 for aviation. This is true of military as well as civil aviation. Hence plane pilots must be constantly advised of weather conditions. Weather is observed and charted by the United States Weather Bureau and then transmitted by teletype to all sections of the land. The devices used in determining certain basic weather conditions are extremely delicate. Some of them are so devised as to determine certain conditions such as humidity by the contraction of a hair. Oddly enough, it must be a blonde hair. Brunette hair will not serve the purpose. When the need arose recently for blonde hair, Uncle Sam advertised for it. There was a deluge of telephone calls from blondes to the War Department offering their silvery, silken tresses for defense. But shucks! It requires hair at least 22 inches long and most of the patriotic blondes had bobbed hair. Such are the worries of defense.

What C. C. C. Taught Me

EXTENSION OF REMARKS

OF

HON. FRANCIS CASE

OF SOUTH DAKOTA

IN THE HOUSE OF REPRESENTATIVES

Thursday, July 17, 1941

ARTICLE BY JAMES W. DANNER

Mr. CASE of South Dakota. Mr. Speaker, under permission previously given by the House, I offer for the RECORD a very interesting article by James W. Danner, entitled "What C. C. C. Taught Me," published in the July number of the Rotarian magazine. The Rotarian, I might say parenthetically, is edited by a distinguished and beloved brother of mine, Leland D. Case. The article follows:

[From the Rotarian of July 1941]

WHAT C. C. C. TAUGHT ME

(By James W. Danner)

I joined the C. C. C.[1] a year after leaving high school because I was broke, out of a job, and only partly recovered from a nervous break-down. The C. C. C., I hoped, would provide what the doctor had prescribed—freedom from worry, regular hours, an outdoor life. It offered not only a fighting chance for health, but it also paid $30 a month, $25 of which would go to the support of my sister and widowed mother.

Narrowly I passed the physical examination, and Company 595, of Euclid, Ohio, had another scrawny recruit.

There was more than a trace of similarity between an army and a C. C. C. camp: Trim brown barracks set in a quadrangle; husky, jostling, bronzed-faced boys in dungarees and khaki; Hooks, the supply sergeant, grinning as he handed me pants big enough to wrap twice around. "Got only two sizes," he chuckled, "too big and too small, but you'll grow into 'em."

Staggering under a mountain of bedding and other duffle, I was led into Furper's dugout, my new home, a long, cheerful frame building with cots strung in a double row the length of the barracks. Time to fix my bed and then a whistle blew for lunch.

Aluminum mess kits and cups in hand, we filed into the mess hall, and heaps of steaming food were shoveled on as we passed the counter. I scarcely touched mine as I watched the boys stow the grub away. I had never seen fellows eat like this, seconds, thirds, fourths.

Filing out of the hall, we washed our mess kits in cans of boiling water. Scratched deep in the bottom of my kit was the inscription: "Beans—Chateau-Thierry, 1918."

At 12:30 the whistle blew again, and the men lined up for work. I was assigned to the wall-building crew, and a truck carried us out to the work detail, a wild ravine in the State park. Toughest crew in camp, the wall-building gang, I discovered, and I was the scrawniest recruit of the entire outfit. Yet every rookie must be initiated—and promptly. Back in the barracks the second night I climbed into bed hastily. But I didn't stop there. I lit on the floor with a thud. The "cruds" had removed the springs.

The first weeks on work detail remain to me still a black void of aching muscles and the sheer misery of exhaustion. The foreman beckoned, "Guess we'll set you to strumming an Irish banjo." There was a glint of humor in his eyes. I had no idea what an "Irish banjo" was, but it sounded easy. They handed me a shovel! A roar of laughter went up from the crew gathered around to watch—my first lesson in the Three-C "punk's" motto: "We can take it."

Many times during the next few weeks I had cause to think of that motto. Nights I was too tired to eat, and sometimes even to sleep. I could barely drag myself the 100 yards from work truck to bed. But even then there was little peace. Then, suddenly, the first bitterness of toil had lessened, and I began to notice the beauty of the forest, around, behind, above us; towering maples, oaks, and hemlocks, ghost-gray beeches. I began to see what it was that we were building, a great wall. Forty feet high from foundation it would be, and 200 feet long.

---

[1] The Civilian Conservation Corps, 8 years old last April, has 1,481 camps, has a total enrollment of about 275,000 boys and men, has graduated 2,500,000 with "a scholarship in work experience." It has built 45,000 bridges, 6,000,000 erosion check dams, planted 2,000,000,000 trees—and that is only a beginning of its record. It has cost $2,800,000,000 to date. It serves youths aged 17 to 23, though 10 percent of its enrollment may be war veterans.

Each stone must be laid with care if the wall were to hold the hill back and stand secure against freshets. When it was finished, a trail would be built atop the wall, and this wilderness would be opened for soul-thirsty city dwellers to drink in deep with their eyes. I felt for the first time since I had been plunged into the depression in 1933 a stirring of pride that I, humbly, was helping build something worth while. I began to catch the enthusiasm I'd sensed in the other boys.

But wall building was only one phase of our work. I learned to love the thwack of an ax biting deep, the fresh pungency of hemlock chips flying; learned to thrill to the cry of "timber" as a great tree crashed to the ground. I learned the rhythm of swinging a sledge and a pick, knew the salt taste of sweat on my brow.

However, not all the work was labor. Boys with aptitude and interest would be selected to learn such skills as carpentry, tree trimming, truck driving, auto mechanics, cooking, or office work. Many boys had already secured jobs outside on the basis of this experience.

But back in the barracks, evenings, life was pleasant and fascinating. On my left perhaps the Little Mope would be limbering up his mouth organ with She'll Be comin' 'Round the Mountain. Caught by the rhythm, Jughaid would stamp his feet; a guitar and a banjo would join in; "Rubinoff" would saw on his fiddle. Next a broomstick would pound on the floor, and then Stahoo would get out his washboard, and with thimbles on his fingers would whack out wicked rhythm. The music was irresistible; soon 30 or 40 boys would be gathered about the players, whistling and singing the whole collection of hillbilly songs.

Tiring of this I could watch Paul Queer and Kid Colossus wrestling roughhouse style, tumbling over bunks, barracks bags, and boxes.

Or I could observe Michelangelo, on the bunk to my right, penciling some promising woodland landscape. He was enrolled in an art course that met every Tuesday night in the recreation hall. He hoped to land a job in a commercial-art studio. Half the men in camp, I learned, were taking classes in such subjects as aeronautics, public speaking, typing, and shorthand.

Not that they were a bunch of bookworms—far from it. We had a topnotch baseball nine and also a bone-breaking football team, and usually 2 nights a week there would be boxing bouts in the recreation hall. They even conducted dancing classes for us and managed a shindig every second week, a full and absorbing program—provided you weren't a rookie. Most of the time I was too busy being razzed or initiated or made the butt of a joke. Fifteen hours a day of it.

Not an easy task at best being a new recruit, but it was made worse for me because of a painful feeling of physical inferiority. They were such a husky lot of bruisers. I hadn't half the strength of the weakest "punk." But I determined then that I would show them yet. Health and strength; that was my one aim.

I began a series of heroic exercises, publicly, sucker that I was. This was the opportunity the fellows had been waiting for, it seemed. Like hyenas they howled gleefully and gathered around to watch. "Step right up, ladeez and gentlemen," bawled "Paul Queer." "See the seventh wonder of the world, the 97-pound weakling who became the world's most perfectly developed man."

That's how I was christened the "97-pound weakling," the name that was to be dinned into my ears every waking moment of the day for months. And from that time on, at least 100 times a day someone would insist on feeling my "magnificent muscle" which was somewhat the size and consistency of a disrobed oyster. After a week of this, I sneaked out of the barracks after dark to take my exercises. Half a mile from camp, in a hollow log, I cached a collection of old iron weights. Three nights a week, through rain or snow, I stuck to my exercises. Razz me! I would show them yet.

But there was one bright spot in being a rookie—you didn't stay one forever. Three months, and a new enrollment of recruits came in. I was now a "vet." Sweet recompense after an eternity of hazing.

It was a sorry-looking collection of rookies, lifeless, thin, rat-faced products of pool halls and street-corner gangs from the big steel towns and worked-out mining-town slums. Each new group was the same at first. Contrasted with the "vets," they looked almost like an entirely different race of men. Yet almost magically their chests deepened, shoulders broadened and became erect, and the pale listlessness gave place to vital rugged vigor. Most men gained from 10 to 25 pounds within 6 months; some even as much as 40 pounds in a year—not hard to understand when you saw them at chow time. The food was good and there was plenty of it, steaming hot, the "sort of stuff that sticks to your ribs." No wonder we went back for more.

The change in the rookies was as much in character as in physique. Here there was a place for them. They had a job to do now. It taught them cooperation, responsibility. And living together taught them generosity almost to a fault, to share and share alike.

Few "punks" had a complete outfit of civilian clothes, but if a fellow had a heavy date, he would make the rounds of the camp, borrowing a natty gray drape-model suit here, tan polo coat there, then a "knobby" fedora and a flashy yellow tie—all the trimmings. It was like having 200 brothers whose clothes you might borrow any time for the asking.

Some brilliant camp financier even partly solved the money problem by the phenomenal discovery that by making the rounds of the barracks collecting "odd" pennies, a dollar or two could be scraped together. Many an impoverished "furper" was thus aided on the road to romance.

Appearance makes the man. But no less a part in the rebuilding of our morale grew from the public's dependence upon us. Brush fire or timber blaze, they called the C. C. C. In a blinding rain one night 30 of us piled out of bed and swarmed up the valley to rescue two girls whose car had slipped halfway over a cliff. No tow truck needed. We picked the car up and carried it back to the road. C. C. C. boys had proved their resourcefulness. "Lucky" even salvaged two phone numbers!

By this time the nip of frost was in the air. Wild geese wee-ing south preclaimed Winter not far off. Soon the first big snow and the roads closed to trucks. A three-mile hike to work in the mornings, the heady exhiliration of clear forest air, singing, shouting, marching along, diving, or getting shoved into snowdrifts, snowball fights. Once we surprised three deer in a clump of hemlocks.

Work, and the frozen earth flying like stone chips at the impact of pickax. Hard labor? We made play of it. Turnabout at warming aching hands at a blazing log fire. Nights hovered around full-bellied red-hot iron stoves, "bull" sessions, feats of strength. Mornings, up like a shot at the first whistle, slipping into trousers and shoes white with frost, then a dash across the quadrangle for a breakfast of flapjacks, bacon, and eggs, washed down by scalding coffee.

Slowly the wall grew, and slowly strength and health imperceptibly flowed back into my body. Six months had passed; I had gained 25 pounds, and I had already exchanged my first G. I. for a bigger size of clothes. But so far as my buddies were concerned, I still hadn't outgrown the ignominous title of the "97-pound weakling."

The wall was nearing completion. Only the coping stones to lay. Two punks were struggling to overturn one of the foot-thick slabs. I turned to give them a hand, but just then they stepped away leaving me with the entire weight. I strained—lift or have my foot crushed—heave. Miraculously the rock flopped over. The two punks stood openmouthed and so did I. From then on I was called Bruiser.

Three more months and I was promoted to the job of assistant leader—$6 more a month and new responsibilities, a crew of 15 to 60 men to handle. New problems to solve, resentment of older enrollees to overcome. Especially in the case of Monk, the bully of our crew, a sort of ex-officio straw boss by right of sucker-punch knockouts of rookies. From the start he had challenged my promotion with half-aside threats of "knocking my teeth down my throat." The fellows were beginning to talk about it, and when the crew started having doubts about a rated man's guts, you just didn't stay boss much longer. Monk had 30 pounds' weight advantage and 4 inches in height. If I lost, I might as well turn in my stripes.

The issue came a few days later in chow line. The "Old Man" had just ordered crowding ahead stopped, and he had stationed me to enforce the order. No sooner had he gone than "Monk" elbowed his way up to the front.

"Make any report of this and I'll smash your face in," he snarled.

Fight—or don't show my face in camp again. It was now or never! I stepped out of line, fists clenched. Another second, then that hamlike fist would connect and I would be struggling up from the ground. But, oddly, nothing happened. The bully's face had blanched and his loose lips had a queasy look. He was a bluff. His colors were bright canary-yellow and a yard wide.

At last spring came, first the grinding and cracking of the ice and the roaring as it went down the creek, wild geese winging north again, squirrels gnawing at maple branches to drink the sugary sap, the redolent smell of skunk cabbage, carpets of hepaticas and spring beauty. Then the bursting of buds.

Mud, working ankle deep in it, stripped to the waist. The good, warm feel of sun on the skin. Trees to transplant and trails to build.

Summer came on with a rush. Bronzed bodies sweating in the bright rays, swims in the river, the good coolness after toil. In July, "One Punch" and I were selected to go to Fort Knox, Ky., for a lifesaving course. A week's vacation training and back we came to serve as camp lifeguards. None of our buddies would drown if we could help it.

We turned the pages of the calendar, and another summer was approaching; I was well and strong, and I must leave. Waving regretfully "So long" to my buddies, I turned my back on the camp that had given me back * * * life. C. C. C. experience had gained me a lifeguard job at a beach for the summer, and then I'd gamble my newfound health against a college education.

I am now a graduate student at a large State university, and I feel that I learned more of value in a year and a half in the C. C. C. than I have in an equal period of college. I had enlisted a half-sick, discouraged kid, and I left a man, confident, rugged in health and strength.

If I ever have a son, I should like him to spend a year in the Civilian Conservation Corps. I should want him to enter it to learn how to live, to build rugged health, to get seasoning and assurance, before he enters the business world or college life.

But will the C. C. C. last that long? I do not pretend to know—nor, perhaps, does anyone else. Depending, as it does, upon annual congressional appropriation, the corps has no guaranty of long life. What effect the huge Army training plan will have on the

C. C. C. is still another question. Much as it has been discussed in the press, the answer to it also appears uncertain.

But of this I am sure: Anything that lifts a boy out of the dumps of youthful despair and sets him up rugged in health, trained of hand, and charged with a zeal to count—as C. C. C. does—won't suddenly dry up and blow away, leaving no trace. Its roots are too deep in democracy.

GLOSSARY OF C. C. C. SLANG

(NOTE.—Much of C. C. C. slang has been adopted from the Army; a large portion, however, is due to C. C. C. inventiveness. While differing from camp to camp somewhat, the slang of the various camps is similar in flavor. (THE AUTHOR).)

Bleached worms: Spaghetti or macaroni.
Chow: A meal.
C. O.: Commanding officer of camp.
C. Q.: Charge of quarters; fellow posted to watch camp headquarters.
Crud: Slovenly, dirty fellow.
Crumb: Same as above.
Dishwater: Coffee.
Dog-robber: Fellow who tidies up officer's living quarters.
Double scrub: Mythical malady supposedly attacking cruds and rookies.
Fisheyes: Tapioca pudding.
Furper: A sheik or ladies' man.
To furp (something) up: To search for and procure (as firewood).
To go furping: To go out on a date.
Goldbricker: A loafer.
Go-to-hell drawers: Knee-length underwear shorts of 1918 vintage.
G. I.: Government-issued equipment.
John L's: Trunks of long winter underwear.
Kitchen furp: Cook's helper.
K. P.: Same as above.
Mess: A meal.
Monkey jacket: Summer khaki uniform coat.
O. D.: Olive drab; khaki.
Punk: Any C. C. C. boy, excepting "rated" leaders.
Rat: A talebearer.
Rated man: Enrollee in official leadership position.
Rookie: A recruit.
Skag: A homely girl.
Trail furper: Nonexistent object for which rookies are dispatched on wild-goose chases.
The old man: The company commander.

The Actual Facts Concerning the Part Played by Silver in Our National Defense

EXTENSION OF REMARKS

OF

HON. COMPTON I. WHITE

OF IDAHO

IN THE HOUSE OF REPRESENTATIVES

Wednesday, July 16, 1941

ARTICLES FROM THE NEW YORK TIMES

Mr. WHITE. Mr. Speaker, the operation of our mining industry is so vital to our national defense and the production of strategic metals is such a controlling factor in the manufacture of war munitions that every energy of our Government is being directed in assisting the mining industry to meet the heavy demands that are being placed upon it.

In this tense situation it is disheartening to find that the great and influential New York Times has accepted and given credence to a story by a thoughtless and uninformed writer as to the facts and actual situation concerning the effect of the administration's silver-purchase program on the mining industry. For the information of my colleagues there is inserted in the RECORD the article that appeared on the front page of the July 13 issue of the New York Times and my reply thereto printed in the July 15 issue of this paper, as follows:

[From the New York Times of July 13, 1941]

SILVER BUYING LAW HANDICAPS DEFENSE, SAY O. P. M. EXPERTS—ECONOMISTS ATTACK POLICY OF SUBSIDIZING AN INDUSTRY COMPETING WITH ARMAMENT—DIVERTING MEN, MATERIAL—USE OF TREASURY'S HOARD AS SUBSTITUTE FOR OTHER METALS IS URGED BY SCIENTISTS

(By John H. Crider)

WASHINGTON, July 12.—The defense emergency has injected so many new considerations into the silver situation that there appears to be brewing under cover one of the most imposing attacks on the silver-purchase policy since the Treasury, under a 1934 mandate from Congress, began to buy silver from all comers at artificially high prices.

Experts in the Office of Production Management, Government economists, and far-sighted officials of the American silver industry are asking these questions:

1. Why should the Government continue to finance a domestic silver industry which competes with defense industries for labor, materials, and equipment?

2. Why is this not the time to substitute commercial demand for Treasury support as the economic justification for silver production?

3. Is there any way that the Treasury's hoard of about 42,000 tons of silver bullion (nonmonetized) could be introduced into the defense effort as a substitute for copper and other materials of which there is a dire shortage?

EFFORT FOR NEW USES URGED

Lawrence Addicks, of Bel Air, Md., a consulting engineer who played a major part in recent efforts of the domestic silver industry to develop new commercial uses of silver in anticipation of the time when the public will no longer tolerate its support by Government subsidy, was asked today what he thought of the present crisis in strategic material supply in connection with silver.

"Now is really the time to make hay while the sun shines," he replied. "There are many places where silver can be used in industrial processes as substitutes for metals not now obtainable."

Mr. Addicks was the editor of a book, Silver in Industry, published last year, which records results obtained in the last few years as a result of the American Silver Producers Research Project at the National Bureau of Standards. That research project, which involved considerable cost in providing research fellowship between 1934 and 1940 for a group of scientists searching for new industrial uses of silver, is regarded as the best evidence that enlightened silver producers are themselves interested in making silver "stand on its own legs" commercially, and remove it from its historical classification as a precious metal.

Sponsors of this project were the American Metal Co., Ltd., American Smelting & Refining Co., Anaconda Copper Mining Co., Bunker Hill & Sullivan Mining & Concentrating Co., Cerro de Pasco Copper Corporation, Handy & Harman, International Nickel Co., Ltd., of Canada, Newmont Mining Co., Phelps Dodge Corporation, and United States Smelting, Refining & Mining Co.

Quotations from the scientific writers in Mr. Addicks' book will suffice to demonstrate some possibilities of silver in the defense effort:

A. J. Dornblatt: "Magnesium alloys containing about 5 percent of silver, plus a moderate percentage of other elements, are being tried in this country. It appears likely that an important use of silver will result from the application of the ultra-light magnesium alloys in the aviation field."

Lyall Zickrick: "Silver is probably the most widely used precious metal for electrical contacts. It has the lowest electrical resistivity of any metal and is superior to all others as a conductor of heat, two extremely important factors in the making and breaking of electric circuits. * * * Copper is the most commonly used metal for carrying current, and copper contacts are used extensively in heavy-current apparatus. Copper, however, oxidizes rapidly, and the oxide has a very high resistance. * * * Although the superiority of silver contacts over copper contacts cannot be stated in definite figures, it may be safely estimated that silver contacts can usually be expected to give satisfactory service for a longer time than copper."

MOST OF METAL PUT IN HOARD

While industrial uses of silver have expanded considerably in recent years, principally in the electrical, chemical, and metallurgical fields, it is estimated on the basis of temporary figures that only about 10 percent of the silver imported into the United States last year went into industrial uses, the remainder having been stacked in the Treasury's hoards, primarily in the new vaults at West Point, N. Y.

A metallurgical expert in the O. P. M. said today he felt there was no possible justification, economical or moral, for the continued subsidizing of silver production by the Government—he had special reference to silver produced for its own sake rather than as a by-product. It is one of the things, such as building of libraries, not needed in the defense program, which could well be postponed until after the emergency, when all manner of artificial measures may become necessary to take up the slack in productive effort, this expert declared.

WASTEFUL USE DECRIED

He called it wasteful use of the Nation's resources to keep men and materials engaged in silver production when they were needed elsewhere in the defense effort.

The O. P. M. is especially concerned with the increasingly acute shortage of copper and has called a meeting for next Thursday to discuss possible expansion of copper output with the producers of this metal. The O. P. M. estimates that there will be a copper shortage this year of 350,000 tons for military and curtailed civilian purposes, which may be increased if shipping difficulties develop between the United States and Chile, where an extra supply is contracted for.

With an additional 75,000 tons of annual refined copper output expected soon from the new Phelps Dodge facilities at the Morenci ore body, the total supply of copper, including all that could be had from Latin America, is estimated at about 1,755,000 tons per year. With increased brass-mill capacity functioning next year, it is anticipated that the military demand for copper alone will be something like 1,420,000 tons in 1942. This increasingly acute copper shortage gives timely significance to the electrical uses of

silver, as described above by Mr. Zickrick, a research scientist with the General Electric Co., in Schenectady, N. Y.

Even with elimination of the tremendous price differential between copper and silver—copper sells for about 12 cents a pound against 35 cents an ounce for silver—the quantities of silver available are so small, in proportion to the demand for copper, that the whole Treasury silver stock, monetized and nonmonetized, estimated at around 88,800 tons, would hardly constitute a fraction of the plug required to fill the hole.

REPLACEMENT IN SOLDER FAVORED

With the price differential between copper and silver being what it now is, there could be little economic justification for wholesale use of silver as a copper substitute, but monetary experts take the view that if there is still a critical copper shortage after all United States civilian uses of copper have been halted, the price factor would become unimportant in the face of pressing defense needs. There are some who feel that such a situation is not beyond the realm of possibility.

The O. P. M. announced only on Thursday that a committee of the National Academy of Sciences had recommended substitution of silver for tin in solder. The committee recommended that large-scale replacement of tin in solder plus the reduction in tin use already being made by users at the request of O. P. M. would reduce total tin consumption about 25 percent.

It is estimated that 66,000,000 ounces of silver annually should be sufficient for all-out replacement of tin in solder. About 40 to 50 pounds of tin would be replaced by 2½ to 5 pounds of silver, with a resultant raw material cost no greater than for tin.

Under the Treasury's silver-buying policy commercial users of silver in this country must buy foreign silver at the 35-cents-per-ounce price maintained by the Treasury in the New York market, since the price of newly mined domestic silver, fixed by statute at 71.11 cents per ounce, forces all new domestic production into the Treasury board. The Treasury can vary its foreign buying price, but it has stayed at about 35 cents an ounce since 1939, with some slight variations.

Monetary experts saw no reason why Secretary Morgenthau could not sell the approximately 42,000 tons of nonmonetized silver at the purchase price, or as some thought, sell it at any price if such a sale was clearly in the public interest.

ARGUMENT OF SILVER GROUP

The Silver Purchase Act of 1934 was regarded as a sop to western mining interests which the administration wanted to line up for national solidarity in the economic emergency existing at that time. In 1939 the "silver bloc" in Congress was successful in taking the domestic price out of the President's hands and fixing it by statute at 71.11 cents per ounce.

One of the favorite arguments of the silver forces has been that artificial silver prices were justified as a means of keeping miners employed in the Western States. The high prices justified the working of "high cost" mines. But this argument has become fairly shopworn by now, especially in view of the present pressure for labor and materials, and it is clear to most economists that unnecessary silver production and silver purchasing becomes an increasingly dangerous source of credit inflation as the national economy approaches full utilization of resources. It is felt that if an adequate commercial demand could be created for silver at politically feasible prices, this might make possible a basis for legislation taking the Treasury out of the silver market.

The argument is frequently made that a high price of silver makes possible lower prices for copper, zinc, lead, and other metals with which it is combined in nature, but Mr. Addicks writes that "there are relatively few complex deposits which depend solely on the price of silver for their operation," and that, in general, "silver production is much more dependent upon the price of lead, copper, and zinc than vice versa." He estimated that one-third of the silver now produced may be considered as of primary origin, and two-thirds as a byproduct.

[From the New York Times of July 15, 1941]

MARKET FOR SILVER LINKED TO DEFENSE—REPRESENTATIVE WHITE, OF IDAHO, WARNS ON ANY ACTION THAT WOULD CLOSE MINES—PRAISES FEDERAL POLICY—CONTRARY TO VIEW OF SO-CALLED EXPERTS, UNITED STATES PROFITS BY PURCHASES, HE ASSERTS

Any move to cut off the national market for silver at this time would force many copper, zinc, and lead mines in this country to close and further cripple our defense industries, Representative COMPTON R. WHITE, of Idaho, member of the House Committee on Coinage, Weights and Measures, said in a statement issued here yesterday.

Mr. White declared the controlling factors in our national-defense program were the cost of production in mining strategic war metals and the Government's profit in its silver-purchase program. He said there were virtually no "exclusive producing" silver mines, and that in this country or anywhere else silver was a by-product of copper, zinc, and lead mines and the profit received for the by-product went a long way in meeting the cost of the production of strategic metals, copper, lead, and zinc.

WARNS ON CUTTING OFF MARKET

He said that at a time when the Government was arbitrarily holding the price of the strategic metals down and combing the Western Hemisphere for lead and zinc, to cut off the silver market now would surely cripple defense.

"Contrary to repeated allegations of the so-called financial experts, the Government is making big profits on its silver-purchase program," Mr. White said. "Domestic silver is bought at the fixed price of 71.11 cents per ounce and immediately put into circulation as money in the form of silver certificate $1, $5, and $10 bills at $1.29 an ounce up to the cost of the silver. The volume of this silver money in circulation has almost reached $2,000,000,000.

"In addition to the silver money in circulation put out by the Government in paying its running expenses, and eagerly accepted everywhere in handling the Nation's business, there is on hand in the United States Treasury over a billion, three hundred thousand ounces of silver that didn't cost the Government anything, representing the difference between the silver taken in and the silver put out as money under the silver-purchase program, which surely represents a profitable transaction for the Government, and in time of national instability and uncertainty is a great bulwark to our national credit.

"Our silver-holding policy proved a Godsend to the British Empire in the emergency of the last war when England had to find a large supply of silver quickly to save her tottering credit in India.

"It was the forehandedness of Uncle Sam in piling up silver in his vaults that put 200,000,000 ounces of the precious metal in the hands of England to save her credit and commerce in the Orient, and the struggling dominions may again rise up to bless Uncle Sam and his silver-purchase program."

Power

EXTENSION OF REMARKS

OF

HON. J. WILLIAM DITTER

OF PENNSYLVANIA

IN THE HOUSE OF REPRESENTATIVES

Thursday, July 17, 1941

Mr. DITTER. Mr. Speaker—

Concentration of power has been shown to be dangerous in a democracy even though that power may be used beneficially.

These words of Justice Brandeis are significant today as world conditions offer the temptation to the President to assume world leadership.

Once again Mr. Roosevelt has made a sensational move on the complicated and confused international checkerboard. The startling disclosure to the Congress, after it had taken place, of the occupation of Iceland by the armed forces of the United States revived the issue of the assumption of power by the Executive. If the strategic value of such actions, as determined by the President and his Army and Navy advisers, is to be the only necessary warrant for the movement of troops into war zones, then the power of the Congress to declare war becomes a meaningless phrase and its exercise a perfunctory gesture.

A most casual consideration of the incident discloses the possible serious consequences of the step which has been taken. It involves fundamental questions. Its worth depends upon the ultimate purposes of the American people. Whether those purposes should be left solely to the determination of the President is a grave question. That question can be answered in only one way by those whose convictions as to the soundness of constitutional government are deep rooted and whose faith in the processes of self-government has withstood the assault of totalitarian attacks.

The desire of the President to exercise extraordinary authority, despite constitutional limitations, manifested itself from the beginning of his administration. Long before the development of the European crisis, his attitude toward the limitations imposed by the fundamental law of the land on the Executive had been made plain. Brushing aside as inconsequential, established barriers, the President insisted that legislation be enacted which delegated complete control to him over the economic life of the Nation. The effort failed to receive the approval of a single Justice of the Supreme Court. The President left no doubt in the minds of the people that he resented the restraints long recognized as limitations on the possible abuse of power. He chafed under the constructions of the Court, which curtailed the authority that he sought in order to deal with domestic problems. To reconcile

himself to the existence of three coordinated branches of government seemed difficult if not impossible.

Under these circumstances, it is but natural that the larger opportunities afforded by the international situation would be tempting to one whose natural bent disdains custom and tradition. The crusade for the four freedoms "everywhere in the world," hopeless and illusory as it may appear to most practical men, can be a compelling inducement to some idealists to disregard the limitations which have been wisely imposed on the concentration of power.

The warning of Justice Brandeis should be restudied as new temptations threaten.

The Country Editor Speaks

REMARKS
OF
HON. WILLIAM S. HILL
OF COLORADO
IN THE HOUSE OF REPRESENTATIVES

Thursday, July 17, 1941

Mr. HILL of Colorado. Mr. Speaker, all over America the country editor has become an institution. Nowhere else in the wide world do we find weekly papers such as we have in the United States of America. Their editorials speak for the thousands of rural people in this Nation. What our people are thinking in the very heart of our country is clearly expressed by the weekly press throughout the country. These editorials taken from current issues indicate the trend of thought in America today:

[From the Keene Valley Sun, Keenesburg, Colo., June 26, 1941]

(G. C. Lewis, business manager; Mrs. G. C. Lewis, local editor)

Butcher Hitler and old Joe Stalin have a bulldog grip on each other's throat and are slaughtering off women and children at a terrific rate. Any self-respecting bulldog would stick his tail between his legs and slink down an alley before associating with either of these bloodthirsty brutes.

[From the Erie (Colo.) Herald, Friday, July 11, 1941]

(R. W. Hays, publisher and owner)

This problem of United States neutrality is getting thicker and blacker to me. First it was bundles for France, then bundles for Finland and bundles for England, and now its bundles for Russia. Apparently this Russion affair hasn't ruffled Roosevelt and Hull, but for some of the rest of us Americans it is hard to take.

President Roosevelt made a 5-minute speech July 4, suggesting that the American people rekindle the spirit of July 4, 1776, on this Independence Day. It is well that the citizenry didn't take the President at his word while so many British propagandists and members of the royal family are living within the shadows of the White House. Our ancestors in 1776 would have shot any one of them on sight.

Confusion among the superpatriots over accepting Comrade Stalin into the fold of democracy is still rampant. The big shots can forgive the "red" chief for banishing God and the Czar, but when he banished title deeds and mortgages on farm land and property, that was too much. Most Americans would want only one guess for the answer as to how that crimson economic and social attempt at equality will mix with present-day democracy.

A lot is being said and printed today about propagandists, spies, "fifth columnists," or what have you that favors those we are supposed to hate. Closing German consular and propaganda agencies and shipping Germans back to Europe is a step in the right direction, but only a small beginning. Rounding up the British propagandists and nobility and starting them home is the next logical step. Cleaning the United States of all hyphenated Americans is the necessary action to be taken if the United States is to be really free from foreign propaganda.

Compensation for John C. Garand

EXTENSION OF REMARKS
OF
HON. CHARLES R. CLASON
OF MASSACHUSETTS
IN THE HOUSE OF REPRESENTATIVES

Thursday, July 17, 1941

LETTER OF LEONARD T. MANNING, OF NEW YORK CITY, IN SPRINGFIELD (MASS.) DAILY NEWS, WEDNESDAY, JULY 16, 1941

Mr. CLASON. Mr. Speaker, under leave to extend my remarks in the RECORD, I include a letter written by Mr. Leonard T. Manning, of New York City, to the editor of the Springfield Daily News concerning my bill (H. R. 5276) to reward John C. Garand for his invention of the Garand semiautomatic rifle.

The letter is as follows:

[From the Springfield (Mass.) Daily News of July 16, 1941]

A friend of mine in Springfield sent me a clipping taken from your publication of July 10, referring to bill proposed by Congressman CHARLES R. CLASON, whereby the United States Government would pay John C. Garand, the inventor of the semiautomatic rifle bearing his name, the sum of $100,000 for his services to the Government.

I note that General Stewart, commanding officer of the Springfield armory, is in accord and stated the armory would be "appreciative of anything done for Mr. Garand," and that as a paid employee of the armory, Mr. Garand turned over all patents and inventions connected with the rifle to the Government as required of him.

General Stewart further stated that, "If the Government had to buy the patents from some outside source, it would cost a pretty penny."

It appears that the Government is once again very fortunate in having among its employees a man with the knowledge and ability to develop a rifle meeting the requirements and approval of the ordnance department and others concerned.

IDENTICAL REPETITION

This matter is an identical repetition of how the Government obtained the 1903 Springfield rifle, developed by my father, Daniel J. Manning, and John L. Murphy.

Both of these men were civilian employees of the Springfield armory and turned over to the Government the improved 1903 Springfield rifle as required of them. Thus, in this case also, the Government was relieved of any expense of obtaining the invention from outside sources.

The 1903 Springfield rifle was considered the best rifle in the world of its type, and was used by the Army since its inception in 1903, and is still being used.

My father, like Mr. Garand, was a civilian employee of the armory and was employed there for over 40 years.

He was retired in October 1926, after reaching the then age limit of 65, and died in May 1927.

GOT ONLY SMALL PENSION

All he got from the Government for his 40 years of service and giving the Government the improved 1903 Springfield rifle was a small pension from the date of his retirement in October 1926 to the time of his death in May 1927, a mere 8 months, the pension ceasing at the time of his death.

It is apparent that there is a change in ideas in matters of this kind and I wish to go on record as heartily in favor of paying Mr. Garand for the rifle which he turned over to the Government as required on account of his being a Government employee

I believe, Mr. Garand should be paid for two principal reasons; first, he is entitled to be paid, and, secondly, to encourage others in the Government employ to improve and make known their improvements, knowing that if they are adopted that they will be properly compensated.

After my father's retirement from Government service he worked to improve on the 1903 Springfield rifle and at the time of his death had completed the working model embracing numerous improvements.

All support possible should be given Congressman CLASON'S bill to insure its adoption.

I am not writing this letter in behalf of Mr. Garand but am merely expressing my thoughts and facts, being thoroughly familiar with a similar prior case where the inventor got nothing.

Extension of Military Service of Selectives

EXTENSION OF REMARKS
OF
HON. U. S. GUYER
OF KANSAS
IN THE HOUSE OF REPRESENTATIVES

Thursday, July 17, 1941

LETTER FROM A CONSTITUENT

Mr. GUYER of Kansas. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following letter received from a constituent, Mrs. Ernest Browning, of Merriam, Kans.:

MERRIAM, KANS., *July 15, 1941.*

Hon. U. S. GUYER,
Washington, D. C.

DEAR MR. GUYER: We are very much opposed to the idea of keeping the selectives in service for more than the year for which the boys were called to sign up for, and ask that you use your every influence against such a proposal and against sending the boys out of our country for service. We have our only son and only child in training in one of the camps, and hope the Government keeps its word in asking the 1 year

We sent our son through college at great sacrifice that he might be ably equipped in

a life's work, and he had secured permanent employment with chance of advancement in a big concern. The company did as suggested—that the boys be given leave for a year—and no one can expect a firm to hold a position for him indefinitely. He is our only stay in case of an emergency, and we pray that the Government will play fair with him as well as with all other sons who willingly submitted to the proposal of a year's training. Please use your influence to hold to the 1 year's training. I can't believe the emergency warranted it at all.

Thanks for all the good work you have done.

Yours truly,

MRS. ERNEST BROWNING.

Fortification of Western-World Islands

EXTENSION OF REMARKS

OF

HON. SAM HOBBS

OF ALABAMA

IN THE HOUSE OF REPRESENTATIVES

Thursday, July 17, 1941

POEM BY HORACE C. CARLISLE

Mr. HOBBS. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following poem by Mr. Horace C. Carlisle, of Alabama:

FORTIFICATION OF WESTERN-WORLD ISLANDS

The United States of America can't
  Permit occupation of neighboring isles
By Germany's forces; but there she should
  plant
  Her own naval bases, and win heaven's
  smiles,
And make sure the safety from overseas raids,
  And help give these islanders freedom from
  fear,
Till Germany's covetous, vicious hope fades,
  Of making invasions in this hemisphere.

These islanders' sovereignty must stay supreme—
  No transocean dictator must be allowed,
By conquest, to see his iniquitous dream
  Come true, lest America, humbled and
  cowed,
In helpless surrender, to Hitler should kneel,
  And wrap, in her anguish, the Stripes and
  the Stars
Around the great engineer of the New Deal,
  Defender of freedom, denouncer of wars.

The safety of neighboring islands we must
  At once, for our own sakes, securely defend—
In dictators' promises we dare not trust—
  For "mere scraps of paper" they prove in
  the end.
Americans feel that it's wiser, by far,
  To fortify these islands that are so near
Than, later, to fight these mad pirates of war
  When they start invasions in this hemisphere.

The United States, like a big brother, stands
  In readiness, should the occasion arise,
To render assistance to Western-World lands
  Whose freedom is threatened before their
  own eyes.
Protecting the nations of this hemisphere
  Should be of the greatest concern to them
  all—
They must stand together when dangers
  appear—
  United we stand, but divided we fall.
All Western-World islands, of right, ought to
  be,
  However important, or humble, they are,
American-owned, or else sov'reign and free;
  But should be immune to the horrors of
  war—
No Western-World nation, regardless of
  cause,
  Should ever wage war except on its own
  ground—
All Western-World nations should settle, by
  laws,
  All their disagreements, that peace may
  abound.

The United States, in dispatching her troops
  To fortify Iceland, is at the same time
Safeguarding herself from the dictator groups
  Now cursing the world with rebellion and
  crime.
The Western-World nations are praying today,
  As they never prayed, for their dream to
  come true—
They need faith to conquer, the Golden-Rule
  way—
  "Do others as ye would have others do you."

—*Horace C. Carlisle.*

Argentine Eggs

EXTENSION OF REMARKS

OF

HON. CLIFF CLEVENGER

OF OHIO

IN THE HOUSE OF REPRESENTATIVES

Wednesday, July 16, 1941

ARTICLE FROM CHICAGO TRIBUNE

Mr. CLEVENGER. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following article from the Chicago Tribune of yesterday:

[From the Chicago Tribune of July 15, 1941]

PRODUCE FIRM TO BUY EGGS IN ARGENTINA

Because lease-lend purchases of eggs for Britain have raised prices in this country to the highest levels in years, dealers will import large quantities from Argentina, they disclosed yesterday. Up until 1938 Argentina was our best export egg market.

Charles S. Borden, of the Chicago office of the Great Western Distributors, New York produce house, announced that his company would purchase 60,000 dozen Argentine eggs a week starting July 21.

Borden said that his company had contracted for 360,000 dozen—30 rail carloads—and is considering importing eggs from Argentina on a much larger scale if the shipments are consistently good in quality.

UNDERCUT DOMESTIC PRICES

He said the present high prices for eggs had caused Argentine dealers to offer to sell this country large quantities at prices well below those paid domestic producers.

The Argentine eggs are being offered to dealers and retailers by Great Western at 28½ cents a dozen in New York. Eggs of a comparable grade from midwestern farms sold at 28 cents a dozen in New York yesterday.

Borden said that the eggs had been purchased from Argentine dealers who have guaranteed weekly deliveries of the eggs by refrigerated boats. The import duty will amount to about 10 cents a dozen.

EXCEEDS IMPORTS IN 1940

The initial egg purchase by Great Western exceeds total imports of eggs from all countries into the United States last year. In 1940 imports totaled 227,411 dozens having a total value of $42,482. The Department of Agriculture reports most of the eggs came from Canada, the Far East, and some European countries prior to the German invasion.

"In the last year or two Argentina has been selling a few surplus eggs to Great Britain," Borden said. "Britain can't get credit in Argentina. Besides, the United States is supplying eggs to Britain. Hence, since the lease-lend program has pushed prices up so high, Argentina plans to sell her surplus eggs to America."

Resolution of the America First Committee

EXTENSION OF REMARKS

OF

HON. CARL T. CURTIS

OF NEBRASKA

IN THE HOUSE OF REPRESENTATIVES

Thursday, July 17, 1941

RESOLUTION PASSED AT MEETING OF 118 REPRESENTATIVES OF COMMITTEE IN CHICAGO

Mr. CURTIS. Mr. Speaker, under leave to extend my remarks in the RECORD, I include a resolution passed by a meeting of 118 representatives of the America First Committee at Chicago on July 13:

Whereas the Constitution of the United States provides that Congress has the sole power to declare war; and

Whereas the Secretary of the Navy, in public utterances, has advocated that the American Navy intervene in the present war now; and

Whereas such intervention of the American Navy would constitute actual and open war without the consent of Congress; and

Whereas by his solemn oath of office, the Secretary of the Navy has sworn to uphold the Constitution of the United States: Now, therefore, be it

Resolved, That we, the representatives of chapters of the America First Committee from San Diego, Calif., to Boston, Mass., do condemn and repudiate the unauthorized utterances and conduct of the Secretary of the Navy and by reason of his outright advocacy of undeclared war, in defiance of the Constitution, we do declare it to be the sense of this group that the Secretary of the Navy is no longer a fit person to hold his present high office and should be removed from that office.

Book-of-the-Month Club Becomes Propaganda Agency for Union Now

EXTENSION OF REMARKS

OF

HON. PAUL W. SHAFER

OF MICHIGAN

IN THE HOUSE OF REPRESENTATIVES

Thursday, July 17, 1941

Mr. SHAFER of Michigan. Mr. Speaker, the statement I am about to make to

this House is not intended in any sense to be a plea for the restraint of a free press or of free speech, but it seems to me that it is necessary for the Members of the Congress to keep the people of the United States informed, as accurately as they can, as to the propaganda organizations and agencies which are loosing a veritable flood of war propaganda upon this Nation through the medium of books, newspaper articles and editorials, magazine articles and editorials, news releases, motion pictures, radio broadcasts, and platform speeches.

Now, we all know nobody has to wet-nurse the American people or guard them against somebody selling them a gold brick, or the Empire State Building, or the Brooklyn Bridge, if they know the sources of the approaches to them and the motive behind those approaches. It is, however, vastly important at this time that the American people be informed as to the character of the information, or the argument, or the propaganda, which is being loosed upon them, and the motives behind it, and who sponsors it.

I very much regret to say that a new agency seems to have come into the picture as a propaganda unit in this country. I refer to the Book-of-the-Month Club. This organization has always purported to pick out for the American reading public the best books and to furnish those books to the membership of the Book-of-the-Month Club at a reduced rate. I have never understood, and I do not now understand, that it was the intention of the Book-of-the-Month Club to use this agency under the guise of a service to American readers to foist propaganda works upon the country.

It is reported in the Des Moines Register of Wednesday, July 9, 1941, that at the first annual convention of Federal Union, which is a group of "Anglophibians" who apparently desire to see this country become one of the Crown colonies, or mayhap one of the British dominions, that "in the late summer the Book-of-the-Month Club will distribute 200,000 copies of Streit's two books, Union Now, and Union Now With Britain as dividends to its members."

Now, I assume, of course, that if the Book-of-the-Month Club wants to thus make itself a propaganda agency for Union Now with Great Britain, or to make this Nation one of the British colonies, the Book-of-the-Month Club has a right to. If the Book-of-the-Month Club wishes to make itself an agency for propaganda to get this country into a shooting war, I concede its right under our system of free speech and free press to do so. But I deny, here and now, that the Book-of-the-Month Club, or any other organization, shall pose to the American people as a disinterested public-service organization to serve American readers while in fact it is engaged in a surreptitious, undercover propaganda campaign. I think the American people have a right to know, and I think they ought to know, that the Book-of-the-Month Club has become, apparently, according to this and other reports which have reached me, a propaganda agency, and can no longer be regarded as a disinterested service agency for American book lovers. I think the American people ought to be told, and that is my purpose today, that when books are sent out by this Book-of-the-Month Club, books like Clarence Streit's Union Now and Union Now With Britain, that this is propaganda, that it is not disinterested literature; that the Book-of-the-Month Club is serving those who no longer want to uphold and maintain and perpetuate free constitutional government in the United States; that, therefore, the books chosen by the Book-of-the-Month Club must be regarded by their readers with grave suspicion, unless those readers are ready to favor Union Now With Britain and the reduction of the great free United States of America to the status of a British colony or dominion.

If the subscribers to the Book-of-the-Month Club—the membership—want to stand for this, that is a matter, as I say, between the subscribers and the Book-of-the-Month Club officials.

In these remarks, Mr. Speaker, I have done what I set out to do. I have warned the American people of the change in the purpose and the principles of this former service agency for American book lovers, and having thus accomplished my purpose, I have no more to say.

Gold Star Mother

EXTENSION OF REMARKS
OF
HON. U. S. GUYER
OF KANSAS
IN THE HOUSE OF REPRESENTATIVES

Thursday, July 17, 1941

POEM BY NICK KENNY

Mr. GUYER of Kansas. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following poem entitled "Gold Star Mother," by Nick Kenny:

GOLD STAR MOTHER

They took her bright-eyed boy away
To die on fields afar,
And so they took her sky away
And left her with a star.

The patter of his baby feet
With daylight used to start,
His baby shoes are empty now—
As empty as her heart.

And there's his helmet, worn while he
Was fighting for the cause;
Fighting out on foreign soil
A war to end all wars.

Her boy who loved the goldenrod
That flamed on hills of home,
Was killed on some unfriendly shore
Across the bitter foam.

One day a year her grateful land
Bedizens her with praise;
One day a year she tries to smile,
But oh—the other days—.

—*Nick Kenny.*

The Cloakroom

EXTENSION OF REMARKS
OF
HON. WILLIAM P. LAMBERTSON
OF KANSAS
IN THE HOUSE OF REPRESENTATIVES

Thursday, July 17, 1941

Mr. LAMBERTSON. Mr. Speaker, the one indispensable American for the future is the taxpayer.

With the marines in Iceland, Santa Claus will be safe until the next election.

"Protective custody" of Iceland! We are snatching a sorry leaf from Adolf's Norwegian scrapbook.

Franklin Roosevelt's fear of Hitler will cost us $50,000,000,000 in money alone this calendar year.

The Christian Science Monitor, an international daily newspaper, has become a propaganda sheet for Britain.

The world will never know whether or not Hitler would have attacked us if we had minded our own business.

Every step toward war under the guise of defense has been a 15-cent penalty hiked to 49 cents after seeding time.

The National Art Gallery, the gift of Andrew Mellon, does not bear his name by request. There is some modesty in the world.

One of the best influences for peace the past week was Mr. Wedgwood, of England, while visiting here, denouncing WHEELER.

One of the newest evidences for war for us is the appointment of "Wild Bill" Donovan, a fighting fool, as coordinator of propaganda.

Our President has taunted us about being like the ostrich, which sticks his head in the sand, yet he has not the I. F. to ask Congress to declare war.

The Chief wants selectees to stay more than a year. This is logical, for he announced that the law was not for war, but peace, and we want peace for more than a year.

For years Kenyon, Borah, and Norris were my heroes. The first two are dead and the third was 80 last week. Lindbergh and Wheeler are what Norris used to be before he succumbed.

A rich bachelor of Fairview, who always rode alone and carried an arsenal in his car, finally blew up in every way without a trigger having been pulled. He was primarily for defense.

Some years ago it was declared supreme wisdom to beat swords into plowshares; now under an artificially created orgy of fear we are about to convert cooking utensils into bombers. (Fr. Claude, O. S. B., Seneca, Kans.)

Profiteering Practices of the Telephone Monopoly

EXTENSION OF REMARKS
OF

HON. COMPTON I. WHITE
OF IDAHO

IN THE HOUSE OF REPRESENTATIVES

Wednesday, July 16, 1941

Mr. WHITE. Mr. Speaker, I have just received a copy of a petition of Oklahoma-Arkansas Telephone Co. for a rehearing in their case against the Bell Telephone Co., which explains some of the tactics of the telephone monopoly to destroy independent telephone companies throughout the country, many of which were in existence long prior to the advent of the Bell Co. to the field where these independent companies were in operation. It appears that President Nakdimen of this independent company has been waging a determined but hopeless fight for justice and fair play for his company, its stockholders, and its patrons against the unscrupulous methods employed by the telephone octopus—the integrated Bell telephone companies. In reading President Nakdimen's appeal it is easy to understand the effect of the strain to which he has been subjected when he says:

> The loss of my case and the expense I have been out are nothing in comparison to the confusion you have placed in my mind. * * * "The injustice," is a mild expression. * * * Not because of the loss that I have been sustaining for 13 years but the loss to know why it was done. It jarred my mind; * * * it jarred my entire mental construction.

Further he states:

> Here is a line that has been built for forty-odd years, and the line was such that the Bell could not steal it, they could not confiscate or manipulate it like they have with all the other independent telephones. They came during the night on Sunday, destroyed the connection, and admit on the stand the reason they came on Sunday during the night was in order that the law would not get them.

In proceedings instituted with the communication commission, the brief cites from a decision in this case:

> Both parties filed briefs with the examiner. * * * The examiner issued his report recommending that the petition be denied insofar as it requests physical connection. * * * The recommendation was based upon the finding that physical connection between the petitioner (the Oklahoma-Arkansas Telephone Co.) and respondent (the Southwestern Bell Telephone Co.) is not necessary or desirable in the public interest.

The petitioner's brief further states:

> Arkansas has a statute which compels every telephone company to receive and transmit all such messages tendered to said telephone company by other telephone companies under a very heavy penalty (p. 29).

In fact, when the case was before the Interstate Commerce Commission, Examiner Myron Witters found:

> Failure of the Southwestern Bell Telephone Co. to use or connect with the toll lines of the Oklahoma-Arkansas Telephone Co. between Poteau, Okla., and Fort Smith, Ark. * * * while at the same time using and connecting with a toll line owned by the Three States Telephone Co. between Hackett, Ark., and Fort Smith, Ark. * * * found unduly and unreasonably preferential and prejudicial. Removal of preference and prejudice ordered. * * * The refusal of the respondent (Southwestern Bell Telephone Co.) to restore said connection and receive messages in interstate commerce is a violation of respondent's (Southwestern Bell Telephone Co.) obligation and duty under paragraphs 1, 3, 4, and 6 of section 1 of the Interstate Commerce Act.

In fulfilling its responsibility to serve its patrons in putting through interline calls, the injustice of the monopolistic Bell company in dealing with independent companies is demonstrated in the division of tolls, as stated in President Nakdimen's brief:

> If someone in St. Louis puts a call in to Poteau, Okla., the Poteau telephone company, through its operator, has to call the one in Poteau and sometimes is compelled to call them 4 or 5 times before they locate them. Then after the party is located, they connect him with St. Louis. The call may last from 3 minutes to half an hour. The Poteau telephone operator has to watch the call until it is completed. If the parties talk from 3 minutes to half an hour, or longer, the Bell may collect anywhere from $1 to $50 for said call. All the Bell company pays the Poteau exchange for its connection, for its time, and for the use of its exchange, is 4 "measly" pennies (4 cents).

President Nakdimen states further:

> By deciding in favor of the Bell Telephone Co., the commission has caused the Oklahoma-Arkansas Telephone Co. to be robbed of between $250 and $500 per month, and the Bell has been putting it in their pocket when it belonged to the Oklahoma-Arkansas Telephone Co. * * * Now do you think this is a fair division? * * * That is the cause of the Bell getting larger and larger, piling up millions and billions; the poor independent telephone company is starving and striving for existence; * * *
>
> Decisions of this kind caused the Bell Telephone Co. to own 98 percent of the independent telephone lines. How did they secure these favorable decisions? * * * By their crooked manipulations. No one could succeed in monopolizing the telephone all over the country, like the Bell has monopolized, on their honesty and integrity.
>
> To further substantiate my statement about the corruptness of the Bell Telephone Co., I desire to call attention to another one of the manipulations of the Bell. In order to accomplish their purpose, known to themselves, they employed my attorney's son, a boy who just came out of school. The main reason, I suppose, was to get his influence to be carried to his father, who was attorney for the Oklahoma-Arkansas Telephone Co. * * * Before employing my attorney of Oklahoma City to join this fight I asked him particularly if there was any connection between himself and the Bell, and he insinuated that his influence would be such whereby he could accomplish something beneficial in the case. So I employed him. When I employed him the Bell continually wined and dined him in such a way that if he ever was for me and intended to do what he should do, I feel through their manipulations and connection and wining and dining him no doubt changed him considerably, because in the wind-up their reltionship was very friendly.

In these circumstances it is easy to understand and appreciate President Nakdimen's statement:

> The loss of my case and the expense I have been out are nothing in comparison to the confusion you have placed in my mind * * * not because of the loss I have been sustaining for 13 years, but the loss to know why it was done.

Now, Mr. Speaker, in considering the tactics of the Bell Co. to beat down and take over this independent company down in Oklahoma and Arkansas, let us see how they are dealing with the Federal Government right here in Washington—right on the desk and in the office of every Congressman and Senator in the National Capitol. In the first place, the departments, the House, and the Senate maintain their own switchboards and pay their own telephone operators. The Government does not own these telephone switchboards, it rents them. The Government does not own these telephone instruments, it rents them. I am told that for two instruments and one line into a Congressman's or Senator's office, the rental is 50 cents a month. When there are two lines in an office with four instruments, the rent is double. The monthly rental for the switchboard in the House Office Building is $270, but in addition to the rent of the telephone instruments and the switchboards, there is a monthly rental charge for practically all the small telephone accessories all through the offices of the House, Senate, and Capitol—wire loops, extensions, switches, cut-offs, and so forth—little gadgets all itemized and placed on a rental basis to make up a huge total in the monthly statement on which the rental collections are made.

But this charge is only the initial payment to the telephone company. For every call outside the Capitol, Senate and House Office Buildings, put through on these rented switchboards and rented instruments by Government-paid operators, there is a toll charge of 1 cent for Department calls and from 3 cents to 5 cents per call on other Government business, depending on the volume of calls. The fact is, the annual telephone bill of the House and Senate, just the House and Senate offices and the Capitol, without a single long-distance call being included, is above $85,000 per year.

The statement—telephone bill—for the month of May for the Capitol, which includes House and Senate Office Buildings—this does not include a single long-distance call—was: House, $4,576.40; Senate, $3,377.26; and these are the only three Government buildings about which I have had an opportunity to obtain any information concerning the telephone charges. In all the other departments, for which I have no information, the telephones are on a dial system and every Government clerk must take time to hunt the dial number of the offices in or out of his particular building and do his or her bit for the telephone company by putting through his own call, which is limited strictly to Government business. Leave it to the telephone company to see to it that this rule is enforced under the regulations from the standpoint of additional revenue. The Government takes kindly care of the monopoly by installing built-in telephone booths all through the departments for the accommodation of the

coin-in-the-slot telephone instrument for the use of Federal employees in putting through personal calls. The profiteering of this monopoly right under the nose of the Congress certainly should be investigated. I do not know what the Communication Commission is doing, but when I find that I am required to pay 10 cents toll for every call I make at my apartment, with a dollar-a-month charge for the rental of the telephone instrument, and then the telephone company has the nerve to offer to list my name in the telephone directory for $1.50 extra for each 6 months, and on top of this, when I come to make a comparison of their long-distance rates, it is appalling to find that while I can be transported personally with 150 pounds of baggage over any of our standard railway lines in an air-conditioned coach costing upward of $30,000, drawn by a locomotive valued at over $100,000, in charge of an expert crew of the highest-paid railway personnel over a railway line, costing on the average of $80,000 per mile for a fare of 2 cents per mile—and I find that in contrast to this service by the railway companies, I am required to pay approximately 1 cent per mile for a long-distance call of 3 minutes over a single wire, strung on telephone poles. Let us thank God that the telephone companies have not a monopoly on transporting and delivering the United States mail, for if they did, we would be lucky if we got by without a minimum charge of 5 cents on local letters and 25 cents postage to the Pacific coast—and this monopoly would bring in all kinds of tables and cost sheets to justify the charge.

I do not know what the Communications Commission is doing—but the telephone outfit has got any monopoly in the country cheated when it comes to getting away with the money. We are told that 30 percent of their stock is held by the general public. Well! The Dalton boys or Al Capone could have well afforded to make a divy of 30 percent for the right to loot the country.

After all, maybe they are proceeding in the right direction, because when they carry their profiteering far enough the people of this country will wake up and in their exasperation direct Congress to take them over and combine this branch of the communications service with the postal service.

David Lasser

EXTENSION OF REMARKS

OF

HON. JOHN W. FLANNAGAN, JR.

OF VIRGINIA

IN THE HOUSE OF REPRESENTATIVES

Thursday, July 17, 1941

ARTICLE AND EDITORIAL FROM THE WASHINGTON DAILY NEWS

Mr. FLANNAGAN. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following news article and editorial on David Lasser appearing in the Washington Daily News of July 14, 1941:

[From the Washington Daily News of July 14, 1941]

IT WORKED A SECOND TIME—DAVID LASSER'S BRANDING CALLED COMMUNIST TRICK

(By Will Allen)

In a successful effort to oust from the Federal Service anti-Communists who are most effective in blocking Communist infiltration into Government departments, Communists have started false reports to the effect that these very anti-Communists are Communists, it was charged today by Representative VOORHIS (Democrat, California), one of leading liberal Members of the House.

Aroused by recent revelations in the News how David Lasser, 3014 Dent Place NW., a leading figure in the fight on the Communists, was cut off the W. P. A. pay roll by congressional action under the mistaken impression he is a Communist, Mr. VOORHIS, whose acquaintance with Communist tactics stems from his service on the Dies committee, told the News today:

"There can be no doubt that the kind of people that Communists have most to fear—and whom they most bitterly oppose—are effective progressives who are anti-Communist and who know a Communist when they see one.

TWO SUCH CASES

"There can be little doubt that one Communist tactic which has been used more than once is that of starting and fostering false reports to the effect that these very anti-Communist progressives are Communists."

It was pointed out in this connection that twice in recent months Congress, moved to action by such reports, has aimed its gun at Federal employees by forbidding the use of appropriations to pay their salaries, under the impression that it was bringing down Communists.

And each time Congress succeeded in blasting an effective anti-Communist off the Federal pay roll—to the delight of the Communists who found their path freer as a result.

In addition to Mr. Lasser's case, it was recalled that last October Congress used a similar technique to oust Dr. David J. Saposs, 1928 Belmont Road NW., Labor Board chief economist and at that time the most effective anti-Communist there.

HIGH DEFENDERS

In the light of an investigation by the News which showed that Mr. Lasser is not and never has been a Communist and for more than a year has conducted an extremely effective exposé of Communist machinations among unemployed, VOORHIS' statement today was regarded as indicating a growing awareness in Congress that a great injustice has been done an innocent man and a valuable public servant.

Those who have joined Representative VOORHIS recently in a warm defense of Mr. Lasser have been Majority Leader MCCORMACK, Representative FLANNAGAN (Democrat, Virginia) and Representative CASEY (Democrat, Massachusetts).

Their attitudes appear to indicate a growing desire in Congress to undo the injury to Mr. Lasser done by stigmatizing him as an undesirable employee.

Mr. Lasser was born in Baltimore in 1902, educated in Newark schools, and was graduated a civil engineer from Massachusetts Institute of Technology. At the age of 15 years and 10 months he told a recruiting sergeant he was 19 in order to enlist in the A. E. F.

GAS RAVAGES LINGER

He saw action at Chateau Thierry and in the Argonne Forest, where he was gassed and was rescued only after a narrow squeak. The effects of that gas still linger in weakened lungs and bronchial passages.

In 1933 he found himself among the unemployed. It gave him first-hand understanding of what the unemployed were up against. His warm sympathies for the common man led him in an idealistic and earnest desire to alleviate the plight of the jobless.

It has been said frequently that if it were not for Mr. Lasser the Communists would have been able to exercise unhampered control of the Workers Alliance and the unemployed. This is important, because the Communist Party, a negligible quantity until 1930, began to acquire influence after that year by basing itself on the unemployed, who at that time numbered between twelve and fourteen million. In similar manner Hitler built the Nazi Party on the German unemployed.

DIDN'T KNOW TRICKS

In the early years of the Workers Alliance Mr. Lasser, inexperienced in dealing with subtle Communist tactics, did not suspect the gravity of the situation.

"It must be noted," he explained, "that acquisition of control by the Communists was a process of years. Much became apparent only in retrospect."

It was not until the late summer of 1939 that Mr. Lasser became personally convinced of the truth of oft-repeated charges that the Workers Alliance was Communist-controlled and he merely a figurehead.

For a year Mr. Lasser quietly fought a bitter internal war to rescue the Workers Alliance from the Communists. When he found this impossible he took the courageous step of resigning as president of the Workers Alliance in order to carry the fight openly and publicly to the Communists, risking the vituperation and calumny the Communists always reserve for those who can expose their "hidden ball" plays most effectively.

REVEALED "RED" TECHNIQUE

Expose them he did, in a series of New York newspaper articles in which he explained the technique they used in dominating the Workers Alliance and from behind the scenes guided it along the "party line."

The Dies committee reported in January that "the non-Communist element in the Workers Alliance withdrew under the leadership of David Lasser in June of that year (1940) and the Workers Alliance became a shadow of its former self."

But Mr. Lasser did more than negatively break up the Workers Alliance so that from a top of a quarter million membership it has dwindled today to less than 5,000. He formed a new organization of the unemployed—the American Security Union. This time, with some experience under his belt, he saw to it that the American Security Union constitution prohibited membership of Communists, Nazis, and Fascists.

PRAISED BY HUNTER

He had built up the A. S. U. to a membership of 20,000 when the W. P. A., because of his experience in dealing with problems of the unemployed, offered him the job of labor consultant to Acting Administrator Howard Hunter, which he accepted.

Mr. Hunter has testified that Mr. Lasser was doing extremely valuable work up to the day he was automatically cut off the W. P. A. pay roll by an amendment to the appropriation act which specified that "no part of any appropriation in this act shall be used to pay the compensation of David Lasser."

Probably one of the most significant things about Mr. Lasser's dismissal is that the Communists made absolutely no protest or criticism of Congress' action, thereby tipping their hand as to how highly they regarded Mr. Lasser.

VICTIM OF MISUNDERSTANDING

Painstaking investigation of facts in the case leads the News to believe an injury and injustice have been done Mr. David Lasser, who, until June 30, was labor consultant to W P. A Administrator Howard Hunter. Beyond question, Congress honestly believed it was taking action against a Communist in the Federal employ when it forbade the use of the W. P. A. appropriation to pay Mr. Lasser's salary, thereby automatically cutting him off the pay roll.

But also beyond question it appears that Congress succeeded in cutting off the pay roll an effective anti-Communist. Every competent authority gives Mr. Lasser credit for single-handedly breaking up the Communist-dominated Workers Alliance. A man might conceivably be rewarded, rather than punished, for such constructive contribution to society.

We are convinced that the action taken against Mr. Lasser was due to a misunderstanding, which it is not too late to correct. And we are convinced that no man on the hill would willingly allow a misunderstanding to persist when it works a hardship and an injustice on a loyal American citizen.

Congress has the right to take such action as it may find appropriate in any case. That is the very heart and soul of our democracy. Administrative agencies particularly should lead the way in recognition of this tenet by showing respect for the wishes of Congress.

But we also respectfully draw to the attention of Congress the fact that cutting Federal employees off the pay roll by naming them in appropriation bills and forbidding the use of such money to pay their salaries is contrary to sound public policy.

As a technique for removing Communists from the public pay roll, it is obviously more desirable to hold a hearing at which all the facts in the case can be laid before the public and where the accused has an opportunity to make a defense.

For such purposes there is the Civil Service Commission, the Dies committee, the F. B. I., and various Federal agencies.

In the case of Mr. Lasser, such a hearing would have enabled Congress to avoid the misunderstanding and its deplorable results.

We concur with Representative BOREN, of Oklahoma, who, though he voted to remove Mr. Lasser from the W. P. A. pay roll, recognized that the technique used was "not the best method of legislating."

The regrettable fact is that at the time Mr. BOREN cast his vote he had not been informed that for the past 2 years Mr. Lasser has been fighting the Communists at least as energetically and perhaps even more effectively than some Members of the House.

Any reasonably thorough hearing would have produced this fact.

Even more, it would have vindicated Mr. BOREN. For the latter, early in 1939, accused the Workers Alliance of being Communist controlled. A hearing would have developed the fact that Mr. Lasser himself confirmed that charge a year later by resigning as president of the Workers Alliance on the ground that it is Communist controlled. And it would also have developed the fact that thereafter Mr. Lasser did everything within his power to expose the Communists and to rescue the unemployed from their clutches.

With such facts in their possession, we are sure Congress would have acted otherwise.

In times such as these it is important to encourage every democratic foe of the Communists to keep up the valiant fight, and to avoid giving aid and comfort to the Communists by striking down the anti-Communist, anti-Nazi, and anti-Fascist foes of the "red" totalitarians.

Marketing Quotas on Wheat—Feeding of Extra-Quota Wheat Should Be Permitted

EXTENSION OF REMARKS

OF

HON. CLIFFORD R. HOPE

OF KANSAS

IN THE HOUSE OF REPRESENTATIVES

Thursday, July 17, 1941

Mr. HOPE. Mr. Speaker, a great many of the complaints which are coming from wheat farmers with respect to the imposition of marketing quotas and penalties on the sales of extra-quota wheat are based upon the fact that under the law the feeding of wheat on the farm where produced is considered as a sale, and in the case of overquota wheat subject to a penalty. There is always considerable wheat consumed on the farms as feed, the amount depending somewhat upon the scarcity of other feeds and the price as compared with other feeds as well as the price of livestock. There are many farmers who have always raised some wheat for feed. I opposed the provision in the present act which defines the feeding of wheat as a sale, and believe that it was a mistake to so define it.

Regardless, however, of what reasons may have been advanced at the time this amendment was adopted, it seems to me that there should be a reconsideration of the question at this time. For one thing there are at this time no marketing quotas on corn and there will be none on this year's crop. There is no reason why a farmer producing both wheat and corn should be permitted to produce and feed all the corn that he cares to and yet be restricted in the feeding of wheat to his livestock. There is even less reason why his neighbor who has been in the habit of producing wheat and feeding some of it on the farm and who has produced no corn should be prohibited from using his extra wheat for that purpose.

At this time farmers are being told to produce more meat and dairy products as a part of the defense program. The first requisite in this program is an increased feed supply. Farmers have been invited by the Secretary of Agriculture to increase their corn production and urged to grow more livestock feed. A very large part of the penalty wheat is in the hands of farmers who can feed it on the farm advantageously.

Furthermore, there is certainly grave doubt as to whether under existing conditions we can get rid of our present wheat surplus without further very drastic cuts in acreage unless some of it is fed on the farm. At the present price there is little incentive to feed wheat on the farm which can be marketed without penalty. However, there is a great amount of penalty wheat which, if permitted to be fed, would be consumed in that way and would not be pressing on the market now or at any future time.

It will require legislation to make it possible to feed penalty wheat. I believe that the Committee on Agriculture should at this time give consideration to a change in the basic law which will permit this. Furthermore, I believe that the Department of Agriculture should give its support to such a proposal in the interest of working out a fair program. If such a change can be made in time to be effective in the near future it will do away with much of the dissatisfaction which is being manifested at this time in the wheat-producing sections of the country.

American Physicans Should Not Lose to Foreigners

EXTENSION OF REMARKS

OF

HON. PHIL A. BENNETT

OF MISSOURI

IN THE HOUSE OF REPRESENTATIVES

Thursday, July 17, 1941

ARTICLE FROM THE CHICAGO TRIBUNE

Mr. BENNETT. Mr. Speaker, yesterday this august body passed an act to enable Dr. Gustav Weil, Irma Weil, and Marion Weil to enter and remain in the United States as quota immigrants.

I take this opportunity to mention the fact that notwithstanding there are now over 5,000,000 aliens in the United States—15 percent or 750,000 of whom are illiterates—there is a growing stream of professional people pouring into the country to become ultimate competitors with our own professional people.

This situation has become so acute that only last Monday the Chicago Tribune carried an article entitled "Influx of Alien Doctors Alarms United States Physicians." It seems that during 1940 of 2,092 graduates from foreign medical schools, 948 were granted permission to practice medicine or surgery in the United States. With many of our own medical men giving up their practices to enter the service of the Federal Government, it seems that these alien doctors are taking over the business our own doctors have so patriotically and voluntarily relinquished for the period of the present emergency. For the information of those who should be interested, I ask that the article from the Chicago Tribune be printed as a part of these remarks, and I want to say that in the future I shall object to any unanimous-consent requests for the relief of alien doctors until I am convinced they will not come here to compete with our own graduates and practitioners.

The article follows:

[From the Chicago Tribune]

INFLUX OF ALIEN DOCTORS ALARMS UNITED STATES PHYSICIANS—NEW YORK MADE BOTTLENECK IN OVERFILLED PROFESSION

(By William Fulton)

NEW YORK, July 14.—American physicians, especially here in New York, are manifesting growing concern over the transfusion of foreign refugee doctors into the profession in this country. Already several thousand medical emigrés have been admitted to practice.

As the port of entry and a cosmopolitan city, New York has become the bottleneck for refugee doctors. They stick here, where they find friendly asylum but also where the medical profession is probably more overcrowded than anywhere else in the country.

Native American doctors, who are contemplating entering the country's armed forces in the medical service, are apprehensive that their practices may be absorbed by foreigners during their absence. Complaints of fee cutting and other unethical acts by the recent European arrivals have been filed with county medical societies.

YEARLY INCREASE SHOWN

Last year 2,092 persons holding certificates from foreign universities (except Canadian) were examined by licensing boards in the various States, according to the Journal of the American Medical Association. Of this number 1,429 applied for licenses in New York State.

Year by year the number of candidates from foreign institutions for licensure in the United States has increased. This trend is graphically illustrated in a table of figures on such applicants, from the A. M. A. Journal, as follows:

Year	Number examined	Number passed
1930	167	92
1931	158	91
1932	182	96
1933	200	129
1934	285	170
1935	437	303
1936	588	382
1937	920	637
1938	1,164	716
1939	1,691	839
1940	2,092	948
Total	7,884	4,403

A small percentage of those examined each year represents "repeaters" who have failed in previous examinations. Native Americans who go abroad to study and then return to practice in this country also account for a small percentage.

MANY FROM GERMANY

By far the largest number of candidates come from Germany or countries under Nazi rule. Among the 2,092 applicants for 1940 were 1,378 from Germany, and of that number 613 bore credentials from the University of Vienna.

Harry D. Biele, secretary of the National Committee for Resettlement of Foreign Physicians, an offshoot of the National Refugee Service, declared that the refugee doctor stays in New York and on the eastern seaboard, because many States have raised barriers to his practice.

Most liberal in admitting refugee physicians to examination and practice are New York, Connecticut, Massachusetts, and Maryland, where first citizenship papers are virtually the only requirement.

OTHER STATES MORE STRICT

Sixteen States, taking the position they are unable to evaluate foreign credentials because of the war abroad, do not admit holders of such certificates to examination. Nineteen States require full citizenship, which takes 5 years to achieve. Prerequisites in other States include basic science credits, internship in American hospitals, and work in United States approved medical schools.

In Illinois, where Gov. Dwight Green recently vetoed legislation requiring full citizenship for admission to practice, no more applications from foreign candidates have been received since last February 21. Illinois requires internship as a prerequisite. Of the 141 graduates from foreign universities who took examinations in Illinois last year, 19 passed.

Some American doctors are suggesting that the plea of President Roosevelt and the British Red Cross for 1,000 physicians to volunteer for service in England be met by sending refugees over there.

Who Wants the Seaway?

EXTENSION OF REMARKS

OF

HON. JAMES E. VAN ZANDT

OF PENNSYLVANIA

IN THE HOUSE OF REPRESENTATIVES

Thursday, July 17, 1941

ARTICLE FROM MARINE PROGRESS

Mr. VAN ZANDT. Mr. Speaker, under leave to extend my remarks, I include the following article from the July 1941 issue of Marine Progress. Appearing at this time, 1 month after the Rivers and Harbors Committee began hearing testimony on the proposed St. Lawrence project, this article seems to be very timely.

From the poll of replies from letters sent by this magazine to Senators and Representatives in the Congress, it will be noted that the majority of the Members have indicated their opposition to this unwarranted, unnecessary construction.

[From Marine Progress of July 1941]

WHO WANTS THE SEAWAY?—ONE HUNDRED SENATORS AND CONGRESSMEN RESPONDED TO THE PROPELLER CLUB'S RESOLUTIONS, BUT THE WRITERS ARE ALL EITHER OPPOSED OR NONCOMMITTAL ON THE SUBJECT OF THE ST. LAWRENCE SEAWAY PROJECT

No one in Congress, either in the Senate or the House of Representatives, openly favors the construction of the St. Lawrence seaway. That is, if the response received from Members of Congress by the Propeller Club of the United States to its resolution in opposition to the project may be regarded as a cross section of congressional opinion. Whether this response can be so considered, however, remains to be seen.

The Gallup poll, or any of the organizations specializing in determining the consensus of public opinion by sampling a percentage of the whole, comes close to forecasting results by questioning only a very small percentage. Up to the time of writing, approximately 20 percent of the total membership of Congress has written the Propeller Club. This may be considered a large sample—far larger than is used, for example, in prognosticating the result of a Presidential election.

But Congress is different.

An indication of the attitude of Congress is found, however, in the letters written by Senators and Congressmen.

At its annual convention in New Orleans last December, the Propeller Club of the United States devoted serious consideration to a resolution opposing the construction of the proposed seaway. So important was the matter regarded that the convention voted to submit the resolution to the organization's member ports for individual consideration. The result was unanimous opposition to the project.

Pursuant to this action, a copy of the resolution was sent to every Member of the Senate and House, urging support of the Propeller Club's stand.

The response has been most interesting. Thus far, 99 replies have been received. Twenty-six of these letters are from Senators. Of these, 10 are opposed to the St. Lawrence project; 16 are noncommittal. None says that the writer favors the undertaking—not even Senator ALBEN W. BARKLEY, majority leader, who generally is understood to reflect the administration's viewpoint, or Senator CLAUDE PEPPER, of Florida, who is frequently referred to as the President's sounding board.

The Senate score might be tallied as follows:

Opposed: Bennett Champ Clark, Missouri; Styles Bridges, New Hampshire; Warren R. Austin, Vermont; Walter F. George, Georgia; Harry Flood Byrd, Virginia; Robert A. Taft, Ohio; James M. Mead, New York; W. Warren Barbour, New Jersey; Ralph O. Brewster, Maine; James J. Davis, Pennsylvania.

Noncommittal: Alben W. Barkley, Kentucky; Albert B. Chandler, Kentucky; Hiram W. Johnson, California; Sheridan Downey, California; Homer T. Bone, Washington; Mon C. Wallgren, Washington; Burton K. Wheeler, Montana; D. Worth Clark, Idaho; Hugh A. Butler, Nebraska; Claude Pepper, Florida; Elmer Thomas, Oklahoma; Harry S. Truman, Missouri; Hattie W. Caraway, Arkansas; C. Wayland Brooks, Illinois; Josiah W. Bailey, North Carolina; Harold H. Burton, Ohio.

Most of the letters classed as noncommittal are the usual stereotyped acknowledgments giving the assurance that "the matter will have careful attention and consideration." Senator TRUMAN states that when the matter comes before the Senate, "I expect to go into it in detail and try to arrive at a conclusion that will be for the welfare of the country as a whole." Anticipating that the bill will be referred to the Senate Committee on Commerce, of which he is a member, Senator BURTON states: "I have refrained from taking a final position on the issue in advance of our hearings. Apart from the project's own merits, however, it seems to me that the present is a bad time to be spending between $250,000,000 and $500,000,000 on a matter only remotely connected with our defense program."

Seventy-two Members of the House have responded. Of these, 42 are opposed to the seaway agreement, and 30 may be classed as noncommital, even such outstanding supporters of the administration as the Honorable J. J. MANSFIELD, of Texas, chairman of the House Committee on Rivers and Harbors; the Honorable MARY T. NORTON, of New Jersey, chairman of the House Committee on Labor; the Honorable CLARENCE F. LEA, coauthor of the Wheeler-Lea bill, and others.

The tally of letters from House Members follows:

Opposed: John Z. Anderson, California; William E. Hess, Ohio; John W. Gwynne, Iowa; John C. Butler, New York; William M. Colmer, Mississippi; Alfred F. Beiter, New York; Guy L. Moser, Pennsylvania; Ben F. Jensen, Iowa; James Domengeaux, Louisiana;

R. L. Rodgers, Pennsylvania; S. O. Bland, Virginia; George H. Tinkham, Massachusetts; James W. Wadsworth, New York; Chauncey W. Reed, Illinois; Joseph J. O'Brien, New York; LeRoy D. Downs, Connecticut; J. Hardin Peterson, Florida; F. Edward Hébert, Louisiana; Leonard W. Hall, New York; Fred J. Douglas, New York; J. Harry McGregor, Ohio; Gerald W. Landis, Indiana; J. M. Robsion, Kentucky; William T. Byrne, New York; Joe Starnes, Alabama; Hale Boggs, Louisiana; James A. O'Leary, New York; John A. Meyer, Maryland; Harry B. Coffee, Nebraska; Joseph Clark Baldwin, New York; J. William Ditter, Pennsylvania; Charles H. Elston, Ohio; Robert F. Rich, Pennsylvania; Stephen A. Day, Illinois; Leland M. Ford, California; Lewis K. Rockefeller, New York; Paul W. Shafer, Michigan; Ralph A. Gamble, New York; Ivor D. Fenton, Pennsylvania; George Grant, Alabama; William T. Pheiffer, New York; Dewey Short, Missouri.

Noncommittal: Edward J. Hart, New Jersey; Robert Ramspeck, Georgia; Clifford Davis, Tennessee; Martin F. Smith, Washington; Earl C. Michener, Michigan; James J. Heffernan, New York; Hugh Peterson, Georgia; Charles H. Leavy, Washington; J. J. Mansfield, Texas; Thomas H. Cullen, New York; Charles F. McLaughlin, Nebraska: Bob Sikes, Florida; Frank W. Boykin, Alabama; John S. Gibson, Georgia; Charles A. Halleck, Indiana; Clarence F. Lea, California; Frances P. Bolton, Ohio; C. Jasper Bell, Missouri; Evan Howell, Illinois; Emanuel Celler, New York; Oscar Youngdahl, Minnesota; Vincent F. Harrington, Iowa; J. Percy Priest, Tennessee; Arthur D. Healey, Massachusetts; Lucien Maciora, Connecticut; Fred Bradley, Michigan; Mary T. Norton, New Jersey; William B. Barry, New York; Pat Cannon, Florida; Sam Hobbs, Alabama.

The point is that while some 50 Senators and Congressmen have expressed their open opposition to the St. Lawrence seaway project, not one Member of either branch of Congress has advanced a single reason to the Propeller Club why the seaway should be constructed, or why the covering agreement between Canada and the United States should be ratified.

The President is extremely anxious to obtain congressional approval of the agreement; so anxious, in fact, that he has chosen to establish a precedent as to the manner in which a treaty should be ratified. For obvious reasons, he has elected to secure that approval by the adoption of a joint resolution to be voted upon by both Houses of Congress, rather than by the confirmation of a treaty which, under the Constitution, requires a two-thirds affirmative vote by the Senate.

Congress may approve the construction of the St. Lawrence seaway. That remains to be seen.

But its heart isn't in the job.

CONGRESSIONAL COMMENT ON THE ST. LAWRENCE SEAWAY PROJECT

Herewith are excerpts from letters written by Senators and Representatives to the Propeller Club of the United States, setting forth their opposition to the St. Lawrence seaway proposal:

Senator BENNETT CHAMP CLARK, Missouri: "You may be familiar with the fact that I led the successful fight against ratification of the St. Lawrence Treaty a number of years ago. I will continue to use every resource at my command to defeat any proposal as I helped to defeat the old one."

Senator STYLES BRIDGES, New Hampshire: "I quite agree with you that such a project is unnecessary and in no way can be construed as necessary to our national defense."

Senator WALTER F. GEORGE, Georgia: "I voted against the project some years ago. However, I cannot see how it can be urged upon this country at this time as a part of the defense program."

Senator HARRY F. BYRD, Virginia: "I, too, oppose this project, and you may be assured that I shall do my utmost against it as I have in the past."

Senator ROBERT A. TAFT, Ohio: "While this project may have merit, I cannot find that it has any real connection with the defense program. It will involve a very large expense, and divert money and energy from the real task which we have before us today. * * * I shall, therefore, oppose the President's proposal that this project be authorized."

Senator JAMES J. DAVIS, Pennsylvania: "I opposed vigorously the building of this waterway in 1934 when the Senate rejected it on a treaty basis, and I shall continue my efforts against this resurrected and camouflaged proposal under the guise of a revised treaty. * * * The building of the waterway would have a serious effect on railroads and their employees—upon coal industries and the miners. Other industries such as steel and agriculture would also be affected adversely."

Senator JAMES M. MEAD, New York: "I acknowledge receipt of your letter expressing opposition to the proposed St. Lawrence seaway project. As you may know, I have likewise expressed my strong opposition to the proposal."

Senator W. WARREN BARBOUR, New Jersey: "You may be sure of my continued opposition to the consummation of the St. Lawrence seaway project."

Senator RALPH O. BREWSTER, Maine: "I feel very strongly that the burden of proof is on those who would divert so substantial a portion of our resources in this period of crisis to a 4-year project under the guise of serving our defense."

Representative WILLIAM T. PHEIFFER, New York: "Not only would it be unsound economically, and divert funds sorely needed for building an unassailable defense for our country, but it would give us one more vulnerable area to defend in the event of threatened invasion. Also, it would play havoc with many of the basic industries of our country and accentuate the unemployment problem."

Representative GEORGE GRANT, Alabama: "I subscribe to the position taken by your organization that the development of the St. Lawrence seaway project at this time is not justified."

Representative IVOR D. FENTON, Pennsylvania: "I am unalterably opposed to the St. Lawrence project and have already personally protested against this project to President Roosevelt."

Representative RALPH A. GAMBLE, New York: "It is a tremendous undertaking and a very costly one. The President is bringing this forward now under the guise of national defense. We have committed a number of crimes under that heading already. I sincerely hope that we will be able to defeat it but it is awfully difficult to defeat the present administration."

Representative PAUL W. SHAFER, Michigan: "It appears to me that such a project at this time would be of doubtful benefit to our American economy. It would obstruct national defense by diverting men and materials from immediately vital needs and would create in itself a new and vulnerable area requiring vast defense work."

Representative LEWIS K. ROCKEFELLER, New York: "I am in hearty accord with the contents of the resolution and am doing, and shall continue to do, all I can to bring about the defeat of the proposal."

Representative GERALD W. LANDIS, Indiana: "I am pleased to inform you that I shall do all in my power to defeat this legislation when it comes before us for debate and vote. Frankly, the administration's desire to build this project is just another New Deal scheme to spend a lot of hard-earned American taxpayers' money."

Representative F. EDWARD HÉBERT, Louisiana: "I share your views concerning the St. Lawrence seaway project and will do everything I possibly can to defeat this proposed measure when it comes on the floor of the House."

Representative JOSEPH J. O'BRIEN, New York: "I am in thorough accord with your views regarding this proposed legislation, and should the bill come to the floor of the House I shall oppose it very strenuously."

Representative CHAUNCEY W. REED, Illinois: "It is indeed gratifying to us who are opposing the St. Lawrence River project to know that our friends are supporting us."

Representative JAMES W. WADSWORTH, New York: "I agree with you about this project. I have opposed it from the beginning, dating back several years, and shall continue to do so."

Representative JAMES DOMENGEAUX, Louisiana: "I do not feel the construction of the proposed St. Lawrence seaway is at this time economically justified. In fact, I feel that the construction of this project would be detrimental to a major portion of this country rather than helpful, so you may be assured of my cooperation."

Representative BEN F. JENSEN, Iowa: "You may be assured that I shall do all in my power to defeat the St. Lawrence waterway project as proposed in H. R. 4927. I can see no good in this project from a national-defense standpoint and most certainly this project would be bad for we folks in the Middle West."

Representative ALFRED F. BEITER, New York: "I have constantly opposed the seaway proposals, and have gone on record in opposition to the pending agreement. My prolonged studies of the proposition have convinced me that it is an unnecessary and unwarranted expenditure at this time which would create additional financial and economic burdens for the people of both countries."

Representative LELAND M. FORD, California: "I have looked into the provisions of this proposal and it appears to me that it is one which is not necessary at this time and could not be made useful at the present time. Inasmuch as there are so many millions of dollars to be expended for national defense this project could well be dispensed with."

Representative CHARLES H. ELSTON, Ohio: "If the President should be successful in having Congress authorize the St. Lawrence waterway project we can expect a demand that Congress also approve of the Florida ship canal, Passamoquoddy, and many other socialistic experiments which have been rejected in the past."

Representative JOSEPH CLARK BALDWIN, New York: "The St. Lawrence seaway is not a defense measure. It is either an attempt to create an even larger pay roll for political purposes or it is a promise for cheaper electricity which cannot be fulfilled. A power measure either way you look at it."

Representative JOHN A. MEYER, Maryland: "The proposed St. Lawrence seaway and power project has been presented before on its merits and defeated. Its proponents now urge it upon us as a necessity to national defense. I can see no justification for reviving this project as a defense measure."

Representative HALE BOGGS, Louisiana: "I am unalterably opposed to the project and will fight it before the Committee on Rivers and Harbors as well as on the floor of the House."

Representative JOHN M. ROBSION, Kentucky "I have consistently opposed the St. Lawrence seaway project and shall continue to do so."

Representative JOHN C. BUTLER, New York: "I am taking the liberty of inserting this resolution in the CONGRESSIONAL RECORD. I hope this action meets with your approval. I have fought this seaway project for years and shall continue to do so."

Representative WILLIAM E. HESS, Ohio: "I am glad to know of the opposition of your club to this legislation. I am opposed to the

measure and will do everything that I can to defeat it. I cannot approve the tactics of the President in this matter, since he is now attempting to accomplish by indirection what he was unable to do directly."

Keeping Faith With Draftees

EXTENSION OF REMARKS

OF

HON. ROBERT B. CHIPERFIELD

OF ILLINOIS

IN THE HOUSE OF REPRESENTATIVES

Thursday, July 17, 1941

EDITORIAL FROM THE GALESBURG (ILL.) DAILY REGISTER-MAIL

Mr. CHIPERFIELD of Ilinois. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following editorial:

[From the Galesburg (Ill.) Daily Register-Mail of July 15, 1941]

KEEPING FAITH WITH DRAFTEES

Congressional leaders in conference with President Roosevelt and his Chief of Staff, General Marshall, are reported to have informed the President that he is in for a hot battle if he insists upon pressing for legislation which would lift the year's limit service for draftees and guardsmen, and also the restrictions upon the use of such service men outside the United States and its possessions.

In spite of these warnings from Members of the House and Senate, it is said that the administration is determined to press for the legislation because of the allegedly startling information gathered by the Army and other service intelligences of dangers impending for this country. This information, the character of which can only be surmised, as its possessors assert its revelation would jeopardize the public interest, is said to be giving serious concern to the high command of the Army and Navy and causes extreme reluctance to forego their plans to retain the trainees in service.

On the other hand, Members of Congress, many of whom voted for the draft law only because it provided that selectees would be required to give 1 year of active service in the United States Army, feel their faith is pledged and that they are obligated to stand by this assurance to the men.

The ultimate action of Congress would seem to hinge solely on what may be the extent and nature of the perils to the country which require that the solons be asked to lay themselves open to the charge of bad faith and keep the trainees beyond their original term. It would appear that there must be some features of the situation, at least, which might be publicized without prejudice to the general interest and which might acquaint the people with the gravity of the situation.

We are not disposed to accuse either the President or the military chiefs with conjuring up bogey men to frighten the people and the Congress into enabling legislation which they may desire. But it does appear that the men involved and their families and the people of the country are entitled to something more specific than the vague and generalized statements so far permitted to be made.

If the circumstances are such that there is immediate danger of hostilities, it should be borne in mind that, if, and when, the United States becomes involved, it will not be President Roosevelt's private war, nor the military chieftain's private war, but a war in which all will be involved. The people of the United States, by and large, presumably are sufficiently intelligent and trustworthy to share in some degree a knowledge of the facts. Nothing could be more prejudicial to faith in democratic institutions and the unity of purpose required to successfully prosecute a war, than an official assumption that a people supposedly qualified for self government, still are too dumb to be entrusted with the truth about the military situation.

An interesting and timely appraisal of the question of extending the service time of draftees and guardsmen is contained in a recent issue of the Christian Science Monitor which follows:

"Doubtless the Army is dealing with a very urgent situation in the recommendation made by Gen. George C. Marshall, Chief of Staff, that Congress authorize the retention of selective-service trainees, National Guard units, and Reserve officers beyond the year for which they were called into service. Yet the recommendation is a questionable one.

"As to the guard units and Reserve officers the request is not unfair, since the men in these branches of the service have known from their first enrollment that they might be called upon in emergency and for the duration of the emergency.

"However, the selective-service trainee is in a different position. He was chosen out of a large registration, among which there are thousands of others equally eligible. He was given no choice as to whether he should serve. Throughout the discussions of the Draft Act and its early administration there was an implied promise that when the man had completed his year of training he would return to his peacetime occupation subject only to call as a reservist.

"It is important to morale at home and in camp that the Government should scrupulously keep faith with the men whom it has conscripted for service. If those specialists and technicians who are particularly needed in their units can be persuaded to volunteer, that is good. The counter attractions to be considered illustrate anew that the rewards of sheltered jobs at home should not be allowed to outstrip those of service in the armed forces.

"Congress should ponder this question carefully. No objection would be made to notifying draftees called henceforward that they might be held for longer service. But the Senate Naval Affairs Committee has lately refused a request for authority to hold naval enlisted men beyond the term for which they signed. A great number of useful potential selectees are awaiting the places vacated by those who have had their year of training."

Senator Tom Connally

EXTENSION OF REMARKS

OF

HON. LUTHER A. JOHNSON

OF TEXAS

IN THE HOUSE OF REPRESENTATIVES

Thursday, July 17, 1941

ARTICLE FROM PATHFINDER

Mr. LUTHER A. JOHNSON. Mr. Speaker, under leave to extend my remarks, I submit herewith the following article, being a clipping from the Pathfinder, issue of July 12, 1941, concerning Senator TOM CONNALLY, of Texas, of whom the people of his State are justly proud:

[From the Pathfinder of July 12, 1941]

PRESENTING TOM CONNALLY

Right now there is a reshuffling of administration stalwarts in the United States Senate. That august body has lost and is losing some good men; and good men must be chosen to replace them. Men on whom the President and also the Nation leaned, like Pat Harrison, of Mississippi; Sheppard, of Texas; and Byrnes, of South Carolina, are, like Elijah of old, dropping their mantles on other shoulders.

It is one of those times of change in which merit is recognized and demonstrated ability is rewarded; and for that reason the "wise guys" around the Capitol are saying, "Watch Senator CONNALLY, of Texas."

The tall, good-looking, genial, witty, wisecracking Senator from the biggest State in the Union has in 25 years of activity under the dome of the Capitol been steadily emerging from the hundreds, even thousands, who have served in Congress with him in that stretch of time. He has not only demonstrated his ability and energy—that he can be counted on to handle the job—but he has also shown that he can make friends as well as fight. He even makes friends of the very ones he fights. Nobody hates TOM CONNALLY. The way he wears his name indicates the sort of "good scout" he is. It used to be "Thomas Terry," but did not fit that way.

The value and influence of a man in the Senate is not measured by ability alone; character and personality also count for a great deal. Those qualities inspire trust and cooperation on the part of others. By way of proof that people like Senator TOM CONNALLY is the fact that in his reelection to the Senate for his third term in 1940 he received the largest vote ever polled by any individual in the State of Texas. And, characteristically, he does not mention that fact in his biographical sketch in the Congressional Directory.

Some political observers who work around the Capitol have picked Senator CONNALLY for the chairmanship of the powerful Finance Committee, to succeed Harrison. There are three prominent majority leaders ahead of him in the point of seniority, GEORGE, of Georgia, WALSH, of Massachusetts, and BARKLEY, of Kentucky—but they all have their hands very full for the present, and they will not worry about the job with TOM CONNALLY on it.

The Lone Star State Senator has already shown his taste and capacity for financial legislation. He is the author of a complete schedule of income-tax rates in the Revenue Act of 1932; he was the author of an amendment to the 1934 Revenue Act placing an excise tax on foreign animal and vegetable oils and fats; and he is the author of the bill for the devaluation of the dollar which was put in operation in 1934, and still operates. The administration would probably feel easy with TOM CONNALLY ready to take charge of that big $3,500,000,000 defense-tax bill soon to reach the Senate. CONNALLY is the only Senator who is a member of the three powerful Committees of Finance, Judiciary, and Foreign Relations.

Another writer who watches the workers at the United States Capitol predicts that CONNALLY will be picked to succeed BYRNES, of South Carolina, as floor leader—sort of administration-Senate liaison officer—to back up Majority Leader BARKLEY, and take his place when necessary. This writer says: "The big scissor-tongued Texan, who can soften that cutting edge to a persuasive drawl, or roll it in a yarn that has the Senate rollicking,

has triple-threat talents rare in the Senate." Besides, CONNALLY has already been an assistant to Senator (soon to be Justice) BYRNES in this confidential work. Perhaps no other Senator could approach all his colleagues on more friendly terms. And he has been consistently a militant supporter of the President, though not a rubber stamp. He has "voted wrong" a few times.

A glance at the life sketch of TOM CONNALLY reveals that he came up the hard way. He was born on a Texas farm and went to the country public schools. He went on to Baylor University and the University of Texas and came out ready to practice law. He soon showed special ability as a trial lawyer, and as county prosecuting attorney he made a record that is still envied and aimed at by young attorneys in that county. (His only son, Ben, is now an attorney in Houston, Tex.) CONNALLY'S friends believe he would have been one of the greatest lawyers of the State if he had stuck to the profession, but his interest in public affairs and his ability to make friends soon pointed his career to politics. He served two terms in the State legislature, and in 1916 was elected to Congress.

But TOM CONNALLY'S mature life was not all law and politics. His is a fighting patriotism. When the War with Spain came up, he enlisted as a private in the Second Texas Volunteer Infantry, and got as far as Florida. In rank he got to be sergeant major. He had hardly learned his way around in Congress when America got into the World War, and he went into the Army again, this time as captain and adjutant, Twenty-second Infantry Brigade. This time he got as far as Fort Meade. The Senator claims a sort of record of having been in more wars and done less fighting than anybody.

A little sidelight on Senator CONNALLY'S military career illustrates his honesty and conscientiousness. In 1919, when the House was considering a resolution for the payment of salaries to Members for the time they were in the military service, the former Texas captain and adjutant rose and made it very plain that he would not accept any such money. "When I entered the Army," he said, "I was willing to accept the reduced pay provided as compensation in the Army. Practically every soldier who joined the colors received less than he did in civil life, and I want no more consideration than was accorded to others in the service."

When Representative CONNALLY became Senator CONNALLY in 1929, a Pathfinder sketch at the time credited him with being "colorful," and an orator whose speeches were "full of wit and sarcasm," and said that in his specialty of foreign affairs "he never failed to pour the acid of his sarcasm and irony into any sore or sensitive spot the ruling party might reveal." He was credited with courage for running for the Senate, for his predecessor had lost out—like so many others—by doing that very thing.

It was only in the last 2 years that majority leaders discovered Senator CONNALLY'S special aptitude for committee work and off-floor negotiations. He did yeoman service for Chairman Pittman of the Foreign Relations Committee in smoothing out and pushing through the aid-to-Britain policy with repeal of the arms embargo, and in enacting the lease-lend bill. CONNALLY, rated as a conservative, is able to patch up differences between conservative and radical factions of the party. And, in addition, he is always ready to be sent into the arena against any champion of the foe for a knock-down and drag-out fight.

TOM CONNALLY excels, both in making war and making peace, in the United States Senate, and now, at 64 years of age, a new period of increased power and influence is apparently opening up to him.

When not in Washington, the Senator, now a widower, makes his home in Marlin Falls County, Tex.

The Coast Guard Operating Under the Present Unlimited National Emergency

EXTENSION OF REMARKS
OF
HON. FRED BRADLEY
OF MICHIGAN
IN THE HOUSE OF REPRESENTATIVES

Thursday, July 10, 1941

RADIO ADDRESS BY HON. FRED BRADLEY, OF MICHIGAN

Mr. BRADLEY of Michigan. Mr. Speaker, under leave granted to extend my remarks in the RECORD, I include the following address I delivered over Station WSOO, Sault Ste. Marie, Mich., on July 16, 1941:

During the present unlimited national emergency declared by the President in his proclamation of May 28 last, it has become increasingly evident to all of us that our normal peacetime pursuits are going to suffer in various degrees and we will unquestionably experience more and greater inconveniences as time goes on. This is, of course, much more noticeable and more immediately noticeable in the case of families whose men folks are in, or entering into, the armed forces of the Nation.

The one particular instance that I want to discuss with you at length today is the situation with respect to the United States Coast Guard. Judging from numerous letters which have come to my office, it is apparent to me that perhaps some misinformation has gotten out to the general public by way of unfounded rumors which has caused considerable alarm, not only among the masters and crews on Great Lakes vessels, but also on the part of yachtsmen and again on the part of those ashore, who for various reasons have a great deal of interest in the operation of the Coast Guard stations in their vicinity; and so, perhaps, in this broadcast I may be able to clarify the situation somewhat based on accurate information which has been given to me by none other than Admiral Russel R. Waesche, commandant of the Coast Guard, a splendid executive, a courageous officer, and a man in whom I have the utmost confidence when I promise you that he will do the best possible job with the greatest degree of efficiency under extremely trying circumstances.

First of all, may I assure you that it is not contemplated that any Coast Guard station on the Great Lakes will be closed down during the present navigation season. It is true that there have been marked, and in some instances almost drastic, reductions in trained personnel, which have been occasioned entirely by the present war emergency, but these situations are being rectified as rapidly as possible.

Now let me give you some of the background. As you all know, the United States Coast Guard is one of our very oldest armed services, which for many years has operated under direction of the Secretary of the Treasury in peacetime, but which in the event of war is transferred to the Secretary of the Navy. Inasmuch as we are still not officially at war, this service is still operating under the Secretary of the Treasury, but much of its personnel has recently been transferred to active service under direction of the Navy.

Until comparatively recently, our Coast Guard was operating with a force of 9,000 enlisted men. Because of the present emergency demands, the Congress has authorized an increase of approximately 10,000 men. These additional men have been, and are continuing to be, recruited as rapidly as possible, about 1,000 men still being required to fill the new authorized strength. These new recruits are being trained to serve not only as replacements for the trained men who have been taken away but to meet the expanded activities of the service.

In addition to this personnel, it is well to remember that within the past year, under the President's reorganization plan, the Coast Guard assumed jurisdiction over the former United States Lighthouse Service, by reason of which some 5,000 additional men—who then enjoyed civilian status—some 3,400 of which have been and are now being taken into the Coast Guard as enlisted personnel; and the remaining 1,600 will still be retained in a civilian status, but none of these men in either classification will suffer any loss of pay, rank, seniority, or retiring status. But this transfer, of course, has caused a tremendous amount of difficulty in arranging for seniority status, ration allowance, rate of pay equalization, etc. Furthermore, in some instances the inspection of the various lighthouse stations has been transferred to other personnel, although this is not true in all instances. I feel confident that as rapidly as possible any present existing difficulties caused by this transfer of the Lighthouse Service to the Coast Guard will be rectified and smoothed out. In this connection it is interesting to remember that practically all of the executive and supervising personnel in Washington of the former Lighthouse Service are still on the job and still directly responsible for the detail of handling the Lighthouse Service. Furthermore, these are the men who are directly responsible for the question of ironing out these details of reorganization.

Now, just what are some of the emergency demands which have been made on Admiral Waesche and his aides for trained personnel; and what are some of the difficulties encountered in supplying this unusual emergency demand?

I previously told you that at the start we had an enlisted personnel of about 9,000 men, about 2,400 of whom were generally known by us civilians as lifesavers. These are the men who have been manning the stations on the Great Lakes and our other coast lines.

Recently in one stroke Admiral Waesche was ordered to furnish about 2,100 trained seamen and surfmen for manning transports under the jurisdiction of the Navy; some of these vessels only recently being transferred to the Navy from their merchant-marine status. In the past the Navy would have normally manned these transports with their own men, but, as you all know, we are at present rapidly expanding our Navy from our traditional one-ocean Navy into a two-ocean Navy, and this, of course, has created a tremendous strain on the Navy itself for trained personnel. Therefore, they had to fall back onto the Coast Guard for not only the trained surfmen but for men with seagoing ratings as well. Some 700 of this first allotment went to man one vessel alone, the U. S. S. *Wakefield*, formerly the S. S. *Manhattan*. And the other 1,400 are being divided up for manning fully 4 other new transports and also to furnish small-boat crews for 22 other transports. Doubtless some of these transports have been used for the transfer of men to our new outlying bases far at sea, as for instance in the case of Greenland and possibly also Iceland.

Now, in speaking of small-boat crews, let me remind you that the present war has served grim warnings on us in the case of Dunkirk and again in Crete that there may conceivably arise occasions when it becomes necessary to land or to evacuate troops from beaches in an emergency situation. Consequently, our Army in conjunction with the

Navy and the Coast Guard has developed a special type of small boat for this purpose, and hence Admiral Waesche was recently called upon for some 1,400 additional trained surfmen other than those mentioned above to be assigned to man these boats, two at a time, to train Navy personnel in their proper use, and a number are being used to train Army men as well in the proper use of these small boats. As you seamen all know, it is no small task, and calls for experience of high order, to successfully launch, handle, and land these boats in a surf, and I know of no one in our services who should know more about it, or have had more experience, than the Coast Guard, but here again, you see that we have suddenly been called upon to supply over a third of our trained personnel for this emergency program.

Added to all this let me say there have been other additional duties imposed on the Coast Guard by reason of the emergency. For instance, they have been called upon to board and police those merchant vessels of foreign flag which we recently seized in our various harbors, and which had sought a haven of refuge early in this war when we were supposed to be a neutral nation. The Coast Guard is still policing those boats. Again, they have been called upon to perform considerable harbor police work to forestall possible sabotage to ships loading war matériel for shipment to England and elsewhere. In this task they have been able to fall back rather heavily on the Coast Guard Reserve and have in a great many instances made use of small yachts and other boats which have voluntarily gone into the Coast Guard for the duration of the emergency.

There is another arm of the Coast Guard which is very important and the nature of whose work is somewhat romantic. I refer to the Coast Guard Air Service, whose record of achievement for a number of years has been studded with brilliant rescues at sea and often the thrilling transfer of injured seamen to naval hospitals ashore. Here again we find the Coast Guard has been called upon to loan a number of its well-trained pilots to the Navy for use in training young naval pilots in the correct operation of the famous long-range bombers. We may truly expect those boys will receive the best possible training from these Coast Guard pilots.

All of this, however, has created a tremendous strain on the peacetime operating personnel of our life-saving service and has caused considerable difficulty and inconvenience in the domestic life of these men and their families. It is not expected, however, that for the time being any Coast Guard stations on the Great Lakes will be reduced to less than four trained men, providing that station is equipped with one or more surfboats. And as fast as the trained men are taken away, it is hoped to replace these with the new enlisted men, who will be trained on the job.

One of the things which has caused the most difficulty in these transfers—and I am speaking now directly for any Coast Guard men or those in the Lighthouse Service and their families who may be listening in—is the question of subsistence allowance or ration allowance. And in this, I want to quote directly from a letter received early this month from Admiral Waesche. He says:

"As you will remember, the matter of subsistence allowances for surfmen has always been very troublesome which was increased when we took over the Lighthouse Service. At that time we had a different rate for subsistence for men on lightships, men at lighthouses, men at Coast Guard stations, men on large floating units, men on small floating units, men on detached duty, and probably a few more. Some got a cash allowance for food, others were on a general-mess basis, and still others received a ration allowance (the Government purchased the food up to a certain limited amount per man). The one big difficulty we had in straightening out these allowances was the fact that for many years surfmen received $1 a day cash for subsistence, which they looked upon as part of their pay. Many of them ate at home with their families. If a single man was attached to a Coast Guard station with a number of married men, he fared rather badly. Several months ago we adjusted these ration allowances to bring them into accord but again continued to give the surfmen a cash allowance which we reduced to 81 cents per day but at the same time the Congress allowed these men upward of $34.50 a month as an allowance for quarters, the net result being a distinct gain for the surfmen. But we still had with us the embarrassing situation of paying a cash allowance to surfmen, which they regard as a part of their pay. Consequently, when these surfmen were ordered to transports or away from their stations, they lost their cash allowance and received a ration on board ship with the net result that their families were deprived of this extra amount.

"I have given this whole matter constant thought and study over a long period of time and have discussed it with many officers.

"Today I have drawn up a new plan and issued instructions to place it in effect as soon as possible. Without going into the many ramifications involved, the salient points of the plan are these:

"(1) We will change the basic pay of surfmen from $60 to $72 per month. Those surfmen who have more than 16 years of service and who are now getting $72 a month we will boost to $84 per month (there will be about 150 of this latter class).

"(2) We will take away all cash allowances for food and furnish all men in the Service, including surfmen, food in kind. The increase in pay plus the actual furnishing of the food will more than offset the loss of the cash allowance for food, so that after this plan becomes effective all cash that a surfman receives will be pay and he will receive that pay whether he is at a station, on a transport, or elsewhere, and he will also get his actual food whether he is at a station, on a transport, or elsewhere. In this way, his being moved in an emergency as at present will in no way affect the amount of money he has available for the support of his wife and children. The plan further visualizes that all men in the future will have to pass very rigid requirements to be rated a surfman. I feel that when this plan becomes effective (and it should become effective within a month) it will once for all obviate any complaints from surfmen that have any merit. At present I can understand the discontent resulting in moving a surfman from a station to a transport with an apparent reduction in remuneration.

"I have no objection to your using the foregoing in any way you please as I see no difficulty in placing the above plan into effect. I will have to get the Secretary of the Treasury to go along with me in raising the pay of these surfmen, but I feel that he will do so." (End of quote from Admiral Waesche.)

In conclusion, I personally want to remind all of you men in the Coast Guard and Lighthouse that we are in an emergency. You are in our armed forces—America expects and we know you will do your duty. And to those of you others interested in this whole question, may I say this: I want to caution all of you masters and seamen, all of you yachtsmen and small-boat operators, and all of you who normally rely on the Coast Guard, to remember that this country is facing an emergency—a war emergency. The Coast Guard is an armed military force of this Nation, and as such must take its place out of normal peacetime pursuits on the front line of defense of this Nation. You yourselves have a tremendously important responsibility ahead of you, not the least of that responsibility must be your realization that for the present at least the Coast Guard stations on the Great Lakes are, of necessity, operating with a drastically reduced personnel of trained men, therefore, you must be on your guard, you must be a little more careful than usual to see to it that you operate your boats with safety first in mind. Let safety be your watchword.

Sesquicentennial of Vermont and Lyndon Independence Day, Every Day

---

EXTENSION OF REMARKS

OF

HON. CHARLES A. PLUMLEY

OF VERMONT

IN THE HOUSE OF REPRESENTATIVES

Thursday, July 17, 1941

ADDRESS BY HON. CHARLES A. PLUMLEY, OF VERMONT, AT LYNDON, VT., JULY 4, 1941

Mr. PLUMLEY. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following address which I delivered on July 4, at Lyndon, Vt., their sesquicentennial day:

Mr. Chairman, you people of Lyndon honor yourselves in honoring the memories of those early settlers of Lyndon, who 150 years ago today held their first town meeting right here and elected their officers for the year ensuing.

Somebody certainly was patriotically and sentimentally inclined who selected the day and date as the Fourth of July for that first town meeting. You have a right to treasure the tradition.

What does make a nation, the philosophers say, is the sharing of the same great traditions, the cherishing of sacred places, the veneration of the same great men, the same wistful memories, and, above all, the tradition of valiance in the defense of freedom.

It is an honor I genuinely appreciate to have a part in the observance of this sesquicentennial anniversary in Lyndon.

This year we, the people of the State of Vermont, as we observe Independence Day, also celebrate the sesquicentennial anniversary of our admission to the Union. As we celebrate that anniversary and yours, we should not lose sight of the fact that the history of Vermont antedates both events by a good many years.

In fact, as has been suggested, Lake Champlain and the Green Mountains were in existence long before the white man appeared on the scene.

Those not so fortunate as to know our story may wonder why it is that Vermont was not admitted to the Union until 1791, and what the Green Mountain boys were doing between 1776 and earlier, and 1791. The answer is found in the fact that for many of those years Vermont was an independent republic, owing and giving allegiance neither to King George the Third nor to the Continental Congress.

Independence in the Green Mountain area was more than political and far from negative. Independence is the correct word to use in order to describe the status of the government of Vermont and the attitude of her people, who were and still are, as Mr. Van De Water pictures them, a remarkable folk, buoyant, boisterous, free from the Puritan gloom, highly individualistic, and withal

passionate lovers of their hard and lonely land.

Having no assurance from the Continental Congress that Vermont would ever be permitted to exist as a State, in fact being refused admission and even denied supplies by the Continental Congress; exposed to attacks on the northern frontier and from Lake Champlain by the British and their Indian allies, they developed that love of the visible land, the hills and lakes and valleys and mountains, which they had wrested from the wilderness at so great a cost, which made them ready to defend it and their lives and liberties at all hazards in order to assure for themselves the permanency of that independence and the transmission to their posterity of that which they had so laboriously won.

It seems to me that it is also very appropriate that we honor ourselves as Vermonters in recalling the fact that we are today observing the anniversary of the birth of Vermont's great son, that typical Vermonter, Calvin Coolidge. Historians, despite the futile attempts of a jealous, small-minded, and inferior group to whom he paid but little, if any, attention, to belittle his achievements—will write his name high on the scroll of those truly great men who have rendered their country outstanding service as its President. Dogs still bark at the moon.

In these days of centralization of government we are too prone to forget that it is not by pruning away individuality but by cultivating it wisely that human beings become valuable to themselves and to others and that human life becomes rich, diversified, and interesting. Individuality is equivalent to development. This the pages of history abundantly demonstrate.

We Vermonters are called rugged individualists. While we know that is true, we modestly conceal from everybody our appreciation of the fact that the story of the Green Mountain boys parallels even that of the Greeks at Thermopylae in its uniqueness with respect to the intrepidity and the bravery exhibited, in its intense interest to students of government and in its appeal to lovers of liberty. That is the Vermonter in us.

So, on this Independence Day, in sesquicentennial year, I would like first to call your attention to the Declaration of Independence. Do you know that a few years ago I found, to my sorrow, that the Declaration of Independence was not included in the histories and civics and other textbooks used in the schools of Vermont? I hope such a situation has been corrected. It should have been.

The papers of this morning carry an Associated Press dispatch which should make everybody sit up and take notice. This is the way it reads:

"N. E. A. RECOMMENDS PURGE IN TEACHING PROFESSION, BOSTON, JULY 3

"A purging of the American teaching profession of educators found 'inimical to the best interests of our country,' was recommended today by the National Education Association, major teachers' organization in the Nation, with a membership of more than 200,000 men and women, from grade-school instructors to university presidents.

"Voting to set up the framework of a national commission of 60 educators, whose duties would include investigation of 'alleged subversive teaching,' delegates to the N. E. A.'s seventy-ninth convention further implemented their action by adopting a resolution opposing the appointment of any teacher 'who advocates, or who is a member of any organization that advocates, changing the form of government of the United States by other than constitutional means.'"

That is a good job, long deferred. You just cannot laugh it off any longer. It is no joke. The threat is portentous. Under the guise of academic freedom a few teachers right here in Vermont (thank God, only a few) who labor under the delusion that they can improve the fundamentals of our form of government have been inadvisedly teaching your children disrespect for American institutions. I am advised that the attention of school boards has been called to the matter by anxious parents, but the complaints have been either ignored or treated as the product of an overenthusiastic American. I have also been advised that one or two school superintendents have insisted on the teachers' right to "academic freedom," which some have made a license to disseminate communistic, socialistic, and un-American theories, right here in Vermont.

The great majority of teachers and superintendents want to rid their profession of these so-called, but pseudo liberals. I know they feel as I do that any man or woman who is not a 100 percent loyal American has no business on any school board, as a superintendent of schools or as a teacher in our schools. Your children should not be subjected to the insidious influence of these mentally unbalanced people.

It is not even smart to be a Communist. There are those who think it is. Despite what they may try to make you think, let me tell you that if they only knew what the Communist Party stands for they must know it is out to overthrow this Government of ours, and by force and violence, or other unlawful means, if necessary to achieve that end. That is in their declaration of principles. They believe in academic freedom. These Communists are a menace to America. So are all their imitators. The N. E. A. is doing a patriotic service and protecting its own good name.

Academic freedom! How many sins against our form of government have been deliberately committed in thy name! The hotbed of anti-Americanism is located at Columbia University, City College, and in other intellectual circles, and in other groups more insidiously un-American, that are encouraged, coddled, and financially supported as pet charities by misguided people, some of whom are in high places. Our colleges and schools have been insidiously communized by these people and the example they have set.

We are so dumb we are fairly numb in our insensibility to what we have tolerated to be done to us. It is time to speak out about some of these things we see and know. The people have a right to be told, and should be told what is being done to them, and for one, I do not propose later to be held accountable for not having done my best to advise them.

So far as I am personally concerned, and as your Representative, it might as well be understood by "fifth columnists," "parlor pinks," "fellow travelers," "pseudo liberals," and all those "lickspittle," "milksop" Americans who criticize me for being outspoken against them and their kind that I have no question as to what my duty is in the premises.

My position can best be stated once for all, and for all time, in the words of Daniel Webster, which I have the presumption and determination to make my own, when he said:

"I mean to stand upon the Constitution. I need no other platform. I shall know but one country. The ends I aim at shall be my country's, my God's, and truth's. I was born an American; I live an American; I shall die an American; and I intend to perform the duties incumbent upon me in that character to the end of my career. I mean to do this with absolute disregard of personal consequences. Let the consequences be what they will, I am careless. No man can suffer too much, and no man can fall too soon, if he suffer or if he fall in defense of the liberties and Constitution of his country."

The principles, methods, and aims of the Communists and their fellow travelers and sympathizers and supporters are the very antithesis of academic freedom. A group that is organized and acts for the purpose of spreading communism through schools and colleges and in youth groups, carrying on its effort underground and clandestinely, has no place in the American system of education, and no place in America anywhere, nor has any individual so inclined. That's plain talk, but true.

Candor is a bitter pill for such people however high they ride to have to swallow, but millions of Americans agree with me and hold that the greed of this group and some individuals for money; their love of power; their obsession for experimentation; their egocentric monomania for publicity at the people's expense; and other things too numerous to mention, are responsible for the weakening of the moral fiber, the breaking down of morale and morals, the turmoil and the lack of confidence found in the body politic today. It is too bad, but too true, but not too late to correct it.

The light of pitiless publicity should be mercilessly turned on the activities of these very people. They should be exposed. No one should be overimpressed, awed, coerced, or cowed by the position any of these people happen to occupy, or by their delusions of grandeur, and least of all by their fantastic theories—social, economic, and paternalistic.

The "fifth column" has been at work here ever since Hitler made his plan to dominate the world. Right here in Vermont, my friends, there have been, and there are still, a few of those who under the egocentric impulse and the camouflage that they are "liberals" are promulgating un-American ideas and theories clearly destructive of those fundamentals on which this State and the United States were founded.

If they love some other country better than their own and what it affords, then they should go to that country or we should send them there. There is no neutral ground. This country was established as an independent republic. It is high time, if not already too late that we should be up and at those who directly or surreptitiously are undertaking in our schools, churches, and elsewhere to undermine our Government and thereby to deprive you and your children of the priceless privileges it is yours and theirs to enjoy. It is either we or they.

Every red-blooded American ought to join in heart and spirit with the cadets at West Point in their Sunday morning prayer when they say, "Strengthen and increase our admiration for honest dealing and clean thinking, and suffer not our hatred of hypocrisy and pretense ever to diminish. * * * Endue us with courage * * * that knows no fear when truth and right are in jeopardy."

But, as I started to say, the Declaration of Independence of the United States of America reads in part as follows:

"We hold these truths to be self-evident, that all men are created equal, that they are endowed by their Creator with certain inalienable rights, that among these are life, liberty, and the pursuit of happiness. That to secure these rights governments are instituted among men, deriving their just powers from the consent of the governed."

Did you know that the Green Mountain boys, your great-grandfathers, issued their own declaration of independence? Do you know anything about it? Did you ever read it?

The trouble with all of us Vermonters is that while we inherited the characteristics and the temperament and the disposition of our forebears, yet too many of us do not know what it is all about or why.

We are Green Mountain boys? Yes; but if anybody in this one hundred and fiftieth year of our life as a State should pin us

down to answer the question, "Why are you Green Mountain Boys?" all we could say is, "Ethan Allen took Ticonderoga." That is no answer at all; it only lets us lie back on laurels won for us by somebody else.

And, by the way, did you ever read The Green Mountain Boys or The Rangers? Shame on you who never have. You do not know what you have missed.

Did you ever visit any of the places mentioned in either of those historical novels? What do you know about the historical geography of our State? In my opinion—with which not too many are obliged to agree—The Green Mountain Boys and The Rangers and certain portions of the text found in Governor and Council and a lot of other works covering the early history of Vermont ought to be required reading in all the schools of this State.

However, be that as it may, I started to ask you if you were aware that the Green Mountain Boys made their own declaration of independence. Did you know that it reads in part as follows:

"VERMONT'S DECLARATION OF INDEPENDENCE

"In convention of the representatives from the several counties and towns of the New Hampshire Grants, holden at Westminster, January 15, 1777, by adjournment

"Whereas the honorable the Continental Congress did, on the 4th day of July last, declare the United Colonies in America to be free and independent of the crown of Great Britain; which declaration we most cordially acquiesce in; and whereas by the said declaration the arbitrary acts of the crown are null and void in America, consequently the jurisdiction by said crown granted to New York government over the people of the New Hampshire Grants is totally dissolved:

"We, therefore, the inhabitants, on said tract of land, are at present without law or government, and may be truly said to be in a state of nature; consequently a right remains to the people of said Grants to form a government best suited to secure their property, well being, and happiness. We, the delegates from the several counties and towns on said tract of land, bounded as follows: South on the north line of Massachusetts Bay; east on Connecticut River; north on Canada line; west as far as the New Hampshire Grants extends;

"After several adjournments for the purpose of forming ourselves into a distinct separate State, being assembled at Westminster, do make and publish the following declaration, viz:

" 'That we will, at all times hereafter, consider ourselves as a free and independent State, capable of regulating our internal policy, in all and every respect whatsoever—and that the people on said Grants have the sole and exclusive and inherent right of ruling and governing themselves in such manner and form as in their own wisdom they shall think proper, not inconsistent or repugnant to any resolve of the Honorable Continental Congress.

" 'Furthermore, we declare by all the ties which are held sacred among men, that we will firmly stand by and support one another in this our declaration of a State, and in endeavoring as much as in us lies, to suppress all unlawful routs and disturbances whatever. Also we will endeavor to secure to every individual his life, peace, and property against all unlawful invaders of the same.

" 'Lastly we hereby declare, that we are at all times ready, in conjunction with our brethren in the United States of America, to do our full proportion in maintaining and supporting the just war against the tyrannical invasions of the ministerial fleets and armies, as well as any other foreign enemies, sent with express purpose to murder our fellow brethren, and with fire and sword to ravage our defenseless country * * *.' "

Do you know that the constitution which your grandfathers adopted was a copy, almost verbatum et literatum, of the Pennsylvania Constitution of 1776? But that's not all the story. The Pennsylvania Constitution which they copied almost in its entirety can be traced back almost a century to 1682 to the Frame of Government granted by William Penn with the authority of King Charles II. Incidentally, William Penn and Benjamin Franklin were the real authors of the remarkable features in the first Constitution of Vermont, and one Dr. Young of Pennsylvania was the guide, philosopher, and friend of the Green Mountain Boys.

Let me this day call your attention to some of the provisions of that first constitution on which rests what Vermont has been and is today.

First, listen to the initial paragraph of the preamble. It was drafted by Ira Allen and is as much a part of the constitution as is any other, and, so far as I know, has never been rescinded. Here it is:

"Whereas all government ought to be instituted and supported for the security and protection of the community, as such, and to enable the individuals who compose it to enjoy their natural rights and the other blessings which the Author of Existence has bestowed upon man; and whenever those great ends of government are not obtained, the people have a right, by common consent, to change it, and take such measures as to them may appear necessary to promote their safety and happiness.

* * * * *

"Therefore it is absolutely necessary for the welfare and safety of the inhabitants of this State, that it should be, henceforth, a free and independent State."

That is rugged individualism exhibited and exemplified.

Now, having examined the preamble, let's look at the original Vermont Constitution itself for a minute. If time permitted, we could do no better than to read and seriously reflect upon chapter 1 thereof, article by article, for therein contained is the declaration of the rights of the inhabitants of the State of Vermont.

It is significant that the first article reads as follows:

"That all men are born equally free and independent and have certain natural, inherent, and unalienable rights, amongst which are the enjoying and defending of life and liberty; acquiring, possessing, and protecting property, and pursuing and obtaining happiness and safety. Therefore, no male person, born in this country, or brought from over sea, ought to be holden by law, to serve any person, as a servant, slave, or apprentice, after he arrives to the age of 21 years, nor female, in like manner, after she arrives to the age of 18 years, unless they are bound by their own consent, after they arrive at such age, or bound by law, for the payment of debts, damages, fines, costs, or the like."

This was the first emancipation act in America. It was not a glittering generality, for the General Assembly in 1786 passed an act to prohibit the sale and transportation of Negroes, it having been made to appear that sales "of such persons as slaves" were being made "notwithstanding their being liberated by the Constitution."

From time to time I have been asked how our State came to be named Vermont. Without discussing the suggestions that are made in various books, I am satisfied that the facts are that the State was officially named Vermont upon the advice of Dr. Thomas Young, of Pennsylvania. Originally the area was known as New Connecticut. If you will look at page 43 of volume I of Governor and Council, you will find a statement of facts drawn up by Charles Phelps, of Marlboro, to the effect—

"That on or about the 15 day of January 1777, a number of people from sundry parts of said New Hampshire Grants, calling themselves New Staters, or people in favor of a new State, met at Westminster in the aforesaid county of Cumberland and State of New York, and declared said District and the people inhabiting thereon to be a new State by the name of New Connecticut.

"That all those who so met at Westminister aforesaid, and all the people whom they pretended to represent, as well as all those who, by the advice of Dr. Thomas Young, afterward held a convention at Windsor in June, or at any other time during that year, and formed and established a constitution or plan of government for what, by his advice also, they called Vermont—i. e., the people of the Green Mountains—did not amount to one-hundredth part of the inhabitants of New York State."

These statements are corroborated by official records of conventions and by documents. It may be too bad to spoil some of the fairy stories that have been circulated, but if you are interested in facts, you will satisfy yourself by reading the records of those early days that Vermont was so named at the suggestion and on the advice of this Dr. Young, the guide, counselor, and friend of the struggling commonwealth.

Anyone who is conversant with our early history must be impressed by the fact that the men and women who laid the foundations of our State meant exactly what they said and had the faculty to say what they meant—and in no uncertain terms. It is probably true that "Vermont as nearly as any spot upon the earth's crust has been the scene of the most conspicuous action by men in all efforts to create, maintain, and advance a true independence of person and state and upon principles fundamentally included in the term 'self-government'."

In fact the history of Vermont "upon utmost analysis discloses that no people organized as a State have more nearly attained to perfect sovereignty or maintained it under their constitution and political methods. Vermont has been an extraordinary upbuilder of the Nation because of the intrinsic character of the people who compose it."

The question which now confronts you and me is, Will we carry on? Can we carry the load? Our responsibility is tremendous. Are we afraid? Of whom?

These are critical days and troublesome times for those who love liberty. We come from a stock to whom the more abundant life only means one that we can carve out for ourselves without the dictation or interference of a paternalistic government. We may well remember that a typical Vermonter, Calvin Coolidge, once said that: "The America which Washington founded does not mean we shall have everything done for us, but that we shall have every opportunity to do everything for ourselves." That is 100-percent Americanism.

The problems which confront us are too numerous to permit at this time even a cataloging, not to say a discussion of them seriatim. The question is, Where are we and where are we going? Who knows?

Shall we quit? Never.

It is our task to finish the job or to go down with all that has been accomplished blotted out in a complete black-out. What a picture.

We must go forward. We must turn our faces to the future, come what may. There must be no retreat.

There is no such word as retreat in the vocabulary of a Vermonter.

We might as well, each and all of us, invoke the spirit of Tennyson's Ulysses, who said:

"Come my friends,
'Tis not too late to seek a newer world.
Push off, and sitting well in order smite
The sounding furrows: for my purpose holds
To sail beyond the sunset, and the baths
Of all the western stars until I die.
* * * * *
To strive, to seek, to find—and not to yield."

It is strange that Americans do not appreciate the fact that this world revolution now in progress will not stop short of America. It is incapable of stopping short of anywhere until it has conquered the world or been conquered by the world. "Nobody can stay out of a world revolution. It can be resisted or accepted." It cannot be ignored.

"There will be no second chance for us unless the revolution is beaten" has been well said, for it is true.

So "put the Vermonters ahead once more and close up the column.'

It is no idle boast for us Vermonters to say as Americans that what we purpose that we perform. So today, imbued, enthused, and encouraged by the independence that is ours, and the thought of all that those who preceded us have made possible for us, let us go forward with determination to preserve, protect, and defend all that is ours and to transmit to posterity our priceless privileges on a shield unsullied and without a stain.

"To what new fates, my country, far
And unforeseen of foe or friend,
Beneath what unexpected star
Compelled to what unchosen end?
"Across the sea that knows no beach
The Admiral of Nations guides
Thy blind obedient keels to reach
The harbor where thy future rides!
* * * * *
"I do not know beneath what sky
Nor on what seas shall be thy fate.
I only know it shall be high;
I only know it shall be great."

Public Sentiment Against Participation in European War

EXTENSION OF REMARKS
OF
HON. FRANK B. KEEFE
OF WISCONSIN
IN THE HOUSE OF REPRESENTATIVES

Thursday, July 17, 1941

LETTER FROM WILLIAM BRIGHAM, OF FOND DU LAC, WIS.

Mr. KEEFE. Mr. Speaker, Members of Congress receive many letters from constituents exercising their constitutional right of petition.

I am pleased to incorporate as part of these remarks a letter recently received from Mr. William Brigham, of Fond du Lac, Wis., that voices the sentiment of many people in America and is thoughtful enough to claim the attention of the Congress.

Mr. Brigham's letter follows:

JULY 10, 1941.

MY DEAR MR. KEEFE: In what I am about to say I am giving the views as stressed by the public. However, I do wish to commend you on your stand on the floor and in your articles in opposition to our entry into this inferno of destruction. And now permit me to give the views as expressed by the great majority.

As the warmongers increase their activities to our nearer involvement, the intensity increases against it, both in numbers and bitter opposition. And one other regret is that certain Members of Congress are being softened up and inveigled into the ranks of the warmongers. And, again, we hear the sentiment that Congress is not acting in accordance with our Constitution and for the welfare of the American people. And here are a few of the arguments in defense of their opposition to the billions expended and hurled haphazardly and without any sense of remuneration, but from a realistic sense aiding in our own destruction.

We hear the multitudes opposing the wail of the warmongers: "Help England. Save democracy." The public bitterly assails this unorthodox statement and justly contends that England has at no time operated in any sense of democracy, but has forced its hundreds of millions to exist under the bruising heel of despotism and that England is our traditional enemy, as are all European nations.

Due to these facts, the great majority opposes any union, affiliation, or involvement with any or all European nations other than in a commercial way. Congress should stop and consider its liabilities and duties in behalf of the American people, in that we have 49,000,000 receiving aid and parity, and one-third of our people ill-fed, ill-housed, and ill-clothed, and an estimated one-half of these in destitute circumstances, 10,000,000 over 60, and a great majority in dire want. In our small State of Wisconsin we have 51,000 over 65, and one-half of them receiving $10 to $15 per month, which barely supplies sleeping quarters, and to maintain life and existence they are forced to beg, pillage, and steal.

We frequently see in the Appendix and the press by Members of Congress and bigwigs that the public are gullible in respect to the trend of activities, etc. The sentiment I hear expressed is that although Congress and the administration have the bull by the horns, they are not fooling the public and they are well aware they are being sold down the river. We hear much dissent against fondling and aiding Russia, as anyone with little intellect knows that Russia has created more subterfuge, communism, etc., than any European nation and that Stalin is the greatest human butcher of all.

In my various contacts of recent date regarding Iceland, the headlines, orders given to shoot, etc., the sentiment is very tense and bitterly opposed by the great majority, and this is due to the fact that the public realizes these measures and their increased advancement are instigated and operated by an element of totalitarian and monarch-minded warmongers. The public resents the fact that Congress is standing idly by and permitting these un-American activities in defiance to our Constitution and the welfare and the wishes of the American people. We often hear the well-read and intelligent public bitterly denounce the remarks and open activities of Knox, Stimson, Willkie, and others of their ilk.

And let me say that 90 percent of the people give open approval that Congress should arise in defense of their rights and the powers vested in them and disrupt and destroy all warmongering activities and castigate the instigators and operators.

One other cry of the war creators is, "Feed starving Europe." How often do we hear of anything pertaining to aid for the millions of American patriots who gave their all and were instrumental in the creation of this great America and due to fate and circumstances are penniless, ill-fed, ill-housed, ill-clothed, and millions half famished, unkempt, and existing in sordid conditions.

If Congress and the administration have any notion that the public approves of these incredulous activities, they are very much in error. These activities are utterly condemned here, there, and everywhere by the American people.

I could continue on, but I have already written to a great extent. I have endeavored to give the sentiment as expressed here and there, and in finale let me say that the public is assuming a deep, smoldering resentment of disapproval and grim determination. While they bitterly regret it and still have hopes, they are in fear that the totalitarian and war-minded element will lure us into this inferno of destruction and despotism And so today we hear the cry: "God forbid it. It must not happen here."

In closing I wish to assure you I mean no discredit to any Member in Congress who is a credit to himself and faithful to the confidence and trust placed in him. I realize the bitter resistance and power of opposition against those who battle for the principles of justice and equality. And so, hoping for a clarification of the difficulties before us, I remain,

Sincerely yours,

WM. BRIGHAM,
Fond du Lac, Wis.

Youth Matches the Hour

EXTENSION OF REMARKS
OF
HON. GEORGE W. NORRIS
OF NEBRASKA
IN THE SENATE OF THE UNITED STATES

Monday, July 21, 1941

ADDRESS OF HON. LISTER HILL, OF ALABAMA

Mr. NORRIS. Mr. President, on the 1st of July this year the Senator from Alabama [Mr. HILL] delivered an address at the seventy-ninth annual convention of the National Education Association, at Boston, Mass. The subject of the address was Youth Matches the Hour. I ask that the address be printed in the Appendix of the RECORD.

There being no objection, the address was ordered to be printed in the RECORD, as follows:

As the youth of today views the world with its contradictions and its confusion and looks for light for his guidance or seeks to attune his ear to the voice of reason and finds answer only in the babel of tongues that this day resounds in America, he must feel as did Matthew Arnold when he spoke of the age in which he lived as groping between two worlds—the one gone forever and the other powerless to be born.

In the days before the present emergency we wer the greatest and the richest Nation in all the world. We had a higher standard of living for our workers; we had more children in free schools, regardless of race, creed, or color. We had the best scientists, the best chemists, the best engineers, the best doctors, and the best teachers in the world.

We had the finest transportation system in the air, on the land, and on the water, with a quarter of a million miles of railroads and 3,000,000 miles of paved highways. We

had more automobiles than all the other nations of the earth combined; every fifth person in our land owned an automobile, every seventh had a telephone, and every fifth possessed a radio.

We had more newspapers than the other 20 nations of the hemisphere put together. Our great cities reared their walls like the fabled cities of the giants. We had bounteous crops and bursting granaries. We still had vast forests and untouched minerals and wonderful natural wealth in our soils and hills and streams—capable of being transformed into all those things that please and prosper humankind. Our art had cast off European self-consciousness and obsequity to Old World forms, and from the genius of our artists there was emerging a graphic art and design of our own, while our music was contributing to the gladness of the world.

We are today the only first-class Nation in the world living as free men and free women, able to worship at our own altars, speak our own faith, and walk erect.

And yet, in the days before the emergency with its great tempo of production and the opportunity it presents for employment, we had 9,000,000 men unemployed, walking the streets, and tramping the highways searching for jobs.

A third of our population, 45,000,000 people, received too little to feed, or clothe, or house themselves at a decent level, too little to protect themselves against disease, starvation, and a life of poverty. The question was being asked why was it possible that there was a surplus of food products in one part of the country while hundreds of thousands of people were on the verge of starvation in another part—why were all sorts and kinds of things being produced without any means of getting them into the hands of those who needed them most.

We saw the squalor in the slums and tenements of our cities, the tumble-down shacks in the Cotton Belt, with its poverty and its exploitation, and the Joads roaming the wasted lands of the West. Nearly half the 32,000,000 farm people of our country lived in tenancy, or as sharecroppers, or as day-to-day laborers, with no land of their own, the masters of not a single acre, and with little or no encouragement to save the soil or make better homes for themselves and their families. We saw the deep gullies and the wash of the rich topsoil where the waters had poured down the hillsides in the wake of the lumberjack. We saw our rivers running red to the sea with the soil's rich red blood while woodlands of millions of acres had been depleted. We had wasted, we had exploited, we had forgotten the golden heritage in wild pursuit for the golden dollar.

We witnessed the most appalling differences in educational opportunity both among and within the States—differences due to no lack of effort on the part of the States, but due to economic conditions beyond the power of the States to control—differences in wealth, income, taxpaying ability, absentee ownership of resources and industries—differences in the number of children in proportion to adults.

Eight years ago, stunned and frightened by the depression, we awoke from a dream in which we had been chasing the rainbow of pseudo prosperity and realized that we had passed into a new era; that the old frontier, the land frontier of the United States, was gone; and that we could no longer solve depression by shipping the unemployed West.

Men were hungry, but the good earth that had fed mankind from the very beginning was still here, needing only man's initiative, imagination, and energy to plan, plant, and reap. Bread for thousands of hungry mouths was here, and all that was needed was a way, a way to distribute it, a way to cause it to flow from the farm to the factory and from the factory to the pantries of the people. That was the awakening in our times.

We proclaimed the continuous responsibility of government for human welfare. We set about to repair the damages and ravages of past generations. We launched a great program of conservation of forest and soil and water and human beings. We set aside 175,000,000 acres of beautiful forest land—enough to cover all of France—for the use of our children and our children's children. We began to restore our land to rebuild Mother Earth, and to preserve it for those yet unborn, to eliminate farm tenancy, and to carry the benefits and blessing of electricity to the farm home, to give agriculture parity with industry.

We built and rebuilt countless schoolhouses and in some instances even paid school teachers with Federal funds. We multiplied manyfold the Federal funds for vocational education. With C. C. C. and N. Y. A., we provided educational benefits for disadvantaged youths. We cleared slums, built hospitals, fought disease, lifted mortgages, increased per capita income, restored people, in case after case removed the hand of greed and ruthless exploitation, won inmortal victories for the economic rights of man, elevated the worth and the dignity of the individual, and gave to the people a better day and a new hope.

But the youth of today must realize that the job has only begun.

The great work with the elimination of its errors and its omissions must go on. The youth of today must realize that with the homesteading of the last of the old frontier and with the advent and marvelous development of the machine, the question is not how to compete with each other for enough of this world's goods but to learn how to live with each other in abundance.

Unhappiness and need are the natural forerunners of revolution. Men who are out of jobs, men whose families are in want, cannot be expected to view with satisfaction for long the institutions under which they live.

Wise men, from Benjamin Franklin to Andrew Carnegie, preached that if the individuals in a nation practiced thrift and hard work all would be well. The doctrine may have been right in an economy of scarcity but in an economy of abundance other duties and other qualities are demanded. The youth of today must learn how to obey economic traffic lights and drive great social machines on the right-hand side of the road.

Our fathers who builded our Nation were concerned primarily with political freedom. Our concern must be for both political freedom and economic freedom—freedom from starvation, freedom from want, freedom from fear, freedom to enjoy the fruits of one's own honest labors.

America's young men and young women must write the future guaranties for economic freedom just as the writers of the Declaration of Independence and the authors of the Constitution wrote through thought and action the guaranties of the political liberties which they left as our heritage.

The youth of today must hold fast to the sacredness of the individual because on the individual as a cornerstone all American life, all American civilization, and all American success has been built, but at the same time he must realize that the great struggle is on the new frontiers of economic justice.

He must realize that the keynote of the new frontiers must be cooperation through the democratic process even as that of the old frontiers was individualistic competition. He must think more in terms of social invention and less in terms of mechanical invention, more in terms of security, peace, and the good life for all. He must open the doors that common men throughout the land may enter into their inheritance.

That the youth of today may do these things so necessary to the life of our country and to the maintenance of our free institutions, he must be given the best possible training and education.

Educational opportunities throughout the land must be equalized by raising all educational standards to the best. This can be done only through the resources and power of the Federal Government. I make bold to say that it is the solemn responsibility and the compelling duty of the Federal Government to do this. In the tortuous and complex civilization in which we live, a nation cannot maintain its democratic way of life if its people be ignorant. And in this day of gigantic military machines in the air, on land, and on water, made possible by the use of modern technology, a nation is not safe if it be not economically strong and if its people be not educated in terms of literacy, or vocational skill, and of professional skill.

We enacted the Selective Service Act to prepare our youth to serve the Nation, if need be, in time of war. We should pass the Federal aid for education bill now as the handmaiden to that act to prepare our youth to serve the Nation both in time of war and of peace.

The youth of today must recognize that we live in a changing world, that change is the law of life, and that today's problems cannot be solved with yesterday's solutions. He must dare break with the past. Because we live in an era of tremendous acceleration we can no longer trust to the evolution of future decades to meet new problems. The youth of today must be on the way, for where there is no vision the people perish.

And yet whatever threat there may be at home to our ordered liberty and our free institutions, there is an immediate and far greater danger to our freedom from dark and sinister forces from without.

A plague has come upon the world. It has spread over the whole continent of Europe. It threatens to overwhelm the British Isles. We know from the sad experience of history that plagues spread from east to west until they finally encircle the world.

The plague of which I speak is a strange one—a new and terrible scourge. It attacks both the mind and the body of its victims. It throws their minds into confusion and drives their bodies into slavery.

The plague which threatens us was incubated in the mind of one man—Adolf Hitler. The sinister power of that one man has spread death and destruction, pain and misery, hunger and wretchedness indescribable to over 100,000,000 people in Europe. One must be blind indeed who cannot see the tragedy of a continent and recognize the danger to this continent.

For 7 years Adolf Hitler was making ready for war, openly and arrogantly, yea contemptuously while the prospective victims of that preparation gave it insufficient heed. The democracies of the world and the free people of Europe never grasped the terrible meaning of that tireless preparation. Thirteen democratic nations were all too tardy in their counterpreparation, all too short of vision to combine their strength while they were yet free peoples that they might continue free.

The path of destiny was clear for all the people of Europe to see, and they glimpsed it dimly or not at all. They heard but did not heed the rumblings of the storm. Those rumblings now come to us. Shall we heed them while yet there still is time, or shall we disregard them and suffer by default the destruction of all that we cherish?

Adolf Hitler announced his whole plan. He asks, "Can a dynamic revolution stop at a sharing of the world? Must not the struggle continue until the final world dominion of a single nation? At the back of Germany's continental empire stands the will of absolute dominion of the world, the technical means of which are no longer lacking as hitherto.

Could there be better evidence of Hitler's determination to carry out his plan for world domination than his attack on Russia? If this attack be successful Hitler will have the oil, the wheat, and the vast resources which he needs for the success of his plan.

Adolf Hitler speaks of the United States as a decadent democracy and predicts our early destruction. He arrogantly warns the countries of South America that he will hold them to a strict accounting, remembering those who are for him and those who are against him.

All the trade routes of the world, all the sea lanes, all the separate centers of production, agricultural and industrial, Hitler would weave into one web with Berlin the center and the control. If Britain should go down Adolf Hitler and the Japanese imperialists would dominate all of Europe, Africa, Asia, and Australia. The trade of the United States would be so reduced that it would force a disastrous reduction in the standard of living of our people. Regimentation of our economic and national life and more regimentation would be necessary to the end that the liberties of our people would be more and more shorn from them.

With Hitler commanding a navy greatly superior to our own, with him possessing a capacity for shipbuilding seven times our own, the burden of armament that our people would have to bear would be staggering indeed. All America would be an armed camp. The United States would find itself within the jaws of a gigantic pincers movement—one jaw in Japan and the other jaw in world-conquering Germany with South America the handle through which the pressure would be applied to us.

With South America almost entirely dependent upon Europe for the sale of its export products, its vast agricultural surpluses, Hitler would move into South America economically, politically, and militarily. The United States would stand alone, isolated, without trade, without commerce, and without friends. She would be an island surrounded by a cordon of economic and military pressure and Hitler has declared that there are no longer any islands.

One barrier stands between the United States and Hitler. That barrier is the strength of England, the might of the British Empire. Adolf Hitler has resolved that democracies shall perish from the earth. England fights today for the right of a democracy to exist in a world in which Hitler lives, their democracy and our democracy.

We did not invite this battle of warring ideals but it is ours. We cannot escape it. We must face it. And facing it we must be worthy of the freedom we enjoy. As England is our barrier, we must give her of our strength. We must give freely, greatly, with great heart and great courage. If there is a risk involved, we must take it.

How foolish it would be for the people of the United States to turn all their strength to forging weapons of war if after forging them we hauled them to the seaboard and dumped them into the sea. The only weapon of any value is the weapon at hand. We must forge and we must deliver. We must do all that may be necessary to get our help to England. We must give help to all nations and all peoples that struggle in the common cause of destroying the Hitler scourge. We must do all that may be necessary to protect and to safeguard the vital interest of the United States—wherever that interest may be, whether it be here at home, in South America, in some island in the sea, or in some place once distant but which now, due to the conquest of distance by the airplane, has become an outpost of the liberty and the civilization which we enjoy and which we would preserve.

Fear has not guided our past, and fear will not control our future.

Half-way or half-hearted measures are useless. The democracies of Europe held back while there was time, and they perished. If we hold back because there is danger, if we go only half way in our efforts, we shall be as foolish as they.

To do less than enough is just as bad as to do nothing at all. It is to be unworthy of the great heritage which is ours and to be unfit to be the heirs of the men who fought and founded our Government and transmitted to us the blessings of liberty.

And when this plague that sweeps the earth, this menace that is Adolf Hitler has been destroyed, the youth of today must see that our country plays its part in building a world which shall be immune to a return of such a plague. We failed to meet our responsibility at the close of the World War. For ourselves and for our children, we must not fail again. We thought that we could isolate ourselves from the rest of the world. We did not realize that, although we might isolate, we could not insulate—that the fire in its fury would sweep to us. This hour the flame of Hitlerism is scorchingly close.

We must build a world on the ideal of live and let live, in which economic justice shall prevail and every nation shall have access to the raw materials and resources necessary to a sound economy for that nation to the end that there may be no seedbeds for aggression. We must set up an international order strong enough to impose stringent limitation of armaments and strong enough to prevent the rise of aggressor nations. We must help blaze the trails for new pathways for human rights and human progress and human welfare in every land and in every clime.

As Vice President WALLACE said in a recent address to the Foreign Policy Association: "A generation ago the United States missed her first big chance to serve the world in a big way because of a naive belief in such catchwords as 'isolation' and 'normalcy.' Our second chance is now with us. There are those who will wish to make the same mistakes again. There are none so blind as those who will not see.

"God grant that we may now have the wisdom to write democracy's new testament in a bill of duties, a testament which in no way will deny the old testament with its Declaration of Independence, its Constitution, its Bill of Rights, and its Gettysburg speech. The new testament of democracy will fulfill, not deny the old. But to fulfill there must be a sense of interdependence as well as of independence—a sense of duties as well as of rights—a feeling of responsibility commensurate with our power."

Let us teach our young people, before it is too late, that there can be no true and lasting peace; that there can be no real and lasting state of security and prosperity on the face of the earth, until the peoples of the earth understand one another.

And the world's greatest Nation must lead in this program of human understanding. Our young people must be taught the importance of learning the problems and aspirations, the needs and the grievances of peoples everywhere.

We are woefully ignorant about our South American neighbors. The youth of North America must learn to know and understand the people of South America.

The future welfare of the American continents, the future of democracy itself may hinge upon how well the two Americas learn to know each other. And the first move is up to the people of the United States.

As the youth of today face the challenging problems of our country and the world's great tragedy, let us encourage and inspire them to hold fast to their ideals. Let us stimulate them and help them to cherish their faith for it is faith that subdues the kingdoms and removes the mountains. Goethe did well when he defined the Devil as the spirit that denies and showed him as an urbane gentleman of the world who in the most charming manner cast doubt on everything that savored of faith or virtue or honor.

Bishop McConnell tells us that when he was a boy he used to look with awe at the pictures of prehistoric monsters, the dinosaur, the ichthyosaurus, the mammoth. He wondered how in the world this earth ever got rid of such monsters. They seemed so gigantic, so cruel, so overpowering that he wondered how they ever could have been exterminated. Then as he grew older he learned that they never were exterminated or killed off by direct assault. The climate changed and they died.

The men who founded our Government through their faith changed the thinking of men and women and brought into being this Nation conceived in liberty and dedicated to the ideal that all men are created equal.

If the youth of today will but keep their faith and hold fast to the principles in which America had her birth and by which America has become the mightiest Nation in all the world's history, they will be able to change the thinking of men and women. Long ago it was said of Christ by someone whom saw Him dimly in the distant future, "This man will be our peace." It is for the youth of today to claim the promise in His words; it is for them to grasp His message when He declared: "I am come that ye might have life and have it more abundantly."

"Dreams are they? But ye cannot stay them,
Or thrust the dawn back for 1 hour!
Truth, love, and justice, if ye slay them
Return with more than earthly power.
Strive if ye will to seal the fountains that
send the spring through leaf and
spray,
Drive back the sun from the eastern mountains,
Then bid this mightier movement stay."

As the young men and young women of today go forth to meet the great challenge, the challenge of life's great adventure, the challenge for service, the challenge for leadership, the challenge for God and country, I have faith to believe that they will not meet it in the wailing and cowardly complaint of Hamlet, "The time is out of joint. O cursed spite, that ever I was born to set it right," but rather that they will meet that challenge in the ringing words of Rupert Brooke, the Christian crusader, who gave his life in the Mediterranean campaign in the World War, "Now, God be thanked, who has matched me with His hour."

Speech Delivered at State College Graduation Exercises, Amherst, Mass.

EXTENSION OF REMARKS

OF

HON. DAVID I. WALSH

OF MASSACHUSETTS

IN THE SENATE OF THE UNITED STATES

Monday, July 21, 1941

ADDRESS OF HON. DAVID I. WALSH OF MASSACHUSETTS

Mr. WALSH. Mr. President, I ask unanimous consent to have inserted in the Appendix of the CONGRESSIONAL RECORD the commencement address delivered by me at the State College Graduation Exercises at Amherst, Mass., on Monday, June 9, 1941.

There being no objection, the address was ordered to be printed in the Appendix, as follows:

You are about to take your place in the stream of life under the most unusual and hazardous circumstances. Few who have preceded you have experienced the various uncertainties and the many obstacles that threaten your right and desire to plan your own future life. Good cheer and happiness on class day naturally prevail, but to all of you here today there is a realism of foreboding clouds and storms.

The world is passing through an epoch in which the very basic foundations of society are being undermined as never before. Not only are the social, economic, and political order disturbed and threatened with even greater ills, but the faith in moral law is shaken. In my early life religion found place in nearly every phase of human life, regardless of one's creed. Work, plans for the future, and even pleasure were accompanied by prayer. Faith in the moral order, that priceless heritage which religion has given us, has ceased to be a dynamic force. Of what use are the spiritual values is asked? It is asserted that spiritual values do not make us richer or more successful, do not help us to get on in this world.

You are entering life at a time when the importance of spiritual values is at a low ebb. You will be shocked to find in places that the idea of the truth has broken down before the laws of expediency. Righteousness has come to mean to many the exacting of rights for one's self. Universal selfishness has taken the place of charity and brotherly love.

This depreciation of spiritual values did not come gradually, but indeed imperceptibly. It is the lust for wealth or for power that has come with the development of our valuable resources and the technical sciences of our day. Gradually, but surely, religion in Europe and in other parts of the world, not excluding our own country, had been giving way to materialism, to the exhortation of wealth and power, to the pursuit of comfort and pleasure; and in public life to an opportunism which most often denies spiritual and moral values.

The result is that many of our people, and you yourself, now that you are about to leave the shelter of your home and school, are disturbed, confused, and discouraged. Yet the hour has struck for you. You are now commanded to enter your years of academical preparedness and take your place in the roaring sea of life which you very naturally are anticipating with trepidation and great anxiety. You cannot hesitate, you have no time to measure values or consequences. "The command is forward." You must take your place in the game of life as you find present-day life, even if it is not as you would have it or make it. It is natural, therefore, for you to ask your older brothers for assistance and for advice gained from the abundance of their experience and through the knowledge that advancing years bring. You ask, "What am I to do?" "Where am I to go?" "What responsibility must I assume?" You ask even more—it is in the recesses of every one of your minds—you ask for guidance. You want to know where you can find a place of security, where your young ambitions may be realized, how and where you can lead a normal life. In a word, you want to know what additional armor plate you must put on to combat the uncertain and terrifying immediate future that confronts you.

Repeatedly you have had outlined to you by your instructors the basic and essential qualities for success in your profession: faithfulness to those whom you serve, personal integrity, industry, and perseverance. The absence of any of these from your professional life will doom you, if not to failure, at least to mediocrity. You are determined to employ all these essentials in the life ahead, but how are you to combat the new and undetermined problems that American youth have not heretofore experienced?

It is extremely difficult to suggest the props and inspiration that your hearts naturally crave at this hour. First and foremost, learn to think, to think with your brains and not with your emotions; learn to realize and understand the consequences of your judgments in matters that concern yourself as well as the rights and welfare of others. Courage and faith are indispensable. With them the trials of the future will be less difficult. Without them the new world about you may overwhelm you. Courage, moral and physical courage, determination to battle life's problems unflinchingly; courage to accept cheerfully the risks, dangers, and demands that will come to you as American youths from the constituted authorities, administering the extreme emergencies in which we live; courage to smother the protests against the inequalities of sacrifice that you, by reason of your age, are called upon to make; courage to give and to sacrifice that others may enjoy the priceless heritage of American life. The spirit to give rather than to possess, at least for the time being, must be a dominant factor in your life.

Next, and especially in this hour, faith, a faith that is strong and firm, faith in yourself and your capacity and ability to weather the immediate storms that confront you; faith in the Almighty and in His sustaining and strengthening power; faith in your country prompted by your gratitude for the bounteous gifts that nature's God has bestowed upon us; faith in the future of America, its destiny to continue to be the citadel of democracy in the world; faith in the preservation of its free institutions and in the inalienable rights that our forefathers proclaimed and entrusted to us and to future generations to defend, protect, and preserve; a faith that recognizes no possible compromise between the spiritual values of life and the material and antireligious influence about you.

With renewed and inspired faith and courage you will find the sun still shining behind the clouds, you will pass through the travail ahead stronger and more contented—more devoted than ever to the principles of Americanism and resolved to cling to the spiritual values your fathers and mothers cherished and that have commanded your admiration through all the years of your life.

Fourth of July Address

EXTENSION OF REMARKS

OF

HON. HENRIK SHIPSTEAD

OF MINNESOTA

IN THE SENATE OF THE UNITED STATES

Monday, July 21, 1941

ADDRESS OF HON. HENRIK SHIPSTEAD, OF MINNESOTA

Mr. SHIPSTEAD. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an address delivered by me at Morris, Minn., on July 4, 1941.

There being no objection, the address was ordered to be printed in the RECORD, as follows:

My friends, this is the Fourth of July. With one exception, it is the most significant anniversary in human history. The exception is the day that marks the coming of the lowly Nazarene who became man in order to teach men how to live in peace, love one another, and enjoy the bounties so lavishly bestowed on us by a generous Creator.

He was the Prince of Peace. That is worth emphasizing, because, today, for the first time in the history of civilization, men who dare suggest that races and nations should stop slaughtering each other and once more seek the paths of peace and understanding, are denounced as traitors to their country.

Of all the days in the year, the Fourth of July is the day when Americans should indulge in calm thinking and plain talking. On this day, just 165 years ago, a group of gallant gentlemen proclaimed the Declaration of Independence—a great charter of human freedom—and, quite appropriately, they attached their signatures to that immortal document in the City of Brotherly Love.

They boldly announced our people's desire to sever all connections with the governments and the sordid politics of the Old World.

They did more than that. They proclaimed a new theory of government. They affirmed the principle that government is the servant of the people and not the master of the people.

In support of that principle, Washington suffered at Valley Forge and gloriously triumphed at Yorktown.

A few years later the men who won the Revolution set up our Republic—a new kind of government on the enduring foundation of the Constitution of the United States. That instrument was made the supreme law of the land.

This Constitution of ours is unique in the political history of the world, because it strictly limits the authority and power of the government, itself.

It recognizes that sovereignty and, therefore, power, is inherent in the people and not in the government, and that the government has only a limited power delegated by the sovereign people.

In the Constitution the people have retained the right, not only to limit the power of the Government, but, when they see fit, to take away whatever power they may have delegated.

We should always remember this fundamental fact, but it is especially necessary at this time when the world is plagued by war on three continents and on the high seas. This war, we are told, is being waged to defend various political and economic theories. In the circumstances, it is vital that we do not forget the theory on which our own Government is founded, and that we should remain firm in the faith that the fathers of the Republic transmitted to us.

It may be truthfully said that on July 4, 1776, our forefathers began writing majestic history. Under the benign blessings of the Constitution, our country developed from the Thirteen Colonies spread along the Atlantic coast, with a population of 4,000,000, to its present truly imperial area of more than 3,000,000 square miles and a population of more than 130,000,000 people.

This tremendous progress has been made without sacrifice of liberty. Through it all we have preserved the Bill of Rights and maintained the innate dignity of human beings.

May I emphasize, we have been able to do this only because the people have been jealous of their own power, and have refused to permit their representatives in government to usurp power not delegated to them by the people through the Constitution.

Today we find the world drifting away from constitutional limitations on power and going back to the doctrine of the Middle Ages, that authority must be concentrated in one man. The theory that a leader or

fuehrer shall govern without interference of congresses, parliaments, or courts, is now tolerated on every continent.

That doctrine must not be permitted to gain a foothold in America. If it is accepted, even for a brief period, American democracy as we have known it will be placed in desperate jeopardy with a fair chance that it will be destroyed.

The experience of all nations demonstrates it is comparatively easy for men in power, possessed of what may be described as the "Napoleonic complex," to retain that power and extend it without regard to constitutional limitations.

One of their methods is to lull the people into a false sense of security. We must not forget that the slogan of "All power to the people," brought into existence the cruel despotism of Communism in Russia, crystalizing in the dictatorship of Joseph Stalin.

With that slogan and under the guise of a national emergency Adolf Hitler rose to dictatorship in Germany. First, he induced the German Reichstag to delegate vast powers to him, assuring the people and the legislators that it would be only "for a period of 3 years."

Of course, it didn't end in 3 years. The emergency has been continuing and Hitler is dictator today.

He has ignored every provision of the German Constitution which places a limit on the power of the Chancelor. Through the control of the newspapers, radio, and moving pictures—as has Stalin in Russia—he has made the people believe it is their duty to follow the dictates of their leader as the slave follows his master.

Of course, in the beginning, Hitler had to have money to control the avenues of information needed to put him in power—the newspapers, the radio, and the movies. That money he got from the bankers and munition makers of Germany, England, and France, and the bankers and financiers of our own country were also liberal contributors.

Substantially the same thing happened in Italy. When Musolini set up as dictator, the bankers of New York rushed in with a loan of $100,000,000. With that money Mussolini was able to rob the Italian people of their liberties and now he has assisted in plunging the world into a devastating war.

Now, why do I call attention to these things on this, the Nation's birthday, when we are here to renew our confession of political faith?

I will tell you why I do it: Because the same vicious propaganda which has destroyed liberty in so many lands is being pressed with appalling force right here in the United States of America. Many people know it, but few dare to speak.

This propaganda dragged our country into the first World War, almost 25 years ago. Then we were told we must "save democracy."

You know the result of that adventure. Our boys won the war, but they didn't save democracy. That wasn't their fault; it was the fault of the stupidity, greed, and lack of vision of the so-called statesmen who made the peace and who have ruled the nations of the Old World ever since.

Now we are told it is the duty of America to go to war to establish the "four freedoms"—political freedom, religious freedom, freedom of speech, and economic freedom—"all over the world and in our time."

Soon our American boys may be asked to die for that slogan, but before the dreadful decision is made the American people should do some clear thinking.

Are we prepared to police the world and to impose on other peoples our economic and political theories? That's a pretty big contract. How many millions of Americans will die to carry it out and how many billions of American money will be expended to finance the fantastic undertaking?

President Roosevelt is sponsoring this proposal, and I think we have a right to ask him a few pointed questions:

The President says that in this war for the "four freedoms" we are going to give aid to Joseph Stalin and his Communist government in Russia because Russia has joined in the fight against Hitler.

Are we expected to believe that Stalin is fighting for the four freedoms? Only the other day he was on Hitler's side. Should Stalin defeat Hitler but still refuse to accept the "four freedoms," must we then turn our Army and our Navy against Stalin?

Not so long ago Russia attacked Finland and took what land she wanted from Finland. Without declaring war, Stalin sent his troops into Latvia, Lithuania, and Esthonia, drove their governments into exile, and imposed his own particular brand of despotism. We denounced that act and expressed our sympathy for the victims of communistic power.

Today Finland, Latvia, Lithuania, and Esthonia seem to be lined up with Hitler against Stalin, to drive Stalin out of the land. Are we to place those little countries on our list of enemies?

France, the country which helped us win our Revolution, built a wall of men along the English Channel so an army of 300,000 British soldiers might escape back to their homeland.

When France could fight no longer Britain attacked the French Navy and sank as many ships as she could find. In addition Britain sent an army to fight in Syria to drive the French Army out of French territory. Are we to count France among our enemies because she rents this treatment from an old ally?

Today Stalin and Churchill are marching side by side with American taxpayers' money to aid them. Do you think they fight for democracy? If and when Hitler shall be defeated, shall we then fight Russia to establish the "four fredoms" there?

These are serious questions. They emphasize what a mess we find ourselves in when we depart from the ancient American doctrine—the doctrine to which we adhered so faithfully until we were lured into European politics and the last World War.

Up to that time it was the fixed policy of this Nation to stay out of the feuds of the Old World and to insist that the nations of the Old World keep their hands off the nations of the New World.

Every public official takes an oath to uphold the Constitution. President Roosevelt took that oath on three occasions. As Senator from Minnesota, I have repeatedly taken a similar oath. That oath binds every man who takes it to respect and obey the Constitution.

When any official, however high his position may be, seeks to evade the Constitution, or to nullify its plain provisions, he is violating his oath of office. I need not tell you that is a most serious offense. It is not only contrary to Christian ethics, but it is a gross act of disloyalty to our republican form of Government.

Now let's attempt to apply that thought to the existing situation. Everyone knows knows that the Constitution vests in Congress the power to declare war. Those who are endeavoring to shove this country into the old World War know that Congress will not approve such a move at this time.

One reason Congress will not approve it is that its members know that 85 percent of the men and women of America do not wish this country involved in foreign wars. Americans are willing their boys should die in defense of our country. They are not willing that they should be again slaughtered on the battlefields of Europe, Africa, or Asia

At this moment, Congress is emphatically in favor of respecting the wish of the people, so the war makers are endeavoring to avoid that provision of the Constitution which gives Congress the exclusive power to declare war.

Almost every day in Washington we are told by men who are close to the President that he is anxiously waiting for some incident which will give him an excuse for starting the shooting. The President has not repudiated these war makers. They occupy responsible positions. They have entree to the White House. They state in print what is in the President's mind.

If that be true, then the President of the United States is seeking to evade and nullify the constitutional provision which says that Congress and Congress alone has the power to declare war. When the President does that, he violates his oath of office.

We should not mince words about such an important matter. The President of the United States is as strictly bound by an oath as is the humblest citizen in the land, and when he violates his oath or when he seeks to evade it, the American people should call him to account as promptly and as emphatically as they would any subordinate official of government who committed a similar offense.

The war agitators, knowing they cannot get a war resolution through Congress, are making a desperate drive to get us into this war by the same methods by which they urged us into the last war. Then Colonel House and Mr. Page, our Ambassador to Great Britain, persuaded President Wilson to so manage our foreign policy as to force a break with Germany.

Today foreign governments, and particularly the British Government, have official and private citizens traveling all over this country, making speeches, writing articles for the newspapers, and in a thousand other ways forwarding propaganda designed to whip the American people into a war fever.

Even so-called peace organizations have become propagandists for war.

That reminds us of what the Carnegie Peace Foundation did to get us into the last war. That foundation got its money from Andrew Carnegie. Carnegie said the foundation was to work for world peace.

However, when Great Britain became involved in the last World War, the Carnegie Peace Foundation promptly became a propaganda agency to get us into that war.

On April 20, 1917, the board of directors unanimously passed the following resolution:

"*Resolved*, That the trustees of the Carnegie Endowment for International Peace, assembled for their annual meeting, declare hereby their belief that the most effectual means of promoting durable international peace is to prosecute the war against the Imperial Government of Germany to final victory for democracy, in accordance with the policy declared by the President of the United States."

In those days, Sir Gilbert Parker, a famous writer, but at the time associated with the British Army secret service, was detailed by the British Foreign Office as chief of propaganda in the United States

His instructions were to get this country into the World War. He did his work very well, and after the war was over he took us into his confidence and told us how he did it.

He said his instructions were to convince the people of this country that we must go to war in order to have peace. He revealed that he started his propaganda with university and college professors After that, he began operating on other groups. One group was made up of our so-called society leaders. Of course, the big financiers and many large industrialists were included.

The same game is being played today. Society leaders, who never moved a hand to relieve the suffering among our own people during the long years of the depression, are now jittery over the condition of the unfortunate people of Great Britain and China.

We all sympathize with these victims of the war, but we also sympathize with the victims of our own economic wars. It is still true that charity begins at home and that man's first duty is to feed his own. After that task has been performed he may,

in good conscience, extend his bounty to outsiders.

You will all recall that during the last campaign President Roosevelt went out of his way to repeatedly promise the fathers and mothers of America that he would not send their boys to war. He still occasionally talks about avoiding war, but his every act takes us nearer and nearer to war.

That this statement is true is supported by the attitude of the members of the President's Cabinet. Every high-school boy knows that under our system of government a member of the Cabinet is not much more than a secretary to the President, and it's his duty to carry out the policies of the President.

It is, therefore, significant that while the President continues to occasionally say he wishes to keep America out of war, his Cabinet officers, on the radio and in different parts of the country, have been making outspoken speeches for war.

Secretary of War Stimson and Secretary of the Navy Knox were for military intervention before they were placed in the Cabinet. I voted against their confirmation, stating on the floor of the Senate I did so because of their well-known attitude in favor of war. Those two gentlemen seldom permit a day to pass without proclaiming their desire to get us into the world conflict.

Mr Wickard, our Secretary of Agriculture, is also busy along the same lines. In addition to heading the Agriculture Department, he is also in charge of the Farm Security Administration. He has tens of thousands of men and women on his pay roll. He is using these men and women to urge Congress to use convoys between this country and Britain. But the President of the United States has said: "Convoys mean shooting and shooting means war."

So, when Mr. Wickard turns his machine loose to advocate convoys, he is really advocating war. That he is doing just that, is indicated by a letter I have just received from Minnesota. It comes from one of Mr. Wickard's employees. I will not give his name, because I do not desire to have him lose his job. However, I assure you the letter is authentic. Here it is:

"DEAR SENATOR: I work for the Farm Security Administration. One day this past week, our district supervisor barged into our office all heated up about convoys for ships to England. He had received a telephone call a short while before from the State office, requesting him to ask each county office to find five people, farmers preferred, who could be induced to send telegrams to Washington endorsing convoys.

"I may lose my job for writing this letter, but I feel you should know the facts. Of course, all this work will be done orally so there will be no written proof to substantiate my statements, unless some of the farmers who were asked to send telegrams would back me up.

"Yours respectfully."

That will give you an idea of the extent to which the warmongers on Uncle Sam's pay roll and the propagandists on the pay rolls of foreign governments are endeavoring to plunge this country into a foreign war in which your boys will do the fighting and the dying.

The President has promised the American people that he would not interfere in a foreign war. People are trying to help him keep that promise. However, the Members of his Cabinet are doing everything they can to stir up our people to intervene in foreign wars.

If that is the policy of the President, he should tell us so. If that is not his policy, he should ask the warmongers in his Cabinet to get out of the Cabinet, and if his close friends and confidants do not tell the truth when they say he is waiting for an incident to begin shooting, he should repudiate them. The President must know what the members of his Cabinet and his close friends are doing. They are trying to get him to violate his oath of office, and in fairness to the American people he should repudiate if they are misrepresenting his position.

I have told you many times I would oppose such a proposal. I am still against it. I assure you warmongers and the propagandists will not change my position.

I do not believe we can insert the principles of the Declaration of Independence and the Constitution of the United States into the hearts of men with a bayonet. I do not believe that bombs and poison gas should be used as missionaries to spread the doctrine of the universal brotherhood of man.

If we preserve democracy in America, nothing can prevent its spread to the rest of the world. If democracy is destroyed in America, dark centuries will pass before it can be revived elsewhere.

There can be no question but that the American people are united in a determination to defend our interests and our institutions from attack at sea or by land or in the air. A majority of the American people—at least 85 percent—do not think America can best be defended on the shores of Asia, Africa, or Europe. Modern warfare and the experience of this war would lead us to believe the unsoundness of that argument. This war has demonstrated that naval ships cannot survive an attack by bombers based on land. That was demonstrated when the Germans drove the British Navy off the Skagerrack and when bombers based on land wrecked half a dozen cruisers and several destroyers in the Mediterranean. Nor can airplane carriers, even though protected by battleships and auxiliary vessels, successfully launch an attack over 3,000 miles upon the United States, if we have our air bases for bombers and our submarines at home. No reputable military or naval man will deny that.

The hysteria about a Nazi invasion on the North American Continent has now been pretty well dissipated. The great mass of the people understand that. However, they are ready to defend the United States and the Western Continent with their lives and their resources if necessary.

The idea that the Nazis can invade England across the Channel seems also to be well understood now to be very unlikely. At least they haven't been able to do it so far. If they haven't been able to invade England in something like 2 years over a channel of water 22 miles wide, how long would it take them to invade the Western Continent 3,000 miles away?

We do not like the Nazi form of government. There are many kinds of governments in this world we don't like. Are we going to war with them all? We don't like the communistic dictatorship of Russia, and here we have the people of the British Commonwealth standing shoulder to shoulder with the Communists against Hitler, France, and Finland to save democracy.

How shall it then go with presidents, dictators, and kings who have usurped governmental power inherent in the people and have led them into undeclared wars in every corner of the earth? How shall it go with those who have been honored and trusted with power, on their solemn pledge that they would not lead their people to war? How shall it go with fuehrers, presidents, and kings when the world is in shambles and the people see it for what it is, and the disillusioned people shall call them to accounting for having caused the greatest tragedy of the centuries? How can these leaders face the disillusioned mothers of the world, whose sons' rotting bodies fertilize the battlefields of the various continents and feed the sharks of the seas?

Our first duty is to preserve democracy in America. To do that we must keep certain objectives clearly in mind:

First. As a nation, we must learn to mind our own business.

Second. We must get rid of the idea that because Britain or some other nation becomes involved in a war we can't keep out. That doctrine makes us slaves of Britain or any other nation with which may form this unnatural connection.

Third, We must have the strongest Navy and air force in the world, and a small, but splendidly mechanized Army. With these weapons, no power or combination of powers on the face of God's earth will dare attack us.

Fourth. Here at home we must set our house in order. We must see that the farmer and the industrial worker are assured a full measure of economic justice. That's a subject I have discussed with you many times during the 25 years you and I have been coming together at meetings such as this. I have not changed my views concerning the great essentials. The first line of defense of every nation must be the welfare of its people.

Fifth. We must have unity in the Nation's foreign policy. This can best be accomplished by the President making no commitments to any foreign government without first obtaining the consent of the Congress; and

Sixth. There must be unity between the President and the Cabinet. They should speak the same language.

And, finally, we must repudiate for all time this abominable suggestion that Americans should clothe any man with dictatorial powers. We are against communism and fascism; we are against Hitler, Mussolini, and Stalin; we will not tolerate either communism or fascism in this country and we will not set up a Hitler, even if the individual who greedily reaches for that power bears a more honored name.

This is America. It was a democracy when we received it as a precious heritage from our fathers. With the help of God, it will still be America and a democracy when we bequeath it to our sons.

This is a time when every American who is worth his salt will have the courage to utter what is in his heart and mind. Remember the lines penned by a great poet:

"Mourn not for the dead
Who in the soft earth lie,
Dust to dust, as will you and I,
But mourn for the cowardly meek
Who see the wrongs of rulers, yet dare not speak."

Service Through Political Parties

EXTENSION OF REMARKS

OF

HON. HAROLD H. BURTON

OF OHIO

IN THE SENATE OF THE UNITED STATES

Monday, July 21, 1941

STATEMENT BY HON. HAROLD H. BURTON, OF OHIO

Mr. BURTON. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD a statement I made at the Summer Institute for Social Progress, Wellesley, Mass., July 15, 1941, on the subject How To Serve Your Community in Time of Crisis Through Political Parties.

There being no objection, the statement was ordered to be printed in the RECORD, as follows:

HOW TO SERVE YOUR COMMUNITY IN TIME OF CRISIS THROUGH POLITICAL PARTIES

(Excerpts from statement by Hon. HAROLD H. BURTON, United States Senator from Ohio, at Summer Institute for Social Progress, Wellesley, Mass., July 15, 1941)

HOW TO WORK THROUGH THE REPUBLICAN PARTY

The question is asked: "How may we serve our communities in time of crisis through political parties?" and under that general question I am asked: "How may we work through the Republican Party?"

The answers fall into two parts: First, those that apply to all parties; and, second, those that apply only to the Republican Party.

One of the greatest services that can be rendered to our Nation in this time of crisis is the maintenance and improvement of the national party system. The question asked refers specially to service to our communities through political parties. A community usually implies a local community that is a city, village, or town. If it is intended to deal with the relation of national political parties to local communities, I must take exception to the form of the question. I believe that the national parties usually have little or no appropriate place in city, village, or town politics. I believe that local questions and local administrations usually are handled better on a nonpartisan basis, or at least on the basis of local parties based on local issues, rather than on national party lines. If, for historical or other reasons, the national party lines are, in fact, drawn in local politics, they cannot be as effective there as they are in State and national politics. The independent and nonpartisan vote will generally hold the balance of power in local elections in spite of the presence of the national party organizations.

The question here really should be, "How may we serve our Nation in time of crisis through national political parties? In the Nation and in the States, the value of the party system is great.

By the party system I refer to the two-party system, coupled with that freedom of association which makes it easy for new parties to be formed and to enter the party contests either temporarily or permanently. The party system helps to organize the voting public so as to make possible a more orderly and clear-cut presentation of the issues between candidates and policies, and makes possible the conduct of campaigns to reach effectively the millions of voters upon whose decisions the success or failure of free self-government in the world depends today. The party system generally reduces the choice to two opposing candidates or at least to a small number of candidates. It thereby makes orderly argument possible without the endless confusion which results from the presence of many candidates for the same office. Other aspirants are usually eliminated by an orderly primary system, which results in the choice of a single candidate to represent each party in the final election. If this process actually reduces the final field of choice to two major candidates, it performs a valuable service in thus insuring election by a majority vote rather than by a mere plurality vote, and thus assures to the elected official the initial support of more than half of the voting public. In a self-governing nation or state, Lincoln said, "public sentiment is everything. With public sentiment nothing can fail; without it nothing can succeed. Consequently he who molds public sentiment goes deeper than he who enacts statutes or pronounces decisions. He makes statutes and decisions possible or impossible to be executed."

A majority vote is a great practical help in solidifying this public sentiment in support of any elective officer.

Long ago it was stated in the Declaration of Independence that free governments derive their just powers from the consent of the governed, and it is not sound to conclude that a plurality consent, which represents less than 50 percent of those voting, measures accurately the consent of the governed. Hence the party system is an important and fundamentally practical mechanism for helping to determine in an orderly manner the opinion of a self-governing community, state, or nation.

For a vigorous, healthy party system to exist takes time, money, and effort. Nation-wide parties cannot possibly spring up over night. Not even State-wide parties can do so because of the lack of time, personnel and money that is needed to locate, interest, qualify, organize, and bring out to the polls, any substantial part of the millions of voters in such an area. For example, recognizing that about 50,000,000 votes were cast in the last Presidential election and estimating that a single letter sent to each voter by first-class mail, including postage, would cost at least 5 cents, this one contact would cost $2,500,000 in cash. It becomes as necessary as the constitutional structure of the Government itself that there be some kind of voluntary group or party organization, whether old or new, to make the election machinery function intelligently and effectively. It becomes, therefore, an essential part of the obligation of good citizens to take some active part in the organization, reorganization, or improvement of such parties so that the real and free judgment of those entitled to vote shall be expressed. Those accustomed to call themselves good citizens, frequently fail to realize this need. By such failure they not only fail to give aid where aid is needed, but through their failure to make themselves felt through some natural and needed organization they reduce their own influence from one of great possible force to one of negligible practical value. Unless compensated for by some extraordinary independent personal influence exerted on public sentiment, such failure to enter into party effort constitutes a crime of civic neglect of duty in the first degree, however, unintentional it may be.

In time of crisis the need for national parties does not disappear. While probably there will be no party lines drawn on such issues as those of national defense and foreign policy, yet the very absorption of public officials and of the public itself in the issues of the crisis makes it all the more important that there be party activity to interest and to guide the vote of the people on the many candidacies and issues not directly involved in the crisis itself. The volume and importance of normal governmental service in time of crisis is almost as great as in normal times, although its place in the limelight has been taken by the more dramatic questions of life and death that come with the emergency.

A self-governing nation in time of national emergency, like the present, may well consolidate many of the administrative powers of government relating to the safety of the nation. If, however, a self-governing nation in time of crisis is to avoid a totalitarianism from which it might never recover, it must carefully keep alive freedom of popular decision on those matters where the safety of the nation does not compel its temporary abandonment.

Our constitutional Government is not and is not intended to be, a government of, for, and by the majority alone. The essence of our plan of government is that it be of, for, and by the people, including the minority as well as the majority. It is of the essence of our Bill of Rights that the constitutional rights of the individual shall be preserved and protected even when he stands alone as a minority of one member. It is also of the essence of our Government that the way shall always lie open for a new majority to arise, either from the existing minority party or from a new movement. All of this calls for the maintenance of a vigorous and alert party organization at all times. A party that cannot cling to its purposes and principles as a minority party does not deserve to become the majority party, but a party whose purposes survive a long test of adversity will find the justice of its cause so clarified and emphasized that it will in time earn its way to the majority position and will secure the adoption of much of its program.

How such a party organization shall be maintained as a matter of practical mechanics, calls for certain well-known lines of conduct in all parties, coupled with such new methods as enterprising initiative may suggest. There is vital need for much voluntary service and for some compensated service to organize each party all the way from its National and State committees down to each voting precinct where the controlling decisions are finally made. There is continuing need to maintain a complete and active workers' organization ready for use in the next campaign, together with up-to-date lists of voters and addresses of voters for mail and personal contact. Frequent meetings need to be held, publications distributed, and broadcasts made to inform not only the party workers but all the people of the issues as they develop. There is a need for contact with all who have become new voters through reaching voting age, by naturalization, or by moving from one locality to another. There is constant need for the all-important mechanical step, especially in large communities, for advance registration and qualification of eligible voters so that they may be permitted to vote when the time comes for them to do so. The unqualified and non-voting but eligible voters often could wield the balance of power were they induced to qualify themselves and use their franchise. There is the need to maintain the contacts through which necessary funds may be raised both for campaign purposes and for operating needs between campaigns. There is the need to maintain the personal social contact and friendliness that is the best basis for effective action in any organization and which is natural where people have banded together in a common cause or crusade. Finally, there is the need for contact between public officials and their constituents so that the views and needs of the officials and the constituents may be constantly and clearly understood and so that sound and fair policies of government can be intelligently determined.

Turning from these questions of general party organization to the service which the Republican Party can render, we find it in the novel position of being the minority party in the Nation while at the same time it is the majority party in many States and communities. Here I can be more concrete, and, while my answers will relate primarily to the national field, they apply in some degree to the smaller areas.

The following are some of the vital services that I believe the Republican Party can render to the Nation in this crisis, and that people can render to the Nation to best advantage through the Republican Party:

(1) On the very issues of the crisis itself, nonpartisan, as they should be, the Republican Party, as the minority party, can render an important and unique service by emphasizing that these issues are nonpartisan. It can help greatly to solidify the Nation on these issues by refusing to treat them as matters of party alinement. The stronger and better

organized the minority party, the greater is its contribution to the united strength of the Nation on policies of national safety. A citizen contributes doubly to this unity when he not only adds the force of his individual support to the Nation but also joins in guaranteeing to the Nation the support of a great organized political party, which, if used otherwise, would present a grave danger of disunity that would serve our enemies rather than ourselves.

(2) On these nonpartisan issues of national safety Republicans, as members of the minority party, can contribute to their soundness by loyal, constructive, free, and unhampered discussion of the merits of each. If there were no minority party or if this discussion were left only to members of the majority party, the Nation would suffer, because those closely associated by party ties with the national administration for that very reason find it somewhat difficult to present effective and constructive criticism of administration policies for fear of disruption of their personal and party relations. This inhibition does not apply to members of the minority party. Therefore, while definitely not making it a partisan issue, a minority party man does not hesitate to point out the weaknesses in proposed policies in time to correct them.

It is well to bear in mind that as a result of these situations, members of the majority party on these national issues are much more likely than members of the minority party to let partisan considerations sway their conduct. The majority member is likely to let partisan considerations keep him silent on important nonpartisan matters when, in fact, his personal judgment opposes those policies. This silencing effect of majority party influence interferes with the best interests of the Government in a way that is little emphasized. The genuine loyal opposition of a minority member to a nonpartisan issue should not be labeled as partisan opposition merely because his genuine opinion is in conflict with that of the administration and he expresses it. A more just criticism can be leveled at any majority member who allows his genuine and personal opposition to an administration policy to be silenced by party considerations. Here the minority party has the important role of a constructive and free critic.

The Republican Party also has many services to render entirely apart from the issues of the crisis and upon which it seeks to unite its members and in support of which it seeks to add new members to its rolls. To the extent that these policies contribute to the present or future stability and welfare of the Nation, it is vital that citizens adhere to them and join in the active party work which forms the best guaranty of their accomplishment. The Republican Party today presents among others the following appeals of an important and fundamental character:

1. The Republican Party is the party of constitutional government. It seeks to preserve, in fact and in substance, the independence of the legislative and judicial departments from the domination of the executive department. While recognizing the increased work, difficulty, and delay that is inherent in our constitutional form of procedure, and inherent in a government by the people, based upon faith in the people, the Republican Party believes that our constitutional representative form of government offers a priceless opportunity for freedom of popular decision that amply offsets the added work, difficulties, and delays that its observance entails.

2. The Republican Party is the party of economy in administration. The absence of a spirit and purpose of economy in determining and in administering the business of the Nation is today a striking weakness of the national administration. It is one that requires a complete change of point of view to one that carefully conserves rather than thoughtlessly dissipates the public tax funds.

3. The Republican Party is the party that seeks to pay its expenses as it goes and to insure the payment of its obligations when due.

4. The Republican Party is deeply concerned over the welfare and the fairness of treatment and equality of opportunity of all persons without regard to their wealth, poverty, age, sex, religion, race, color, or national descent. It recognizes that America is not so much a place as it is a people, and the welfare of its people, on sound lines of social and political economy, is the first concern of the Nation.

5. The Republican Party is dedicated to full observance of the principles of the bill of rights and the Declaration of Independence, and to the observance of the great freedoms of religion, assembly, speech, press, and opportunity coupled with corresponding obligations of loyal support of the Constitution and principles of our Republic.

6. The Republican Party is the party that encourages private initiative and opportunities for all who are willing to contribute their full share of effort for what they receive. It seeks to encourage increased production, higher standards of living, the development of new products, and the discovery of new wealth, rather than to rely largely upon restriction and regimentation of the existing wealth.

7. The Republican Party is the party of free popular expression of opinion of what is best for the Nation, undominated by the pressure of direct or indirect governmental subsidy and uninfluenced by pressure through governmental employment or assistance.

8. The Republican Party has the opportunity and the obligation in each place where its members are now vested with authority to demonstrate the soundness of its purposes and its policies so that the party may thus earn through actual demonstration the right again to be the majority national party, entrusted with the responsibility of national administration.

9. The Republican Party seeks to determine policies upon the basis of the best interests of the Nation as a whole rather than upon the basis of aid to special and private interests that place their personal welfare and privileges above those of the Nation as a whole.

10. The Republican Party is dedicated to bringing into the spirit of the Nation and of its people an understanding and appreciation of the brotherhood of man and the fatherhood of God consistent with the record of the founders and early protectors of the Republic.

In the present crisis the greatest obligation of America is to demonstrate the soundness and the adequacy of our free self-government to meet the issues of the times. Among the primary elements that make it possible for self-government to succeed on a national scale is the comparatively complete organization and intelligent, honest, and fair conduct of the two-party system through which individual citizens may effectively express themselves. Self-government is the most difficult form of government, and it has been well said that it will survive only so long as we deserve it.

The national political parties provide the natural channels through which self-government can be made a failure or a success, and they depend directly upon the interest and the efforts of the private citizens of America. I recommend active membership in the Republican Party.

What Does Uncle Sam Mean to Me?—Young America Speaks

REMARKS

OF

HON. AUGUST H. ANDRESEN

OF MINNESOTA

IN THE HOUSE OF REPRESENTATIVES

Monday, July 21, 1941

Mr. AUGUST H. ANDRESEN. Mr. Speaker, the Benevolent and Protective Order of Elks is one of the Nation's great patriotic fraternal organizations. In accordance with its tradition to foster patriotism and national unity for the preservation of American ideals, this order has just completed a Nation-wide essay competition for high-school students on the subject What Does Uncle Sam Mean to Me? A prize of $1,000 was offered for the best essay. Local lodges and State Elks associations also offered prizes in the competition.

The national Elks convention was held at Philadelphia last week, and I am very proud to announce that Miss Grace Langley of my home city of Red Wing, Minn., was the first-prize winner in the local, State, and national competition. Miss Langley graduated this year from the Red Wing High School. She was a guest at the National Elks Convention, and she is our guest in the gallery today. I wish to present Miss Langley to my colleagues in Congress, and I am very happy to include as a part of these remarks, the prize-winning essay written by her on the subject What Does Uncle Sam Mean to Me?

WHAT DOES UNCLE SAM MEAN TO ME?

For our convenience we talk in symbols. Sometimes we accept the symbol as the reality. Perhaps that is what we have done with Uncle Sam, symbol of 132,000,000 people, symbol of a past that is not dead, symbol of a future unknown. Who is he? He is the sober-clad pilgrim singing hymns on the afterdeck; he is the patriot patiently mending a coat faded with salt water; he is the gaunt woodsman staring out of his study window as he hears the guns of division; he is the bearded miner sifting gravel through hard fingers; the dust-choked farmer watching his bony cattle die; he is the workman swinging his lunch pail down the lamplit street; the bindlestiff asking for a dime. His voice is the moan of the Negro congregation, "Hallelujah, Lord," the shout of the foreman above the blast furnace, the dowager's well-modulated tones as she gives her chauffeur his orders for the day, and the chauffeur's response. His voice is your voice as you read these words, and my voice as I sit in the classroom.

My grandparents needed no definition of Uncle Sam. Grandfather Pritchard left London to find a home for his gentle wife and a family of 12 in Ohio. My other grandfather fled Germany to escape service in a war of autocracy. For them Uncle Sam was real in terms of dark loam to plough, schools for the children, and friendly neighbors to cry the time of day over the garden wall. But to me, child of these men and women, what does Uncle Sam mean to me? Perhaps there are dangers in an inheritance of glory won too easily.

I recently entered a national forensic meet. Little did I realize that in discussing our foreign policy—the labor problem, our defense program, I was exercising a right few people now have. Take the question for debate, "Resolved that the power of the Federal Government should be increased." Where else but in the United States would high-school students be allowed to argue the worth of the administration? I have grown to accept freedom of speech just as I have grown to accept the religious toleration which permits me to be a Presbyterian and my best friend an orthodox Jew.

I am beginning to realize that such rights are not immutable and static. They were not won once by a war or by the scratching of quill on parchment. Ours is a heritage of adventure and promise, a heritage to be earned again and again. We are now required to believe stronger than ever in the American ideal, to believe buoyantly, and earnestly, and joyously.

Who is Uncle Sam? Sing joy! He is the sober-clad Pilgrim singing hymns on the after-deck; he is the workman swinging his lunch pail down the lamplit street; his language is that of all nations; his hope is that of all peoples and ours the responsibility to share.

Memorial to Gen. James Longstreet

EXTENSION OF REMARKS

OF

HON. ROBERT R. REYNOLDS

OF NORTH CAROLINA

IN THE SENATE OF THE UNITED STATES

Monday, July 21, 1941

ADDRESS BY BRECKENRIDGE LONG AT GETTYSBURG BATTLEFIELD

Mr. REYNOLDS. Mr. President, on July 3, 1941, at the battlefield of Gettysburg, Pa., I attended ceremonies in reference to the breaking of ground for the erection of a monument to one of the South's great leaders, Gen. James Longstreet. Among those who delivered addresses at that time were Mrs. Buddy Rogers—the former motion-picture actress, Miss Mary Pickford—and Mr. Breckenridge Long, of the State Department. I have before me a copy of the address delivered by Mr. Long, and ask unanimous consent that it be printed in the Appendix of the RECORD.

There being no objection, the address was ordered to be printed in the RECORD, as follows:

We are assembled today to participate in the arrangement for a memorial to James Longstreet, general in the Army of the Confederacy, one of its most distinguished sons, one of its outstanding military leaders, subsequently a patriotic servant of the reunited country, and a courageous American.

He and those who participated in the epochal struggle in this valley and over these hillsides contributed, all unconsciously, to the solidification of a great nation. On this battlefield of Gettysburg was born the modern United States. The sons of those who struggled here have lived to rebuild a divided nation, to unify a variety of thought, to provide a more equitable distribution of the opportunities of life, to evolve a national purpose.

These seeds were planted at Gettysburg. Here they were sanctified with the blood of contending brothers. And here again on the scene of Gettysburg the flower of those seeds is heralded by the name "America."

When we say "America" we mean a land of plenty and of peace, a land of happiness and of contentment, a land of fair dealing at home, and of honorable contacts with other lands. But we in America realize that much as we love peace we cannot really enjoy peace if the rest of the world is at war; that as much as we desire happiness we cannot really be happy when sorrow and suffering run rampant through the world and threaten our own domestic order; that we can have no assurance we can have fair dealing from other governments which violate their solemn undertaking.

It is all very alluring for us to sit complacently in our comfortable homes and think in illusory vein that war will not come to us here—that the stories we hear of Europe and of Asia and of Africa are, after all, happenings thousands of miles away—that it cannot happen here. It is all too easy to be deceived by stretches of fertile fields which run out beyond horizons and to feel that no danger from abroad could carry this far. So thought Poland. So thought Norway—stretching way up into the Arctic Ocean. So thought Greece, bathed by the warm water of the Mediterranean. So it was thought on the tropic sands of Africa, in the distant recesses of China, far Indochina, and in old Siam down near the Equator. And so thought Russia—the most recent example of an unholy ambition to destroy nations, to enslave their peoples, to rob them of their resources—to dominate a world.

We must not be beguiled by such thoughts of complacent illusion. We must understand that distance measured in miles has been reduced to inches, that time has been decimated, and space rendered of no protective value. We must understand that the actual waging of that thing called war has changed. There was a time that it commenced when the shooting began. But now it has precursers the consequences of which are worse if possible than the devastation of actual military combat. There is the insidious infiltration of whispering agents casting doubt upon the justice of our own position, faintly praising the qualities of the intending invader. Then come agents of trouble and discord, inciting opposition at home, making disturbance in centers of mechanical production. Then the saboteurs to throw monkey wrenches into the machinery—all with the object of creating discord and dismay and of rendering nugatory efficient organization. The radio becomes the instrument of insidious voices. Doubt is cultivated. Fear is propagated—fear, the worst of our foes, the ally of threatening force.

Another precourser is economic penetration, to destroy markets abroad, to gain footholds in the territory of your neighbors, and, when economic and financial conditions have been sufficiently cultivated, to institute political control over some not distant country. Once political control is established, then the military armies arrive—through the air, on the water, by land—and from the new base the cowering inhabitants become servitors, even unwilling partners of mechanized military autocracy in preparation for its next plunge, with a history of suffering in its wake and a promise of sorrow for the next victim—unless stopped in its mad career.

We have determined that in America these things shall not happen. They cannot happen if we unite as a nation in carrying forward a mighty program of defense; if we build speedily, adequately, and efficiently.

You may be assured that your Government is fully alive to the situation confronting the United States. The officers of your Government are on guard. We only hope that each American citizen realizes for himself the situation as it actually exists and the consequences for himself and his family unless all of us join in a mighty effort for defense.

President Roosevelt has proclaimed a full national emergency. That fact alone should make every man and woman in America realize that the danger is direct. The President has called upon all loyal citizens to place the Nation's needs first in mind and in action to the end that we may mobilize and have ready for instant use all of the physical powers, all of the moral strength, and all of the material resources of this Nation.

The call has gone forth. Let us respond to it with the spirit and courage exhibited by the men at Gettysburg. Whether we are in the armed forces, in the factories, or on the farms, let each of us resolve to make his own worth-while contribution to the cause of safeguarding the Nation during this critical period. Gettysburg echoes the call to the service of a united and determined Nation.

Congress Must Keep Faith With the Selectees

REMARKS

OF

HON. PHILIP A. BENNETT

OF MISSOURI

IN THE HOUSE OF REPRESENTATIVES

Monday, July 21, 1941

Mr. BENNETT. Mr. Speaker, when the Seventy-sixth Congress enacted the Selective Service Act, it was distinctly and generally understood that this act was passed for the purpose of providing this Nation with a trained reserve of manpower to defend the Nation in case of war. The act was presented to the people of the Nation as a defense measure. The young men of the Nation, who were given absolutely no chance to vote on the measure, were told repeatedly that their term of service or training would be for 1 year.

Mr. Speaker, it seems our defense measures of last year are slowly maturing into war measures this year. The boys who were taken into the service ought not be made the victims of the clique in this Government who see Hitler and his armies knocking at our gates, although the Atlantic still separates us from the graveyards of Europe and Asia. We ought to play fair with the selectees and let them know that they will be discharged when their year's training period has ended. Congress has neither moral nor legal right to declare a phony emergency just to give this administration the right to keep these boys in uniform.

Mr. Speaker, if we need more trained men, all we need to do is to draw on the latest registrants promptly, and within 3 months we will have men sufficiently trained to replace the men whose term of duty under the Selective Service Act will be at an end. If we follow this procedure, we will need to discharge only

13,800 selectees in November, 5,521 in December, and 73,633 next January. By February the replacements will be 90,000; March, 150,000; April, 130,000; May, only 50,896; and, if we have not gotten over the emergency by that time and the country is not completely broke, we can start all over taking in new men and releasing those who have been trained. This is the fair way, this is the sensible way, and this is the American way to train our men in time of peace. By this method we will soon have a very great army of trained reserves.

I understand that the President intends by means of radio to try to arouse the country and bring pressure to bear upon Congress to hold draftees more than 1 year. It appears to me that if the country really faces a great emergency, it would be better for the President to talk frankly with Congress in an executive session behind locked doors and give all the facts. All Members of Congress are under oath to protect and defend the country and have at least as much respect for their oath as the President. Unless I have proof that my country's safety would be jeopardized by failure to retain selectees beyond 1 year, I shall vote against doing so.

America's Relation to World Affairs

REMARKS

OF

HON. WALTER M. PIERCE

OF OREGON

IN THE HOUSE OF REPRESENTATIVES

Monday, July 21, 1941

Mr. PIERCE. Mr. Speaker, recently a very fine and thoughtful speech was delivered before the Oregon State Grange by the publisher of the Portland Oregonian, Mr. Palmer Hoyt. He clearly shows the present condition of the world and what should be our position in regard to it. I desire to share this with others throughout our country, because I am convinced that it will help to stabilize the thought of the country in relation to the necessity of our defense program.

The article I referred to follows:

[From the Oregon Grange Bulletin of July 5, 1941]

AID TO BRITAIN IS NECESSARY, SAYS NOTED PUBLISHER

(Address of E. P. Hoyt, publisher of the Oregonian, presented at State Grange session at Newport June 17)

I want to talk to you today not about farm matters but, rather, about the national crisis in which we find ourselves. It is very important to me that I give you clearly my views on the various aspects of the greatest emergency in which America has yet found herself. It is very important because if America is to be saved it will be because you are thinking clearly and realistically and because you are able to see the problems we face without the roseate glow of false hope and wishful thinking.

To me it is more than unfortunate—it is a national tragedy that many of our leaders are today dealing with half truths, arguing about things that have never happened and debating hopes for the future that have no roots in the past. I refer specifically to men like Senator Burton K. Wheeler, Col. Charles A. Lindbergh, Senator Gerald Nye, and Representative Martin L. Sweeney, of the Seventeenth District of Ohio.

It is very unfortunate that these mighty voices are not raised in criticism of the administration for failure to proceed more rapidly with the settling of strikes and the production of armaments. It is tragic that these voices are not raised to urge immediate ceilings on wages, profits, and prices. That they are not questioning the type of army we are raising today, and that they are not demanding further recessions in Government spending aside from defense.

It is unfortunate indeed that they see fit to debate nightly whether or not we will engage in World War II. Such debate is the epitome of futility because we are actually at war with the Axis Powers and have been for months.

It is more tragic than regrettable that these national leaders choose to ignore that America is threatened, even as we talk here today, on every side. Potentially and actually the world has changed from our concept of that world. We are on the "wave of the future," but it is not the wave that the wishful-thinking Mrs. Lindbergh would have you believe. It is a wave of barbarism—the wave of Attila the Hun—a wave armed with new techniques, armed with ability for destruction beyond our powers to conceive only 10 years ago.

WAVE OF FUTURE, WAVE OF DESTRUCTION

The "wave of the future" is the wave of destruction that must be curbed if the world of free men is to survive.

It is more than unfortunate that men of the caliber of those leaders mentioned should make this type of statement to millions of listeners over a national hook-up. And I quote the substance of the statement to which I refer: "I would rather see every bit of material provided by the $7,000,000,000 of the lease-lend bill sunk and in the bottom of the Atlantic Ocean than to see 7,000,000 young Americans dead on foreign shores."

And who wouldn't?

But the tragic fallacy of the statement lies in its false and stupid implications. This is not an era of large expeditionary forces—the war technique of 1941 is not that of 1914. Categorical comparisons cannot be made between these wars. Why then, do men of such prominence insist on making them? I do not know, but at least I hope their motives are sincere and patriotic regardless of how far afield their reasoning may take them.

At the present moment this country is divided into two great camps. In the one camp are the gentlemen mentioned above, some 30 percent of our newspapers, and a like percentage of our population. In this isolationist group are many sincere people—honest people who believe either that we can ignore the rest of the world, or that Mr. Hitler will keep his promises, or that Mr. Hitler truly has no ambitions in the Western Hemisphere.

On the other side, in the so-called interventionist camp are the administration, Wendell Willkie, and Thomas E. Dewey representing the Republican Party, some 70 percent of our newspapers, and two-thirds of our people. They believe that America cannot desert the human soul; they believe that freedom is something not lightly to be discarded; they believe that Mr. Hitler will not keep his promises and that he has every intention of conquering the New World economically, and if necessary by force of arms; they do not believe that the statement: "Since we are not threatened by immediate invasion we should do nothing" can apply to our Government the situation in which we now unhappily find ourselves.

In the history of the world this day, June 17, is an historic one, for it was only a year ago that France on this day formally sued for peace, and on June 22 the armistice was formally signed in the forest of Compiègne. Less than a month before June 17, 1940—on May 21—Paul Reynaud, Premier of France, made a brilliant and historic speech before his country's senate.

Premier Reynaud's address was in itself an historic event because it was the first official admission by the French Government that their case was all but hopeless. The day before the onrushing German war machine had opened a breach of 62 miles in the French lines * * * Arras and Amiens had fallen.

The French Army of 5,000,000 men, considered by military experts to be the greatest army in history and the greatest army in Europe, was hopelessly beaten. A million and a half men of that fine French Army, inadequately armed, led by hopeless and inefficient officers, were in full retreat. It was, perhaps, the blackest situation that France had known in its long and varied history. And with that historic day, May 21, came the first nation-wide knowledge that France, long a world power, faced an enemy so strong as to make further resistance all but useless.

M. Reynaud's official pronouncements to the French Senate came like a death knell when he said:

"The truth, gentlemen, is that our classic conception of the conduct of war clashed with new conceptions. The basis of these new conceptions are not only mass uses of armored divisions, there is not only cooperation between armed divisions and fighting planes * * * there is a determination to disorganize an enemy in the rear by deep thrusts, by parachutists, who in Holland almost took the Hague, and who in Belgium took the most powerful of the Liege forts by orders given on telephone lines which caused premature evacuation."

This was the first official admission that France was not prepared by equipment, by understanding, by tactics.

In this historic speech the French Premier said: "France and England cannot be beaten; they cannot be beaten if they cannot die."

If I were told that a miracle was needed to save France, I would say, "I am a believer in miracles."

I believe with Premier Reynaud that France cannot die; that England cannot die; that France will live and that England will live. And I, too, am a believer in miracles.

There will be a miracle and you are that miracle. You and the millions like you who are the strength of America * * * for America itself is a miracle.

America is the living shrine of human freedom.

America is God's pledge to civilization of the dignity and freedom of the human soul.

The United States of America was founded and a war was fought because our forefathers believed tremendously in freedom. And we have enjoyed that freedom * * * that great freedom. And today, in this calm and peaceful spot in the center of one of the most beautiful areas in this America of ours, may I suggest that such freedom as we have enjoyed connotes and implies great responsibilities.

There are many reasons why America cannot sit idly by and see freedom pass from the rest of the world. One of these reasons is very selfish * * * for if freedom passed from the rest of the world then it would surely pass from this, its last and greatest stronghold. And if freedom passed, so would pass the civilization that you and your fathers and your forefathers have known and fought for.

In the issue of your own Grange Bulletin for May 20 your State master, Ray W. Gill, made comment relative to some of the basic issues involved. His statement thrilled me and encouraged me, coming as it did from

the head of the Oregon State Grange. I quote in part:

"As a Christian people we still must hold for right as against wrong. The innumerable wrongs committed by Hitler must not dull our sense of right or wrong, and yet these wrongs have become so commonplace that we stand in that danger. A Christian faith can only be properly maintained where truth and right are recognized by governments. As much as we hate wars, we know that Christianity has emerged from the bloody battlefields of history. These wars waged around the right of peoples to worship God according to the dictates of conscience. Christianity cannot long survive in a Hitler-dominated world. He cannot or will not discern between right or wrong. His victory would revive the bloody religious wars of the past, for freedom of religion would again become the issue."

But those freedoms will not pass, the freedom of religion, the freedom of assembly, the freedom of expression, of speech, and of the press, freedom to be governed by designated representatives. These things will not pass, for there will be a miracle, and you are that miracle—you and the countless millions like you.

In America we have a manner of life which has come to be called the American way. It is not a life that we want to die because of, but it certainly should be a life we are willing to die to preserve.

What manner of man is this Hitler, who has challenged not only the American way but the right of all men everywhere to live in freedom?

The best illustration I know is the one cited by the distinguished newspaperwoman, Lillian T. Mowrer, in her book, Journalist's Wife. She tells of an incident in Paris in 1935 after she and her distinguished husband, Edgar Ansel Mowrer, had been evicted from Germany for telling the truth, a habit which has never been popular with Mr. Hitler. After their arrival in Paris the Mowrers were invited to an evening salon which was crowded with diplomats and correspondents from all over Europe. Mowrer was picked out by a German count, turned Nazi, who insisted on knowing whether or not Mowrer believed that Hitler was the greatest leader of the world. Mowrer walked away from the count several times but finally turned on him and said: "Yes; I think Hitler is the greatest leader the world has ever known—to lead the people of the earth back to the trees!"

And I think there was not as much exaggeration in Mowrer's cryptic and pointed remark as it would seem at first flush. Already, in many parts of the world, men are cowering underground while sudden death bursts above them with an intensity not even imagined before.

More than a year ago Dr. Arthur Compton, noted American scientist, suggested that science had better be controlled by men of good will in the future or that perhaps the civilization that we have known might be destroyed. In other words, the world today finds itself in a position analogous to that of the fiction scientist who created Frankenstein, a horrible monster, a monster that eventually destroyed his family and himself.

When Attila overran civilization with his Huns, they were truly barbarians and equipped only with the most primitive weapons. This modern Attila of 1941 is at the head of a civilized people with barbaric instincts. The weapons of sudden death and destruction, with as yet untold implications of slaughter placed in their hands by science, make these new Huns even more dangerous to civilization than was Attila.

The thought that if Hitler continues until he has physically conquered the world, and thus will destroy civilization as we know it, is now generally accepted. In whatever way we can accomplish it, our task is to prevent just that.

ARE WE IN DANGER?

May I give you Hitler's box score to date, since the outbreak of the war in September 1939:

Country and days to conquer:

Poland	28
Denmark	hours 11
Norway	24
The Netherlands	4
Belgium	18
Luxemburg	hours 18
France	39
Yugoslavia	13
Greece	17

In addition, Germany has by military and diplomatic pressure taken sovereignty over Austria, Czechoslovakia, Rumania, Hungary, and Bulgaria. Total of nations overrun and held by Germany—14.

You will note that most of these countries are democracies. By quick computation you will realize that there are very few democracies left in the world. Democracies in general are Mr. Hitler's hate—and particularly is it true of the United States.

As H. V. Kaltenborn recently said over the air: "Hitler already hated the United States in 1932 when I first visited him. He said more recently than that:

"'I will not have to defeat America. * * * The confusion my agents will cause will make America defeat herself.'"

America is liberally mentioned in Hermann Rauschning's book and in this documentation of Hitler's talks the eventual conquering of this country is forecast. His dupes and agents are now working in the United States, and they are going on working until he is ready to strike. Hitler actually is making war on us now but he is doing it in secret. And as Mr. Kaltenborn points out, he can accomplish far more against us while diplomatic relations remain unbroken.

Hitler's own explanation of his intent, as quoted by Rauschning in his Voice of Destruction, is:

"Revolutionary propaganda must function before my army acts. We shall have friends in the land of the enemy. They will help us. Confusion, contradiction, uncertainty, panic * * * those are our weapons. I have learned something from Bolshevism, and I am not ashamed to say so. Study intrigue and revolutions. Then you will know our task. Seizure by surprise, terror, sabotage, attack from within * * * that is the war of the future."

As Mr. Kaltenborn pointed out, it sounds fantastic. But we know that it worked in Norway, Holland, and France, in Rumania, Bulgaria, Yugoslavia, and all the rest of the countries.

Yesterday was an historic day in America, too. For it was yesterday that formal notice was given to Germany that they must close all consular offices, eliminate their propaganda news services, and close the German library of information. This should have been done before because German consular offices have become nothing more than espionage headquarters. And under the cloak of diplomatic immunity they have conducted and carried on activities aimed directly at you, the people.

They have been carrying on a basic Nazi principle of war as clearly outlined by Col. Hermann Foertsch of the German general staff, in his article, Heart of Modern Warfare.

"To render an opponent defenseless means to rob him of his will, * * * everything that affects his will and his means to fight must be struck at, not only his military but his moral, spiritual, and economic forces, in which is entire political power."

Hitler, of course, goes much further than his staff tactician; his methods include bribery, blackmail, assassination of lives and of characters, with everything synchronized and calculated to destroy the enemy from within. All of the "fifth column" activities Hitler has used so successfully are being employed now in the Americas, or will be when the need seems to arise.

Basically, Hitler's formula is very simple. It is the use of methods which placed him in supreme power in Germany, with the aid of many of the very men and the very persons he later destroyed, such as Fritz Thyssen. One of the amazing factors of Hitler's march over Europe has been the aid given his conquests by countries who felt they were not yet in danger. For example, Bulgaria aided in the dismembering of Rumania; Hungary and Poland helped conquer Czechoslovakia; Czechoslovakia remained neutral when Austria was invaded and thereby sealed her fate; and England and France were of the greatest help up until Poland was invaded. The Netherlands and Belgium got completely in line when Norway was invaded, instead of allowing Allied troops to come in to defend their borders.

The use of such tactics has been profitable in democratic countries because Hitler has been able to camouflage his real objectives and to influence enough influential people so that his real objectives could always be safely veiled.

There is no question but what one of the bases of the deal between Stalin and Hitler was the use of the Communist Party line in invading American industry and providing England with the tools of war. This slowing-down process has not been as effective as Hitler hoped, but it is far too effective for our own safety, as witness the strikes now on today.

The attitude of the strike leaders in the North American Aviation shut-down was almost beyond belief, if one is to judge by simple American standards. The messages of President Orton of the I. W. A. and the striking machinists in San Francisco seemed little short of treason—statements typical of Communist Party line tactics. Thus the "com-rats" and the "commu-nazis" work.

What can we do to be saved?

As I see it, the problem is hydra-headed:

First, there is the problem of aiding Britain. And I say to you who are anti-British and who are Anglophobes, visualize a world without a British Empire; visualize America alone in a world of totalitarianism. The picture is not pretty, and I can tell you that in such a case, despite the brave words of Colonel Lindbergh and Senator WHEELER, America would be crushed either by the weight of arms manufactured by hundreds of millions of slave states or by the weight of economic destruction.

Then there is the problem of our internal economy. It would be useless for us to save democracy if in saving it we lost our own. And tied in closely with our democracy is our problem of economy. This country could not, in my judgment, pass through a war crisis and an inflation at the same time.

And there is also the problem of unity. This country is not only threatened from without, it is threatened from within.

There is the problem of diverse interests, the problem of labor, the problem of capital, and in a general way the problem of production. Closely allied to that is the problem of sabotage, the "fifth column," and the Communist Party line.

Ladies and gentlemen, these are not bugaboos; these are actual dangers which we face, and serious problems. In this connection I commend your attention to two articles in the current Readers' Digest. One by Stanley High, pointing out under the title "Rehearsal for Revolution," that the Allis-Chalmers strike for 73 days tied up for that length of time one-third of our vital defense industry; it was not a strike for wages and hours, but it was a strike planned in 1936 and executed in 1941 as a part of the Communist Party program. We will have more of these unless our Government acts.

I am firmly convinced that part of the deal between Mr. Hitler and Mr. Stalin was the use of the Communist Party line in delaying and sabotaging American industry in this time of vital need.

I commend also for your attention an article by Mr. Thurman Arnold, Assistant Attorney General of the United States, in the same issue of Readers' Digest, entitled "Labor's Hidden Hold-up Men," which points out the dangers to industry by the current practices of A. F. of L. unions in demanding high entrance fees into the unions and demanding the presence of men on jobs to fill arbitrary requirements rather than actual needs

Labor presents a problem; and a problem is not born of the average American workingman but created by venal leaders and those loyal to another form of government than our own.

What can we do to be saved?

First. We can enter into the greatest production the world has ever seen; and thus supply England on the first line of defense against the horrors of barbarism with the vitals of war.

Second. We can stop labor racketeering and check the work of Communists and Nazis in labor.

Third. We can, and immediately, put a ceiling on wages, on profits, on prices, to insure against strikes, against inflation, and against profiteering in a national emergency.

Fourth. We can immediately and without further adieu suspend trade relations with unfriendly countries, such as Japan and Russia, allies of Germany, a nation with which we are already actually at war.

Fifth. We can urge our Senators and Congressmen to take their heads out of the sand and, instead of wasting their time arguing against a war in which we are already engaged, demand of the administration that that war be carried on efficiently and speedily; and that pork barreling and boondoggling be halted during the period of emergency.

Let us go back again for a moment to the isolationists and one of their principal spokesmen.

Let us say that Col. Charles A. Lindbergh is sincere. Then his statement of the other night on the radio that new policies are needed in Washington and new leadership are definitely un-American, too, since we cannot have new leadership until we have another election. That is, we cannot have new leadership without revolution.

The Nazis and their allies, the Communists, are working rapidly and effectively in the Americas today. They pack America First meetings; they are responsible for many of the rumors concerning high-ranking American officials; they are responsible for reports which seem to reach and influence many prominent American businessmen, that the Nazis are really not friends to the Communists; they are responsible for continued race hatreds and religious bigotry.

You may gather from the foregoing remarks that our outlook is pretty hopeless; that the future is dark and gloomy. I do not believe that. I think the future is full of hope and that that hope is America.

The future is full of hope if America is able to do the Herculean job she faces—if America does not try to avoid her destiny.

It seems to me increasingly so that there are many bright spots in our economic future. It is not true that a depression will necessarily follow this, our battle for freedom. If the democracies win, and they must win, many multibillion-dollar tasks face the world, and particularly this country.

Just to cite a few of the more immediate and probable jobs to be done: The physical reconstruction of Europe is in itself a multibillion project. China, which now enters into its industrial revolution and into its renaissance, is another great field. In South America, expansion of American trade and American ideologies presents remarkable possibilities.

One of the most cogent factors in America's reconstruction must be the bringing of South America into more complete understanding of democracy, so that foreign "isms" will find the soil there as barren to the enemies of the human soul as we hope to make America's.

Yes, the world is full of hope—and you are that hope.

H. G. Wells is credited with the statement that ours is a generation which has an appointment with destiny. There are few to doubt that statement, nor can we avoid that destiny.

In that connection I want to tell you a little story which appears in one of Somerset Maugham's books. It is the story of Sammara. It seems that a merchant from Bagdad sent his servant to the market place to purchase the day's supplies. In a little while the servant returned, white and trembling. He said: "Master, may I borrow your horse that I may ride away?"

The master said: "What has happened?"

The servant replied: "I went to the market place as you ordered, and there I saw an old woman and she was Death, and she made a threatening gesture at me. Now I want to borrow your horse and ride away to Sammara that I may avoid my destiny."

And so the merchant gave the servant his horse and the servant rode away as fast as he could to Sammara. A little later the merchant, curious as to what had happened, went down to the market place and there he saw the old woman who was Death. He approached her and said: "Why did you threaten my servant?" The old woman answered: "I did not threaten your servant. When I saw him I made a gesture. It was a gesture of surprise, because I had an appointment with him in Sammara tonight and I wondered what he was doing in Bagdad."

Let us remember what Wendell Willkie said only recently:

"The world cannot live without the United States of America."

And let us go a step farther and remember that the United States of America cannot live without the rest of the world.

Blaine-Conkling Debates

EXTENSION OF REMARKS

OF

HON. ALBEN W. BARKLEY

OF KENTUCKY

IN THE SENATE OF THE UNITED STATES

Monday, July 21, 1941

CLIPPING SENT BY C. C. JUSTUS, KNOXVILLE, TENN.

Mr. BARKLEY. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD a newspaper clipping sent to me by Mr. C. C. Justus, county historian and vice president of the East Tennessee Historical Society, giving an account of the debates between Roscoe Conkling and James G. Blaine.

There being no objection, the clipping was ordered to be printed in the RECORD, as follows:

SEEN AND HEARD

(By J. A. Dunn)

The famous Blaine-Conkling quarrel reached its climax in the House of Representatives on April 24, 1866, when the House resumed its consideration of the bill entitled "An act to reorganize and establish the Army of the United States." Mr. Conkling objected to the twentieth section, which provided for the creation of a provost marshal-general on the ground that it created an unnecessary office for an undeserved public servant. Gail Hamilton gave the following account of the origin of the quarrel of these noted men, as follows:

"It may be mentioned," says the biographer, "that the officer who was so obnoxious to Mr. Conkling had been assigned to western New York by General Fry. In the debate which followed, Mr. Conkling lost his patience to the point of direct and simple fire. He said among other things, 'I do not wish to have anything to do with the Member from Maine. Mr. Speaker, if he had the least idea of how profoundly indifferent I am to his opinion upon the subject he has been discussing, or upon any other subject personal to me, I think he would hardly take the trouble to rise here and express his opinion. I submit the whole matter to the Members of the House, making, as I do, an apology for the length of time which I pronounced the other day ungentlemanly and unparliamentary, and which had nothing whatever to do with the question.'

"Mr. Conkling was alluding to an interruption made by Mr. Blaine to some of his (Conkling's) statements. Mr. Blaine then arose, and turning directly to Mr. Conkling, there came one swift downpour of scorn for scorn.

"Mr. Blaine replied:

"'As to the gentleman's sarcasm, I hope he will not be too severe. The contempt of that large-minded gentleman is wilting, his haughty disdain, his grandiloquent swell, his majestic, supereminent, overpowering turkey-gobbler strut has been so crushing to myself, and to all the Members of the House, that I know it was an act of the greatest temerity for me to venture upon a controversy with him.'

"Referring then to a chance newspaper comparison of Mr. Conkling to Henry Winter Davis, he continued: 'The gentleman took it seriously, and it has given his strut additional pomposity. The resemblance is great; it is striking. Hyperion to a satyr, Thersites to Hercules, mud to marble, dunghill to diamond, a singed cat to a Bengal tiger, a whining puppy to a roaring lion! Shade of the mighty Davis, forgive the almost profanation of that jocose satire!'

"The House of Representatives proved to be children of a larger growth. It listened to every word and shouted its inextinguishable laughter."

Salvaging Physicaliy Disabled Persons

EXTENSION OF REMARKS

OF

HON. ROBERT R. REYNOLDS

OF NORTH CAROLINA

IN THE SENATE OF THE UNITED STATES

Monday, July 21, 1941

ARTICLE FROM WASHINGTON SUNDAY STAR

Mr. REYNOLDS. Mr. President, I ask unanimous consent that there be inserted in the Appendix of the RECORD a very interesting article from the Sunday edition of the Washington Star of April 20, 1941, entitled "Salvaging of Physically

Disabled Presents Possibilities for Defense Program."

There being no objection, the article was ordered to be printed in the RECORD, as follows:

[From the Washington Sunday Star of April 20, 1941]

SALVAGING OF PHYSICALLY DISABLED PRESENTS POSSIBILITIES FOR DEFENSE PROGRAM—REHABILITATED PERSONS BECOME ASSETS OF NATION INSTEAD OF EXPENSE TO COMMUNITY—COST OF SUPPORTING ADULTS IN IDLENESS IS BALANCED AGAINST LATER EARNING CAPACITY

(By David Amato)

John Ruskin once wrote: "This is the help beyond all others—find out how to make people useful, and let them earn their money instead of begging for it." Guided by such wisdom, the States and the Federal Government have vocationally rehabilitated and made self-supporting almost 150,000 physically handicapped persons in the past 20 years.

Although all of the States, the District of Columbia, Hawaii, and Puerto Rico have now accepted the National Rehabilitation Act of 1920, there are many people who are not familiar with the fact that their States are engaged in salvaging the economic and human waste resulting from physical disabilities. While much has been said and done for the conservation of our national resources, each State division of vocational rehabilitation, in cooperation with the Division of Vocational Rehabilitation of the United States Office of Education, has been carrying on a small and little-heard-of program of conservation of human energy and manpower. At first it was conducted as a temporary program, but its success in transforming human liabilities into assets was quickly recognized. In 1935, through a provision in the Social Security Act, vocational rehabilitation of physically handicapped persons was made a permanent Federal-State program.

In view of its success in the past, vocational rehabilitation presents interesting possibilities for the national-defense program. From all reports, the totalitarian countries of Europe have been very successful in training handicapped workers for noncombatant, home-defense service. Prompted by labor shortages rather than humanitarian motives, these countries have discovered that such workers could be used to replace the able-bodied workers drafted into the military service. The British Minister of Health proposed before the House of Commons a program of rehabilitation as a means of increasing the supply of labor and absorbing the physically handicapped in industry. Commenting on rehabilitation as a defense measure, the Economist, published in London on November 2, 1940, has the following to say: "Rehabilitation has been defined as 'the process of reconditioning which will be required in certain cases after clinical treatment in order to obtain full restoration of working capacity.' It means more than medical recovery; it involves not simply patching up the injured person at home or at a clinic, but seeing that his ability to work is restored. Its importance is not simply humanitarian. It is economic, and the bringing back of disabled men and women into work with full output and full earnings was never more needed than at this stage of the present conflict of industrial manpower."

The most convincing argument for vocational rehabilitation of the handicapped is the fact that it costs from $500 a year upward to support a disabled adult in idleness, whereas a single expenditure of $300 or less could make him self-supporting. Besides eliminating the high cost of institutional and private care, the rehabilitation of the handicapped adds millions of dollars annually to the national wealth. The average earnings of a disabled worker after rehabilitation are about the number rehabilitated in the last 20 years, $1,000 a year. If this figure is multiplied by the earnings of such workers become an annual income of about $150,000,000 instead of an expenditure of roughly $75,000,000 for their care. The total Federal-State expenditure for the year 1940 (which was the highest since the inception of the vocational rehabilitation program) was less than $5,000,000.

More emphasis has generally been placed on the correction of the physical disability than on the elimination, insofar as possible, of the vocational handicap. This partly explains why not more than 20 percent of all handicapped persons eligible for training are being vocationally rehabilitated. Once the physical disability has been treated, the central problem is that of restoring earning capacity so the handicapped person may become self-supporting. When able to earn a living and care for himself and his family, he is no longer a problem for public or private charity. He becomes a social and economic asset instead of a liability.

Vocational rehabilitation is accomplished by providing for the individual one or more of the following services: First, vocational guidance in the selection of a suitable type of employment; second, physical restoration, that is, surgical or medical treatment when the disability can be reduced or removed, or provision of an artificial appliance to restore the impaired function; third, vocational training in the occupation at which it has been determined the person can work despite his handicap; fourth, assistance in securing employment in the occupation for which the person has been prepared. These services enable physically disabled persons to fill high-grade positions demanding ability and experience as well as other types of jobs. Because of the scientific treatment of the training and placement problems of the handicapped, it is not surprising to find that this type of worker is often more successful in his work than the able-bodied. He is trained and placed in a job where his disability would least interfere with the performance of the normal duties required. Experience shows that certain types of disabilities are adaptable to certain types of jobs. This not only reduces to a minimum the accident risk and its costs but also reduces labor turn-over.

RECORD APPROVED

The actual performance of handicapped persons in a large manufacturing plant was shown to be very favorable. A comparison was made of about 685 disabled workers with a similar group of nonhandicapped employees doing the same type of work. Registrations, absences, and discharges for cause were found to be from 7 to 8 percent higher among the nonhandicapped, while there were 5.6 percent fewer accidents among the disabled. A slightly higher percentage of the disabled (4.6 percent) as compared with the nonhandicapped (4 percent) received increased earnings.

To encourage the employment of disabled workers, most of the States have adopted a second injury provision in their workmen's compensation laws. In these States the employer of a person who has been handicapped by a previous injury is only liable for the disability caused by the second injury. Fifteen of them have adopted a second injury fund, and in these States compensation for the disability resulting from the combined first and second injury is paid from the second injury fund. The initial rate of compensation insurance for an employer is generally fixed for the industry and the total cost is based on the number of employees, occupations, and pay roll. No information is generally required regarding the physical condition of the employees. The rate is later adjusted on the basis of the experience of the company. The claim that the experience is poor if handicapped persons are employed has not been substantiated. The Ford Motor Co., as an example that the contrary is generally true, employes over 10,000 physically handicapped workers and reports that it has the lowest compensation insurance rate in the automotive industry.

One of the reasons why the seriousness of this social problem has been minimized is that society has not realized its extent. In sizing up the situation, many of us have thought in terms of the scattered cripples who have been selling papers or shoestrings on the street corner or of only those who become handicapped through infantile paralysis. The plight of the many thousands who become disabled each year through diseases and injuries, both industrial and nonindustrial, has not been fully appreciated.

DEFECTS SHOWN

One of the most recent studies on the prevalence of disabilities was conducted by the United States Public Health Service in a national health survey. From the data gathered by this survey it is estimated that 23,000,000 persons, or more than 1 person in 6 in the United States, have some chronic disease, orthopedic impairment, or serious defect of vision or hearing. Of course, not all of this number need vocational rehabilitation. It is estimated, however, that at least 3,000,000 of this group are in need of self-supporting employment. According to another estimate, 800,000 persons become permanently handicapped every year. Of this number, roughly 1 out of every 8 can be made employable with proper guidance and training. Estimates show that the number of seriously disabled increases as the income level decreases. Accordingly, the need for vocational rehabilitation and the benefits of possible employment are greater among the lower income groups.

One of the principal reasons why we have not recognized the problem of the growing number of handicapped people is that we have been thinking principally of returning the able-bodied to gainful employment rather than retaining the worker who has become disabled. We have been inclined to overlook the possibility that a large number of the unemployed may not be working because of serious handicaps. Estimates of the number of seriously disabled persons on relief in the urban population run as high as 25 percent. In times of economic depression the number of persons listed as handicapped increases. During prosperous times many of these persons are absorbed in the economic picture and therefore do not present an acute problem to the community. They are, however, the last to be rehired, just as they are the first to be dismissed.

TRAINING PROGRAM

The success of the Federal-State vocational rehabilitation program can well be taken as an index of the practicability of such training for national-defense purposes. Such a training program would be effectuated by making funds available for the expansion of the present vocational rehabilitation programs of the States. It would cover training in many of the 127 different types of jobs now necessary in the defense industries and training in purely nondefense jobs to replace the able-bodied in case of a national emergency.

The types of training provided under a defense program would be based largely on the supply of and demand for certain jobs not only during the national emergency but also in normal times. This would insure employment of these individuals after the crisis is over. Such a program would make available a supply of workers already exempt by law from military service.

Extension of Service of Members of Military Service

EXTENSION OF REMARKS

OF

HON. JOSH LEE

OF OKLAHOMA

IN THE SENATE OF THE UNITED STATES

Monday, July 21, 1941

ARTICLE BY WALTER LIPPMANN

Mr. LEE. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an article by Walter Lippmann appearing in the Washington Post entitled "The Army in the Hands of Congress," which is most appropriate in view of the message from the President of the United States read to the Senate today.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

[From the Washington Post]

TODAY AND TOMORROW

(By Walter Lippmann)

THE ARMY IN THE HANDS OF CONGRESS

There is not the slightest ground for recrimination over General Marshall's request that Congress should extend the service of the men in the Army. In enacting the Selective Service Act Congress expressly laid down the rule, as a matter of fact by amending the original bill, that Congress and not the President would determine whether the men should be held for more than 12 months. They can be held only when "the Congress has declared that the national interest is imperiled." In conformity with the law General Marshall has now gone back to Congress.

The law, which now requires General Marshall to ask Congress for new authority, is entirely in accord with the spirit and intent of the Constitution and with the traditions of liberty in the English-speaking countries. The ultimate control of the Army is the historic power by which the legislature opposes usurpation at home or wars of conquest abroad. This, rather than the somewhat academic and legalistic power to declare war, is the effective power of the representative legislature in the whole process of wa. and peace. In reserving the right to say whether the Army authorized a year ago is now to be maintained, or reduced, or even in effect largely disbanded as an effective force, Congress was assuming a responsibility which in any free country ought to rest upon the legislature. The American Army is commanded by the President. But it can exist only by authority of Congress. What Congress willed a year ago has now happened: the future of the Army is in the hands of Congress.

Once the Members of Congress have studied General Marshall's testimony there is little doubt that they will not wish to repeat in this crisis the errors of every other Congress in every other crisis in our history. This is the first crisis in which we have seriously prepared for war before war actually began, and Congress, considering that there was an election in progress last summer, has already shown greater foresight and courage than any other Congress in any similar period in our history.

But if by any chance it now refuses General Marshall's request or subjects it to emasculating amendment or filibustering debate, Congress will be repeating the errors which in 1776 and in 1861, not to speak of 1812, caused immense unnecessary sacrifice and very nearly led to disaster. The problem of the short enlistment, which now troubles General Marshall and threatens to disrupt the whole Army, was the main military trouble which beset Washington in the Revolutionary War and Lincoln in the Civil War. Before any conscientious man ventures to oppose General Marshall's request he should read the history of the Army in time of war as set forth, for example, in General Upton's The Military Policy of the United States and the recent book by General Palmer on America in Arms.

Washington's Continental Army was composed of volunteers from the militia of the States, and in the beginning Congress insisted that the Continentals should be enlisted for 1 year instead of for the duration of the war.

"Due to this folly," says General Palmer, "it was necessary to train a new army each spring. * * * It was Washington's opinion that but for this stupid decision * * * the war would have ended in decisive American victory before the winter of Valley Forge."

What Washington though of the 12-month enlistments is to be found in a letter to the President of Congress dated August 20, 1780. There is not space to reprint all of it, though all of it is well worth reading today: "Had we formed a permanent Army in the beginning, which, by the continuance of the same men in service, had been capable of discipline, we never should have had to retreat with a handful of men across the Delaware in 1776, trembling for the fate of America, which nothing but the infatuation of the enemy could have saved; we should not have remained all the succeeding winter at their mercy, with sometimes scarcely a sufficient body of men to mount the ordinary guards. * * * We should not have been under the necessity of fighting Brandywine * * * of seeing Philadelphia fall a prey * * * we should not have been at Valley Forge. * * * There is every reason to believe the war has been protracted on this account. * * * The fluctuations of our Army kept alive their (the enemy's) hopes and at every period of the dissolution of a considerable part of it, they have flattered themselves with some decisive advantages."

This same story was repeated, perhaps even more disastrously, in 1861. There were in the Army then about 200,000 volunteers for the term of 3 years and about 75,000 militia with a 3 months' term of service. One can appreciate the feelings of General Marshall today when one reads the following from a dispatch of General Patterson, commander of the Army of the Shenandoah, on June 28, 1861: "I beg to remind the general in chief that the period of service of nearly all the troops will expire within a month. * * * The new regiments will not be fit for service before September, if then, and meanwhile this whole frontier will be exposed."

The disastrous and humiliating Battle of Bull Run, which very nearly resulted in the loss of the war, was almost certainly precipitated because the Army was melting away. It was certainly lost because on the day of the battle "some of the volunteers and militia had been mustered into the service less than a month; the term of service of all the regiments of militia was on the eve of expiring." Thus, "discipline, the only sure bond of cohesion, was entirely lacking." (Upton, p. 246.)

With the record of the past before it, with the position today set forth by General Marshall, there should be no reason to fear that this Congress will refuse to do its duty in accordance with the responsibility it has expressly accepted. Unlike any other Congress, and to its everlasting credit, this Congress raised an Army to prepare for war before the outbreak of war. There is no reason to suppose that in the situation which now exists the Congress will listen to those who ask it to refuse to maintain the Army which it raised.

Comments of Col. Josiah C. Wedgwood

EXTENSION OF REMARKS

OF

HON. BURTON K. WHEELER

OF MONTANA

IN THE SENATE OF THE UNITED STATES

Monday, July 21, 1941

ARTICLE FROM WASHINGTON TIMES-HERALD

Mr. WHEELER. Mr. President, I ask unanimous consent to have placed in the RECORD an article published in the Washington Times-Herald of Saturday, July 19, 1941, entitled "A British Official Tells This Nation Where to Get Off."

There being no objection, the article was ordered to be printed in the RECORD, as follows:

[From the Washington Times-Herald of July 19, 1941]

IN THE NEWS—A BRITISH OFFICIAL TELLS THIS NATION WHERE TO GET OFF

We have been honored by a visit from a typical member of the British ruling classes.

He is Col. Josiah C. Wedgwood, of the Wedgwood porcelain family.

He is likewise a member of the British Parliament.

He tells us all about our American business—"where we get off," when we get off, and how we get off.

We are punks.

We are too slow.

Colonel Wedgwood wants to give us the "bum's rush" and throw us out of our peace, out of our independence, out of our public welfare, out of our free institutions, into the gutter of war.

He allows of no argument.

He says:

"This is your war and you are in it up to your necks."

He continues:

"The trouble with you Americans is that you are afraid to assume responsibilities."

Friends and fellow Americans, we sort of thought that we had assumed quite a lot of responsibilities during the last war that England was in.

And that we had assumed obligations, too—obligations of foreign nations that were in no way ours and debts that were theirs but were repudiated, and damages and depressions, too, that we have never been able to recover from.

And we thought we had conferred quite a few boons and benefits, especially upon England, pulling John Bull out of the bloody mess he had gotten himself into, and putting his topper back on his head, and dusting off his clothes, and wiping his bruised nose, and standing him back on his unsteady feet.

For all of which we were called "Uncle Sap"—and rightly so called.

Now comes this British warrior and statesman and crockery manufacturer and shows us up.

He tells us how wrong we are, and have always been, and how only our President

is willing to assume "a large share of responsibility"—which he certainly is overwilling to do, and has considerably overdone.

Then this British member of Parliament asks us why we have not got a "sensible Congress," and says:

"In England all the best people (including Colonel Wedgwood, of course) go into Parliament."

But, remarks the colonel disparagingly:

"They don't try to go into Congress here."

Then Colonel Wedgwood, warrior, diplomat, and parliamentarian, tells Senator WHEELER "to go soak his head," and says:

"I would be glad to see physical intervention (of America in the war) tomorrow," and further says:

"I would like to see American troops fighting beside ours, flying American planes, sailing American ships over and in the war zone."

The "Union Now" movement, declared Colonel Wedgwood, is "far more advanced" in England than in the United States.

"The people (in England) are ready for it now.

"We've all got to hang together or we will hand singly," says the colonel, adopting Benjamin Franklin's dictum in the reverse, and applying to America what that revered signer of the Declaration of Independence had to say about England.

As a matter of fact, Americans would have no particular objection to seeing Colonel Wedgwood hanging singly.

Indeed, they would rather favor the idea.

But they do object to all of us being hanged together in support of the jealousies and commercial rivalries and selfish political policies of any foreign nations whatever.

Still, there is no use becoming unduly incensed at this crockery warrior.

His opinions are characteristic of his present Government.

In the press dispatches of the same day appear the remarks of Lord Vansittart, member of the British House of Lords, who says:

"Any talk of peace with the Nazis is impossible. Persistent bombing may weaken German morale and may start a crack-up.

"But land success is needed against the Reichswehr. This will take immense manpower, and unless the Russians crush the Germans in the East, America is the only hope.

"In the long run American manpower will be needed for a land victory over Germany."

And a few days before, General Sir Claude Auchinleck, commander in chief of the British forces in the Middle East, said:

"I've always thought the war must be won in Europe, in Germany, on Germany's own soil.

"Therefore, I see as much need for American manpower in this war as in the last."

And Lord Elibank, speaking before the House of Lords Wednesday, advised that the British war cabinet "include representatives of the dominions, India, and the United States, who soon will be nearer to us in war than they are at present."

How gratifying it will be to the once free people of the United States to be back in the British Empire on the same terms and in the same rank with the subject races of oppressed India.

The facts are, folks—in the plain English which we are only now beginning to hear spoken—that England knows she cannot win the war against Germany.

But she positively will not make peace, no matter how honorable a peace might be offered.

"Any German offer of a peace conference with honor," Lord Vansittart says, "will always have a certain degree of acceptance among 'mugs' of high circles as well as low."

But "no comprehensive peace is possible."

Because the British Empire expects America to do her fighting for her, and to drag her chestnuts out of the hot coals of the war she has declared, and the diplomatic complications she has involved herself in.

We Americans could not say this and be believed, but when English lords and generals and members of Parliament say it, it must be recognized as true.

Moreover, Mr. Atlee, member of the British War Cabinet, repeats it; and Mr. Churchill, Premier of England, definitely declares it.

"The age of appeasement and isolation is gone," says the truculent Col. Josiah C. Wedgwood, speaking for us Americans as well as for the British Parliament.

"We've had years and years of these wretched appeasers, like WHEELER, in England."

And "by wretched appeasers I mean all people who are not prepared to consider their duty to the rest of mankind."

"And," continues the crockery colonel emphatically, "this includes all those who think they can keep out of the war and let the other hemisphere settle its own difficulties."

According to these British statesmen and generals, we Americans must take on the age-old hatreds and jealousies of Europe, the ancient racial and religious antagonisms of Asia.

We must carry the four freedoms futilely to the four corners of the earth, only to have them rejected and ridiculed when they arrive there.

Meanwhile we must deprive ourselves of every phase of freedom here at home—of every ounce of political liberty, of every atom of prosperity, of every shadow of public or private welfare.

We must even sacrifice our independence so that a foreign nation, against which we formerly rebelled because of its exactions and harsh domination, its ingratitude and injustice, can now use us as part of its war machine, and make us a part of its long-sought world dominion.

In discussing this flagrant British war propaganda on the floor of the Senate, Senator TOBEY recalled the fact "That Lord Northcliffe said in his book in 1928 that he spent $150,000,000 in the United States in 1917 to get America into the war.

"How much," continued Senator TOBEY, "do you suppose they (the British) are spending today?"

"This man Wedgwood," said Senator TOBEY further, "is only a disciple of Winston Churchill. The same Winston Churchill who said in his book written in 1925—'the best way to secure American sympathy is to get American blood shed on the field.'"

Senator WHEELER, also on the floor of the Senate, defended the United States Congress against the attacks of Colonel Wedgwood, and repelled with admirable restraint the amazing personal assault against himself made by the British premier.

Said Senator WHEELER:

"Lord Halifax and the other English statesmen may take Mr. Willkie into camp; they may take Mr. Morgenthau into camp; they may take Mr. Knox into camp; but they are not going to run the Congress of the United States, in my judgment."

Let us hope that Senator WHEELER's judgment is sound and true.

But the people of the United States have small belief that this cowering Congress will possess the courage to assert any form of American independence, or to stop in any manner the offensive foreign propaganda which is rushing our country into an alien war.

Colonel Wedgwood is on his way home, to be sure, but Lord Halifax, the authorized and official interferer extraordinary, and meddler plenipotentiary, in America's personal political affairs, is still at large in this land of the free, and still perpetrating—without protest from our pseudo-American Congress—his humiliating affronts to the independence and the self-respect of the American people.

The Army We Need

EXTENSION OF REMARKS

OF

HON. STYLES BRIDGES

OF NEW HAMPSHIRE

IN THE SENATE OF THE UNITED STATES

Monday, July 21, 1941

ARTICLE BY MARK SULLIVAN

Mr. BRIDGES. Mr. President, I ask unanimous consent to have printed in the Appendix an article by Mark Sullivan entitled "The Army We Need," published in the Washington Post of Monday, July 21, 1941.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

[From the Washington Post of July 21, 1941]

DRAFT ALTERNATIVES

(By Mark Sullivan)

THE ARMY WE NEED

General Marshall says that August 1—that means next week—is the deadline for action by Congress to keep draftees in service beyond the 1 year for which they were inducted. General Marshall wants the draftees kept. Much of Congress is reluctant.

The few days left for decision may be too short a time to talk about alternatives. It may be the only practicable thing is to hold the draftees. If General Marshall says so, that carries the greatest possible weight. If the head of the Army says this is unqualifiedly the best way, that his judgment is not affected by enforced expediency, that he is not merely asking for the best than can be done under the circumstances—if General Marshall says that, then no reasonable person will wish to argue.

But there remains a sound judgment that merely keeping the draftees beyond their year will not fully solve our ploblem. It will lead to future situations as embarrasing as the present one; and it will leave a bad taste among many draftees and their families, who understood their period of service was to be but a year. Finally, keeping the draftees will not give us the kind of Army America needs.

The kind of Army America wants is composed of two things. The first is a permanent Regular Army, a standing Army. By "permanent" is meant permanence of the individuals composing the Army. Our permanent Army should be made up of men who remain in the Army, make a lifetime career of it.

It is such men who have always made up our Regular Army, men who enlist voluntarily because they like the career, and for the same reason reenlist when their 3-year terms of service end. The permanent standing Army must be made up of soldiers of this kind. For the essentials of a modern army are that it should be highly mechanized, highly mobile. In such an army, the soldiers must have greater mechanical skill than can be commonly acquired in a single enlistment. Also, such an army needs the sort of teamwork, the quick coordination and maneuvering in units that can only be acquired by fairly long experience with the same personnel, training shoulder to shoulder in the same units.

This permanent, standing Army need not be extremely large. General Marshall, before a Senate committee last Thursday, said that 1,600,000 would be enough. That is an outside figure—some judge that a million would

be enough. (Bear in mind we are speaking of the figure for the permanent standing Army. Bear in mind also that every discussion of the size of our standing Army includes the assumption that we shall have in addition an extremely strong Navy, and an air force practically without limit.)

This regular standing Army of say 1,600,000, is what we need as a permanent army. In addition, we need, for possible emergencies, a reservoir of additional material. This reservoir should be provided by adopting universal military training—military training as distinct from induction into the Army. The military training should be given to every youth during the first year following school or college. After a few years we would have an adequate reservoir of young men with 1 year of military training, available for addition to the Regular Army in emergency.

These two things together compose what America needs for its permanent military system.

The immediate question is, Can we set about building up this system now? Is it too late to make a fresh start? As Congress debates whether to extend the service of the draftees, is it practicable to consider, as a substitute, the permanent two-part military system here suggested? Could we get it started in time?

The first concrete question is, Can we build up our Regular Army quickly enough to a figure of approximately 1,600,000? To start with we already have 476,000 Regulars. (These are the regular 3-year voluntary enlistees, as distinct from 1-year draftees.) As an addition to these, we could probably get many of the draftees now approaching the end of their service. The total of these is about 600,000. Many of them, having become familiar with the Army, and having already been detached from their ordinary peacetime employment and associations, might be willing to become Regulars.

In addition, we could renew the mechanism for stimulating enlistment of Regulars, which was more or less dropped when we adopted the draft system. Whether we could attain the total of approximately 1,600,000, and attain it in time, is for General Marshall and the other Army experts to say.

Whether or not we can begin the two-part system now, there can be little question we would have done better to adopt it instead of the draft system a year ago. Much that we have done was awkward and wasteful, and is now being undone.

We took men up to 35 away from industries in which they were useful and put them in military training, where they were little needed, and from which those over 28 are now being released. Some of the notions of a year ago are now seen as fantastic. How many remember that the original proposal was to register every male from 18 to 64, and put under draft all up to 45?

Sign of the "V"

Monday, July 21, 1941

ARTICLE BY BARNET NOVER

Mr. BRIDGES. Mr. President, I ask unanimous consent to have printed in the Appendix an article by Barnet Nover entitled "Sign of the 'V'" published in the Washington Post of today, July 21, 1941.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

SIGN OF THE "V"

(By Barnet Nover)

NEW WEAPON IN THE WAR OF NERVES

"There is no more welcome gift to men than a new symbol."

—*Emerson.*

How it began, by whom, and where is not quite clear. The inhabitants of occupied Europe live behind a high wall closely guarded by the Gestapo. But from time to time news from that vast concentration camp does manage to get out.

Early this year it was learned that in Belgium the population was giving vent to its hatred of the conqueror by chalking defiant inscriptions on walls and doors. The writing was usually done in the dead of night. When day came the German authorities saw to it that the inscriptions were erased, sometimes taking punitive action against those deemed responsible. The next night the same inscriptions reappeared. Among them one was notable for its stark simplicity—the letter V.

Writing on the wall is an old political habit in many parts of Europe. It was so prevalent in France that laws had to be passed by the chamber prohibiting the practice. It was so common in Italy that Mussolini saw to it, soon after he came into power, that the walls were covered with his pet slogans, such as, for instance, Believe! Obey! Fight!

The inscriptions that began to appear on Belgian walls this year were manifestations of passive resistance. The movement was individually initiated, the reflection of a spontaneous urge to express the loathing felt for the conqueror. And what was happening in Belgium was happening elsewhere in Europe as well. It may, therefore, be that the "V" symbol first made its appearance not in Belgium but in France or Holland. The important fact is not where it originated but that it soon began to spread.

British propaganda has tended to be far from effective in this war. The Nazis have had the jump on them in waging psychological warfare as in the field of military action. But somebody in London was wise enough to see the effective use to which the "V" symbol could be put. So beginning in April the B. B. C. broadcasts to occupied Europe began to urge people everywhere to manifest their spirit of defiance, their hope of an ultimate victory over the Nazis, by making the widest use of the symbol.

It is a capital offense in the conquered countries to listen to foreign broadcasts, particularly those originating in Great Britain. The spread of the "V" campaign shows how little this drastic law operates to prevent such listening. By June the letter V had become the symbol of a silent crusade against the Nazis. Then people began to tap out the letter V in Morse code—three dots and a dash. Then the discovery was made that this rhythm was to be found repeated in endless variations in Beethoven's Fifth Symphony, now the Marseillaise of a new war for liberation.

What does "V" stand for? Alone it stands for the twenty-second letter in the English alphabet, the Roman symbol for 5. But to the oppressed people of Europe it has taken on a far greater meaning. To the people of France and to the French-speaking Belgians it means "victoire"—victory. To the people of Holland and Flanders it mean "vrijheit"—freedom. Repeated thrice Norwegians recognize it as an abbreviation for "ve vil vinne"—we will win. In all languages it means: "We are not alone." The man who wrote the V or whistled its musical counterpart or tapped it out in Morse code and the one who reads or listens to it form part of a great brotherhood: "We are weak today. We shall be strong tomorrow. We are disarmed but not conquered. We are fighting back. We shall triumph. We shall be free again."

This theme of solidarity and hope the B. B. C.'s mysterious speaker, Col. V. Britton, has hammered home to the conquered peoples of Europe almost daily. And at the end of last week the movement was given official sanction by none other than Winston Churchill in a special broadcast.

In unity there is strength. Hitler has sought to unite Europe by transforming it into a continent of slaves ruled by a master race.

Writing the letter V on doors and walls will not give arms to the disarmed, destroy prison walls behind which 135,000,000 people are being held in subjection. But by enabling the conquered to express their feelings the movement is nonetheless one of great potential significance. So much so, indeed, that, acting on the theory that if you can't beat them you join them, the Nazis are now proclaiming that V means viktoria—the victory of the German arms, or veni, vidi, vici, which they insist they have a greater right to say than did Caesar. But this clever ruse of appropriating the symbol of the enemy will not work. It comes too late. Besides, the German word for victory is not viktoria—that is a word borrowed from Latin—but sieg. Those in Germany and Austria who write V on their walls may have quite another word in mind—vergeltung—revenge, for instance, as Erika Mann suggests, or verdamt—damned, or vernichten—to wipe out.

In the meantime R. A. F. squadrons flying in V formations over the Channel to their targets on the continent are reminding the people of Germany and the conquered peoples of Europe that V can also stand for vengeance.

Labor and the Law

EXTENSION OF REMARKS

OF

HON. A. S. MIKE MONRONEY

OF OKLAHOMA

IN THE HOUSE OF REPRESENTATIVES

Monday, July 21, 1941

EDITORIAL FROM THE WASHINGTON POST

Mr. MONRONEY. Mr. Speaker, under leave to extend my remarks in the RECORD, I include therein the following editorial from the Washington Post of Saturday, July 19, 1941, entitled "Labor and the Law":

[From the Washington Post of July 19, 1941]

LABOR AND THE LAW

When strikes paralyze defense industries, they are, as Assistant Attorney General Thurman Arnold points out in a current article, dramatic enough to receive spectacular publicity, and public opinion is focused upon the problem of finding a solution for such disturbances. Mr. Arnold is, therefore, more concerned about illegitimate union practices that are carried on unobtrusively or under cover. More particularly, he is irked because of the inability of the Antitrust Division, which he heads, to proceed vigorously against such practices. In the now famous Hutcheson case, which came before the United States

Supreme Court last winter, it was held that restraint of trade due to jurisdictional disputes is not one of the practices banned by the Sherman Act. The effect of that and several subsequent decisions handed down by the Court has been to leave the Department of Justice helpless to proceed against practices that further no legitimate ends of labor organizations but serve only to impose antisocial restraints upon interstate commerce.

Apparently the only way to secure relief from the exactions of racketeers, large and small, who prey on labor unions without running afoul of the law is to amend or extend the Sherman Act so that the unions may no longer restrain interstate commerce for purposes unrelated to their primary and legitimate objectives. Those objectives are, briefly, the securing of better wages, shorter hours, generally improved working conditions, and the right to collective bargaining.

Two bills designed to outlaw specified antisocial activities of labor unions have recently been introduced in Congress by Congressman MONRONEY and Congressman WALTER, and are now before the House Judiciary Committee. These bills would make it unlawful for unions to engage in strikes designed to prevent the introduction of labor-saving devices, to coerce employers into hiring unneeded men, or to compel recognition of a nonrepresentative labor organization for purposes of collective bargaining. The mere recital of the numerous activities that these bills propose to bring within the scope of laws designed to protect the consumer, the businessman, and labor itself from oppressive restraints and monopolies is enough to show the need for a legislative redefinition of labor's rights under the Sherman Act.

Mr. Arnold's especial aim is to protect low-income consumers from union exploitation and to prevent the destruction of small independent businesses by unreasonable union demands. Obviously, practices that impede the effective functioning of industry in normal times also retard our defense program. Hence, amendment of the antitrust laws to cover antisocial labor activities can be urged as a defense measure as well as for the more immediate and germane reasons stressed by the Assistant Attorney General.

How to Stop Strikes

EXTENSION OF REMARKS

OF

HON. MARTIN J. KENNEDY

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Monday, July 21, 1941

RADIO BROADCAST OF ALBERT W. HAWKES, PRESIDENT, CHAMBER OF COMMERCE OF THE UNITED STATES; JOHN Q. CAREY, MAYOR, TOLEDO, OHIO; EDMUND RUFFIN, DIRECTOR, TOLEDO INDUSTRIAL PEACE BOARD

Mr. MARTIN J. KENNEDY. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following broadcast over the red network of the National Broadcasting Co., Friday evening, July 18, 1941, participated in by Albert W. Hawkes, president, Chamber of Commerce of the United States; Hon. John Q. Carey, mayor, Toledo, Ohio; and Edmund Ruffin, director, Toledo Industrial Peace Board.

It is encouraging in times such as we are now experiencing in the industrial world to find men, outstanding in business, public affairs, and in the field of labor relations exchanging views on a subject which is close to the heart of every thinking person in this country. In a discussion free of any self-serving motives and designed to further the progress of our national-defense program by the elimination of any and all industrial misunderstandings, these gentlemen, in my opinion, have presented a constructive and workable plan. Let us hope that their suggestions will find ready and enthusiastic support.

The radio broadcast follows:

ANNOUNCER. "How to Stop Strikes." The National Broadcasting Co. presents a progress report on a strike-preventive plan that the Chamber of Commerce of the United States advocates for adoption by the Nation's industrialized communities. This report will be delivered by Albert W. Hawkes, president of the national chamber and outstanding American industrialist. What is the plan and how does it function? To bring you a specific illustration, N. B. C. presents, with Mr. Hawkes, a first-hand report on the work and accomplishments of the Toledo Industrial Peace Board. The manufacturing city of Toledo, Ohio, has attained national prominence because of its remarkable record of steadily diminishing strikes. Here this evening to tell Mr. Hawkes and the radio audience the success story of the Toledo Peace Board are Toledo Mayor John Q. Carey and Edmund Ruffin, the board's director. And now, Mr. Hawkes.

Mr. HAWKES. The destructive tidal wave of strikes that swept the country has now subsided somewhat, but there is no assurance that there won't be a recurrence. Therefore, the issue is far from being settled. Strikes have not ceased altogether by any means. Threats of strikes continue to hover ominously over the Nation.

The serious problem of industrial strife—strife that interrupts the flow of the machines and materials of defense—warrants the painstaking consideration of every patriotic and public-spirited American.

In my last talk to the N. B. C. network audience several weeks ago, I pointed out emphatically that legislative compulsion in the settlement of defense strikes is not the answer in a representative democracy—that voluntary cooperation is the American way. We do not and cannot defend ourselves against totalitarianism through adoption of totalitarian methods.

What, then, is the solution to the strike problem? Well, here's the most logical answer that I know. The Chamber of Commerce of the United States strongly urges that employers and employees declare a Nation-wide moratorium on industrial strife for the duration of the emergency. This moratorium may most effectively be realized through local and voluntary action. Though national in effect, defense strikes are mostly local in origin. Communities throughout the country are answering the national chamber's urgent call for a cessation of industrial disputes—disputes that disrupt not only defense production but the Nation's very unity.

Local chambers of commerce have been instrumental in the organization of moratorium committees composed of the most progressive elements of local labor, management, and the public. These committees are making possible the machinery of mediation locally, and employers and employees are talking their differences out instead of fighting them out. That method, I submit, is the American way—and we believe that is the only way.

The progress thus far achieved through this voluntary method of settling disputes is encouraging. But now let's listen to a first-hand account of a strike-preventive plan, similar to that advocated by the national chamber, which has been operating with increasing success in Toledo, Ohio. As our announcer has already informed you, John Carey, Toledo's mayor, and Edmund Ruffin, director of Toledo's peace board, are with us this evening. Mayor Carey, will you tell us something about your city?

Mr. CAREY. Well, Mr. Hawkes, we have approximately 325,000 people in our city and its environs. We have about 500 industries. We are the center of the glass industry, and we're large manufacturers of automotive parts. We are mainly an industrial city—a city that under ordinary circumstances would be just as subject to labor disturbances as any other highly industrialized community.

Mr. HAWKES. Mayor Carey, all evidence indicates that your conditions are ordinary, but that your accomplishments are extraordinary. Industrial relations in your city have become singularly free from discord. How do you account for Toledo's industrial harmony? Surely you have had labor troubles in the past?

Mr. CAREY. Toledo's record of industrial disputes was no different from that of many other harassed manufacturing cities before we organized our peace board. As a matter of fact, we experienced labor difficulties of a rather spectacular character in 1934. Our peace board came as a result of those hectic times.

Mr. HAWKES. What was the nature of those labor troubles, Mayor Carey?

Mr. CAREY. Well, it wasn't so much the extent of the trouble as the violence of its character that worried us. The State guardsmen had to be called out. Two persons, innocent bystanders, were killed, and we suffered from a rash of lesser strikes. Then a general strike threatened to smother Toledo's production almost entirely.

Mr. HAWKES. And did this general strike occur?

Mr. CAREY. Fortunately, it didn't. But it made us stop to think—think fast and hard. In the meanwhile, Edward McGrady, former Assistant Secretary of Labor, had traveled to Toledo time and again in connection with industrial conflicts. Finally, Mr. McGrady told us that our problem was a local one and should be solved locally. He suggested that we form a local industrial peace board. We acted on his sound advice and set up a board composed of five labor leaders, five manufacturers, and eight representatives of the Toledo public.

Mr. HAWKES. I understand that the peace board met with success from the start.

Mr. CAREY. That's right, Mr. Hawkes, and the city is determined that it will continue to be successful. Not only city and peace board officials, not only employers and the labor unions, but the Toledo public in general is determined that wasteful deadlocks must be forestalled. And right here, Mr. Hawkes, I should like to express my belief that the determination and cooperation of the community means everything to the board's successful operation. There's no magic in the plan itself. But behind it is the will of the people. It was formed at the insistence of the people, the employers, the workers and the press. In my opinion, the peace-board plan, which is generally the same as the moratorium plan advocated by the national chamber, can succeed anywhere if the community stands firmly behind it.

Mr. HAWKES. The peace board is a part of Toledo's city government, isn't it?

Mr. CAREY. Yes; it is, Mr. Hawkes. And the cost of the board to the city is only a little more than $6,000 a year.

Mr. HAWKES. What have been the results of the peace board's activities so far as the city is concerned?

Mr. CAREY. The results in man-hours saved, in orders to Toledo industries which would have gone elsewhere if labor conditions had been disturbed, in wages earned and paid, and in uninterrupted production total savings of many millions of dollars. But that's only the material side of Toledo's success story. Our town is more unified now, more friendly and its people are more neighborly. We are not only more peaceful in our industrial relations but in our personal relations as well.

Mr. HAWKES. You've given us a good idea of what the peace board means to Toledo, Mayor Carey. Now, let's take a closer look at the methods used by the board.

Mr. CAREY. Ed Ruffin is the outstanding authority on the work of the board, Mr. Hawkes. Since Mr. Ruffin is a modest sort of fellow, I won't embarrass him with too much praise of his qualifications. But I do want to say that Mr. Ruffin, as director of the peace board, is the key to its success. He has the respect of employers and employees. As a newspaper labor reporter at the time of his appointment as the board's director, he had an excellent knowledge of Toledo's labor relations. In many instances, an entire dispute is handled by Mr. Ruffin, without recourse to the volunteer members of the panel.

Mr. HAWKES. Thank you, Mayor Carey, for your instructive and interesting comments, and I want to talk with Mr. Ruffin in just a moment. First, I should like to tell our audience in the many communities throughout the country that I believe the picture of Toledo painted by Mayor Carey—a picture of peace in industry—can be painted in your community through adoption of the national chamber's proposal for a moratorium on industrial strife. These are perilous times for our Nation. The need for the highest degree of unity and harmony in our relations, industrial and social, is urgent and vital. As president of the national chamber, I urge every local chamber of commerce, every community worried by strikes or threats of strikes, to give immediate and sincere consideration to the national chamber's plan. And now, Mr. Ruffin, briefly what is the record of Toledo's peace board?

Mr. RUFFIN. We are proud of our record, Mr. Hawkes. During the 6 years of the board's life, 181 disputes have been settled without stoppage of work in any instance. These disputes involved 36,244 employees. Over the same period the board helped settle 52 lesser strikes involving 6,090 employees. And I am happy to say that not a single strike has occurred in Toledo's defense industries.

Mr. HAWKES. Those figures pretty much speak for themselves, Mr. Ruffin. What authority has the board?

Mr. RUFFIN. None at all, Mr. Hawkes. We don't actually hunt disputes, and the board's decisions aren't mandatory. Our function is to mediate disputes brought to us. However, our recommendations are virtually always accepted as just and fair.

Mr. HAWKES. Since the board itself has no legal powers of intervention, will you tell us how you proceed when a dispute is referred to your agency?

Mr. RUFFIN. Well, first of all, Mr. Hawkes, we guard against either side bringing a trifling matter to the board. While either side can appeal to the board, our first step is to determine if the disputants cannot agree without our help.

Mr. HAWKES. Then, what's the next step?

Mr. RUFFIN. The next step isn't always the same. Sometimes we hold a hearing. Sometimes a round-table conference. Then, again, we center our efforts on what is obviously the point of greatest difference and suggest concessions of one sort or another.

Mr. HAWKES. Will you relate a few instances?

Mr. RUFFIN. Well, in one instance, we persuaded a union to forego its demands altogether in view of conditions prevailing in a firm—conditions which made it impossible for the firm to meet the union's demands. In other instances, we've persuaded employers to grant at least a part of wage increases demanded—and in some cases the full increase. Working conditions have also been a field of many compromises. And both with C. I. O. and A. F. of L. unions we have managed to iron out tangles involving perhaps only one or two men. You know, of course, that considerations involving only one or two employees are often the cause of a strike. In other instances we have not completely settled issues, but at least have obtained delays. During the period of delay tempers cool and give employer and employee an opportunity to work out a congenial and logical solution to their dispute.

Mr. HAWKES. Mr. Ruffin, do you feel that Toledo has definitely secured insurance against major strikes through the peace-board plan?

Mr. RUFFIN. It is possible for Toledo to have a bad strike at any time, Mr. Hawkes. However, I do believe that such a strike is much less apt to occur in Toledo than in most industrial communities. I most certainly feel that before a strike is called, every effort would have been made to effect a peaceful settlement. And we would exhaust every resource before calling on the Federal Government.

Mr. HAWKES. In Toledo, then, there is little likelihood of your having to call upon the Federal mediation agencies?

Mr. RUFFIN. That is correct, Mr. Hawkes, as effective as they are, we would only call on them as a last resort. You see, Mr. Hawkes, we believe that we shall have set a new pace in settling labor difficulties through voluntary local cooperation. Like all people with good reputations we feel compelled to maintain that reputation to the best of our ability.

Mr. HAWKES. I see your point, Mr. Ruffin. It's largely a matter of civic pride. I commend the people of Toledo for the intelligence they show in using brains instead of force in conducting their community affairs. Peaceful labor conditions are the best advertisement any city can have. Thank you, Mr. Ruffin, and you Mayor Carey, for taking time to come to the broadcast studios and tell us about Toledo's industrial peace board. What has been accomplished by Toledo in bringing peace to management and labor can be accomplished by other American communities. In this connection telegrams just received today from chambers of commerce in Atlanta, Ga., Savannah, Ga., and the Oranges and Maplewood, N. J., advise us of the successful organization of moratorium committees in those communities. We hope they will be as successful as the Toledo board has been. Other cities throughout the country are in the process of forming moratorium committees as advocated by the National Chamber. If Nation-wide support is given the National Chamber in its plan to put an end to disputes between employer and employee, I believe we shall have advanced toward a solution of our entire problem of industrial conflict—both in peacetime and preparedness industries. Any American community interested in the National Chamber's plan for a moratorium on industrial strife, which would like to adopt it, can receive complete information by writing to me in care of the Chamber of Commerce of the United States, Washington, D. C.

ANNOUNCER. You have just heard a discussion on the subject How to Stop Strikes, presented by National Broadcasting Co. in cooperation with the Chamber of Commerce of the United States. Participating in the discussion were Albert W. Hawkes, president of the National Chamber; John Q. Carey, mayor of Toledo, Ohio; and Edmund Ruffin, director of Toledo's industrial peace board.

Defense Highway Program Means Strengthening Transportation Arteries for Increasing Preparedness Activities

EXTENSION OF REMARKS

OF

HON. JENNINGS RANDOLPH

OF WEST VIRGINIA

IN THE HOUSE OF REPRESENTATIVES

Monday, July 21, 1941

Mr. RANDOLPH. Mr. Speaker, by passage today of H. R. 5110 the House of Representatives has again definitely displayed its determination to proceed wisely in building the strongest defense program possible for America. We have been slow in realizing that our highways were not improved and built for military uses—and for this reason there must of necessity be a speedy undertaking of the construction of roads which will supplement the regular Federal Aid Road Act funds.

The time is long overdue for action—and yet we must not go forward with haste which will in some instances cause reckless procedure. But we must start now to put into motion the forces vital to getting the work under way in the next few months at the latest. Wisdom certainly dictates that we take stock of our highway deficiencies and begin the work which will modernize our national highway system, making it the finest for peacetime service and at the same time a highly developed and definitely efficient adjunct for our national defense.

SUPERHIGHWAYS NEEDED NOW

Mr. Speaker, it has long been my belief that many-lane roads and superhighways were urgently needed in the United States. I am pleased at the reaction which has come to the building and use of the so-called Pennsylvania Turnpike. I hope it will not be many years until there will be a vast network of such highways. They will be of great value to the country in future time—when war, we trust, is banished and free men are once again able to work in peace. It is necessary that we not close our eyes to what has happened and our responsibility to the same in these days of all-out defense effort.

In this connection I should like to include at this point parts of an address which I delivered on December 11 of last year, when speaking before the annual banquet of the Illinois Road Builders' Association. Excerpts follow:

HIGHWAYS AND NATIONAL DEFENSE

An outstanding lesson in Germany's amazingly successful blitzkrieg is the importance of an adequate and integrated system of highways. From the day he attained power until he struck his first devastating blow Hitler had some of the best engineering brains of Germany constructing a network of superhighways on a scale the nation had never

seen, coordinating it with the development of rail, water, and air transportation systems. It was this system that made possible the gigantic expansion of German armaments in the few short years that followed Hitler's march into the Rhineland. And when Poland's hour struck it was the broad, perfectly constructed roads right to the border which enabled his swiftly moving mechanized hordes to accomplish what military men considered an utter impossibility.

NARROW ROADS HAMPER ALLIES

In Hitler's headlong rush to the French coast it was again the superhighway system that transported his unending stream of tanks and motorized troops, in contrast was the relatively inadequate system of narrow roads used by the French and British. The Allies were slow in their initial advance through Belgium to meet the Germans, and then were bottlenecked without supplies or reinforcements when the narrow roads were choked with fleeing humanity and blasted by Stuka bombers. It was the story of one- and two-lane roads, vulnerable to attack, against a vast system of six- and eight-lane superhighways.

In relation to our industrialization, size, and strength, our highway system today is little better than were those of the conquered countries. Nearly one-third of our 75,000 miles of strategically important highways do not at the present time meet even the minimum requirements of the War Department. Some of it is too crooked, some too steep, some too light in construction to stand military transport. During the October maneuvers of the District of Columbia National Guard, centering in the West Virginia mountains at my home town of Elkins, heavy trucks carrying antiaircraft guns had to be rerouted from the main highway between Washington and Elkins because in that 230-mile strip of excellent road there were two bridges over which the trucks could not pass. This condition is duplicated in all parts of the country; maneuvers in Texas this year showed that only 25 percent of the roads used were adequate to handle even the comparatively light 10-ton tanks and 155-millimeter howitzers, which were the heaviest equipment used. What would we do if the coming heavy tanks were rushed into this possible invasion site under conditions of actual warfare?

NEW HIGHWAY BILL NEEDED

With the convening of the new Congress in January we must meet the responsibility of preparing and passing supplemental legislation to provide for an immediate program of constructing highways adequate for our national-defense requirements. This should be in addition to the regular biennial Federal-aid highway measures, the last one of which was passed a few months ago. Moreover, I believe that the Federal Government should bear the brunt of this cost, perhaps as much as 80 percent, instead of the 50 percent borne under our regular Federal-aid legislation.

I believe the Federal Government should bear this high ratio of the expense because such a program is as essential to our rapidly expanding defense effort as are new manufacturing facilities. We need transport and more transport, particularly since the Federal Government has at long last recognized the need for decentralizing defense industries. Four years ago I advocated such a plan; today factories by the score for production of aircraft, munitions, engines, nitrates, and other sinews of war preparedness are being located in Illinois, Kansas, Iowa, Missouri, Ohio, Kentucky, West Virginia, and other interior States.

Industrial mobilization, plus an increasing peacetime traffic, already threatens to overtax our present transportation system. Railroads, with equipment depleted by depression years, may soon feel the pressure of transporting defense materials. Waterways have been steadily improved in recent years, but still fall far short of carrying their share of the load. Commercial aviation, with emphasis on passengers and speed, grows in importance daily but cannot be expected to help materially in the transport of bulky materials. The automotive industry, which grew to its present giant stature with the growth of highways, can lend its facilities to speeding defense transport, provided we build the roads to carry the trucks. Our transportation network must be strengthened at every point. To you who are road builders there appears the challenge of uniting your forces in the planning, improvement, and extension of our highway development. I am sure you will not fail in this obligation.

STUDIES BEGAN 20 YEARS AGO

Some 20 years ago the War Department began studies of our highway needs, which are being modified today to meet the new tempo of modern war. We realize that we must revamp our conception of minimum requirements. Testimony before the House Roads Committee, of which I am a member, revealed that there are some 6,390 miles of highway in the New England States alone that should be rebuilt, widened, or relocated. There are also 506 bridges that should be widened or rebuilt. And these recommendations, which will cost an estimated $388,223,000, are based only on our immediate peacetime needs to better traffic conditions and promote highway safety. The cost of building New England's highways to serve the dual purpose of civil and military use would probably reach the staggering total of $600,000,000. At this time it is impossible to estimate accurately how many billions will be needed for necessary highway expansion and improvement through the entire Nation.

As I said in the foregoing, the task is going to be a gigantic one, and the cost will be staggering. Revenues will be tapped deeply to carry out such a program. But the people will find a way to do the job. By passing H. R. 5110 an important start is made. Access roads and strategic highways will receive the bulk of the program, although we have not forgotten to provide for surveys and experimental phases, such as flight strips. The testimony of Maj. Gen. George H. Brett, Chief of the Air Corps, leads us into new fields—but they are of growing importance as air power dominates the war scene.

FLIGHT STRIPS URGED BY BRETT

General Brett, in his testimony before the Roads Committee, wisely stated:

The establishment of auxiliary airdromes, satellite fields, as we call them, is a strategic problem in certain sections of the country.

He then went on to say that it was believed that widening of the roads, by giving right-of-way for about 450 feet at road intersections where advantage could be taken of wind conditions that real benefit would come to the Air Corps, and that the public would be benefited with the improvement of the roads themselves.

The money which is to be spent on this experimental work will, I feel, be returned manyfold. National defense will surely be strengthened by this work.

In conclusion may your attention be directed to the fact that some 33,000,000 motor vehicles are operating daily over the roads of this country. To better serve our civilian needs, to increase the safety factor, to bring about a greater degree of national defense—all these are cogent reasons for making more adequate the highway system of America.

Generation of Electrical Power from Coal

HON. GEORGE W. JOHNSON

OF WEST VIRGINIA

IN THE HOUSE OF REPRESENTATIVES

Monday, July 21, 1941

CORRESPONDENCE OF HON. GEORGE W. JOHNSON OF WEST VIRGINIA AND W. L. BATT, DEPUTY DIRECTOR, OFFICE OF PRODUCTION MANAGEMENT

Mr. JOHNSON of West Virginia. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following letters:

OFFICE OF PRODUCTION MANAGEMENT,
Washington, D. C., July 14, 1941.

Hon. GEORGE W. JOHNSON,
House of Representatives,
Washington, D. C.

DEAR MR. JOHNSON: This is in further response to your letter of June 9, addressed to Mr. Knudsen, outlining your views of the desirability of constructing steam electric-generating facilities to provide power for national defense.

We are giving the subject of adequate power supply for defense most careful consideration. It is our present view that the country will need as much low-cost generating capacity, both steam and hydro, as our manufacturing facilities for turbines, boilers, generators, and related equipment can produce.

For the most part, the privately owned utilities are dependent upon steam electric installations to meet additional demands for power in their respective service areas. For this reason, to the extent possible, the productive facilities for steam-electric equipment are being reserved to meet the requirements of private power systems. This means that public agencies must be relied upon to develop hydroelectric power and under certain conditons, as in the Tennessee Valley region, a combination of hydro and steam power.

We are rushing to completion our surveys of probable power demands by areas. As soon as these studies are completed we will be in a position to make specific recommendations to the private and public power systems throughout the country on how much additional capacity must be installed to meet anticipated requirements. We shall be pleased to keep you in touch with developments in West Virginia.

Very truly yours,

W. L. BATT,
Deputy Director.

JULY 21, 1941.

Hon. W. L. BATT,
Office of Production Management,
Washington, D. C.

MY DEAR MR. BATT: I have your letter of July 14 in reply to a letter I addressed to Mr. William S. Knudsen, under date of June 9, with reference to the generation of electrical power from coal, instead of depending entirely, or to a large extent, on generating this power from hydroelectric power. This letter was published in the Appendix of the CONGRESSIONAL RECORD, page A2746.

I have read your letter of July 14 with a great deal of interest; however, I do not feel that it throws very much light, or gives very much encouragement.

Somehow, I feel, that the hydroelectric group is very wide awake to the development of hydroelectric power, while, on the other hand, the coal industry is, seemingly, asleep at the switch. It is evident from your letter that even the O. P. M. realizes that energy developed by the use of coal is more dependable than hydroelectric energy, for at most, if not all, your hydroelectric plants you have installed plants for the use of coal to help out when waterpower fails.

While I am not authorized to speak, I feel confident that the coal industry, as well as the coal miners, would be glad, indeed, to do their part in aiding you in installing coal-burning plants for electric energy at the mouth of the mines. I am hopeful that I can arouse the coal industry to take action.

I note what you say about the apparent need for providing so much additional electric generating capacity as will tax to the utmost the manufacturing facilities for turbines, boilers, generators, and related equipment. This is substantiated and amplified in the report which the Federal Power Commission submitted to the President on July 16, a copy of which I have at hand. The latter report gives rise to many questions of policy, as well as of need, that the Congress will necessarily have to examine into with great care.

In your letter to me you suggest that in the consideration of the question of steam power versus hydro power, you are proceeding upon the assumption that private utilities in expanding their own electric generating facilities will absorb all of the steam power plant equipment that the manufacturers are able to produce, and that hence, the Federal Government in any steps of its own to increase electric generating facilities is virtually compelled because of a manufacturing bottleneck to have recourse to hydroelectric power for generation, rather than to steam power. I find myself unable to accept that assumption.

Obviously, either new steam generating plants or new hydroelectric generating plants will impose heavy demands on the manufacturers of turbines, boilers, generators, etc. As to some of this equipment the requirements of steam and hydro plants are very nearly identical; some of the equipment will be quite different.

But, in the case of the steam plant, the generating equipment is all there is to it except the building in which it is housed, whereas in the case of the hydroelectric plant, dams and waterworks representing large capital expenditures and entailing large amounts of labor and material are requisite in addition to the generating equipment. Of course, the interval of time between the commencement and completion of a hydroelectric project is ordinarily twice as great as in the case of a steam plant. Further in favor of steam plants is the greater flexibility with respect to location and often the escape from the problem of long-distance transmission.

We know that time is of the essence when it comes to providing these electric facilities. I believe we may assume also that if other factors are anywhere near equal we should elect the course that costs the least and involves the least in terms of men and material. It seems to me a poor justification for new hydro power plants to say that we build them because the manufacturers of steam power-plant equipment are already overloaded with orders.

It seems to me that the thing to do is to increase the manufacturing capacity of the generating equipment for steam plants and concentrate on equipment of that type except with respect to enlarging the generating capacity of hydro plants already in being.

With kindest regards and best wishes, I am,

Sincerely yours,

GEORGE W. JOHNSON,
Member of Congress.

President Roosevelt Is an Unconscionable and Lawless Dictator

EXTENSION OF REMARKS
OF
HON. GEORGE HOLDEN TINKHAM
OF MASSACHUSETTS
IN THE HOUSE OF REPRESENTATIVES

Monday, July 21, 1941

LETTER TO THE PRESIDENT BY AMOS PINCHOT

Mr. TINKHAM. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following letter addressed to the President by Mr. Amos Pinchot:

NEW YORK, *July 11, 1941.*

The Honorable FRANKLIN D. ROOSEVELT,
The White House, Washington, D. C.

MY DEAR MR. PRESIDENT: Nine scant months ago, by the election of a Chief Executive for a third consecutive term, a dictatorship was begotten on the body politic of this country. Your occupation of Iceland, without knowledge or consent of Congress, together with your July 7th message and July 8th press conference, disclosing your intention to wage an undeclared war on German sea power in the Atlantic, give proof that the period of gestation is over, and a new dictatorship born to the world.

Mr. President, if you act upon your proposition to shoot it out with the German Navy, should it attack vessels carrying contraband to England, or even show itself in the waters between Iceland and the United States, you will do this in clear defiance of international law and our Constitution, that places the war-making power in Congress. Moreover, this act of war will be a repudiation of your pre-election contract with the people, to keep America out of war provided they would give you a third term in office. and it may be said that, for the performance of this contract, you were paid in advance on November 5, 1940, by the votes of 27,000,000 then trusting, but now betrayed, citizens.

Mr. President, some of us have short memories nowadays. Consequently, with your permission, I will remind you of the evening of October 23, 1940, when in Convention Hall, in Philadelphia, you addressed some 16,000 wildly cheering citizens as follows:

"To Republicans and Democrats, to every man, woman, and child in the Nation I say this—your President and your Secretary of State are following the road to peace. We are arming ourselves not for any foreign war.

"We are arming ourselves not for any purpose of conquest or intervention in foreign disputes. I repeat again that I stand on the platform of our party: 'We will not participate in foreign wars and we will not send our Army, Naval, or Air Forces to fight in foreign lands outside of the Americas except in case of attack.'"

And these citizens certainly believed that, by the word "attack," you meant attack, and not some seizure by Germany of some other nation's bases in Africa, or the Indian Ocean on the far side of this planet. In Madison Square Garden, on October 28, you said:

"We shall continue to go forward in firm faith. We shall continue to go forward in peace."

And 2 days later, at Boston, you rammed home your New York and Philadelphia pledges in the following now familiar words:

"And while I am talking to you, fathers and mothers, I give you one more assurance. I have said this before, but I shall say it again, and again, and again. Your boys are not going to be sent into any foreign wars."

Mr. President, Iceland is not in the Americas, or even in the Western Hemisphere, as you have erroneously claimed. It is as much a foreign country as England or France. It is in the war zone, 3,000 miles from the United States and but 700 from the English coast. Nevertheless, you told your press conference that you propose to relieve its British garrison with American boys.

More than that, you said you would "act" in other undisclosed places outside this hemisphere, without authority of Congress, whenever, in your opinion, such action might be necessary. In a word, you propose to act, not as an American President, but as a confessed dictator equally scornful of his own promises and of the public will. And in a hilarious mood you wound up that strange conference, where the floor was littered with your torn up pledges, with jocular remarks on the fallibility of geographers, and a comic story about an old woman in a boat.

Mr. President, I earnestly beg you to reconsider the course you propose. For, if you continue on that course, that is to say use Iceland and ports in far away parts of the globe as bases from which to launch attacks against Germany, in your personal, unauthorized war, you will not merely kick down the ladder on which you climbed to the highest, if most perilous, honor ever given an American—three terms in the White House—but break the downright agreement you made with Congress, before the lend-lease bill was passed. Namely, that our Government would not be responsible for delivering goods lent, leased, sold, or given to Britain, and that the provisions of the bill should in no case be used to provoke war.

Today there is no defense reason in God's world for entering a declared or undeclared war that did not exist in greater measure when you made your peace pledges last fall at Philadelphia, Hartford, Boston, New York, Brooklyn, Cleveland, and Washington. We are far better prepared for defense than then, and so is England. And, with our rising production, we can admittedly make America impregnable before Hitler, involved as he is, could organize an expeditionary force, if he were mad enough to do so. No military authority has dared testify otherwise.

That is one reason why the majority of Americans are little moved by the cowardly doctrine that we cannot defend ourselve and will be enslaved by Hitler, unless we go forth and fight him in Africa and Asia, or in Europe on his home grounds. That doctrine does not make sense. And everybody knows it. The one place where the English have stopped Hitler is England. And yet, from the moment of your reelection, you have not ceased to use every expedient to spread a psychology of hysteria and blind funk in the United States. And you have invited German attack and total war by aggressive, provocative acts that follow each other in ever faster succession.

The unvarnished truth is that you are taking part in something which can only be described as an international conspiracy to draw America into participation in bloody, foreign wars that are needless for defense and prejudicial to every legitimate interest of our people. Meantime you and your spokesmen, in and out of Congress, are reviling every loyal American who says now precisely what you said 9 months ago, and whose cardinal sin is that he loves his own country better than any other.

So this, Mr. President, is democracy—your democracy, democracy à la mode and à la New Deal. It is the first fruit of your four freedoms—especially including freedom of speech and freedom from fear and war—which you propose to install and defend in every part of the world. A people that does not want war dragged into war by the irresponsible will of an individual who rose to

power by promising to keep them out of war. Mr. President, once more I urge you, in the name of your country's good, and the reputation of American democratic government, to reconsider your course before it is too late.

Personally, I do not believe you can either force, frighten, or finesse a great self-respecting people into foreign wars which their common sense and considered judgment tell them to avoid. Nevertheless, if you do not abandon the purposes you announced in your message to Congress of July 7, and your subsequent press conferences, you will do your country an unforgettable injury by serving notice on the world that the integrity of America's White House is no longer intact.

In closing, may I remind you that not long ago you stated that the world can neither deal nor make peace with a man who does not keep his word.

Sincerely yours,

AMOS PINCHOT.

Extension of Period of Military Service Under the Draft Act

EXTENSION OF REMARKS

OF

HON. WILLIAM P. LAMBERTSON

OF KANSAS

IN THE HOUSE OF REPRESENTATIVES

Monday, July 21, 1941

RADIO ADDRESS OF HON. ALF M. LANDON, OF KANSAS

Mr. LAMBERTSON. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following address delivered over the radio yesterday by Hon. Alf M. Landon:

The President's drive to extend the period of service under the draft act is just the beginning of a sad revelation to the American people. A revelation that major statements of policy of candidates for the Presidency were "mere campaign oratory." Frankness and candor compel me to say that in the last national election only one of the candidates for President has been loyal and consistent to his preelection policies and promises, and that was the candidate of the Socialist Party, Norman Thomas.

Lack of confidence in the word of its chief executive is a real disintegrating force in any nation and any army. Last year, when the President, speaking as a candidate, was telling the American people of the beneficial results of a year's training for boys—and girls also—in Army camps and labor battalions, France and Holland and Norway and Belgium were conquered countries. He, the President, and the Presidential candidate, must have known then the demands his provocative speeches and acts would place on the draftees. But he has shown himself a master at changing his pace. One day he threw provocative words at the bloody dictators. The next day he assured the American people that their boys would never be sent to Europe to fight, but would only be given a nice healthful outing by a year's training in outdoor exercises.

But that is not all of it, nor the worst of it. Within 2 months Mr. Roosevelt, according to press dispatches, repeated his assurances that the boys would be sent home at the end of the year, and so would the National Guard.

The world situation has not changed any since that latest promise to the American people, except for the war between the Communists and the Nazis. And the average man is getting a cynical laugh out of the flip-flops that are being done, not only by the American Communists but by the war crowd in meeting the shifting line-ups characteristic of European wars. The Communists had to join the administration over night. But the administration has also taken the Communists as partners.

The only invasion this country has suffered since the war with England in 1812 is the organized propaganda invasion by Soviet Russia.

I quote from the July Readers Digest:

"Representatives of the Soviet Government offered to insert a clause in a contract with a machine-tool manufacturer, guaranteeing that while the company was working on Russian orders there would be no strike."

As Stanley High points out, the Communists' union leaders belong to "an invading Communist army, shielded by an uninformed public and coddled by the authorities, which has moved into position from which, on orders from Moscow or Berlin, it can jam the wheels of American production and paralyze our national defense."

Of course, this was written before the "Commies" and the Nazis fell out.

From this startling revelation by a reputable and accurate reporter it is evident that the greatest violation of our national rights, the most wholesale commitment of unfriendly acts by any foreign government against us, has been committed by the very government that we are now expected to help, the "red" Soviet.

Now, if the period of service under this Draft Act is extended, I predict the next step will be to remove the prohibition against any draftees or National Guardsmen being sent outside the Western Hemisphere. The newspapers reported: "Both the White House and the Army are willing to abandon at this time the resolutions which would remove this prohibition" [against sending the draftees and guardsmen outside the Western Hemisphere by mere Executive order].

That is a qualified position similar to Churchill's speech last April that England didn't need American soldiers "at this time."

With the President's proposal to extend the Draft Act we are getting down close to brass tacks.

Another "fooler" of the President in the campaign was the repeated promise of "business as usual." The President was the author of that sleazy slogan. Another "fooler" was that we would keep all our social gains. The President repeated that one in his May fireside chat.

But if the President is to blame for trying to hoodwink the American people, so are his fellow conspirators, including members of his Cabinet. There are those who sold the lease-lend bill to the country under false pretenses.

Then there are certain labor leaders. These know—the tops at least—that Mr. Roosevelt is heading for war, and that if we get into war, business will not be conducted as usual, and social gains will be sacrificed. Yet John Lewis is the only national labor leader who has the guts to stick his neck out and tell labor what is going to happen to it.

Finally, what are those democratic Members of the Congress going to do who promised never, never, never would they vote to send an American boy to fight in Europe—let alone Asia, and Africa, and the seven seas.

This political chicanery, this hoodwinking the American people, is the enemy that is flooding our homes, at one of the six most critical times in our national life. Because the American people have been denied the truth, and treated as weaklings, confidence and trust in leadership is being destroyed at a time when it is most needed.

No wonder the world, as well as his fellow Americans, are puzzled at the President's leadership. Friendly New Deal columnists printed the fact that a few months ago the President, for the first time, realized that he couldn't defeat Hitler by speeches.

So maybe the President was fooled himself, while he was fooling the American people.

In any event, he has persisted in a course of action that his closest supporters said meant war, while at the same time protesting that he did not mean war.

And now, realizing at last that his course means war, he wants to extend the draft act so that he can keep the boys in the Army and have them available to send overseas without any further interference from the Congress.

A logical explanation for his sudden reversal on the period of service of the draftees and the guard could be his sudden awakening to the fact that wars are not won by words, or diplomacy, or halfway, half-baked measures. But many men, including myself, saw this clearly and said so on repeated occasions. Mere campaign oratory is bad enough in the great national referendum. It can be fatal in international affairs.

Now, from the viewpoint of pure consistency, some who have opposed Mr. Roosevelt's war policies can honestly and sincerely support the extension of the period of service in the Draft Act. These are neither handicapped by having attempted to hoodwink the American people, nor can they be accused of not accurately foreseeing the inevitable result of Mr. Roosevelt's war policy.

I am compelled by circumstances, brought about partly by the President's policies, to take the position that it is unsafe to release from service these men who have had some physical training and some fundamentals of military coordination. They are all we have in the way of land defense.

However, for the sake of national morale, the President must advise the Congress definitely what unforeseen events have caused him to change his statements of even 2 months ago to the American people.

A vigorous independent legislative branch of the Government should require such a statement. That is the way to public strength as well as legislative strength. The Congress should require the President to advise it where these boys are to be used, and what the Nation and the Army are to prepare for. Neither the country, the Army, nor the O. P. M. knows for sure—in fact, no one can be sure—whether we are preparing for defense of the Western Hemisphere or underwriting an English-Russian victory. This confusion handicaps all our defense preparations.

Today, as a Nation, we are wide open. Under the provocative words and bellicose policies and acts of the President and his Cabinet we have gone too far not to be armed to the teeth.

The President has been guilty of using the pretext of national emergency time and time again to rush through the Congress vague and limitless grants of power. His short cuts to obtain legislation have established the seeds of totalitarianism in this country as nothing written in the legislation itself has done.

But this is one time the national emergency is real. So the American people will have to take it on the chin. It is a gross breach of the promises that this administration made the country and the draftees. But then, that is the record of the New Deal in many other cases in past years.

But I do think the amendment to the Draft Act calls for a frank, clear-cut statement, with no weasel words in it, from the President himself, as to whether he believes we are in the war or not.

The most vicious part of this whole business is the attempted terrorization of all who dare to say that our participation in the war is still an issue. This terrorization has all the earmarks of the methods of the Nazi, Fascist, and Communist dictators.

It is evident from the statements of the two field commanding British generals that they think we are already in the war as an ally of Great Britain and Communist Russia. They say it is our war. They say if Hitler is to be defeated the United States must land another A. E. F. in Europe, and that we must face the probability that Britain cannot be expected to cripple her own defense by sending British boys to fight in Europe.

The right basis for national unity cannot be obtained by declarations and coaxings and chidings. A free people cannot be driven or coaxed into flaming national unity, any more than they can be driven or coaxed into the true spirit of religion.

A people can be fused by the fire of events, and by a wise, vigorous, candid, and forthright leadership into a unity of purpose built on confidence and faith, which will achieve wonders against great odds.

One cannot read history without being impressed with the fact that one people may possess a great inner fortress of the spirit while another does not. One regiment will possess this exalted, magnificent battling spirit, and another fighting alongside of it will not. Here we see the effects of the weight of the imponderables, the opinions, the sentiments, and the conscience of humanity.

This is the effect of aggressive, straightforward, wise, unwavering leadership that diligently devotes itself to welding together the fragments of the mass for the building of a united people.

We have not had this kind of leadership from the President. He has not developed teamwork throughout the Nation, nor even in his own Office of Production Management, that we need, that we must have.

This is the President's great task and duty. The more critical our situation, the more desperate the need. The quality of the leadership and the character it develops in the people is the heart and soul of national life.

The spirit of a free people, the spirit of this Nation, is not expressed by blind following of any leadership. The right leadership stirs a country to great deeds. That is what we expect from a President of the United States.

America has always cheerfully contributed her wealth and her manpower when the country was in danger, and there never was any need of deceiving the people.

So, my reluctant support of the amendment to the Draft Act to continue the draftees and guardsmen in service is based on preparations for defense of the Western Hemisphere. Furthermore, if there is no stopping of Mr. Roosevelt's war policies, he will throw the finest untrained and unequipped army in the world into a shooting war.

The President has the country out on the limb now, and we have got to strengthen the tree at the base.

Joint Income Tax Returns

EXTENSION OF REMARKS

OF

HON. WESLEY E. DISNEY

OF OKLAHOMA

IN THE HOUSE OF REPRESENTATIVES

Monday, July 21, 1941

ARTICLE FROM THE CHRISTIAN SCIENCE MONITOR

Mr. DISNEY. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following article from the Christian Science Monitor:

[From the Christian Science Monitor]

INTIMATE MESSAGE: WASHINGTON

(By Mary Hornaday)

ONE HUNDRED AND FIFTY THOUSAND WOMEN AND $323,000,000

Wendell Willkie declared here the other day that the House proposal to require husbands and wives to file joint income-tax returns would set women back 500 years in their progress toward freedom.

His summarization may be debatable, but, at least, it serves to focus attention on one of the most controversial sections of the new tax bill Congress will consider this summer and autumn.

The provision that married couples must hereafter file joint returns was inserted in the bill by the tax subcommittee of the House Ways and Means Committee to bring in $323,000,000 more in taxes than will be paid if joint returns are not required.

Latest internal-revenue reports show that approximately 150,000 husbands and wives, or about 2½ percent of those filing returns, choose to make them separately rather than jointly.

With most the reason is economic; with a few, ethical.

If both husband and wife earn money and pool it for tax purposes, the tax sometimes runs into higher brackets and bigger sums than if they make separate returns.

Suppose a man makes $10,000 a year. His wife, through her own effort, makes another $10,000. On a separate return basis, they would pay $1,540 on their 1941 earnings. With the proposed joint return, they would pay $4,356 on their 1942 salaries; $3,190 if Congress allows them to file separately.

Protests on the proposed joint-return provision have come from many sources. Clergymen are writing in to predict it will break up or delay marriages. Feminists say it is no more fair to require joint returns from husband and wife than from brother and sister.

Economic and moral factors in the case are being confused in many of the protests. In some, opposition to paying heavier taxes is being cloaked under feigned solicitude for the rights of married women workers. Yet the feminist has a point.

Mrs. Harvey W. Wiley, chairman of the National Woman's Party, has written a letter to the chairman of the Ways and Means Committee describing the provision as "accentuating the common-law concept of the wife as her husband's chattels," and jeopardizing women's independent and equal status as American citizens. Since the World War Congress has advanced the position of American women, through the suffrage law granting them the right to vote, the nationality law allowing them to retain their citizenship though married to a foreigner, and the wages-and-hours law assuring them equal wages and conditions of law in interstate commerce. To curb her freedom as independent agent required to pool her resources with her husband, in the name of defense, would be a "retrogressive and reactionary step," Mrs. Wiley told the committee.

Especially aroused over the joint-tax-return plan are couples in community-property States, 45,000 of whom now file separate returns even though all the income is earned by the husband.

Community-property laws, handed down from the old Spanish or Mexican law, still stand on the statute books of Arizona, California, Idaho, Louisiana, Nevada, New Mexico, Texas, and Washington. Instead of giving a married woman outright control of all her earnings, the community-property system automatically designates property acquired after marriage as community property. The wife is automatically given title to one-half, but the husband has sole management and control rights.

Filing half their income under their name and half under their wives has enabled thousands of taxpayers in community-property States to avoid high surtaxes. Use of the two-income system has been especially popular in Hollywood. Nearly half of the community-property returns are now filed in the State of California.

If the compulsory joint-return clause stands, the community-property law will become practically a dead letter on State statute books, since its actual operation within States is now carefully safeguarded in behalf of the wife, and the once overlording husband now has little authority not shared by his wife.

Ironically enough, the Nation's feminists have always fought community-property laws as un-American and old-fashioned. Now they are lined up together to fight the "tax on marriage and equality."

War on the Home Front

EXTENSION OF REMARKS

OF

HON. J. HARRY McGREGOR

OF OHIO

IN THE HOUSE OF REPRESENTATIVES

Monday, July 21, 1941

NEWSPAPER EDITORIAL

Mr. McGREGOR. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following editorial:

WAR ON THE HOME FRONT

New Deal consistency is ever a rare jewel. Today farmers are in the midst of the worst muddle they have yet seen in the whole A. A. A. program, and in rightful indignation they are protesting governmental regimentation and partial confiscation of their business.

Not many months ago farmers were forced to curtail production, little pigs were killed, cotton was plowed down, allotments were set up for grain crops, some crops even were destroyed, millions were spent to force farmers to produce less. Now an "emergency" is declared, and these same farmers are being asked to produce more than they ever did before, especially more hogs, more hens and eggs, more milk and butter and cheese.

Yet, regardless of this about-face program, a handful of faithful followers of the A. A. A. held a referendum last spring and a majority voted to impose wheat allotments, making regulations mandatory upon every grower who raises as much as 200 bushels or 15 acres. Ohio farmers voted against the proposal, but western wheat growers swung the vote to their side.

Now each county agricultural conservation committee must decide upon an allotment for every farmer, issue him a marketing card, police his farm, measure the fields and yields, figure any penalty and collect it. If a farmer sells over his quota, he must be fined 49 cents a bushel, which amounts to virtual confiscation. He cannot even feed this wheat without penalty, except to members of his family, but we'll bet there will be some mighty big families from here out. Of course, he can store the grain or give it to the Government for relief, but woe unto him if he tries to sell or feed beyond his quota. How the regulation will be enforced is not explained, nor even any reason why it is necessary.

The irony of this situation is to see the New Dealers now asking farmers to feed more hens and thus produce more eggs as a defense

measure, also to keep more heifers for milk production and feed more grain so that additional milk will be produced, and thus canned milk, butter, and cheese can be shipped to Britain. The Secretary of Agriculture has even asked Americans to eat less cheese so that more will be available for export, even though there are now storage holdings far beyond average. Livestock feeders are asked to raise more hogs.

Wheat enters into the rations of cows and hens and hogs. It makes more milk and butter and cheese, more eggs, and more pork. Yet if a farmer strives patriotically to fulfill the governmental request and has some extra wheat to produce more milk and eggs and pork, he must pay 49 cents a bushel to the Government for this privilege.

Is it any wonder farmers are holding indignation meetings and besieging their Congressmen with protests? Any grower should demand of his Senator and Representative that he use his influence to amend a law that permits such a jargon of inconsistencies and imposes such limitations on farmers' liberties.

Deem or Find

EXTENSION OF REMARKS

OF

HON. ROY O. WOODRUFF

OF MICHIGAN

IN THE HOUSE OF REPRESENTATIVES

Monday, July 21, 1941

EDITORIAL FROM THE SATURDAY EVENING POST

Mr. WOODRUFF of Michigan. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following editorial from the Saturday Evening Post:

[From the Saturday Evening Post]

DEEM OR FIND

When the figure of HATTON W. SUMNERS rises in the well of the House of Representatives the parliamentary principle shudders. He is going to say it again, a thing everybody knows, and it will be again unanswered.

On June 6 he said it: "This Government has not had the benefit, except in a very modified sense, of an independent legislative body for a good many years. We all know where the important bills have come from. We know, speaking generally, that matters of policy of major importance are not fashioned by the policy-fixing agency of the Government. Speaking generally—and the exceptions are rare—important legislation cannot be put through which the President does not want. Prominent Members of the House state here as a thing to be proud of, that they are for whatever the President wants. They could not be important people in this House unless that were true."

Echoes of the President's mighty declaration of foreign policy were at that moment going around the world. That was his unlimited-emergency speech. He had not consulted Congress about it. He did not address it to Congress. Never once did he mention Congress. He delivered it over the radio, and among the listeners were the Members of Congress, knowing no more what he would say and what the foreign policy of the Government was going to be than the people knew.

The speech appeared in the CONGRESSIONAL RECORD the next day, along with the emergency proclamation, not as a message from the President of the United States to the Congress of the United States but as matter referred to in the course of a debate in the House on Executive powers.

The second day it was formally brought to the attention of the Senate by a resolution offered by Senator PEPPER. The resolution read: "*Resolved*, That being informed of the forthright and straightforward address by the President on the 27th instant, it is the sense of the Senate that the President was right and deserves the full confidence of the Congress and the country."

The Senator was persuaded to let his resolution lie on the table. The argument for doing this was, in the words of Senator GEORGE, that if the resolution were pressed it "would precipitate an unnecessary and most regrettable debate at this time."

Mr. SUMNERS of Texas says everybody knows where the important laws come from, meaning that they come from somewhere on the Executive side and are sent to Capitol Hill to be passed. That is all the Congress knows. Who writes them it does not know. It was never able to find out who wrote the lend-lease law.

On being asked to amend the wartime passport law so that it could be made effective in the emergency by proclamation of the President—exactly the same law but for that one difference—the House fell into a dispute over the distinction between "deem" and "find," because the old law read, "If the President shall find," and so on, and this one had been changed to read, "If the President shall deem," and so on. Who made that change and why, saying notwithstanding that it was exactly the same law? Nobody knew. Representative JONKMAN said, "I do not think that if we were to want the person produced who changed the word, we would find him very quickly."

Recently in the Senate there was an hour of painful debate on why certain columnists were apparently better informed on the foreign policies of the Government and about the intentions of the President than United States Senators. Spreading one such column on the record, Senator WHEELER said: "Some of these columnists get from the War Department, from the Navy Department, and from the State Department information which no Senator and no Member of the House of Representatives is permitted to have."

Hear a Member of the United States Senate—this is Senator TYDINGS—saying, "I have remained silent * * * hoping, always hoping, that leadership would be assumed and that action, which is vital to the safety of this Nation, would be taken by the President. I now call on him in the name of the American people * * * to give us some leadership in the solution of the difficulties between capital and labor. * * * I ask the President, in the name of all the people of this country, to save our financial front, too. * * * If the President will take the leadership * * * all the people of this Nation will support him, and I know that the Congress of the United States will do so."

"Then the Senate," says the official reporter, "resumed the consideration of the bill to amend section 204 of the Sugar Act of 1937."

The Congress of the United States calling for leadership! To whom, then, shall the people call?

We see clearly enough what has happened elsewhere in the world to the parliamentary principle. Do we realize what is happening to it here? It has forsaken leadership. It has surrendered the purse, it has delegated more and more of its power to the Executive, and now a Senator calling upon the President to act in the name of the American people!

Government will survive. It is only the parliamentary principle that can fail. And if it does we shall have another kind of government.

The Distribution of Defense Contracts

EXTENSION OF REMARKS

OF

HON. HALE BOGGS

OF LOUISIANA

IN THE HOUSE OF REPRESENTATIVES

Monday, July 21, 1941

RADIO ADDRESS OF HON. HALE BOGGS, OF LOUISIANA

Mr. BOGGS. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following address delivered by me over the radio on July 3, 1941:

Ladies and gentlemen, the subject of my talk tonight, The Distribution of Defense Contracts, has given rise to endless controversy throughout the Nation and is fast becoming the favorite topic of columnists and investigators. It is not my purpose to add to the controversy nor to be critical in my approach to the subject. Time has been the essence of the national-defense program, and in many instances it has not been possible to indulge in long-range planning.

By now, however, it must be obvious to all Americans that "business as usual" has been necessarily junked. We are talking about gasless Sundays, about drastic price-control legislation, and we have ordered a vast curtailment in automobile production, and have even designated a day for housewives to donate old pots and pans to assist in overcoming the critical aluminum shortage.

Astronomical sums of money have been appropriated and a new tax law is being prepared by the House Ways and Means Committee to raise billions in new revenues. Hence it is my thought that it is entirely logical to discuss at this time some of the phases of the national-defense program which are bound to affect our country in the years to come.

Many of us are fearful that we have lost all sight of the day when the national emergency will cease and the Nation will attempt to return to normal times. Some are saying that unless we give consideration to that time we may build up problems and difficulties in our Nation which defy solution.

Some months ago the Temporary National Economic Committee in a special report to Congress asserted that the Office of Production Management, set up to mobilize and organize the productive resources of the United States for national defense, was an instrumentality of economic concentration the like of which the world has never seen. This Committee was created by Congress to study our entire business and industrial structure.

Its report on the national-defense program says, in part:

"Far from detracting from the importance of economic reconstruction, the events of the past year have served only to emphasize the need for readjustments after the present crisis is over. It is quite conceivable that the democracies might attain a military victory over the aggressors only to find themselves under the domination of economic authority far more concentrated and influential than that which existed prior to the war.

"Our investigations offer ample evidence of the dangers of size and concentration of plants and industries. We therefore submit to all public and private bodies responsible for industry location the desirability of decentralizing industry to the end that the

economic benefits can be secured from plants operated at their most efficient size, that the depressing aspects of the factory system prevented, and the American way of life preserved."

For years the Nation has recognized the danger of overconcentration of industry, of wealth, and even of population. Yet well over 75 percent of all defense contracts have been awarded to firms in the East, in the Great Lakes area, and on the Pacific coast. I realize fully that in most instances the fact that the old-established industries capable of efficient mass production are located in these areas has been responsible. But it is well to review the consequences before establishing new plants and industries in the same localities.

Additional plants in these areas will inevitably result in housing shortages with spirals in rents and the cost of living. Warehouses are fast becoming jammed, and it is almost impossible to maintain the normal flow of rail traffic, thus eventually a shortage of rolling stock and a bottleneck in transportation can be expected. Skilled workers are now being siphoned from other sections of the Nation to the concentrated centers, resulting in a loss to many cities and adding confusion in the area of concentration. As the cost of living increases, workers demand greater wages and further work stoppage and strikes can be anticipated.

I will cite one or two examples to make my point clear. Representatives of the Government several weeks ago, testifying before the House Rivers and Harbors Committee in behalf of the St. Lawrence power and seaway project, asserted that the project was necessary to national defense because it would make possible the utilization of shipbuilding facilities on the Great Lakes, despite the fact that all industries in that section are now jammed with defense contracts, and despite the fact that it will be 4 or 5 years before this project can be completed.

Yet these men must know that ideal locations are available throughout the entire length of our Gulf Coast for the building of ships now. Such a program there would employ thousands of men and would take up much of the unemployment caused by the diversion of ships from the coastwise services. It is worth noting, too, that recently workers and employers in the Gulf area in the shipbuilding trade voted to ban strikes for a period of 2 years, and throughout this area production may be maintained the year round due to ideal climatic conditions.

It is impossible for the Nation to prosper if industry, commerce, and wealth are concentrated in a few areas, while the remaining territory is seeking work and occupation. A prosperous farmer or worker in Georgia or Idaho is essential for the maintenance of the factories in Detroit and the trade centers in Chicago.

As the defense program has advanced we have heard almost daily reports of power shortages. One reads that soon it may be necessary to ban night baseball and that the next heavyweight championship boxing match may be fought in the daylight. There seems to be almost a frantic effort to build new dams and to lay new pipe lines.

Yet throughout the great Southeast and Southwest there are idle tonight thousands of gas fields in which are stored limitless tons of energy and power. This power requires no dams before it can be utilized by the arsenal of democracy. In my own State of Louisiana nature has beneficently distributed its resources in such a fashion that the Nation need but to build the plants to manufacture much-needed chemicals and munitions. The same may be said of many other States of our country.

No part of the Nation, except possibly the agrarian Midwest, has suffered more from this shortsighted policy of concentration than the South. Nor did our suffering begin with the national-defense program. For years an arbitrary and indefensible system of discriminatory freight rates has been maintained and much of our natural wealth has been exploited through absentee ownership. Nor can it be said that any section will suffer more as the result of the present world conflict. With a diminishing market, the production of cotton during the past 20 years has steadily decreased, and now the entire export market has been virtually lost. The South must turn to industry to balance its diminishing agriculture returns.

Aside from basic fundamental economic reason, the present policy of concentration is wrong from a military point of view. France was destroyed and forced to surrender when the plants concentrated in a narrow northern section were overrun. The production of Great Britain has been seriously crippled by bombing of the congested industrial midlands. The Nazis, on the other hand, have scattered their industries throughout Germany, making disruption of production extremely difficult. Yet the most vulnerable places in America, the Atlantic and Pacific coasts, are the center of most of our vital industries. How much wiser would it be from the standpoint of defense to establish plants between the protecting mountain ranges and within the vast plains of the Mississippi Valley, where raw material need be transported but a few miles and where the entire area is safeguarded by our mighty bases in the Caribbean.

I realize, of course, ladies and gentlemen, that we must work with all speed, but I have attempted to point out some of the practical considerations that must be studied as our program advances if we are to maintain the system of free enterprise which has made our democratic institutions possible.

We are on the eve of celebrating the birth of our independence. The Fourth of July 1941 should mean more to Americans than ever before. As some of us casually accept the institutions which have made our Nation great, as many of us take for granted our civil liberties which make it possible for us to worship God as we please, to express our opinions by word of mouth or by the pen, the vast continent of Europe which nurtured liberty and equality is blacked out, and there roams about it strange doctrines, fostering dictators who make the despots and tyrants of the Middle Ages fade into insignificance.

Never since that first Independence Day has America meant more to the world and to Christian civilization. It is the sacred and solemn duty of each of us to fortify and strengthen our democracy so that the mighty currents from abroad will be interrupted and controlled as they splash on our ramparts. The lesson that has been taught in Germany, in Italy, and in Russia is that the tempest that succeeds, however, is not always that which comes from without. Economic unrest, domestic insecurity are the fertile fields for the demagogs, the dictators, and the "isms."

It is with this thought that I have spoken tonight. The national-defense program can and should be double-edged sword to protect us from without and to make us secure from within. If we will study and plan in the distribution of contracts, the location of plants, the construction of ships, the manufacture of armaments so that all phases of the national economy will be balanced and cushioned for the inevitable difficulties which must follow in the wake of this world conflict, our defense program will accomplish its double purpose, and national unity will be achieved by national participation in our mighty effort to safeguard our liberties and our way of life.

Daylight Saving

EXTENSION OF REMARKS

OF

HON. EDITH NOURSE ROGERS

OF MASSACHUSETTS

IN THE HOUSE OF REPRESENTATIVES

Monday, July 21, 1941

EDITORIAL FROM THE BOSTON HERALD

Mrs. ROGERS of Massachusetts. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following editorial from the Boston Herald:

NATIONAL DAYLIGHT-SAVING TIME

The President's proposal for extension of daylight saving is an obvious method of relieving the power shortage now threatening the defense program. Electric power is extremely important at this time. Without it the raw materials we are amassing cannot be molded into guns, planes, and tanks. For example, the reduction of aluminum from its naturally occurring ore, bauxite, requires tremendous amounts of electricity.

Power production cannot be stepped up automatically. It must be generated from water in hydroelectric plants or through the burning of oil or coal. Then it must be transmitted over cable networks of definitely limited capacities. The problem is to use our existing power facilities more efficiently. To this end the President has asked for legislation to provide daylight-saving time "upon such a regional or national basis, and for such part, or all, of the year, as he might deem necessary in the interest of our national defense."

There are two principal ways in which extension of daylight saving can free more power for defense uses. First, reduction of consumer demand for electricity would save water and fuel stocks. These sources of power could then be used to create additional electricity for industrial production. While it is not quite as simple as turning off the lights in your home an hour earlier and using the current to run a lathe, that is the ultimate effect.

Daylight saving could also permit more efficient use of existing power capacities. In some respects, this is even more important than the first economy. An electric-power system which has a maximum of half a million kilowatts can deliver only that much power at any one time. Sometimes, it may operate at that peak. At other times, the demand falls off and it functions at only a fraction of its full capacity. If excessive demands at peak hours—demands which the plant cannot meet because of its limiting capacity—can be spread to those hours of low demand, the total power delivered in a 24-hour period will increase.

Daylight saving can accomplish that in this way. There are two general peaks of power consumption, at about 11 a. m., as the morning shift operates full blast, and at about 4:30 p. m., as the afternoon shift reaches high gear. Daylight saving cannot lighten the load at the morning peak. By prolonging daylight for 1 hour in the evening, however, it can considerably lessen the danger that the afternoon industrial peak and a consumer peak will occur simultaneously. This would be especially true in the winter, when the sun sets early.

Daylight saving was first tried in Germany in April 1916 as a war measure. Other European nations quickly followed. Congress prescribed it for this country in June 1917,

and it went into effect the following April. The farm States opposed it vigorously when the war ended, and it was repealed in July 1919 over the veto of President Wilson, who maintained that it had "resulted in very great economies of fuel and a substantial economy of energy." Massachusetts has had daylight saving on a State basis since 1920. Several other States and many of our chief cities, including New York, Philadelphia, Pittsburgh, and Chicago, also observe it. Great Britain and Germany are now saving not 1 but 2 hours of daylight as a war economy.

Experts have estimated that Nation-wide, year-round daylight saving of 1 hour would reduce the annual consumption of electricity by 736,282,000 kilowatt-hours. Officials of both the Office of Production Management and the Federal Power Commission have urged such a program strongly. The saving may seem a drop in the bucket compared with our national consumption, but drops in the bucket are important these days. As Senator AUSTIN, of Vermont, has pointed out, most of the opposition to daylight saving arises from confusion concerning it. The facts prove it highly desirable.

War, Peace, and Trade

EXTENSION OF REMARKS

OF

HON. ROY O. WOODRUFF

OF MICHIGAN

IN THE HOUSE OF REPRESENTATIVES

Monday, July 21, 1941

ADDRESS BY GEORGE N. PEEK

Mr. WOODRUFF of Michigan. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following address by George N. Peek:

The war interventionists, in their campaign to involve this country in foreign wars, have made some broad and unsupported assertions respecting our foreign trade and our dependency upon it which they ask us to swallow whole—hook, bait, and sinker. A short time ago Wendell Willkie, in an article published in a national magazine, appeared as an advocate of the view that participation in the war was necessary to save our foreign trade. No reasons were given, however, why his views should be taken seriously on account of any special knowledge or experience in the field of trade, foreign or domestic. His statements again may be regarded as just campaign oratory—this time in a campaign to involve us in a foreign war. On May 17 the President, and on May 18 Secretary Hull, added their voices and the prestige of their high offices to this same view and this same campaign, seemingly oblivious to the fact that for 7 years past they have been acclaiming their foreign-trade program as a great instrument of peace. Nevertheless, the high prestige of their offices will not overcome this inconsistency. Enough to say that the arguments of one are the arguments of all. They stem from the self-interest of a few. They are built on a false theory of trade. Their case will not stand up before a jury of American informed opinion.

The American people are entitled to hear both sides of this question before being stampeded into war and they should be afforded an opportunity to make up their minds after full and open discussion, in their own forum, the Congress of the United States. So far, that opportunity has been denied them just as it was in the 1940 election.

The assertions of the interventionists fall into three general classes:

That Hitler can impoverish America by causing our economic collapse by cutting off our export markets and by denying us access to the imports of vital materials we need;

That if Hitler controlled a large part of the world politically, thus increasing his bargaining power, he would be in a position to dictate terms to us; and

That we cannot compete with his slave labor, his barter system, and his goldless economy.

All of this would result, they say, in our regimenting our whole economy.

These assertions are based upon the assumption that Hitler will control all the world, politically and economically, with the possible exception of North America. To assume that he can do this is a counsel of unreasoning defeatism. Few, if any, informed people in or out of our armed forces accept this assumption. Moreover, the assertions would apply with equal force to any other nation occupying a position of similar prestige. Could you imagine a victorious Britain giving us many trade advantages?

In considering their assertions there are certain fundamentals of trade to be borne in mind:

First. There is no difference in principle between foreign and domestic trade. Confusion has arisen, however, because foreign trade is complicated somewhat by restrictions imposed upon the entry of goods and the transfer of funds between countries and by differences in language and customs.

Second. It takes two parties to complete a trade. Continued and satisfactory relations are based upon recognition of the needs and desires of each.

Third. Competition is the life of trade and is always a threat in private business no matter from whom it comes. So it is with nations.

Now, as to the specific assertions: That Hitler can impoverish America by causing our economic collapse by cutting off our export markets and by denying us access to the imports of vital materials we need.

We are more nearly self-contained than any other nation. More than 95 percent of our trade, as a whole, is domestic and less than 5 percent foreign. Of that 5 percent the Americas account for 2 percent of it, leaving but 3 percent for the rest of the world. An increase of 5 percent in our domestic trade would amount to more than an increase of 100 percent in all of our export trade, including the Americas. Certain industries differ from others in their pecentage of export trade. Some radical readjustments would be necessary in some industries if we were to lose all of our export markets, but they would be nothing compared to the hardships we would have to endure through participation in a foreign war.

Every informed person knows that 5 percent added to or deducted from the gross income of an American industry does not represent the difference between profit and loss. Yet the fanatical war interventionists do so assert. It is clear, therefore, that even if Hitler could stop all of our exports he could not cause our economic collapse.

All over the world nations have been trying to make themselves more self-sufficient and independent of their neighbors, near and far. This trend has been especially evident following the first World War. We supplied men, money, and materials everywhere to help the rest of the world take advantage of technological development, much of it our own, apparently with no thought that by so doing we were cutting the ground out from under our own export trade in those countries, and building active competitors, not only in our export trade but in our home markets as well. Examples are Czechoslovakia with shoes, Japan with textiles, and more recently Brazil with cotton. The development of wheat production in France and Italy is notable also as evidence of the efforts of nations to become self-sufficient.

A few instances of the decline in our farm exports, because of the growth of competition and the effort of nations to become self-sustaining, suggest that we must not build our economy upon the foundation of export trade.

Let me show you how our farm exports have been slipping.

In 1910 we exported 68 percent of our cotton; in 1940 less than 8 percent.

In 1910 we exported about 31 percent of our tobacco; in 1940 about 18 percent.

We exported about 11 percent of our wheat in 1910 and less than 7 percent in 1939.

Corn about 2 percent in 1910 as compared with 1.3 percent in 1939. (See table I.)

Henry Ford was right when he said during the depression:

"Whatever we do, we shall need to do at home. The place to revive the standard of living of the United States is within the United States, and the idea that we can revive our own industries and promote a higher level of domestic exchange by foreign trade is without foundation. In the first place, the world could not offer us enough sales to make any material difference in our home production, and in the second place, business founded upon foreign markets, instead of our own markets, is only temporary."

As to the imports of vital materials we need—let us see how important they are.

Rubber accounted for 12½ percent of our imports in dollars in 1940. Tin 5.1 percent, coffee 5 percent, raw silk 4.9 percent, cane sugar 4.5 percent, newsprint paper 4.9 percent. No other items amounted to more than 3 percent except wool, 3.3.

Now let us see what technological development is doing in these fields.

Rubber: The production of our own rubber has progressed to a point where we may say that, if necessary, we are no longer dependent upon the Eastern Hemisphere. Very shortly we can produce our own rubber, synthetically as well as from new plant material. Germany is doing it. A number of our most important rubber manufacturing and chemical companies are active in this field.

Tin: The same thing is true of tin. We are now preparing to smelt a considerable proportion of our tin requirements in the United States from ore coming from Latin America. In addition, important substitutes have been developed from plastics and other materials replacing tin. These are so important that one of our largest users says he believes that even now his company is entirely free from dependency upon tin imports.

Silk: Witness the great development of rayon and now nylon. Some authorities forecast that within a reasonably short time we will be entirely independent of silk imports.

Newsprint: Most of us are familiar with the development of this new industry in the South using slash pine as a raw material according to processes originated by Dr. Herty. This development, plus the supply from Canada, promises to fill our requirements independent of the Old World.

Coffee, sugar, and wool can be supplied from the Western Hemisphere. But the interventionists say that if Hitler controlled a large part of the world, politically, he could dictate terms to us.

Napoleon had a similar idea in 1806 when from Berlin he established the continental blockade against England. He could not make it work. Portugal, Russia, and even France persisted in maintainirg their English trade connections. Human nature was too strong, and it is likely to be always.

Political control is one thing; economic necessity, quite another. The war interventionists' theory is that one party to a

transaction could dictate all the terms and conditions of trade between two or more parties. How false. Every man, woman, and child knows, if he will think but for a moment, that it takes two parties to complete a trade. As to Hitler's ability to dictate terms of trade to us in the event of a victory—no. The interventionists entirely overlook the importance of our markets to foreign nations. That is where economic necessity comes in.

We have the greatest consuming market in the world. This is our high card. Our purchases from foreign countries support a large part of the economy of many of them. This economy does not shift overnight with the flag of the overlord. It must continue to rely upon our market. Let us look at the situation with respect to a few important imports and not how the income of the supplier rose or fell with the amount of our purchases.

Rubber: The Malay States, the Dutch East Indies, and small neighboring countries produce nearly 95 percent of the world's rubber, of which we use half.

In 1929 we imported over 526,000 tons for which we paid over $247,000,000. By 1932 our imports had dropped to less than 394,000 tons; we paid less than $35,000,000. By 1937 we had increased our imports to more than 592,000 tons. We paid nearly $253,000,000.

Tin: The case of tin is similar. The Malay States, the Dutch East Indies, and small neighboring countries, and China produce 60 percent of the world's tin. We use 40 percent of the world's production.

In 1929 we imported 195,000,000 pounds for $91,839,000. In 1932 we imported less than 78,000,000 pounds for less than $16,500,000. In 1937 our imports amounted to more than 197,000,000 pounds and we paid over $104-000,000. (See table II, last page.)

The last 2 years show a greatly increased tonnage on account of our Government policy of storing up rubber and tin.

Silk: Japan produces nearly 90 percent of the world's silk. We buy 90 percent of her exports.

Manganese and potash: We can supply our requirements from this hemisphere for these products, manganese through the development of machinery and new processes for refining low-grade ores here and in Cuba; also there are further possibilities in Brazil. Potash has been made available through the development of our own mines.

These are examples only of the dependency of foreign nations upon our market. Others may be cited—jute from India, diamonds and gold from South Africa, tea from southeastern Asia, etc.

A careful canvass of the world's mineral production discloses that the non-American nations of the world are more dependent on the Western Hemisphere than it is dependent upon them.

The world marches on.

Trade is never static; conditions and methods change; demand and sources of supply with them. Many examples could be cited of where one concern or one country—a principal source of supply one year—has given way to another concern or country in the year or two succeeding. Manganese, cement, matches, and various food products are examples. But so long as we retain our great consuming market we shall find the rest of the world ready to compete to fill its requirements.

But the war interventionists insist that we cannot compete with Hitler's slave labor, his barter system, and his goldless economy. Let us consider these claims briefly.

Other things being equal, free labor can out-produce slave labor. We made our greatest progress after we abolished slavery. Slave labor produces little buying power. American wage levels support our higher American standards of living. They protect the American workers on our farms and in our factories against the lower standards not only of the forced labor of the Axis Powers and Russia, but of the low-paid labor of the Argentine and China, and the cheaper labor everywhere outside the United States. Our wage levels must be insulated against the competition of a world turned upside down.

About the barter system: All trade is barter. "Trade" is defined by the dictionary as "an act or business of exchanging commodities by barter or by buying and selling for money." Barter is the simplest form of trade. Of "money," the dictionary says, "In a comprehensive sense, anything customarily used as a medium of exchange and measure of value as sheep, wampum, copper rings, et cetera; hence in economics anything having a conventional (i. e., generally recognized) use, either as a medium of exchange or a measure of value, or as a measure of value alone." Money, in other words, is a convenient medium for facilitating the exchange of goods. But we have allowed money to dominate trade rather than serve it. We have our wires crossed.

We have seen England abandon the practice of a century as the leading advocate of free trade and the gold standard, and for the last decade follow a new policy of tariffs, trade agreements between nations, and managed currency, which is often indistinguishable from barter. I do not say that this is or is not the best way to conduct trade between nations, but the point is that that is the way world trade has been trending for more than 10 years. We are the only important nation attempting to ignore this fact.

In 1933 and 1934 we demonstrated that we could barter with other nations to our advantage. Indeed, we made some desirable trades, mutually agreeable ones, receiving from France modification of their quota restrictions against American apples in return for import licenses for French wines. Similar trades were made with Spain and Italy when we received, in return for the issuances of liquor licenses, the restoration of our markets for tobacco in both countries. But the administration refused to continue to trade. The reason given was that to do so would interfere with our trade-agreements policy which was one of reduced tariffs and international altruism toward every country in the world—save one. The real reason, however, was more obscure. In the case of Germany, notwithstanding that her two great necessities were understood to be easier access to raw materials and larger markets for her manufactured products, the New Deal denied her both, beginning as far back as 1934.

The reasons were social and political. Vice President Wallace now says (address, Foreign Policy Association, April 8, 1941), "The next peace must give the * * * aggressor nations the opportunity to buy materials and sell manufactured goods without discrimination." Recent statements of the President and Secretary Hull support this view. If these officials and their associates had recognized Germany's legitimate necessities in 1934 and since, instead of declining to trade with her, they might have made a real contribution toward world peace. Moreover, such recognition might have checked the rapid rise of nazi-ism, thus avoiding the danger of America involvement in this war. It will be necessary in the post-war period if we are to avoid depression at home and further war abroad.

As to gold. It is frequently asserted that Germany does not want gold. Hitler himself, in a recent talk to his nation, refuted this assertion. No one is going to repudiate gold except those who do not have it and cannot get it. Remember the fable of the fox and the sour grapes. But even if we had no gold in this country we could still lead the world in trade on account of our unrivalled resources and the productive labor of a free people.

There are many considerations involved in trade besides price. Design and adaptability of products for the work desired, terms, delivery dates, personal equation between buyer and seller, and numerous other things. Frequently we hear the phrase, "Quality is remembered long after price is forgotten." If price were the sole measuring stick the manufacturer with the lowest price would be selling all the goods, be they automobiles or what, but this does not happen.

The answer lies in the diversity of human demands and in mutuality of interest between nations and regional economic areas, all things considered. Under these circumstances there is only one intelligent procedure for us to follow, and that is to recognize the conditions under which trade is now conducted between nations, and then, so long as governments control the foreign trade of their nationals, to negotiate country by country for the terms and conditions under which goods may be exchanged satisfactorily. Each country must recognize frankly the needs of the other.

If regimentation is to result, as the war interventionists say it will, my answer is that I would prefer to regiment the 5 percent of our economy which is represented by our foreign trade, than the 95 percent which is devoted to our domestic needs.

We must recognize the fact that we cannot prescribe the rules and regulations for all the world. Rather, if we are going to engage in trade with other nations, we should use our strategic advantages to negotiate in our own interest.

We should, of course, keep ourselves in a position to join with other nations in improving methods of trading if and when the time comes that the rest of the world is ready to consider a change. But, in the meantime, we should refrain from playing Santa Claus and from opening our markets recklessly to nearly all the world and so exposing our national economy to influences from abroad over which we have no control. Our need is for more defense of our national economy—not less.

The preservation of our free institutions is essential, not only for the peace and welfare of our own people, but as an example to the rest of the world of the success of the American way. Nevertheless, any attempt arbitrarily to impose our way upon other peoples, regardless of the social and economic structures of their own making, would be futile and foredoomed to failure. It should be resented just as we resent propaganda antagonistic to our form of government.

Earlier in my remarks I referred to the arguments of the war interventionists as stemming from the self-interest of a few. Generally I referred to the 18 percent shown by the Gallup poll of the people constituting the interventionists. More specifically, I referred to those who profit most from international trade—the international bankers, ocean transportation companies, marine insurance companies, exporters and importers, and so forth, as distinguished from the business concerns who do some foreign business incidental to their domestic business but whose business is primarily domestic. All of the latter group, if compelled to choose between a prosperous American market and one periodically shot to pieces by foreign events, in times of peace and war alike, as ours has been, would choose the American market.

I think that all of our foreign policies, political and economic, should be related definitely to our American needs and ideals,

with the objective of protecting and perpetuating the form of government and the economic policies which have made our country great. Our aim should be to make possible to all Americans the fullest benefits of our form of government as granted by our Constitution and the Bill of Rights. The first requisite to this aim is knowledge based on reliable and comprehensive information, so that we may know what the problems are and consider them fairly. The second is a realization of the principle that foreign policies, whether political or economic, must not be permitted to destroy or impair either our form of government or our standards of living.

The question boils down to this, Shall we take advantage of our position of geographic and economic security and contribute to world peace and prosperity by developing our own country and by attending to our own affairs, or shall we involve our Nation in foreign wars under the guise of protecting a theory of foreign trade which, as has been shown, is detrimental to our welfare? Shall we dilute our Nation's strength with the world's weakness? There rests our choice.

TABLE I

	1910		1940	
	Net tons	Percent	Net tons	Percent
Cotton:				
Produced	2,902,000	------	3,172,000	------

1937	197,377,000	54.24	104,285,000

Veterans' Preference on W. P. A.

EXTENSION OF REMARKS
OF
HON. JAMES E. VAN ZANDT
OF PENNSYLVANIA
IN THE HOUSE OF REPRESENTATIVES

Monday, July 21, 1941

Mr. VAN ZANDT. Mr. Speaker, organized veterandom throughout the United States is deeply appreciative of the fact that Congress has at last recognized the need for a real veterans' preference provision in the annual Emergency Relief Appropriation Act, commonly referred to as the W. P. A. law.

For years confusion has prevailed in the interpretation of veterans' preference, and numerous Congressmen were at their wits' end in trying to find a solution as a result of the faulty interpretation and the discrimination that became widespread.

During the consideration of the W. P. A. bill for the fiscal year 1942 Congress recognized the fact that the veteran was not receiving the preference intended for him on W. P. A. To correct the situation a real veterans' preference provision was written into the W. P. A. law when my amendment was adopted which guarantees that the needy unemployed veteran or the wife of an unemployable veteran or the widow of a deceased veteran will receive preference to which he or she is justly entitled.

Commissioner Howard O. Hunter, of the Work Projects Administration, has issued the following letter to State Work Projects administrators furnishing a uniform interpretation of veterans' preference on W. P. A. Mr. Hunter's letter is as follows:

FEDERAL WORKS AGENCY,
WORK PROJECTS ADMINISTRATION,
Washington, D. C., July 17, 1941.

Commissioner's letter No. 18 to State Work Projects administrators.

Subject: Provisions of the Emergency Relief Appropriation Act, fiscal year 1942, affecting eligibility and assignment of veterans.

SECTION 1. General: The Emergency Relief Appropriation Act, fiscal year 1942, contains certain provisions which necessitate important changes in present policies and procedures governing employment of veterans. Necessary revisions to the appropriate sections of operating procedure E-9 will be issued in the near future. General directions as to the necessary changes are set forth in the following sections.

The pertinent provisions of the act are as follows:

"SEC. 10. (a) Section 15 (a) of the Emergency Relief Appropriation Act, fiscal year 1941, is hereby continued in effect for the month of July 1941. Effective on August 1, 1941, in employing or retaining in employment on Work Projects Administration work projects, preference shall be given to veterans of the World War and the Spanish-American War and veterans of any campaign or expedition in which the United States has been engaged (as determined on the basis of the laws administered by the Veterans' Administration, except that discharged draft enrollees other than those with service-connected disability shall not be considered as veterans for the purposes of this subsection), and unmarried widows of any such veterans, and the wives of any such veterans who are unemployable, who have been certified as in need of employment by the Work Projects Administration or by any agency designated by it to so certify: *Provided*, That if the total monthly income from all sources of any such veteran or of the unmarried widow of any such veteran, or if the total combined monthly income from all sources of any such unemployable veteran and his wife, as determined by the Commissioner (whose determination shall be final and conclusive), is less than the monthly earnings the veteran, unmarried widow, or wife would receive if employed as a project worker of the Work Projects Administration, then such veteran, unmarried widow, or wife, as the case may be, shall be certified as in need of such employment, and when assigned to such employment he or she shall be employed for such period as will permit the total monthly income of such veteran or unmarried widow, or the total combined monthly income of such unemployable veteran and his wife, to be approximately equal to the amount which would be obtainable by full-time employment on any such project. Thereafter preference in such employment shall be given on the basis of relative needs, as far as practicable, to other American citizens, Indians, and other persons owing allegiance to the United States who are in need."

SEC. 2. Determination of need of the veterans' group: The effect of section 10 (a) is to entitle employable veterans, wives of unemployable veterans, and unmarried widows of veterans to certification if the total income in the family from all sources is less than the amount which he or she would earn on a project.

For the purpose of effectuating this provision when a veteran, the wife of an unemployable veteran, or the unmarried widow of a veteran applies for certification for project employment, it shall be assumed that if he or she were assigned to a project they would receive the unskilled "A" wage. Therefore if the income in the family is less than the unskilled "A" wage, the veteran, the unmarried widow of a veteran, or the wife of an unemployable veteran shall be certified even though the income is sufficient to meet the subsistence needs of the family. This does not preclude the referral and certification of veterans, wives of unemployable veterans, and unmarried widows of veterans whose income is equal to or greater than the unskilled "A" wage if they are in need and otherwise eligible.

The act provides that the need of the veteran group shall be based only on income. Accordingly, resources such as non-income-producing property, life insurance, etc., cannot be considered in determining the need of members of the group. However, all forms of income, including disability compensation, whether in cash or kind, shall be considered, including earnings of other members of the family group, such earnings to be considered on the same basis as for nonveterans. Since unemployment-compensation benefits are income, eligibility for such benefits does not render a member of the veterans' group ineligible for certification if the amount of the benefits plus any additional income in the family is less than the unskilled "A" wage.

Wherever possible the determination of need of the veteran group should be made by the referral agency if it is willing to accept the standard established by the act. However, if the referral agency is unable or unwilling to apply such a standard to the veteran group, the responsibility for determining the need of this group must be assumed by the Work Projects Administration.

The regional and central offices should be advised at the earliest possible moment whether the referral agency is able and willing to apply this standard or whether it will be necessary for the State work projects administration to assume the responsibility.

SEC. 3. Preference in employment: Preferences in assignments to projects are set forth below. All preferences are subject to the requirement that persons assigned to projects shall be qualified to perform satisfactorily the work which they are assigned.

Preference in assignment and in retention of employment shall be given the following order:

1. Certified persons having veteran's status.
2. Other certified persons in relative need, category A.
3. Other certified persons in relative need, category B.

SEC. 4. Assignment: When members of the veteran group are assigned to projects they shall be assigned for the normal schedule of hours.

HOWARD O. HUNTER,
Commissioner of Work Projects.

Mr. Speaker, briefly, Congress has provided that a veteran, the wife of an unemployable veteran, or the widow of a deceased veteran is entitled to preference

on W. P. A. in the event that the total income of the veteran or his family does not exceed the monthly W. P. A. wage. If, however, the veteran's income does exceed the W. P. A. wage, and such income does not meet his subsistence needs, the veteran is eligible for preference on W. P. A. and entitled to work the normal monthly schedule of hours.

In determining the certification of a veteran for W. P. A. employment, it need only be shown that the veteran is in need of employment and that his income from other sources is not sufficient to provide for himself and family. The question of certification rests entirely in the hands of the W. P. A., but according to Commissioner Hunter's letter it is intended to delegate such certification to the State relief agencies. In the event the State agency declines to act as a certifying agency it is incumbent on the W. P. A. to establish such a system.

In the past several months many veterans have been included among those furloughed from W. P. A. employment. In such cases the W. P. A. is faced with the duty of giving preference to such veterans in filling vacancies.

In some instances veterans have been unable in the past to obtain certification by State relief agencies because of the relative-needs clause. Under the provisions of the 1942 W. P. A. law the relative-needs clause is abolished and those veterans formerly denied certification should make application under the provisions of the 1942 W. P. A. law to the nearest certifying agency.

The previous exemption from the 18-month, 30-day furlough provision continues to apply to all veterans, their wives, and widows.

The Struggle for Americanism

EXTENSION OF REMARKS

OF

HON. CHARLES S. DEWEY

OF ILLINOIS

IN THE HOUSE OF REPRESENTATIVES

Monday, July 21, 1941

ARTICLE BY WILLIAM SALTIEL

Mr. DEWEY. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following article by William Saltiel:

THE STRUGGLE FOR AMERICANISM

(By William Saltiel)

No man of my acquaintance has ever possessed profounder appreciation of America than did my father, Leopold Saltiel. He came to this country at the age of 19, imbued with a burning zeal to foster and to enjoy the blessings of freedom, which were not vouchsafed to those who lived in the Old World.

He was a lifelong student of ancient and modern philosophy. He knew the painful struggle of men in their groping for wider expression. Plato, Aristotle, Aurelius, Spinoza, Descartes, Rousseau, Paine, and Jefferson were a part of his very soul.

He was born and raised in Vienna, Austria, in the reign of Emperor Franz Joseph. The monarchial and feudal theories which obtained in that land and in that time met with his fervent disdain. They were stultifying to those who believed in the inalienable rights of men to life, liberty, and the pursuit of happiness, though in the light of present-day Europe the Austria of my father's time was incomparably freer than it is today. True, there was a certain degree of persecution and oppression, but it was as nothing compared with the savagery which now crushes humanity. Even then there were millions who came or who sought to come to America. It was the Promised Land.

To my father, it was not just a land of milk and honey; it was the country of opportunity for the broader life of the spirit. It was not the economic urge alone that brought him here. He wanted to breathe the air of a nation which lived under a constitution which safeguarded all men, a country where men had opportunity to develop themselves. He knew full well that what freedom he would enjoy, he must, himself, help protect.

He knew that this was not a perfect land, that its institutions had not attained perfection, that all things human, being fallible, constant sacrifice, devotion, and even martyrdom might be expected. He resented the attitude of some who thought democracy could go on without having its altar fires refueled.

When he came to America in 1889, he struggled mightily to build a home for himself. He came without money, and the fact that he was a cultured gentleman with scholastic background often impeded rather than accelerated his endeavors. There was no work too hard for him. While studying law, he supported a family. He worked from early morning until late at night to build a career, as well as to create a home. He worked in the spirit of those pioneers who made this country great.

INTERDEPENDENCE BRINGS STRENGTH

In my long walks with him, as a child, he always sought to impress upon me that mankind was interdependent, that everything we possessed mentally and materially we owed to many people, as well as to the ages which have gone before. Only stupid conceit would make any man believe that he himself had acquired what he possessed. To him, therefore, democracy was based upon the broad foundation of appreciation. Appreciation naturally leads to acceptance of humanity, to acceptance of brotherhood and fellowship with all peoples.

He believed in peace with a deep and fervent belief but not in the peace of cowardice. He believed moral courage was greater than physical courage and where either or both were required, men could not flinch. If they accepted wrong supinely, then they must expect the forging of slavery's chains.

Even while he searched for truth in all things, he never permitted himself to become a zealot. He remained essentially human, understanding sympathetically that wise change is only brought about through orderly processes. He was never blindly partisan. He resented the crusader who could not or would not see the other man's side of the case. He fought against force and violence, knowing that those who employ such methods only evoke counterforce and violence, which in the end results in destruction. This principle applies to the technique of all total wars, whether they be of the spirit or of the battlefield.

He knew that democracy was dependent upon patience; that in some aspects it was slower than personal government. But certainly it was always fairer, freer, surer of results over the years.

Many like my father have made America better because they looked for better things in America. They brought with them the spirit which they sought. They lighted the fires to which they came; fires which are still glowing in a world of black-outs. This cosmopolitan America gives humanity its only hope because it has given these men haven and refuge. The spiritual pluralism of our country is the crowning achievement of the ages.

My father died 2 years ago, a few days after reports from Germany that a reign of unprecedented terror had fallen upon that afflicted nation. The memory of those days will always remain with me because it constitutes a challenge to justify the faith that he had, the faith that mankind could and would overcome its present nightmare.

The army of which he was a part must not fail in this crucial hour. His Americanism was one of nonacceptance of evil, an Americanism of battle, not of resignation.

Recognized Engineering Experts Versus Administration-Controlled Mathematicians in Estimating Cost of St. Lawrence Seaway and Power Project

EXTENSION OF REMARKS

OF

HON. JAMES E. VAN ZANDT

OF PENNSYLVANIA

IN THE HOUSE OF REPRESENTATIVES

Monday, July 21, 1941

Mr. VAN ZANDT. Mr. Speaker, on page A3460 of the Appendix of the RECORD appears the extension of remarks of my good friend and colleague the gentleman from Texas, JOSEPH J. MANSFIELD, chairman of the House Committee on Rivers and Harbors, entitled "A Layman's Guess Versus Engineering Facts."

Congressman MANSFIELD'S remarks were intended to challenge the authenticity and accuracy of the statements contained in my radio address of July 8 in opposition to the St. Lawrence seaway.

Following the tenor of Congressman MANSFIELD'S remarks it is not my intention to pose as an engineering genius but rather would I take my place at his side as a humble layman eager for the truth. In our quest for the truth it is incumbent upon us that we look at the facts.

We have before us the picture of the administration marshalling every wheelhorse in true "Charlie McCarthy" fashion in a frantic effort to convince the American people through distortion of figures and facts that the St. Lawrence seaway is not a political pet but an economic necessity.

A careful digest of the survey made by the United States Department of Commerce reveals without doubt that in a frenzied effort to build a case for this economic monstrosity known as the St. Lawrence project every conceivable means was employed to twist and turn the real facts in the hope of creating a favorable impression in the minds of the American people for this proposal.

The true answer as to how much the St. Lawrence project will actually cost is not definitely known. This fact is borne out on the basis of the experience gained in building other waterways.

As an example, the following table gives the estimated cost of several well-known large navigation projects, together with the actual cost when these various waterways were completed:

	Estimated cost	Actual cost on completion
Panama Canal	$160,000,000	$375,000,000
Suez Canal	30,000,000	80,000,000
Chicago Drainage Canal	16,000,000	53,000,000
Welland Canal	50,000,300	131,000,000
New York Barge Canal	62,000,000	176,000,000

The above figures speak for themselves and reveal that the projects cost nearly three times their original estimates. It is an accepted fact that Government engineers in the majority of the above-named projects made the estimates so that their figures on the St. Lawrence seaway may be taken with the proverbial "grain of salt." Then, too, modern construction costs have skyrocketed when compared to those encountered in building the above-named navigation projects.

Turning our attention to the subject under discussion—the total cost of the St. Lawrence seaway—we have the following figures representing the seasoned judgment of nationally known and reliable engineering experts. Their estimates are as follows:

G. L. Cooper, industrial engineer	$1,350,000,000
E. P. Goodrich, consulting engineer	1,054,000,000
Dr. Moulton, Brookings Institute	712,000,000
Herbert Hoover, engineer	800,000,000

On the other hand, General Robins, Assistant Chief of Engineers, United States Army, when appearing before the House Committee on Rivers and Harbors on July 8, testified that the estimated cost to complete the St. Lawrence seaway would be $429,474,515. In addition, General Robins stated it would cost an additional eight or nine million dollars to deepen the channels and turning basins in six or seven harbors. This would bring General Robins' estimate to $438,474,515.

It must be remembered that my good friend and colleague, Chairman MANSFIELD, of the House Committee on Rivers and Harbors, relies on General Robins' estimate. However, the great discrepancy between the estimates of renowned engineering authorities and General Robins raises a doubt as to the correctness of the figures relied upon by the advocates of the St. Lawrence seaway.

On page 983 of volume XII of the hearings on the St. Lawrence seaway we have a striking illustration of the differences of opinion as to the estimated cost involved in making the necessary improvements to the Buffalo Harbor. General Robins is quoted on page 983 as follows:

> Our figures for port facilities at Buffalo show it can be adapted to meet the needs of the immediate future, after the St. Lawrence project is constructed, at a cost of a little over a million dollars—$1,200,000.

On the same page my colleague, Congressman RODGERS, of Pennsylvania, quoted from a letter he received under date of July 2, 1941, from Frederick K. King, city engineer, city of Buffalo, that—

> Our estimate of the cost of the work involved for the necessary improvements was carefully prepared and is based on quantities readily ascertainable, and the unit prices employed are those used by Great Lakes dredging contractors. Our total estimate for this work is $46,909,709. Included in this amount is the sum of $3,349,525 for protection of existing docks due to additional depth of channel adjacent to these docks.

From the above statements we have an estimate from General Robins that the cost of improving Buffalo Harbor will be $1,200,000; yet Mr. King, city engineer of the city of Buffalo, states the cost to be $46,909,709, a difference of $45,709,709.

Mr. Speaker, if the above discrepancy prevails in the improving of Buffalo harbor alone, it is not difficult to understand that the St. Lawrence seaway has earned the cognomen, "An economic monstrosity," and is destined to cost in excess of $1,000,000,000.

My colleague Congressman MANSFIELD questions the cost of defending the St. Lawrence seaway. In this connection, it is timely to recall the great cost of defending the Panama Canal.

It is certain that we will be called upon to defend the St. Lawrence seaway in like manner with the added thought that 90 percent of the St. Lawrence project is within the Dominion of Canada. In the event of any misunderstanding with our Canadian neighbors, we would be denied using the St. Lawrence seaway as well as defending it.

Congressman MANSFIELD took occasion to mention in his extension of remarks on July 15 the Conowingo Dam in Maryland. The Conowingo Dam is one of many hydroelectric dams constructed with private capital and not with the money of the already overburdened American taxpayer. The consumers of electricity generated by the hydroelectric dams in Pennsylvania pay for every kilowatt-hour of electricity and enjoy no Government subsidized electric power such as furnished by the Tennessee Valley Authority and other Government subsidized projects.

As a Representative in Congress of the Twenty-third District in Pennsylvania, which includes 27,000 employees of 5 major railroad systems and 14,000 coal miners, together with thousands of employees of related industries, I am content to join my constituents in opposing the St. Lawrence seaway and power project as a menace to the welfare of not only citizens of the great Commonwealth of Pennsylvania but of many other States.

No one can deny that when the St. Lawrence seaway is completed, dirty, ill-manned foreign steamers, with crews paid starvation wages, will ply the Great Lakes and divert cargoes that should be hauled by the American transportation systems. It is well to remember that for every ton of freight diverted to these dirty, ill-manned tramp steamers, the American taxpayer will be called upon to pay a subsidy of $3.50, inasmuch as these foreign vessels will not be called upon to pay any taxation or toll costs for the use of the St. Lawrence seaway.

Truly the St. Lawrence seaway permits an invasion of the rights of the American workingman by permitting low-paid foreigners to force good American citizens to the bread lines.

As for the power part of the St. Lawrence project, the late Thomas A. Edison correctly defined the situation when he said:

> The first and best source of power is coal.
>
> We shall steadily require more power, but a great deal more fuss is being made over hydroelectric power than its intrinsic value warrants. The amount of coal available is not limitless, but for all practical purposes it is limitless. We can probably use coal at our present rate for a thousand years or so without any danger of exhausting our supply, and it is highly improbable that we really know our supply. * * *
>
> The development of hydroelectric power is very important, but also it is very expensive and usually requires an auxiliary coal steam plant. Some of the best water power is too far away from our manufacturing centers to make its utilization wholly practical.
>
> Water power is a political issue, not a business one. It can never at best mean very much to us except as something to talk about. The monopolizing of water power is also just a political idea. * * * There is far more danger in public monopoly than there is in private monopoly, for when the Government goes into business it can always shift its losses to the taxpayers. If it goes into the power business it can pretend to sell cheap power and then cover up its losses.
>
> The Government never really goes into business, for it never makes ends meet. And that is the first requisite of business. It just mixes a little business with a lot of politics and no one ever gets a chance to find out what is actually going on.

There is a wealth of truth in the statement of the American genius, Thomas A. Edison, when he said in speaking of our Government going into the power business:

> It (the Government) just mixes a little business with a lot of politics, and no one ever gets a chance to find out what is actually going on.

The St. Lawrence seaway is a striking application of the above quotation, since it is in reality the politicians' golden dream and the American taxpayers' hideous nightmare.

Work for Unemployables

EXTENSION OF REMARKS

OF

HON. THAD F. WASIELEWSKI

OF WISCONSIN

IN THE HOUSE OF REPRESENTATIVES

Monday, July 21, 1941

EDITORIAL FROM THE MILWAUKEE JOURNAL

Mr. WASIELEWSKI. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following editorial from the Milwaukee Journal of July 19, 1941:

[From the Milwaukee Journal of July 19, 1941]

WORK FOR "UNEMPLOYABLES"

Who is an unemployable?

Relief departments tell us that a considerable percentage of those now on general relief are unemployable in industry. W. P. A.

authorities declare that many on W. P. A. are "slowed down" workers, unacceptable to the private employer.

Yet we read that Ford, who is reputed to be a "hard boiled" employer in that he demands utmost efficiency, has on his pay roll some 11,800 "handicapped" men and women. Among those employed are 54 deaf mutes, 24 blind, 1,200 with one eye, 800 with very much impaired vision, 80 with one arm or none, 21 with no hands, 13 with no legs and 29 with one leg.

We know, too, that in Europe considerable effort has been made to fit handicapped persons into jobs which will pay them at least a subsistence wage. Work has been found for the blind which they can do better than the average-sighted person. Work has been found for other handicapped persons which they can do at least as well as physically sounder individuals.

Now, with relief loads still high and with labor demand abnormal due to the emergency, is it not time for this country to broaden its up to now somewhat apologetic program for the rehabilitation of the handicapped? If we are making an "all out" effort, the effort should include not only every able-bodied person but every person who can be fitted into a job, despite deficiencies we have looked upon as "incapacitating."

Not Breaking Word

EXTENSION OF REMARKS

OF

HON. FRANK CARLSON

OF KANSAS

IN THE HOUSE OF REPRESENTATIVES

Monday, July 21, 1941

EDITORIAL BY CHARLES BIGLER

Mr. CARLSON. Mr. Speaker, under leave to extend my remarks I am including an editorial entitled "Not Breaking Word." This editorial was written by Charles Bigler, editor of Goodland Daily News, and expresses the view of a large number of citizens of my congressional district:

[From the Goodland Daily News]

NOT BREAKING WORD

The President and the high Government and Army officials arguing now to keep the soldiers in the Army longer than their year are contending that it is not breaking the Government's agreement with the men by extending the year indefinitely.

We have become so accustomed to the Government changing the contract in the middle of it that no surprise is occasioned by this two-faced policy. In fact, we predicted from the start that the men would not be released in a year, and have never spoken of "a year of service" in connection with the Army training.

It was never the intention of the administration to let the men off with a year. The whole idea has been to build up a big army, and then send it overseas. But to have started with that, in the open, would have created so much opposition that the country would not have accepted the peacetime draft. The idea is to get something started, then add to it.

A year ago the same people who now are hollering for keeping all possible men in the Army were "pooh-poohing" the idea that it would take more than a year to train the men, that there would be any idea of holding them longer.

We do not oppose military training for the young men. In fact, we favor it. But we would like to see it made fair, and not require one eligible to go to the Army at $21 a month and another just as eligible exempt and given a dollar an hour with double pay for more than a short week. It has always seemed to us that the obligation to use skill or training for the benefit of the Nation was just as binding as to shoulder a gun. But it wasn't in the last war, and it isn't being done now.

The idea of the citizen army was to give a lot of men the rudiments of military training, and create a huge reserve that would be ready and able, if the Nation was endangered, to take up arms and do something with them. It has never been the idea of the people of the country to train a few million men and send them overseas to fight the battles of Europe and Asia, for the "four freedoms in all the world." We tried sending 4,000,000 to Europe once to save democracy and end all wars, and look what we got out of that.

There can be no faith in the word of the Government until at sometime it keeps its word. The citizen owes something to his Government, but he has a right to expect a square deal from his Government in return.

The President can say the Nation is not breaking its word with the soldiers. That, however, is exactly what he is asking the Nation to do.

Joint Income Tax Returns

EXTENSION OF REMARKS

OF

HON. WILLIAM G. STRATTON

OF ILLINOIS

IN THE HOUSE OF REPRESENTATIVES

Monday, July 21, 1941

EDITORIAL FROM THE ROCHESTER (N. Y.) TIMES-UNION

Mr. STRATTON. Mr. Speaker, under leave to extend my remarks in the RECORD I include the following editorial which appeared in the July 17, 1941, issue of the Rochester (N. Y.) Times-Union relative to the storm of indignation that has been aroused throughout the length and breadth of the Nation at the proposal to require joint returns from married persons for Federal income-tax purposes:

[From the Rochester Times-Union of July 17, 1941]

UNFAIR, INJURIOUS

The proposal to require joint returns from married persons for Federal income-tax purposes has aroused a storm of opposition. So Chairman DOUGHTON, of the House Ways and Means Committee, concedes.

And small wonder!

More than the money issue is involved, as women's organizations have been quick to recognize and emphasize.

In essence, it involves a return to the old common-law idea that a wife's property comes under the control of the husband.

Indeed, that was the actual ground on which a small minority of the Supreme Court once argued a State had a right to impose such a requirement. They held a State could revert to the common-law theory.

But the Court, by a substantial majority, rejected that theory.

The Ways and Means Committee has a responsibility to do what is just, fair, and in accordance with an enlightened view of the marriage relation, the very basis of the home and society.

It should not ask helplessly: "What other way can we raise this money?"

Opposition to this particular tax provision indicates widespread belief that the proposal is unjust, reactionary, and socially injurious.

This country has not yet come to the pass where it must resort to such oppressive taxation.

Suppose two sisters each receive the same inherited income. One marries.

The unmarried sister pays the regular tax rate, whatever it may be, on her income. But the income of the married sister goes into a joint return of husband and wife. That means a higher rate of tax for both, since it brings in the surtax rate on the combined income of the couple.

Why should our Government discriminate against marriage?

Why should it encourage separation, even divorce, by thus imposing a higher tax on married persons living together?

That is socially unsound, as well as financially unfair.

Nor should it be alleged that this concerns only persons of wealth or applies only where wives have an income bequeathed them.

It will not require a large total to bring in surtax rates. The plan hits middle-class folks chiefly.

Take the case of a married woman who earns a modest income comparable to that of her husband. Considered separately, neither income is large enough to pay surtaxes. But the combined income would immediately jump into the surtax rates, and thus impose an onerous and unjust tax burden.

Obligations of all sorts have been founded upon the assumption that there will be no special increase for married persons, above what all have to pay.

Couples who have built or bought a home may be taxed so heavily that they will not be able to keep up their payments.

The committee should drop this unfair and unwise provision.

If it fails to do so, Congress should refuse to approve the joint-return plan.

The National Defense

EXTENSION OF REMARKS

OF

HON. PETE JARMAN

OF ALABAMA

RESOLUTION OF THE AMERICAN LEGION OF ALABAMA

Mr. JARMAN. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following resolution of the American Legion of Alabama:

Be it resolved by the American Legion, Department of Alabama, in convention assembled at Huntsville, Ala., this 15th day of July 1941, That we do take this opportunity to express our scorn and contempt for the defeatists, Quislings, and appeasers who afflict

our glorious country, and our unhesitating confidence in our duly constituted authorities and especially in our wise, far-seeing, and courageous President of the United States of America, who, as Commander in Chief of our Army and Navy, has had the intelligence to take the advice of the War College, of the Chief of Staff of our Army, and of our Navy chiefs in matters of military and naval strategy. He has proved himself an able, bold, and resourceful leader. Let us say to him and to the world that the men of the American Legion value our precious freedom above and beyond any possible sacrifices; we stand ready for any service to which we may be called, and ask only for an opportunity through blood, sweat, and tears, if need be, to stamp from the face of the earth the Hitlers and jackal Mussolini and all those who disturb the peace of the world and threaten our security, our homes, and our free way of life. We have what it takes and we are ready to go, to transmit to our children and our children's children our glorious heritage of liberty and equal justice to all; be it further

Resolved, That a copy of this resolution be forwarded to the President of the United States and to each of our Senators and Representatives in Congress.

Iowa Responds to Food Drive

EXTENSION OF REMARKS

OF

HON. WILLIAM S. JACOBSEN

OF IOWA

IN THE HOUSE OF REPRESENTATIVES

Monday, July 21, 1941

Mr. JACOBSEN. Mr. Speaker, that Iowa farmers are responding to the call for more food is the conclusion of the agricultural economists of Iowa State College in a survey indicating increased purchasing power for the Iowa farmers.

On April 3, 1941, Secretary of Agriculture Wickard issued an appeal to farmers to increase food products, as follows:

1. Send hogs to market at heavier weights.
2. Increase fall pig crop about 20 percent.
3. Increase milk production from 6 to 8 percent.
4. Increase egg production 6 percent.
5. Increase poultry production 15 percent.
6. Increase canned tomatoes 50 percent.

This appeal did not find the Iowa farmer entirely unprepared. In September 1940 the Iowa State College Extension Service started to advise farmers with warnings of prospects for 1941. From the following indication the results will apparently be profitable and warrant their action:

IOWA FOOD PRODUCTION SITUATION AS OF JUNE 1941

Hogs: The Government June survey shows a 5-percent increase in the Iowa spring pig crop for 1941, 11,264,000 head.

The Government June survey indicates an increase of 30 percent in sows bred in Iowa for fall pigs.

On the basis of the above estimates Iowa will produce 16,000,000 head of hogs in 1941. This would be a little less than one-fourth of all hogs produced in the United States. This number has been exceeded but once in Iowa.

The weight of hogs going to market has apparently increased from 3 to 4 percent, which further markedly increases the meat supply.

The production of hogs in the entire United States has remained stationary. The estimated increase of sows bred for fall farrowing in the United States is 13 percent.

Dairying: The Bureau of Agricultural Economics estimates that total milk production in May was 9 percent and in June was 5 percent larger than a year earlier and the highest on record for those months. Iowa dairymen are milking from 1 to 2 percent more cows, and for the first 5 months the average increase per cow in Iowa was about 6.5 percent, and the total production will be about 8 percent over the first 5 months in 1940.

Poultry and eggs: Iowa egg production for the first 4 months of 1941 was 7.5 percent above the production for the same period in 1940, according to U. S. D. A. reports. This is an increase of about 3,000,000 dozen eggs for that period. During 1940 Iowa produced 168,000,000 dozen eggs and she is requested to produce 180,000,000 dozen for 1941.

Iowa commercial chick hatching is 18.3 percent higher in 1941 than in 1940. It is estimated that 75,000,000 chicks were hatched in Iowa this spring. Iowa produced 43,000,000 chickens to maturity or market age in 1940, and with the large increase in hatching this year Iowa should produce about 55,000,000 birds in 1941, or 5,000,000 above the Government request of last April.

Tomatoes: The best estimate indicates a 40-percent increase in acreage.

General crop conditions in Iowa are good. Iowa farmers have met Government requests for food for defense to date, have gone far in the lead on hogs, and are in a most favorable position to meet any future demands.

Welcome to Officers of Veterans of Foreign Wars of Virginia

EXTENSION OF REMARKS

OF

HON. PETE JARMAN

OF ALABAMA

IN THE HOUSE OF REPRESENTATIVES

Monday, July 21, 1941

RADIO ADDRESS BY PAUL C. WOLMAN, WITH INTRODUCTORY REMARKS BY HON. PETE JARMAN, OF ALABAMA

Mr. JARMAN. Mr. Speaker, under leave granted me by the House, I submit herewith a speech of Past National Commander Hon. Paul C. Wolman, of the Veterans of Foreign Wars, together with my introduction of him:

The service, to his country and to his comrades, of the distinguished gentleman and comrade it is my privilege and pleasure to introduce has been long, regular, consistent, and valuable indeed. Entering the service when scarcely 21 he remained in the Army practically 2 years during the World War, considerably more than half of which was spent overseas. He served on numerous active fronts including the vividly-recalled Argonne Forest and attended a British university after the Armistice.

Returning to his native Maryland he resumed his study of the law and pursued it to graduation, having enjoyed an excellent and lucrative practice in Baltimore since. He was appointed assistant State's attorney of that city in 1938.

Long active in both the American Legion, of the Montfaucon Post, of which he is a member, and particularly the Veterans of Foreign Wars, he has repeatedly been signally honored by the latter. After serving as national judge advocate general of our great organization, he made a most enviable record in the highest office within our gift, which I regard as one of the highest within the gift of Americans, that of national commander. Not content to rest on his laurels and his comrades being unwilling to be denied a continuation of his valuable service, he is now ably performing the duties of the important post of national legislative chairman.

Long a member of the Maryland War Memorial Commission, he was less than a month ago appointed a major in the Maryland State Guard and very appropriately assigned to the G–2 or intelligence section.

It affords me unusual pleasure to present to you that excellent soldier, patriotic citizen, and outstanding Veteran, former National Commander Paul C. Wolman.

ADDRESS BY PAUL C. WOLMAN

I am deeply appreciative of the privilege of participating in this fine program arranged for the welcoming of the officers chosen to guide the destinies of the Department of Virginia, Veterans of Foreign Wars of the United States, during the next 12 months.

The pleasure of having attended the Virginia encampment in Staunton will long be remembered by me. There I found a gathering of American men and women who served as our country's defenders in our wars. They were the same type of men whom the immortal Washington had with him when he first set forth to make American history.

They were serious and determined men and women from the cradle of American democracy, who had journeyed from Arlington and Alexandria, from the tidewater regions of Norfolk and Newport News, from the orchards and farmlands of Winchester and Harrisonburg, and from the southern hills of Roanoke and Bristol.

There were laborers and farmers. Doctors, lawyers, artisans, merchants, and mechanics filled their ranks. The rich and the poor voiced their thoughts with equal freedom. It was, in reality, a cross section of the peoples of our great land.

These veterans met to renew acquaintances made on the battlefields of France, or on the mine- and submarine-infested high seas, or in the Philippines, in Cuba, or China. They met to exchange views and to become better versed in the horrible affairs of a seemingly God-forsaken and war-torn world. They met to find out what, if anything, they might be able to do to assist our President and the others clothed with the serious responsibility of preserving our American way of life; that which we recognize as American democracy.

These men, ordinary citizens now, who in years past had the privilege of extraordinary service, gathered to rededicate themselves to the cause of preserving the principles of American constitutional freedom. In addition to electing the officers, to whom we are expressing our greetings tonight, the members of the Department of Virginia, Veterans of Foreign Wars of the United States, discussed and passed many resolutions.

As veterans, we know that the United States of America cannot satisfactorily progress as a first-rate nation by building a complete wall around our country and saying that whatever goes on outside of our

continental and hemispheric limits is of no concern to us. We appreciate the fact that we now live in an age when nations and their peoples are more interdependent than ever before. Try as hard as we may, we cannot entirely ignore the events which go on in other parts of the world, for they can and must have great and telling effect upon our Nation and its people.

Certain well-meaning individuals and the spokesmen for various mushroom organizations tell us that the wide spans of the Atlantic and Pacific Oceans will forever protect us from invasion. They say that whatever goes on outside of our hemisphere need not concern us.

These folks who call themselves noninterventionists and isolationists talk as though America has a choice between assured and permanent peace and willful and needless participation in the world conflagration.

As veterans of past wars we know that they lose sight of the fact that if we allow Great Britain to lose the war, we must then fight a victorious Hitler and Germany alone, whenever Hitler sees fit to attack us. We know how long our blessings of liberty and self-government would last, with Great Britain out of the way, with Nazi Germany in possession of the British Fleet and its islands so near to us, and with Hitler in control of Siberia, so close to Alaska.

Yes, as veterans who once fought for freedom and democracy, we think we know what would be in store for us. We know that the fight for liberty is never completely won, that liberty is not only a heritage but a fresh conquest for each generation.

We feel as Sergeant York, that great soldier and member of the Veterans of Foreign Wars, when asked what the veterans of World War I gained by fighting to make the world safe for democracy, he replied:

"It gave me 23 years of living in a country where the Goddess of Liberty is stamped on men's hearts as well as on the coins in their pockets. By our victory in the last war we won a lease on liberty, not a deed to it. Now, after 23 years, Adolf Hitler tells us that that lease is expiring; and, after the manner of all leases, we have the privilege of renewing it or letting it go by default."

I am proud to say that the Department of Virginia, Veterans of Foreign Wars of the United States, demonstrated its attitude upon that question for another democracy, when, by unanimous vote, it decided to purchase and present to the British Government a new and fully equipped ambulance for use on the battlefields. Ere the wording of the resolution had been recorded, pledges were forthcoming in amounts almost sufficient to defray the costs of the whole outfit. Such is the spirit of these men who hail from the great Commonwealth of Virginia.

I would that time permitted me to tell you more about the Veterans of Foreign Wars of the United States, and particularly about the members of the organization from the State of Virginia. I would love to tell you a lot that I know about these fine folks tonight. Each has made a name for himself or herself in the service of our country during time of war, and since the close of hostilities in time of peace. It is because of the faith and confidence that their comrades have in them that they were chosen to lead the organization within their State.

There is much I could tell you about William D. Morgan, the new department commander, who comes from the hill lands of Roanoke and whom I had the pleasure of installing to take over the duties that were so ably performed by the now past department commander, Oscar J. Jungbluth, of Norfolk, who, by the way, was just called back into the active service of the United States Navy. Also I would like to tell you of the fine work of the new senior vice commander, Austin J. Matthews, of Arlington. Likewise, I would be happy indeed to give to you the history and backgrounds of each of the other officers who will carry on for both the men's organization and the ladies' auxiliary as well.

Unfortunately, however, our time on the air is limited. I must, therefore, content myself by saying that each of these officers who will guide the destinies of the Department of Virginia, Veterans of Foreign Wars of the United States has been chosen for the able work done and the interests taken while holding other or lesser offices. They have all served their respective communities, State, and their Nation in time of war and in time of peace. This year they are rededicating themselves to the unselfish service of their fellow comrades and to the upbuilding of our great organization. They know that this year may be a most important one for them as well as for the leaders of all other veteran groups.

These officers of the Department of Virginia, as well as the leaders of the other departments in the Veterans of Foreign Wars of the United States, fully appreciate that their responsibilities may increase as the national emergency becomes greater. Nevertheless, as veterans they are willing to "carry the torch" that was handed to them by their now departed comrades.

One of these new officers whom I had the pleasure of installing recently told me, with tears in his eyes and a quiver of his lips, that when he raised his right hand and placed his left hand upon Old Glory and faithfully promised to discharge his official duties to the best of his ability he closed his eyes and thought of his deceased comrades sleeping the eternal sleep of peace in the American cemeteries in France and in Arlington. He said he could hear them whisper from their sacred resting places:

"Have you let us die in vain? Will you stand by idlly and permit democracy to wither and decay? We died so that you may live in freedom. Unless you preserve those principles for which we made the supreme sacrifice, our souls shall never rest in peace."

Those words, this officer of the Department of Virginia said, have rung in his ears for years and will ever serve as his incentive to work and work for the preservation of American liberty and all that it implies.

There is hardly a man, who served in the armed forces, on foreign soil, or in hostile waters, who has not had similar experiences, and who has not heard the same voices whisper to him. It is because they have heard those voices, and know what they mean, that they have and should have the God-given right to speak out for their comrades, and for the rest of the liberty-loving people as well, upon the all-important questions of democracy, liberty, freedom, tolerance, and understanding.

What fair-minded American would challenge the honest, unselfish leadership of such men, who learned what it means to fear death in the form of an enemy submarine, a burst of shrapnel, the deadly fire of a machine gun, or the sudden explosion of a hand grenade; of the men who know what it means to seek shelter from a hail of lead in the mud and filth of a trench; of men who know the utter weariness and the hunger and the suffering of the endless marches, under the cover of darkness. Yes, of the men who know, too, of the screams of a dying comrade, crucified on a cross of barbed wire, because he was willing to give his life to protect our freedom and our liberty.

Men, with such recollections, are the leaders in the Veterans of Foreign Wars of the United States. Such men have pledged their allegiance to the President of these United States of America, in his efforts to preserve the American way of life. Such men have undertaken to do their parts to help convince the public that our country is something worth living for, in time of peace as well as dying for in time of war.

And so we take this opportunity tonight to salute those new leaders of the Department of Virginia, Veterans of Foreign Wars of the United States, and the leaders in the other departments as well. In doing so, may I say that we wish that their duties may not be too arduous and too trying. However, whatever they may be, we shall stand beside them, shoulder to shoulder, as we stood beside our comrades in time of war, that we shall lend to them every encouragement in their efforts to further instill the spirit of patriotism and Americanism, in the minds and in the hearts of all of the people in our land, and that when their terms of office shall have expired, we will take our hats off to them and say:

"We are glad you accepted office in our great organization, the Veterans of Foreign Wars of the United States, and so willingly gave of your time and efforts in order that this country and all that it stands for may continue to be a free land and "One Nation, indivisible, with liberty and justice for all."

We Should Not Have Hedged in the First Place

EXTENSION OF REMARKS

OF

HON. WILLIAM S. HILL

OF COLORADO

IN THE HOUSE OF REPRESENTATIVES

Monday, July 21, 1941

EDITORIAL FROM THE STERLING (COLO.) ADVOCATE

Mr. HILL of Colorado. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following editorial from the Sterling Advocate, of Sterling, Colo.:

[From the Sterling (Colo.) Advocate]

WE SHOULD NOT HAVE HEDGED IN THE FIRST PLACE

The Government, which is to say, the people of the United States, faces a dilemma.

Less than a year ago Uncle Sam made a contract with several hundred thousand young fellows for a year of military training. Now, Chief of Staff Marshall perceives that "the possibilities of a year ago have become dangerously near probabilities today, and it is vital to the security of the Nation that the hazards of the present crisis be fully recognized." Specifically, the Army wants the selective-service trainees and the National Guard men retained for more than a year, because some of them have been stationed in Hawaii, the Aleutian Islands, and other distant places. Their dismissal soon, to quote the Chief of Staff further, would mean that "our present trained forces would largely melt away."

Army chiefs are not politicians. It is probable that General Marshall had little to say about the selective-service plan when it was adopted. Congress, it seemed, did what the executive branch of Government wanted. It is obvious now, however, that someone lacked a reasonable measure of foresight.

It isn't wholesome for the Government to violate contracts with its citizens. Granting the right of the country to conscript the services of any who may be needed for the national defense, it isn't moral to make promises and forsake them.

It was silly for Congress to legislate that the services of certain armed forces should

not be utilized outside the Western Hemisphere. The only defense that is effective is that which meets the enemy long before he has invaded our shores and which is free to anticipate his strategy. That, of course, is not to argue for an expeditionary force without consent of Congress.

It should have been clear a year ago that no modern army could be constructed within a year and even if it were that 1-year enlistments would dissolve the army just as it became effective.

The truth is that much of the first year has been in large measure wasted because the Army did not have the equipment to train men in mechanical warfare. The fact is that, as the Secretary of War has admitted, even should the first selective service trainees be retained we should not immediately have an adequate army, because we lack modern weapons still. Millions of man-hours wasted in strikes have helped prolong our unpreparedness.

Nevertheless, many of the selective service trainees entered training as volunteers, keeping faith with the Government. Some volunteered with careful calculation of plans for education to follow and for their vocational careers. Had they anticipated prolonged service, or had they desired military careers, they would have entered the Army through the route of regular enlistments. Doubtless the selective service plan thwarted in considerable degree recruiting of the Army.

The fact is that the administration has not been frank with the American public in this matter or its calculations were extremely poor. Polls of public opinion still register the fact that the people are overwhelmingly opposed to participation in the European war, and yet they support the administration at Washington in steps which lead us closer day by day to participation. The public has been led to believe that we could decide the outcome of the European war without fighting and without incurring any grave danger. An original cash-and-get-it-on-credit policy was revised to a come-and-get-it-on-credit policy, and recently, without specific authorization of Congress, our Government has inaugurated a policy of take it to them on credit. Whereas in the beginning the administration condoned, if it did not champion, a policy of withdrawal which took our ships and our travelers out of danger lanes, our fighting forces of late have been rushed to one of the potential hot spots of the conflict, in Iceland. The neutrality policy which we were told should be good, and which many think we are still following, has been completely reversed.

The imperative need for continuance of training and service for the selective-service men and National Guard men is but one of the developments growing out of the use of oblique methods that lead the public nudge by nudge, rather than plain talk which bravely faces the unpredictable future. For purposes of the third term it was more expedient to reassure the public boldly and take half-way measures. But compromise for political advantage has not altered the course of events beyond our control.

Fair Enough—the Real Issue

EXTENSION OF REMARKS

OF

HON. CHARLES A. PLUMLEY

OF VERMONT

IN THE HOUSE OF REPRESENTATIVES

Monday, July 21, 1941

Mr. PLUMLEY. Mr. Speaker, under and by virtue of leave granted, I am including and inserting in the RECORD an editorial from the Washington Post of last Friday, July 18, 1941. Every man who is more concerned about preventing the destroying of this Republic than he is for votes for himself ought to read, reflect, and carefully consider what his duty to himself, to the selectees, and others, and to posterity may be and is.

This is no community picnic, to which willy-nilly we have been invited. We are in this war whether we like it or not. "None are so blind as those who will not see."

It is my well-considered opinion that the way to keep from sending our best blood and brain to Europe is to keep it here and to train it to that point of efficiency that no man and no combination of men dare attack us. To do less is to betray everybody; or that is what I think.

[From the Washington Post of July 18, 1941]

THE REAL ISSUE

When General Marshall first appeared before the Senate Military Affairs Committee to urge the extension of Army service, his main job was to convince the committee that service extension is absolutely necessary. On the basis of his testimony, some of which has been made public, no person with even an elementary grasp of our defense problem can fail to acknowledge the soundness of his appeal. Nor can there be any logical refutation of the general's argument that failure to extend Army service would mean the virtual disbandment or immobilization of two-thirds of our trained enlisted strength and three-fourths of our trained officer personnel. Congress appreciates this, of course, as does every thinking person. Yet it is disconcerting to find that in a matter of such urgency Congress, convinced for the most part of the advisability of extending Army service, must first resort to the ancient technique of finding the correst formula. No formula, no bills such as the War Department has sent to the Senate committee, are required. The Selective Service Act gives Congress the power to extend Army service by passing a simple resolution declaring that the national interest would be imperiled, as it obviously would be, if selectees leave the Army at the end of their year's training.

Two factors militate against immediate acceptance of such a resolution. One is the apparent fear on the part of some Members of Congress that isolationists would interpret the resolution as authorization for the President to take direct action leading to a shooting war, and might even rally enough support to defeat the measure. The other is the moral issue involved in extending the service of draftees who were originally led to believe that they were to serve 1 year and no more. Bother factors would and should arouse some debate. This would give Congress an opportunity to assume a larger responsibility for the defense program—which Members of both Houses feel has been increasingly commandeered by the President. And it would also focus national attention on the fallacy of short-term military service, which in 1776, in 1812, and in 1861 caused unnecessary sacrifices and near-disaster, and which now threatens the very existence of the Army.

Those who raise objections to immediate acceptance of a congressional resolution supporting extended Army service really evade the main issue. That issue, whether or not we acknowledge it, is that this country is at war now. It is not a shooting war, to be sure, but there may be shooting at any time, regardless of our efforts to avoid it. If we recognize this unpleasant fact—and it is sheer folly to try to dodge it—the arguments against extending Army service collapse of their own weight. Congress faces no dilemma; its duty, consistent with the convictions of the American people, is to free the Army from the necessity of having to begin all over again.

And one thing more! Do you know that we have just two divisions, or at most four, in shape now for action? Well, so says Raymond Clapper, who goes on to say that—

Of the Regular Army divisions, only one, the first, is a solid Regular Army outfit, with only a negligible sprinkling of less than 10 percent of selectees. And this division has 75 percent Reserve officers, meaning that approximately three out of four of its officers are free to leave the Army at the end of 1 year.

The other divisions have from 20 to 81 percent selectees who cannot be held more than 12 months. In fact, all except the second triangular division have more than 30 percent selectees and most of them more than 50 percent. All of them have 75 to 80 percent Reserve officers.

Take the four armored divisions, in which long training and technical skill are required. Eighty-two percent of their officers are Reserve officers. Their percentage of selectees runs: First Division, 50 percent; Second Division, 45 percent; Third Division, 62 percent; Fourth Division, 81 percent.

In all we have some 40 divisions in preparation, compared with Germany's 260 divisions. Germany and Russian each have more than 160 divisions fighting against each other now. Those figures give a general idea of the size of our Army against the two main armies in the world. Russia has almost twice as many divisions in Eastern Siberia alone as we are organizing of our entire Army, which must protect not only the United States but which also must garrison all of our numerous outposts and bases.

The prospect of having virtually to disband this army, which would be none too large even if it were thoroughly trained and equipped—and it is neither—is what has driven General Marshall to insist upon a show-down in Congress, although warned that there is intense opposition to continuing draftees in service beyond 1 year.

Wheat Farmers and Cotton Farmers—Let Us See the Whole Thing

EXTENSION OF REMARKS

OF

HON. HAMPTON P. FULMER

OF SOUTH CAROLINA

IN THE HOUSE OF REPRESENTATIVES

Monday, July 21, 1941

ARTICLE BY J. M. ELEAZER, COUNTY AGENT, SUMTER, S. C.

Mr. FULMER. Mr. Speaker, under leave to extend my remarks in the RECORD, I am including an article which was carried in the Sumter Daily Item, contained in the weekly write-up by Mr. J. M. Eleazer, county agent at Sumter, S. C., which should be of interest to wheat farmers and the Members of Congress representing the wheat growing section of the United States.

One of the reasons that we are having some trouble with a number of farmers in the various sections of the country is that when their major crop is reduced under the agricultural program, naturally, they want to go into various other

lines, all of which would be in competition with other farmers and other sections of the country.

Therefore, this article, to my mind, is very timely, and I congratulate Mr. Eleazer on his position in connection with this most important matter.

[From the Sumter (S. C.) Daily Item]

LET'S SEE THE WHOLE THING

One farmer told me the other day that his neighbor has been driven to more profanity, had lost more sleep, had stood on the corner and at the crossroads and talked more heatedly to all who would hear about the farm program not letting him sell the wheat from his 13 acres than anything that had happened in a long time.

What are the facts surrounding this situation? Here they are: The West grows wheat for a living and we grow cotton for a living. The national farm program will not permit them to grow cotton in competition with us, and it will not permit us to grow commercial wheat promiscuously with competition with them. But it will permit us to grow wheat for home use.

The above unhappy man was permitted to grow as much as 10 acres of wheat and do as he pleased with it. Any farm could do that. Any farm also could plant as much as 3 acres per family, if 10 acres were not enough for the farm. But in the event none was to be sold from the farm. That was written to every farmer in every country, published in the paper, and carried over the radio. With 10 acres or less you were in the clear, but over 10 acres could be planted for home use, but not in excess of 3 acres per family. If that much per family were not needed then it should not be planted. In short, the regulations did not want to cramp any farm in growing the wheat for home use, and neither did it intend opening up commercial wheat production in competition with the Wheat Belt. Yet it did permit any farm to grow as much as 10 acres and sell it all if the farmer wished.

Now, that farmer saw red when he thought of his wheat dilemma, which was due to a pure misconception of his. I chanced to see him the other day and think he sees it in its true light and is satisfied.

The whole thing wasn't so bad when he realized twenty-odd dollars per bale on his loan cotton and recalled parity and other payments, etc.

To have a national farm program we must all see the whole picture. Congress has to see it. They have to legislate for the West as well as for the South. They can't let the Cotton South ruin the Wheat West, nor vice versa.

Test for Congress—The Yellow Race, or Is It?

EXTENSION OF REMARKS

OF

HON. CHARLES A. PLUMLEY

OF VERMONT

IN THE HOUSE OF REPRESENTATIVES

Monday, July 21, 1941

ARTICLE BY ERNEST K. LINDLEY

Mr. PLUMLEY. Mr. Speaker, under leave to extend my remarks I am placing in the RECORD an article by Ernest K. Lindley, which appeared in the Washington Post of Friday, July 18, which deserves the careful consideration of Congress and of the people.

The article follows:

[From the Washington Post of July 18, 1941]

TEST FOR CONGRESS—THE EXTENSION OF ARMY SERVICE

(By Ernest K. Lindley)

Many Members of Congress are uncomfortable over having to vote whether to extend the service of National Guard men, selectees, and Reserve officers beyond 1 year. With forethought this decision could have been lodged with the President, as Commander in Chief. But by law Congress specifically prevented him from exercising such discretion. This was entirely proper, and perhaps desirable, but it means now that Congress must take a responsibility which many of its Members would like to dodge.

The main facts are plain. The discharge of all guardsmen, selectees, and Reserve officers at the end of 1 year would demolish the Army. The Army at present is drawn from these sources:

Officers:	
Regulars	14,700
Guard	21,800
Reserve	55,000
Total	91,500
Enlisted men:	
Regulars (3 years)	476,000
Regulars (1 year)	18,000
Guard	266,000
Selectees	597,000
Total	1,357,000

Even this table underemphasizes the difficulty. A majority of the enlisted men in the Regular Army have been recruited within the last year; many are selectees who volunteered. Only 200,000 men have had more than 1 year of training.

Experienced officers and men had to be spread thin as the framework for the new Army. Only two divisions—the first and second—have less than 30 percent selectees, and so would not be crippled if the 1-year rule were to stand. Most others have more than 50 percent selectees. And in all the Regular Army divisions, including the first and second, approximately three-fourths of the officers are Reservists.

The National Guard provides many of the special defensive units. A National Guard antiaircraft unit had to be sent to Hawaii because no other was ready for duty. For the same reason, a National Guard Coast Artillery unit was sent to Alaska. These can be replaced—by straining limited shipping resources—but only by Regular Army units containing upwards of 40 percent selectees whose 1-year service will begin to expire a few weeks later.

The Army estimates that it needs for present assignments a minimum of 640,000, 3-year men. It has only 476,000, less than half of whom are fully trained. It might have been better if, a year ago, Army pay had been raised and an all-out recruiting campaign had been launched, so that selectees in Regular Army units could be kept few enough to be rotated easily. But this was not done. The 1-year limit was put on selectee service in the face of the Army's desire for 18 months and the obvious fact that full training requires more time.

The argument that the Nation is in greater peril now than it was a year ago hardly carries conviction. A year ago whether England would survive the summer was doubtful. But the peril obviously has not vanished. And the Selective Service Act stated that when Congress declared the national interest to be imperiled the term of service might be extended by so much as the President deemed necessary. In time of war there is no limit on the service of the National Guard and Reserve officers.

General Marshall has explicitly pledged that the 80,000 draftees over 28 years of age will be discharged if they so desire. For others, a scheme for gradual replacement can be worked out. Likewise, it may prove possible to let some National Guard units go home, although the Army is making no promises. The Reserve officers it plans to rotate, anyway, but the automatic 1-year rule would play havoc with many units.

Our diplomatic experts know that failure to remove the 1-year limit would do terrible damage to our position in Latin America. One of the most difficult tasks our Government has had is to convince Latin Americans that we intend to, and can, defend the Western Hemisphere. Many of them are still highly skeptical. The disintegration of our Army at this point would be worth a major military victory to the Axis.

The greater perils—if England should go down or the Nazis should arrive on the Pacific, or start toward South America via the Iberian Peninsula, West Africa, and the Atlantic Islands—are obvious.

Congress will squirm and offer every variety of compromise. But if the President and General Marshall stand firm, it is hardly conceivable that they will not win. The responsibility of voting no is too grave to be assumed, in the show-down, by any man who puts the national security first.

A Bill To Amend the Agricultural Adjustment Act of 1938, as Amended, for the Purpose of Regulating Interstate and Foreign Commerce in Potatoes So as To Provide an Adequate and Stable Supply With Fair Prices for Producers and Consumers, and for Other Purposes

EXTENSION OF REMARKS

OF

HON. HAMPTON P. FULMER

OF SOUTH CAROLINA

IN THE HOUSE OF REPRESENTATIVES

Monday, July 21, 1941

Mr. FULMER. Mr. Speaker, under leave to extend my remarks in the RECORD, I am inserting a brief summary of a bill which I am introducing today, which should be of great interest to the potato growers of this country, as well as the Members of Congress who represent potato-growing districts.

These farmers are suffering perhaps as much, or more, than any other group of farmers because of the unfair price which they are receiving for their potatoes.

I believe that this bill will mean much to them.

It is my purpose to hold hearings on this legislation during the early part of the coming fall.

SUMMARY

A summary of the provisions of the bill by sections and subsections is as follows:

Subsection 360A: This subsection is a statement of "legislative findings" and points

out that the chaotic condition existing in the marketing of potatoes with wide fluctuation from year to year in the quantity of potatoes marketed and in the prices therefor results in disaster to producers and periodic excessive costs of potatoes to consumers.

Subsection B (1): This subsection provides for proclamation of a national marketing quota and particularly a quota for commercial farms—those raising over 9 acres—not later than September 15 of each calendar year for potatoes of the crop to be harvested in the next succeeding year. The quotas are converted to acreage allotments on the basis of average yields.

B (2): Not later than September 30 of each calendar year the Secretary is required to conduct a referendum of commercial growers. The quota can be in effect only if approved by two-thirds or more of the farmers voting in the referendum. If a referendum approves quotas, the vote will apply to the crops of the 3 succeeding years.

B (3): The national commercial-acreage allotment is apportioned among States on the basis of the acreage of potatoes harvested on commercial farms in the past 5 years, with adjustments for trends, abnormal conditions of production, and State potato-acreage allotments for the preceding year. Not over 2 percent of the national allotment is set aside for "new" farms.

B (4): The State acreage allotment is apportioned through local committees among commercial farms. Special provision is made for determination of allotments in areas where potato production normally is shifted from one farm to another from year to year and also for the determination of allotments for "new" farms.

B (5). The farm marketing quota for any farm is the actual production of the harvested acreage, if such acreage does not exceed the allotment. If the harvested acreage exceeds the allotment, the quota is the actual production of the farm minus the "farm marketing excess." The farm marketing excess is the smaller of the actual or normal production of the acreage harvested in excess of the farm acreage allotment. Provision is made for reduction of the farm marketing quota in any area by not more than 10 percent if the Secretary finds that the supply of potatoes available for marketing from the area is excessive in relation to the supply normally marketed and if such reduction is necessary in order to enable farmers to obtain fair prices. The quantity of potatoes represented by any such reduction of the farm marketing quota may consist of potatoes of any specified grade or size.

Subsection C: This subsection relates to penalties upon excess potatoes and to the operation of programs to aid farmers in obtaining fair prices for their potatoes. The penalty is 1.25 cents per pound upon the marketings of the farm marketing excess of potatoes from the farm, but payment of penalty is not required if excess potatoes are disposed of by diversion outside of normal trade channels in accordance with regulations approved by the Secretary. In connection with excess potatoes the Secretary is authorized to establish an agency or agencies to receive the excess potatoes and divert them to uses other than those afforded by normal trade channels. In such case, the Secretary can pay to producers whatever amount can be obtained for the potatoes, less any cost for handling. Provision is made that legislation authorizing marketing quotas for potatoes shall in no way affect the operation of any programs authorized by existing legislation (such as marketing agreements, diversion programs, or surplus purchase programs) which the Secretary finds will assist farmers to obtain fair and reasonable prices for potatoes.

Congress Will Check the War Makers

EXTENSION OF REMARKS

OF

HON. STEPHEN A. DAY

OF ILLINOIS

IN THE HOUSE OF REPRESENTATIVES

Monday, July 21, 1941

ADDRESS OF HON. STEPHEN A. DAY, OF ILLINOIS

Mr. DAY. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following address delivered by me before America First Committee at Pittsburgh, Pa., on July 18, 1941:

Foreign influences have so penetrated the atmosphere of Washington that it is impossible to make a true appraisal of our national affairs without coming to a great industrial center like Pittsburgh. In Washington today foreign prapaganda is running at such speed that only the most loyal still retain their grip on that fundamental Americanism which has made us great.

Since my national broadcast of June 14 entitled "We Must Keep America Independent," many of the prophecies which I then made have been transacted into actual events. I said at that time that Winston Churchill and President Roosevelt contemplated a pooling of the British and American Navies in the Atlantic. Winston Churchill has already proclaimed this on the floor of the House of Commons. I asked the question, Why was Knox appointed Secretary of the Navy? He has answered that question, and it is now no longer doubtful that his function in the present crisis is to take the leadership in the waging of an undeclared war. In his recent speech at Boston, Secretary Knox without any previous authorization from the Congress, which under the Constitution has the sole power to declare war, said that the time had come when the American Navy under his control must make war on Germany in the Atlantic and blow up and drive from the seas all German submarines. American armed vessels do not operate without officers and crew. Secretary Knox, therefore, urged that our manpower be forced into an actual shooting war against Germany. It is reported and not denied that at least one depth bomb has been used against a German submarine and it is not definitely stated, but implied, that the German submarine was destroyed.

One week after my last broadcast Germany declared war on Soviet Russia. To any mind this is actual war as plain as any war could ever be. I said at that time that the President had no regard for the fundamental law of the United States. We now have additional positive evidence to prove that statement. In open defiance of the Neutrality Act, the President refuses to apply its provisions to Soviet Russia. The only reason assigned for this glaring violation of his duty is the simple one that the United States is to give total aid to the Communists.

Bear in mind that the lend-lease bill was passed with the express promise that it was a peace measure and that it was intended for aid to Britain so that Britain might defeat Germany. We are now advised that the President will soon come to the Congress with a demand for an additional $7,000,000,000 and I am confident that it will not be for Britain but will be for the aid of Soviet Russia. This step will perfect the new union of Britain, Soviet Russia, and the United States for a fight to the finish that Soviet Russia shall not fail.

The time has come for plain speaking. Ever since the President recognized Soviet Russia in 1933 we have witnessed the gradual undermining of our American way of life by the steady destruction of this serpent of internationalism that we call communism. But did any American ever believe that the time would come in this great land of constitutional liberty when we would go so far beyond mere recognition that we would make it the foreign policy of the United States to encourage communism by embracing it?

I charge here tonight that the administration has departed from the shores of free America and we are taking our orders from Winston Churchill. American boys, wearing the uniform of the United States, are today in far off Iceland brigaded with British troops. Winston Churchill has said that these British troops will remain in Iceland. When the day comes that the armed forces of Germany attack their enemy represented in these British troops in Iceland, aggressive war will be made upon these British troops and the American boys who will stand there beside them. No one can dispute that Germany has the right to attack these troops. Britain, no matter what may be the reason, declared war on Germany, and under all rules of war and international law Germany has the right to defend herself. Furthermore, it has been announced and not denied that Winston Churchill has forbidden American newspaper correspondents to land in Iceland. We also know that after Germany and Russia became involved in war the participation of the United States was announced not by the President but by Winston Churchill, who guaranteed to the world that Soviet Russia would be aided to the fullest extent not only by Britain but by the United States. When it came to the President's turn, he echoed this promise of Winston Churchill.

Since then the British Ambassador and Molotov, Stalin's right-hand man, signed in Moscow a solemn and formal treaty of military alliance to fight to the bitter end, one for all and all for one. Right here let me explain just what this means. When we use the term "Soviet Russia" we are apt to think of the old Russia as a separate nation—the Russia of 1917 that was one of the Allies in the last World War. But what is the truth? The other contracting party with the British Empire is the Union of Socialist Soviet Republics of the World. It is well known that things which are equal to the same thing are equal to each other. I therefore charge that at this hour, to all intents and purposes, the British Empire is a part of the Soviet Union of Socialist Soviet Republics to the bitter end. Students of communism know that the Union of Socialist Soviet Republics of the World recognizes no national boundaries; that this godless union extends wherever it is in existence. In my last broadcast I warned against the treasonable scheme of Union Now with Britain, devised to make the United States a colonial dominion of the British Empire, to fight and pay for Britain's wars and to forever surrender American citizenship for the mongrel slavery in which American men and women of today would be on a level with the hordes of India and the tribesmen of Africa. I could not believe that in less than 2 weeks these same Americans would be virtually threatened with the surrender of their American citizenship to follow under the bloody red flag of communism and to proclaim the leadership of Stalin, blood-soaked with the murder of over 2,000,000 innocent people in what was formerly Russia.

Whither are we drifting? This week in Washington I listened to a broadcast coming not from Moscow but from Washington. The broadcast frankly stated that it was the broadcast of the Communist Party in the

United States and undoubtedly paid for by this branch of the Communist Party of Stalin. The leading official representative of the American branch of the Communist Party openly praised the President of the United States for his all-out aid to Stalin and expressed his pleasure that we were all pledged to the perpetuation of the Soviet Union. The attitude of the Communists in America has changed. We are facing a vastly more powerful propaganda of communism than we have ever known before, no matter how damaging and polluting it has been. Unless something be done, and done at once, to check this closer association of the administration and the Soviet Union, no matter what may be the outcome of the present war, the destructive and subversive forces of communism in the United States will have grown so powerful that we can never eliminate from our American life this cruel serpent of internationalism.

What, then, is our duty at this hour as free Americans? We must in positive terms declare that we shall preserve our American independence under the Constitution of the United States against all foreign influences. We must omit no effort to defend America to the fullest extent for the protection of the United States and the Western Hemisphere. But we must not spend one dime or spill the blood of a single American boy in the surrender of this independence for the perpetuation on the free soil of America of a union now with Britain, or a union now with Soviet Russia, or a union now with Britain, Soviet Russia, and the United States.

Fortunately for the American people the time has arrived when a vital decision must be made. This decision will be made by the people themselves through their chosen representatives in Congress. Step by step, the President has been carrying forward an undeclared war. He now realizes, on the advice of General Marshall, that he cannot carry this undeclared war any further without the use of the American Army. Congress now faces the test vote that will go far to check the war makers and the outcome of this vote may well be the turning point which will bring peace and freedom from war to the American people. Certainly the American people do not wish to enter the war on the side of Britain to defeat Germany. This has been clearly shown by every test of public sentiment. The American people stand today 80 to 20 against war.

The test is coming on the issue of whether the Congress shall extend the service period of draftees beyond 1 year. The Selective Service Act in plain terms states that the draftees were called for 12 months of active duty "except that whenever the Congress has declared that the national interest is imperiled, such 12-month period may be extended by the President to such time as may be necessary in the interest of national defense."

The Congress must now decide whether the draftees at the end of their 12 months of active service are to be placed in reserve or sent abroad for active duty on foreign soil and, to all intents and purposes, be drafted for a war of intervention in foreign disputes. To send the draftees to foreign soil will be in direct violation of the pledge of President Roosevelt made on October 23, 1940.

"We are arming ourselves not for any purposes of conquest or intervention in foreign disputes. I repeat again that I stand on the platform of our party: 'We will not participate in foreign wars, and we will not send our Army, naval, or air forces to fight in foreign lands outside of the Americas, except in case of attack.'"

For the Congress to declare that the national interest is imperiled as provided in the Selective Service Act it must declare that a national emergency exists. This is tantamount to a declaration of war and has been so interpreted by Congressman Woodrum of Virginia, a staunch supporter of the President and the man who, as chairman of the Appropriations Committee of the House of Representatives piloted to success the appropriation of $7,000,000,000 to implement the lend-lease bill. On the floor of the House on June 28 of this year, on this subject, Congressman WOODRUM of Virginia stated:

"The man today who stands before the American people and advocates a declaration of war either does not know anything about what he is talking or else he is utterly stupid, or both.

"The idea of this country going off now and trying to settle the conflicting emotions and ideologies of Europe to me is ridiculous, even if we were prepared to do so, and we are not. There are many reasons why we should not go abroad. It is only necessary to state one, and that is we have not the troops nor the equipment.

"Mr. Speaker, if anybody has a notion in his head, either in the War Department or in any other department, that they can come to this Congress and get any sort of declaration that will put us aggressively into the European war or that will send American expeditionary forces abroad, I think the sooner they get the idea out of their heads the better it will be."

General Marshall, Army Chief of Staff, this week in Washington testified that he and the War Department felt that the time had come for Congress to declare the existence of a national emergency, and stated as follows:

"The President has deemed it expedient to declare an unlimited emergency concerning civil functions, and the War Department and I personally now believe it urgently necessary in the public interest for Congress to declare the existence of a national emergency."

This makes it positively clear that the Army dare not and will not send the draftees to foreign soil under the national emergency declared by the President on May 27 of this year but must have the legal sanction of the Congress by a declaration of a national emergency.

The time has come for the Congress to check the war makers, and this can best be done by the refusal of Congress to declare a national emergency. The President has tried to force the hand of Congress by sending American troops to Iceland. But these troops are now only Marines, and there are not sufficient of them to constitute the 80,000 armed soldiers which the President wishes to place in Iceland. It is now known how many the President wishes to place in Ireland, Scotland, and England. It is safe to say that it is contemplated to send 800,000 American soldiers beyond the shores of the continental United States. Questioned by Senator DOWNEY, General Marshall said the Army now has 476,000 3-year volunteers, and that this figure will be increased to about 800,000 "as we occupy the Atlantic bases and increase our overseas garrisons." We must contrast this statement of General Marshall with his statement of 1940, when he said that an Army of 700,000 would be amply sufficient for American defense. The present personnel of the Army is 1,400,000. The President plans to increase this figure, and no one can dispute that it will be increased not for defense but for intervention in foreign disputes.

It must now be plain to anyone that without asking the Congress to declare war, the President is asking Congress to declare a national emergency and to use our armed forces for service on foreign soil. That is the issue which Congress must decide, and in my opinion the Congress will refuse to declare the national emergency. This will be the turning point on the road to war, and I want to make this issue perfectly clear to the American people so that they can lend their support to the Members of Congress who will vote against the President's demands. We have no time to lose. This decision will be made next week, and I ask you to write and wire your Representatives and Senators to vote against the extension of the service period of the draftees.

The American people are sick and tired of deception and double-dealing. The Constitution provides the direct and honest method of declaring war. To obtain national unity in the United States we must put an end to totalitarian methods and give the people and their chosen representatives the opportunity to pass upon this vital question. This was recognized in the impressive statement of Senator WALTER GEORGE, chairman of the Foreign Relations Committee of the United States Senate, when he arose on the floor of the Senate on June 28, of this year and stated:

"Mr. President, the way to national unity in America is not through methods of totalitarianism. It is not through asking for powers for which there is no need, and which cannot be wisely exercised without disrupting the orderly processes of living and making a living in the United States.

"The way to national unity is to give our people the assurance that when we are called upon to move into the actual range of fire and send our men there, whether on board naval vessels or in the aircraft, the American people themselves will have some opportunity to pass upon that question; in other words, that they will have the ultimate decision, through the machinery to which they have become accustomed and the only machinery which they have at hand, will be able to pass upon the question of whether an actual state of war shall be brought into being or a formal declaration of hostilities shall be made by the people of the United States."

Members of Congress feel that a pledge was given to the boys who were drafted, amounting to a contract, that they would not be called into active duty for more than 12 months and would not be sent outside of the Western Hemisphere. These boys heard the pledge of President Roosevelt made at Philadelphia on October 23, 1940, and doubtless many of them, like other millions of American people, voted for President Roosevelt because of the pledge which he then made. They also heard him say and believed him when he said 1 week later, on October 30, 1940, at Boston:

"Your boys are not going to be sent into any foreign wars. They are going into training to form a force so strong that, by its very existence, it will keep the threat of war far away from our shores."

The covenant made with our boys is sealed with the words of the late Senator Key Pittman, chairman of the Senate Foreign Relations Committee at the time of the passage of the Selective Service Act. On September 18, 1940, he placed in the CONGRESSIONAL RECORD the letter which he had just written to the Secretary of State of Nevada, his native State, to assure the mothers of America that their boys were not in danger of involvement in foreign wars. He said in part, as follows:

"I have your letter in which you state that you will no doubt receive a great many inquiries concerning the contents, operation, and effect of the Selective Training and Service Act of 1940. I will have sent to you a number of copies of the act so soon as printed as a public document. * * * Unfortunately public opinion was based upon the Burke-Wadsworth bill as introduced. This is quite natural. A number of speeches were made against the bill before the limiting and protective amendments were adopted in the Senate. * * * The second important amendment adopted on the floor of the Senate was a provision that these men inducted into the service for training shall not be used in the military service outside of the Western Hemisphere and our own possessions. That means that the President and the military departments are absolutely commanded not

to send these soldiers outside of the Western Hemisphere except to our own possessions. It is true that it is contended by two or three able and sincere Senators that the President of the United States would violate this law. Such an attempted violation by any President of the United States is inconceivable. Not only would Congress refuse to appropriate the money for such an undertaking but the President would be subject to impeachment. * * * It is hardly worth while, however, to discuss these legal questions, as the President has time and again promised the country that he does not intend to take our soldiers into the European war. It would be impossible for the United States to land the soldiers in Europe, and the President, having great knowledge of these subjects, is aware of this fact. * * * If anything on earth will prevent war being forced upon us, it is the action taken by the President and the Congress in preparing such a defense that no one will dare attack us. It knows that our boys will not be led into any war outside of the Western Hemisphere and our own possessions, and only within the Western Hemisphere if we are threatened with attack. * * * For the sake of their peace of mind, let the mothers of Nevada and the rest of the country banish groundless fears."

There can be no doubt that the draftees were called into an army of defense of our shores and for no other purpose. The danger of invasion has passed and no one now claims that we need fear an attack by Germany. Many will ask: Why does the President send our troops into the war zone to seek war with Germany? There can be only one answer. The war makers are determined to get us into war and knowing that Congress will never declare war, secret and unconstitutional methods are utilized to involve us in war. This is plain usurpation. The people must rebuke this usurpation by any method at their command. We are still an independent nation governed by law and it is the duty of every citizen in office and out of office to see that the law of the land is observed.

President Roosevelt, on August 14, 1936, recognized the right of the people to assert themselves and check the war makers. He must be made to recognize this right today. At Chautauqua, N. Y., on that date he said:

"We can keep out of war if those who watch and decide have a sufficiently detailed understanding of international affairs to make certain that the small decisions of each day do not lead toward war and if, at the same time, they possess the courage to say 'No' to those who selfishly or unwisely would let us go to war."

The Congress of the United States is not telling us to go to war. It is the war makers led by Secretary Knox, Secretary Stimson, Secretary Ickes, and Secretary Wickard. Have we the courage to say "No" to them?

When Josiah Wedgwood, a member of Parliament, was asked when we would have union now with Britain, he stated that all that was necessary was a common war cabinet between the United States and Britain. The press carried a news item a few days ago that Harry Hopkins had been secretly sent to London. Today we find that upon the invitation of Winston Churchill, Hopkins sat with the British War Cabinet. Do we need any further confirmation that there is a secret understanding for union now between Churchill and President Roosevelt? We recall that Hopkins lives at the White House and is the director of the $7,000,000,000 lend-lease fund. What are we going to do about it? The answer will soon be given by the people of the United States through their chosen representatives in the Congress. This has gone far enough. We must take action.

A Tribute to Stephen Bolles

EXTENSION OF REMARKS

OF

HON. CHARLES A. PLUMLEY

OF VERMONT

IN THE HOUSE OF REPRESENTATIVES

Monday, July 21, 1941

Mr. PLUMLEY. Mr. Speaker, after a full and splendid life our friend, STEPHEN BOLLES, who had achieved fame and honor and glory, has gone "to a laurel rest at the goal."

Those of us who were privileged to know him intimately will miss him most intensely. Such a friend he was.

The world saw but one side of him. Those of us who have sat at his feet and listened to him will never forget his comments on men and things and will long remember his positiveness, his tenderness, and his fighting heart.

Some of us recall an occasion when, after he had done his best to aid the passage of a measure in which he was interested and which had failed of passage, he said to us, his companions of the hour: "The bill failed of passage, but I remember the poet says:

They never fail who light
Their lamp of faith on the unwavering flame
Burnt for the altar service of the race
Since the beginning."

And he went on to say, "Don't worry; I shall live to see my dream come true," for, as Dana Burnet said—

Who dreams shall live! And if we do not dream
Then we shall build no temple into time.
Yon dust cloud, whirling slow against the sun,
Was yesterday's cathedral, stirred to gold
By heedless footsteps of a passing world.

The faiths of stone and steel are failed of proof,
The king who made religion of a sword
Passes and is forgotten in a day.
The crown he wore rots at a lily's root,
The rose unfurls her banners o'er his dust.

The dreamer dies, but never dies fair dream,
Though death shall call the whirlwind to his aid,
Enlist men's passions, trick their hearts with hate,
Still the fair vision lives! Say nevermore
That dreams are fragile things. What else endures
Of all this broken world save only dreams!

To those who did not know him as I did, this chance meeting was the revelation of a side of this man that they had never seen and did not know.

And so I might go on at great length, but the memories of our most pleasant and to me most profitable association over the years are mine, to be kept in the casket of the mind as precious jewels are by those who treasure them.

Today—

Like a young child who to his mother's door
Runs eager for the welcoming embrace,
And finds the door shut, and with troubled face
Calls and through sobbing calls, and o'er and o'er
Calling, storms at the panel—so before
A door that will not open, sick and numb,
I listen for a word that will not come,
And know, at last, I may not enter more.

Silence! And through the silence and the dark
By that closed door, the distant sob of tears
Beats on my spirit, as on fairy shores
The spectral sea; and through the sobbing, hark!
Down the fair-chambered corridor of years,
The quiet shutting, one by one, of doors.

—*Hermann Hagedorn.*

The Nation's Foreign Policy

EXTENSION OF REMARKS

OF

HON. HENRIK SHIPSTEAD

OF MINNESOTA

IN THE SENATE OF THE UNITED STATES

Tuesday, July 22 (legislative day of Monday, July 21), 1941

RADIO ADDRESS BY HON. HENRIK SHIPSTEAD, OF MINNESOTA

Mr. SHIPSTEAD. Mr. President, I ask unanimous consent to have printed in the Appendix a radio address delivered by me at Minneapolis, Minn., on Saturday, July 19, 1941, dealing with the Nation's foreign policy.

There being no objection, the address was ordered to be printed in the RECORD, as follows:

On the 4th day of this month all over the United States were gathered men, women, and children in Nation-wide ceremony, pledging loyalty to the flag of the United States.

The 48 stars in the flag symbolize the 48 States of the Union. These States jointly are tied together by the Constitution of the United States, the supreme law of the land.

It is surprising sometimes to discover how many of our citizens, even among the most learned, have given but small attention to the study of that law.

Every public official, before taking office, takes a solemn oath to preserve, protect, and defend the Constitution of the United States. It must be self-evident to everyone that the best way to preserve, protect, and defend it is for public officials to confine their activities within the limitations allotted to them by that instrument.

The duties of the Congress, the courts, and of the Presidency are clearly defined. For instance, among the powers delegated to Congress is the power to declare war.

There are people in these days anxious for us to become engaged as a belligerent in the present World War. These people do not relish reading that section of the Constitution conferring that power upon Congress. They know that a resolution declaring war cannot be passed in the Congress of the United States at the present time. So they are urging the President to adopt policies that bring us nearer and nearer to a state of war, hoping for incidents that will precipitate us into a state of belligerency without a declaration of war by the Congress.

Members of the President's Cabinet are notorious for making prowar speeches. Secretary Knox, of the Navy, has intimated to

newspapermen that the Atlantic Fleet is policing the Iceland route and has orders to shoot at German submarines and bombers if shooting appears advisable. If that is true, he assumes the right to make war.

Our armed forces have occupied Iceland because it is claimed that it was necessary to do so for the protection and defense of the United States. It is even claimed now that Iceland is in the Western Hemisphere. This is done to give a shadow of legality to the occupation. It has never been considered in the Western Hemisphere before. If merely saying it is there places it in the Western Hemisphere, then all we have to do to place Africa, France, and Italy in the Western Hemisphere is to say they are in the Western Hemisphere too.

Both Mr. Roosevelt and Mr. Willkie gave their promises before the last election that if and when elected they would not interfere in foreign wars except by aid to England short of war.

Roosevelt has sent troops to Iceland, which is a European country occupied by British troops.

Mr. Willkie is quoted in the press as stating that—

"It looks to him like only the first step of several needed steps and that he favors bases in Northern Ireland and Scotland."

These ideas of aid short of war appear now to be as phony as the last national Presidential election appears to have been.

Many people in the United States who favor war are anxious to have the President conduct an undeclared war and as an excuse for doing so they point to our war with Mexico. In that war the United States was an aggressor nation and it comes with poor grace to hold that up as an example in statesmanship when we are urged to join a world war against aggressors.

It is also claimed that Lincoln's defense of Fort Sumter without a declaration of war by Congress was an example to be followed in starting an undeclared war at the present time; but Fort Sumter was not on foreign territory, it was United States territory and American property that was attacked.

Theodore Roosevelt's activities in the Panama affair have been cited as a worthy example to follow; but in that case we were again an aggressor nation, and without declaring war we found some excuse to occupy and to set up a puppet government of our own.

I repeat, these acts of aggression are a poor foundation upon which to base the policy of conducting war without the consent of Congress.

As I said in the beginning, the Constitution of the United States is the supreme law of the land and confers war powers on Congress.

Article I, section 8, subdivision 11, states:

"The Congress shall have power to declare war, grant letters of marque and reprisal, and to make rules concerning captures on land and water."

Congress has not declared war, nor has Congress made any rules for the capture of Iceland. Congress was not told about it until it was done. It is reported that the British Ambassador to Iceland induced the Icelandic Government to invite us to come in. Congress was not consulted about the matter. Congress was not consulted about the 50 destroyers that were given to Britain. These are warlike acts, and they seem to occur with more and more disregard for provisions of the Constitution.

As a matter of fact, step by step, we are are being dragged nearer and nearer into war, in spite of the fact that the Congress or the people of the United States are overwhelmingly opposed to our going into war.

The New York Daily News has taken a poll involving more than half a million votes in the State of New York, where most of our war propaganda comes from. These votes show that the people of the State of New York are opposed to becoming involved in a shooting war by a ratio of 3 to 1.

The Chicago Tribune has taken a similar poll in Illinois on the same question. That poll showed the vote to be 4 to 1 in Illinois against entering the war.

In spite of the sentiment of the people and the sentiment of Congress—which has the only legal authority to take us into war—the President and his Cabinet are following a policy that will sooner or later bring about such a condition that a state of war will actually exist without a declaration of war by Congress.

There are men in public life and commentators who tell the American people that the President is charged with the sole authority in foreign affairs. If that were true, the Constitution would confer the power of declaring war upon the President. That is the most important foreign policy of the Government. But nowhere in the Constitution is there any foundation for the charge or the claim that the President is the sole authority in foreign affairs. It is true the Supreme Court has said that he is the authoritative spokesman for the United States, but the Court has also said his authority as spokesman is limited by the Constitution to inquiry and negotiation; but he cannot commit the Government of the United States by any promise or act except by the advice and consent of the Senate.

It is amazing to learn how many editors and public speakers take the position that Congress should waive its responsibility and power and follow the President blindly in foreign affairs, even into war, although the Congress may disagree and sincerely believe that the policy enunciated would mean ruin for the United States. They forget that the Congress has its own responsibility under its oath to the Constitution. It is for the Congress to determine whether our policy shall be one of peace or war.

It is very clear that the American people overwhelmingly support the present attitude of Congress. It is a libel upon Congress to say that a majority of Congress are opposed to going to war for partisan reasons. All Congress asks and all that the American people ask is that if our policy shall be war, that policy shall be declared by the only authority that has the power to declare it, and that is Congress. Though the President is Commander in Chief of the Army and the Navy, he has no right to conduct a policy or use the Army and Navy for purposes that will involve us in war without the consent of Congress.

If and when war is declared by the Congress there will be no question of national unity.

If the President is opposed to going to war, he should say so, and have a Cabinet who speak the same language and conduct public business accordingly.

Does anyone believe that by going to war we can enforce the "four freedoms" upon the people of Japan, China, Russia, or anywhere where the people themselves have not the will to maintain them?

Does it seem sensible to depose dictators we don't like and impose upon foreign peoples dictators according to our own liking, who will force the "four freedoms" upon their people who have never heard of the "four freedoms"?

On the standpoint of common sense, is there any reason in proposing a world-wide crusade that so far as the world is concerned would be as futile and as pathetic as the Crusades of ancient times?

Europe and Asia have had their recurring wars for thousands of years, and in spite of anything we can do will have bigger and better wars in the future.

When this war is over, it is very safe to predict that a treaty will be made which will contain the seeds for the next war.

If we go to war with Germany today, whom shall we be at war with tomorrow?

Today Stalin and Churchill are marching side by side, with American taxpayers' money to aid them. Do you think that they are fighting for democracy? If and when Hitler shall be defeated shall we then fight Russia to establish the "four freedoms" there?

A year ago we lauded Finland as a brave democracy. Today Finland is again fighting Russia. Are we today going to take the side of Stalin against Finland?

In the beginning, England and France declared war against Germany. France fought as long as she could, and now England is fighting France. I ask, if we go to war with a totalitarian nation today, what democracy would we fight tomorrow?

These are serious questions. They emphasize what a mess we find ourselves in when we depart from the ancient American doctrine—the doctrine we adhered to so faithfully until we were lured into European politics and the last war. So long as we followed that doctrine we prospered, and had friends in every land, and had the respect of every government in the world.

There can be no question but that the American people are united in a determination to defend our institutions from attack at sea, on land, or in the air, but an overwhelming majority do not think America can best be defended on the shores of Asia, Africa, or Europe.

Our present war has determined that navies cannot successfully contest with bombers based upon land. Nor can airplane carriers, even though protected by battleships or auxiliary vessels, successfully launch an attack over 3,000 miles on the United States if we have our bombers and submarines at home.

We do not like the Nazi form of government. There are many other governments in the world that we do not like. Are we going to war with them all? Our first duty is to preserve a democracy in America. To do this we must keep certain objectives clearly in mind.

1. Let not public officials exceed their responsibilities under the Constitution, nor usurp powers and authority not delegated to them therein.

2. As a nation we must learn to mind our own business.

3. We must get rid of the idea that because Britain or some other nation becomes involved in a war we can't keep out. That doctrine makes us the slaves of Britain or any other nation with which we may form this unnatural connection.

4. We must have the strongest Navy and air force in the world, and a small but splendidly mechanized Army. With these weapons no power or combination of powers on the face of God's earth will dare attack us.

5. We must have unity in the Nation's foreign policy. This can best be accomplished by the President making no commitments to any foreign government without first obtaining the consent of the Congress.

6. Let all public officials be mindful of their limited power under the Constitution. It is still the supreme law of the land. This is necessary if we are to remain a government by law instead of a government according to the whims of men.

This is America. It was a republic when we received it as a precious heritage from our fathers. With the help of God Almighty it will still be America and a republic when we bequeath it to our sons.

Coffee Sugar Bill, H. R. 3582

EXTENSION OF REMARKS

OF

HON. HARRY B. COFFEE

OF NEBRASKA

IN THE HOUSE OF REPRESENTATIVES

Tuesday, July 22, 1941

Mr. COFFEE of Nebraska. Mr. Speaker, under permission granted by the House, I am submitting herewith certain facts to clarify some of the objections that have been raised against the Coffee sugar bill, H. R. 3582, now pending before the Rules Committee. This bill is very similar to the Adams-O'Mahoney bill, S. 937, which passed the Senate by a vote of 45 to 26.

H. R. 3582 simply provides that if the Secretary of Agriculture finds that the Commonwealth of the Philippine Islands will be unable to market its duty-free quota of sugar in the United States, he shall prorate the deficit among the domestic sugar-producing areas.

Unless this amendment to the Sugar Act is enacted, the Secretary of Agriculture must prorate any deficit in the Philippine quota to foreign countries other than Cuba. This bill does not disturb the full-duty quota of sugar which is allocated to the Philippines and which has always been reallocated to foreign countries. Under the Philippine Independence Act, the Philippines are given a duty-free quota of 982,000 short tons of sugar, raw value. Because ocean freight rates from the Philippines have advanced almost 500 percent since the European war began and since cargo space now is unobtainable, the prospects are that there will be a deficit of at least 150,000 tons of duty-free Philippine sugar.

The question involved is whether this deficit shall be allocated to foreign countries or allocated to domestic areas. If this deficit is allocated to domestic areas, it would be distributed as follows:

Area:	*Percent*
Domestic beet sugar	41.72
Mainland cane sugar	11.31
Hawaii	25.25
Puerto Rico	21.48
Virgin Islands	.24

Unless this deficit is allocated to domestic areas there is little likelihood that the domestic beet-sugar industry will be permitted to sell any sugar this year from the 1941 crop.

On January 1, 1941, the domestic sugar-beet industry had on hand an inventory of 1,754,879 tons of sugar. The marketing quota announced at the beginning of this year it was 1,589,100 tons. As the marketing quotas were originally announced, it meant that the beet-sugar industry would have to carry over 165,000 tons of the 1940 crop into 1942 in addition to their entire production of 1941. Since the marketing quotas are based on estimates of consumption, and since the estimate of consumption has been recently greatly increased due to hoarding and fear of a possible shortage of sugar, the beet-sugar industry will now be permitted to sell during this year approximately the amount of their invoice on January 1 this year. This surplus beet sugar was produced in strict compliance with the Sugar Act.

In spite of prospective difficulties in bringing in sugar from offshore areas, the sugar-beet acreage was reduced 16.2 percent this year by order of the Secretary of Agriculture in compliance with the Sugar Act of 1937. By permitting the sugar-beet industry to absorb their prorated portion of the Philippine deficit, some of the 1941 crop of beet sugar could be sold. This would relieve the pressure for acreage restrictions and would permit beet growers to again resume their normal production. It is essential that continental beet- and cane-sugar production be encouraged in order to assure the domestic market of an ample supply of sugar and to prevent the consumers from having to pay exorbitant prices as was done during the last war, when we depended upon offshore supplies. This bill is opposed by the Seaboard Cane Refiners, who are interested in refining offshore sugar. They feel they may lose a little business to the beet-sugar industry.

The Sugar Act of 1937 provides that the United States beet-sugar area shall be allotted 41.72 percent of the quota for domestic sugar-producing areas. Thus, if a deficit of 100,000 tons were to occur in the duty-free portion of the Philippine quota and were, under the provisions of the Coffee bill, allotted to the domestic areas, the share of beet-sugar producers would be 41,720 tons. The remainder, 58,280 tons, would be made up of raw cane sugar and would be available to refiners.

Seaboard refiners normally handle each year about 4,500,000 tons of sugar, so that the allocation of 41,720 tons of a Philippine deficit would represent less than 1 percent of their average volume. To assert that the diversion of that amount of tonnage to beet-sugar producers would seriously affect the refiners' operations or work hardships on refinery labor is clearly ridiculous. From year to year the volume of sugar handled by refiners has varied by more than 300,000 tons, as shown in the following table, which covers the years for which sugar control has been effective:

Annual meltings of seaboard refiners

[Short tons, raw value]

Year	Meltings	Increase or decrease from preceding year	Percent of change from preceding year
1933	4,128,808		
1934	4,182,368	+53,560	+1.30
1935	4,509,176	+326,808	+7.81
1936	4,513,602	+4,426	+.10
1937	4,845,169	+331,567	+7.35
1938	4,576,957	−268,212	−5.54
1939	4,487,499	−89,458	−1.95
1940	4,630,068	+142,569	+3.18
Average	4,484,200		

There is no evidence to indicate that employment in the refining industry is directly proportionate to the volume of meltings. In 1935, as an example, the refiners melted almost 400,000 tons more than in 1933, and 2,337 more men were employed in 1935 than in 1933. In 1937, however, meltings were 335,000 tons greater than in 1935, but only 192 more men were averagely employed. In 1939 meltings were 358,000 tons less than in 1937, but employment in the latter year was nevertheless 109 men greater than in 1937 despite the significantly smaller volume of sugar handled. Variations in refinery employment are shown in the following table, based on the biennial reports of the Bureau of the Census for the years indicated:

Census year	Average number of employees	Increase or decrease from preceding census year	Percent of change
1933	11,495		
1935	13,832	+2,337	+20.3
1937	14,024	+192	+1.4
1939	14,133	+109	+0.8

The only conclusion to be drawn from these facts is that year-to-year fluctuations in production are not necessarily reflected in corresponding increases or decreases in employment. That being true, there is no reason whatever to believe the allocation of 41,720 tons of a Philippine deficit to the beet-sugar producers would result in any measurable decrease in employment in the seaboard refineries.

Between 1937 and 1939 meltings of the refiners decreased 357,670 tons, and at the same time there was a slight increase in employment. Before the beet-sugar quota could be increased by that amount through an allocation from the Philippines, it would be necessary that a deficit of 857,310 tons be determined in the quota for the islands, which is inconceivable. In other words, the year-to-year variations in the operations of the refiners, as the Sugar Act now stands, have been as great as those which would occur if the Philippines were able to market only 13 percent of their quota in any year—about 130,000 tons—and 41.72 percent of the deficit were allotted to the beet-sugar industry.

Far from operating at a reduced level, reports of the Sugar Division of the Department of Agriculture indicate that in 1941 the refiners are operating on a scale which may well exceed the volume of any recent year. Meltings for the first 4 months of the year—more recent figures are not yet available—were only a few thousand tons behind 1937, when the refiners handled more sugar than at any time since sugar control has been effective. The situation is shown in the following table:

Refiners' meltings, January to April, inclusive, for certain years

[Short tons, raw value]

1935	1,581,233
1936	1,720,981
1937	1,856,268
1938	1,308,593
1939	1,514,480
1940	1,410,636
1941	1,819,109

On the basis of these figures and in view of the demand for sugar which has

been apparent for the first 6 months of the year, it is entirely probable that the refiners' meltings for the year will equal, if they do not exceed, the 4,845,169-ton melt of 1937.

If the seaboard refiners have reason for complaint, the reason is not to be found in the competition offered by the beet-sugar industry but rather in the excessive expansion of refining capacity in the United States. That excess capacity, constructed under boom conditions and high prices, is a condition for which only the refiners themselves are responsible. John E. Dalton, one-time chief of the Sugar Division of the Department of Agriculture and now secretary of the United States Cane Sugar Refiners' Association, deals with this point in his book, Sugar, A Case Study of Government Control, as follows:

The expansion of the refining industry, consisting almost entirely of fixed plant of a highly specialized character, went beyond the needs of the artificial wartime market. When the "abnormal" war export trade disappeared, and when the "normal" export trade of the early twenties was killed with the dumping of refined sugar in the world's market by the highly subsidized European industries, the domestic industry found itself facing an overextension of facilities. Its exact amount is impossible to measure, but the Supreme Court in the Sugar Institute case stated that there has been "* * * an overcapacity since the war of at least 50 percent." For a few years, however, the loss of export demand and the existence of overcapacity were partially offset by the rapidly growing consumption in the American market which, in 1926, reached the all-time high of over 6,350,000 tons, refined basis.

No Hired Agents Needed To Procure Federal Grants

EXTENSION OF REMARKS

OF

HON. WILLIAM R. THOM

OF OHIO

IN THE HOUSE OF REPRESENTATIVES

Monday, July 14, 1941

LETTER FROM JOHN M. CARMODY, ADMINISTRATOR OF THE FEDERAL WORKS AGENCY

Mr. THOM. Mr. Speaker, when the City Council of Canton, Ohio, was asked to appropriate $2,000 to hire agents in Washington to promote the application of that municipality to obtain funds under the Lanham Act for water works and sewage improvements, certain members of the Canton council asked me if such an expenditure was necessary and if Washington persons who offer themselves for such service were in a position to influence the Federal Works Agency. In reply to an inquiry made by me of John M. Carmody, Administrator of the Federal Works Agency, the following letter was received from him:

MY DEAR CONGRESSMAN THOM: In response to your question about the attitude of the Federal Works Agency and its constituent units with respect to lobbying to get projects through, or to get contracts for work, I should like to quote two regulations that have grown up as a result of experience in trying to render intelligent service to citizens without at the same time leading them to believe that they need special pleaders who collect fees from them.

Under Public Works Administration the following regulation is effective: "This offer is made subject to the express condition that, if the Commissioner shall determine at any time that the applicant has paid or agreed to pay, whether directly or indirectly, a bonus, commission, or fee to any person, firm, or corporation for attempting to procure an approval of the applicant's application, or for alleged services in procuring or in attempting to procure such approval, or for activities of the nature commonly known as lobbying performed or agreed to be performed in connection with the application, then the Commissioner shall have the right, in his discretion, to rescind this offer and any agreement resulting herefrom, and, in the event of such rescission, the United States of America shall be under no further obligation hereunder."

The following is quoted from contracts made by the Public Buildings Administration: "Covenant against contingent fees. The contractor warrants by the act of accepting and executing the contract that it has employed no person to solicit or secure the contract upon any agreement for a commission, percentage, brokerage, or contingent fee. Breach of this warranty shall give the Government the right to terminate the contract, or, in its discretion, to deduct from the contract price or consideration the amount of such commission, percentage, brokerage, or contingent fees. This warranty shall not apply to commissions payable by contractors upon contracts or sales secured or made through bona fide established commercial or selling agencies maintained or regularly employed by the contractor for the purpose of securing business during the 2 years next immediately preceding the award of the contract."

These represent specific statements. I think it is fair to say to you that no local officials and no group of citizens ought to allow themselves to be mulcted by people who tell them that they have special influence or inside information with respect to any projects that are under consideration in these agencies. All projects are processed on their merits, to the extent that it is humanly possible for men to handle this business.

Let me give you an example of what I encountered myself in another agency 2 or 3 years ago. Four or five groups of citizens in different parts of an outlying State were interested in similar projects. The projects had merit, and were being considered on that basis, but funds were not immediately available. They knew about this. When they went home they discussed the matter, and a man in a nearby city persuaded them that he could get the projects through. He visited our offices. He was given precisely the same information that the other citizens had been given.

What did he do? From a Washington hotel he sent a wire to each of these groups saying that the projects were practically through, and that if they would wire him a named sum of money—in this case a few hundred dollars for each of them—he could get final approval. I did not learn of these telegrams for several weeks, because he had sent them to his own people from a hotel. In the meantime, of course, the projects were not approved because the appropriation had not yet been made available, but he had collected his money from some; not from all, however. It was not until I discovered by accident during a visit to the field that these telegrams had been sent that I was able to tell the citizens they had been bamboozled.

The fact of the matter is that we all get along better if we know we are dealing with officials doing their job, whether they be local officials or State officials, or Members of Congress, than when we think we are dealing with special pleaders.

Sincerely,

JOHN M. CARMODY,
Administrator.

Living Costs and Buying Power

EXTENSION OF REMARKS

OF

HON. JOHN W. McCORMACK

OF MASSACHUSETTS

IN THE HOUSE OF REPRESENTATIVES

Tuesday, July 22, 1941

AN EDITORIAL

Mr. McCORMACK. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following editorial:

LIVING COSTS AND BUYING POWER

The National Industrial Conference Board presents its monthly statistical records, which show that the cost of living of wage-earner families in the United States in June rose 1.3 percent over the May level. That this is not the small figure it appears at first glance is shown by the fact that it is the largest monthly increase in the last 7 years with the exception of the advances in August and September 1939. Food prices led the upswing, with rents and clothing little changed.

While the consumer will not regard the National Industrial Conference Board's statistical news as cheering, he will find something better emanating from the Department of Commerce, which indicates that many Americans will have more money to spend this year than ever before in their history. The Commerce Department report shows that income payments to individuals in May reached a record high equal to an annual rate of $86,000,000,000. This compares with total income payments last year of almost $76,000,000,000 and with a peak in 1929 of a little better than $82,000,000,000.

The advance in living costs appears to be causing less official concern currently than the increase in buying power. Some commentators claim that an outpouring of purchasing power in excess of the volume of goods to be purchased will bring inflation. So they urge the taxing away of a part of the excess purchasing power.

In the preparation of taxation for this purpose, it should be realized that the rising tide of income payments mostly mirrors war orders and the Federal Government's colossal spending program. Everyone is not benefited financially by this arms and defense prosperity, at least not directly. So-called white-collar workers have been mentioned recently by some writers as the most notable exceptions. Taxes intended as a brake on excess purchasing power should not bear down on those classes which have no excess purchasing power and which, by reason of the continued rise in living costs, may even be finding it increasingly difficult to meet their monthly bills.

There is widespread skepticism manifested toward Government price controls, which failed to work well in World War days and

which hold no guarantee of doing better now. An even less charted sea to navigate is that of tax controls of purchasing power. Tremendous problems are being imposed upon Congress, and that happy solutions to all of them can be quickly found is too much to expect. What can be demanded of our representatives in Washington is that they seek earnestly to arrange that no unnecessary burdens be placed upon the people to bring discontent in this period of emergency. Intelligent protection of the American way of living will most speedily and surely advance us toward our goal of adequate defense against totalitarian aggression.

W. P. A. Writes a Great Chapter in the Construction of Grand Coulee Dam

EXTENSION OF REMARKS
OF

HON. CHARLES H. LEAVY
OF WASHINGTON

IN THE HOUSE OF REPRESENTATIVES

Tuesday, July 22, 1941

Mr. LEAVY. Mr. Speaker, Grand Coulee Dam on the Columbia River is rapidly becoming a completed project. W. P. A. performed a great job in making this possible. The massive block of concrete, containing more than 11,000,000 cubic yards of material, is in place. It is the largest structure of its kind in all the world. It harnesses one of the earth's grandest and mightiest rivers, the Columbia. Behind the dam the stormy, turbulent, and at times, treacherous river has become a placid, beautiful lake, stretching back 151 miles to the international boundary between this country and Canada. I give briefly the facts of the tremendous contribution made by W. P. A. to Grand Coulee Dam.

W. P A. PROJECT

In order to prepare the area lying back of the dam and reaching to the Canadian border, it was necessary to perform a tremendous amount of work in the alteration of highways; the removal of railroads; the shifting of villages and towns and farm homes; the removal of timber and similar obstructions, and even the removal of one of the most ancient Indian cemeteries in the western part of the United States. To perform this Gargantuan task, one of the greatest W. P. A. projects in the United States was set up, and during the last 3 years 3,000 men as W. P. A. employees were engaged in this work, working in all 10,000,000 man-hours. Their great task is now complete.

There must be a genuine personal pride on the part of the unnamed thousands of W. P. A. workers who can now stand on the shores of the altered Columbia River and view this great inland sea that has been created and know that each of them was one of the constructive builders who made it possible.

To the critics of W. P. A., who always seem to look for the shortcomings of that agency, I would recommend that they travel into the great Northwest, into the State of Washington, and into my congressional district, and go by boat from the dam northward for 151 miles to the Canadian border. For each mile of this marvelous journey let them bear in mind that the beauty and perfection of the artificial lake upon whose waters they are traveling was made possible by W. P. A. workers. I am glad, Mr. Speaker, to pay this deserved tribute to those thousands of unemployed men who here found an opportunity to turn their idle hours into enduring, constructive, and useful effort.

THE COULEE DAM RESERVOIR

This great reservoir will not alone be 151 miles in length, but it will have a width varying from 2,000 feet in the canyons to 4 miles where the mountains are less rugged, with a maximum depth of 375 feet. The dam will back water into the Spokane River, a tributary of the Columbia, for 35 miles; into the San Poil River for a distance of 8 miles; and a similar distance into the Kettle River. This storage reservoir will cover 82,000 acres of ground, or 130 square miles, and it will have a storage capacity of 10,000,000 acre-feet of water, which would be sufficient water to supply the needs of New York City for a period of 10 years. The shore line of this newly formed lake will be 550 miles in length.

The project was one that was sponsored by the United States Department of the Interior, Bureau of Reclamation, and drew most of its manpower from the counties of Douglas, Grant, Okanogan, Ferry, Lincoln, Stevens, and Spokane. The first work began in December 1938, and it included clearing 54,000 acres of land along both banks of the river that was later to be submerged and become a part of the bed of the newly formed lake.

MANY W. P. A. CAMPS REQUIRED

In order to provide living quarters for the W. P. A. workers on this job who were miles removed from their homes, it became necessary to establish camps. It has been my pleasure upon several occasions to visit these camps, and they were models for efficiency and sanitation as well as wholesome surroundings. Three of the camps, because of their temporary nature, were tent camps and were designated Camp Spokane, Detillion, and Little Falls, each housing about 200 men. Four of them, to wit: Lincoln, Jerome, Keller, and Gifford were wood-construction camps accommodating from 400 to 600 men; and, oddly enough, one was a floating camp called Camp Ferry, which consisted of three barges 24 feet wide and 64 feet long, containing double-deck quarters, including kitchen, dining room, and refrigerator space. This camp accommodated a crew of 130 men, whose work it was to clear trees, brush, stumps, and debris from steep cliffs along the river, which were inaccessible to land crews.

PAUL BUNYAN TOOK PART

In order to tow the floating Camp Ferry from place to place on the river and transport the heavy equipment required, as well as transfer men, the W. P. A. constructed a Diesel power boat 65 feet in length with a 20-foot beam and a 4½-foot draft. This motorboat was provided with twin Diesel motors, which gave it a speed of 12 miles an hour, and it had a capacity of 100 tons of material and would transport 300 persons. The boat was used to run river rapids as well as navigate the artificial lake, and because of its size, and in keeping with a forest tradition in the great forests of the Northwest, it was named by Frank A. Banks, the supervising engineer of the Bureau of Reclamation, under whose direction Grand Coulee Dam was built, after that giant hero of whom every lumberjack has heard in the Pacific Northwest, Paul Bunyan. *Paul Bunyan* was the flagship of the W. P. A. navy on the new inland sea.

In addition to the flagship *Paul Bunyan* there were numerous other boats used by the W. P. A. crews, there being more than 21 boats and barges, and all of them, with one exception, were built by W. P. A. workmen. This exception was a 42-foot Diesel power tug, which was called the *Blue Ox*. It had been built for use in the construction of Boulder Dam. Two other well-known towboats were named the *Nespelem* and *Wellpinit*. These boats were named for historic Indian villages on the Colville Reservation.

Mr. Speaker, I have mentioned this watercraft used in the making of the marvelous new lake that is now in existence, because in future years, by contrast, it will seem crude when viewed in the light of the marvelous modern boats of every type and character that will be seen in service on this lake.

THE COLVILLE INDIANS AND THE COULEE DAM

No statement of the remarkable work done by the W. P. A. people in preparing the reservoir to become a great lake would be complete without some reference to the effect that it has had upon the genuine native Americans who have resided on the shores of the Columbia River for centuries.

The Colville Indians, as well as those of many other tribes, hundreds of years before the white man came, and up until the time of the construction of Grand Coulee Dam, would gather each year at Kettle Falls on the Columbia River, which constituted the major fishing ground for the Indians, and there would catch thousands of pounds of salmon, which fish were on their way to the spawning grounds from the Pacific Ocean. Kettle Falls was a point on the Columbia River more than 100 miles above Grand Coulee. The construction of the dam and the storage of the water behind it has completely submerged the falls, and likewise the construction of the dam forever put an end to the annual salmon runs at that place.

THE CEREMONY OF TEARS FOR KETTLE FALLS

The passing of Kettle Falls, by reason of the white man's work in his march of progress, left the Colville Indians and those of other tribes heartbroken. On June 17, 1941, just before the waters backed over the falls to forever hide the numerous giant boulders and the jagged rock formations that made the falls, the Indians gathered for a final 3-day meeting. They appropriately designated their meeting as the Ceremony of Tears for Kettle Falls. They stood solemnly and silently on the rocky banks of Kettle Falls and mourned the passing of their ancestral fishing grounds. The white brother,

who has been driven through the years by a spirit of progress, could not help but feel a bit of remorse as he observed this simple yet touching ceremony. Today, only a month later, as one stands on the shore of the newly formed lake, there is no evidence under the pleasant, quiet, cool waters of the Columbia at this point that through the centuries before it was a rushing torrent, where the great salmon leaped by the thousands out of the water in their struggle upstream to their native spawning grounds, and where they were taken by the thousands by the native Indians as a source of subsistence, to be used through the long winter months, their meat being preserved by a process of smoking peculiar to the Indians of that region.

ANCIENT INDIAN BURYING GROUNDS

Another very interesting phase of Indian life was involved in this unusual W. P. A. project. For years and years it had been the custom of the Indians to bury their dead near the river, and the great Columbia that served them as a highway of transportation and a source of food also became the final resting place for their loved ones when death overtook them. The Bureau of Reclamation made provision to remove the remains from these graves insofar as they could be located, and there were more than 1,200 such graves opened and the remains removed to higher ground. Some of the graves were so old that they were found beneath giant trees. Some were placed one above the other, indicating that one had disappeared before the second grave was dug. Some held the remains of one person, while others contained entire families. It was recalled by old Indians that more than a century ago a smallpox epidemic that swept through that region had wiped out whole families. The fact that there were so many graves near Kettle Falls was accounted for by the statement that when the Indians became afflicted they would go to the Falls for the purpose of being cured. Their treatment consisted of long hours in the sweat house, which was followed by a plunge in the icy waters of the river. The plunge was usually followed by a burial ceremony.

Pages could be written of the fascinating Indian legends connected with the upper Columbia River and particularly with Kettle Falls. That this portion of the river played an important part through the long years in the life history of the Northwest Indian could not be doubted by anyone, nor can anyone fail to feel some compassion for those Indians now residing in that region to whom Kettle Falls, as Nature had built it, had meant so much. It is only another evidence of the irresistable march of progress that in its forward movement at times would seem to be relentless and cruel, but from it all, through the years that lie ahead, we know there will come much to lighten the burdens and bless the lives of both Indians and whites.

THE COMMERCIAL SIDE OF THE W. P. A. PROJECT

In the clearing and preparation of this great reservoir there was a certain financial gain to the United States Government. There was much timber of commercial size and value, and more than 32,000,000 feet board measure of merchantable timber was cut, scaled, and delivered to sawmills farther down the stream. In this regard we had already begun to recover some of the cost incident to the mighty Grand Coulee Dam construction.

The electrical energy to be developed at Grand Coulee, when installation is made to capacity, will be more than 2,000,000 kilowatts. To translate this into kilowatt-hours the number would be multiplied by 365, and that in turn by 24, thus giving the kilowatt-hour production in 1 year. This electrical energy sold at the insignificant sum of 2 mills per kilowatt-hour would make an annual return in money to the United States Treasury of the colossal sum of more than $25,000,000.

Already industry is coming to the Northwest in volume and begging for this potential electrical energy. This beloved Nation of ours in its feverish haste to prepare itself from its enemies is finding the mighty Columbia an anxious and willing servant, and these unnamed thousands of W. P. A. workers who participated in this great task each may have the joy of knowing that they were a part of it.

THE NEW LAKE THAT WILL BE FORMED

Mr. Speaker, I have already stated that the lake that will be created as a result of the construction of Grand Coulee Dam which rises from bedrock to its crest some 550 feet, will be 151 miles in length. It will become a great transportation artery. Upon its surface thousands of commercial and pleasure craft will move. Along the shores of this lake many new industries will find suitable locations, and in some of the pleasant and picturesque spots attractive summer homes and resorts will be built. The lake itself will be a region known far and wide to sportsmen. By reason of the rich mineral resources existing in the great mountain ranges bordering on this lake, undreamed of mineral development will take place, made possible in a large part by the tremendous electrical energy output at the foot of the dam. It seems almost incomprehendible to realize that if the 18 giant generators were today installed and being driven by the falling waters of the Columbia River, they would be turning out more than one-twentieth of all the electrical energy now produced from every source in the whole of continental United States. This project is truly so colossal that the mind of man cannot comprehend it.

GRAND COULEE, THE KEY STRUCTURE

Grand Coulee Dam is referred to frequently as the key structure in a comprehensive development plan of the Columbia River in the United States. It is so called by reason of the fact that the 10,000,000 acre-feet of water that it will store will so regulate the flow of the river from the dam down to the Pacific Ocean, a distance of about 350 miles, as to increase year-round navigation in the river, so as to insure against floods, and above all, so as to greatly increase hydroelectrical energy production in all downstream dams.

The Army engineers' survey indicates that nine great power and navigation dams below Coulee are possible by reason of the tremendous fall of this river on its way to the sea. Two of these dams are now in existence, one being at Rock Island near Wenatchee, Wash., and the other the great Bonneville structure near Vancouver, Wash. When the remaining seven dams are constructed and power facilities installed, this great giant, the Columbia River, will be producing energy equal to that of 10,000,000 horses harnessed and at work, and the dam at Grand Coulee will be the greatest of them all. It will be the controlling and regulating dam upon which all those downstream will be dependent. When this day comes—and I do not believe it is far distant—there will arise a new electrical empire, both industrial and agricultural, the like of which will not exist anywhere else in the world.

Mr. Speaker, in conclusion I want to say that I have not discussed the tremendous possibilities incident to the development of 1,200,000 acres of the most fertile land on the globe that now lies a barren waste because it is without water. The Grand Coulee project will supply all the water needed to make homes for half a million people on this land, and in the cities and towns that will grow by reason of this development.

The brief outline that I have given in this short space of time indicates how lavish Nature has been to our region in giving us the mighty Columbia River. The results of converting the river into a useful instrumentality to bless mankind must never be permitted to pass into selfish private hands for exploitation, nor be subjected to the collection of a tribute from the general public, for whose benefit and advantage this whole project was undertaken and constructed.

I have gone somewhat into detail in an endeavor to give a picture of this great project in my State, and I, like the thousands of W. P. A. workers who were engaged in the clearing project, and the other thousands of mechanics and artisans who were directly employed upon the dam, and the additional thousands of people who have battled to make this great undertaking a reality, feel a just pride in being able to say with all those others, "I, too, had a part in building Grand Coulee."

Saturday, July 19, Seneca Falls Day, or Women's Independence Day

EXTENSION OF REMARKS

OF

HON. WILLIAM T. BYRNE

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Tuesday, July 22, 1941

MEMORANDUM FROM NATIONAL WOMAN'S PARTY

Mr. BYRNE. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following memorandum of the National Woman's Party regarding Seneca Falls Day, Saturday, July 19, or Women's Independence Day.

We are apt to assume that the freedoms we enjoy have existed forever and forget

that the rights and privileges which we enjoy have been made possible by the wisdom and vision and courage of men and women who have given their lives to securing those blessings for us.

The young people of the present day may easily forget unless they are reminded by the recognition of this anniversary that the women of the United States gained the vote after a long and gallant and bloodless campaign which had its inception 93 years ago in Seneca Falls, N. Y.

To that village in 1848 were called the liberal-minded men and women of this country for the purpose of examining the laws and customs of the Nation to the end that they might discover what the position of women was and how it might be raised to the same position held by men.

Lucretia Mott and Elizabeth Cady Stanton signed the call.

By that time the suffrage had been extended to all white men, but to no women, and this first convention demanded "the sacred right to the elective franchise."

Due to the introduction of machinery and the consequent flight of women's work from the home to the factory, women were already entering industry in appreciable numbers. They were paid then as today much less than men. The convention demanded equal pay for equal work.

Seven years previously, in 1841, the first women had been granted degrees in Oberlin College, but universities, most colleges, all technical schools, and even high schools were closed to women. The convention demanded opportunities for education equal to those given men.

In addition they demanded equality with men in the professions, in marriage, and in the church. They demanded the right to contract, to be joint guardians with their husbands of their children, to possess their own property and their own wages.

Of all these demands only one has been thoroughly secured. The vote has been guaranteed to women because it rests no longer upon the whim of the States, but has been declared theirs by the Constitution itself in the nineteenth amendment. No State can now withdraw the vote from women.

Some of the States have granted some of the other demands. Some of the States added further discriminatory laws, and all States have it in their power to discriminate still further against women.

An amendment to the Constitution granting women the same protection that men now enjoy would wipe out the laws which now discriminate against them and prevent the enactment of new ones.

Such an amendment would grant women the same kind of citizenship now given men and complete our democracy It reads:

"Men and women shall have equal rights throughout the United States and every place subject to its jurisdiction."

Wheat Marketing Quotas Unjust and Unfair in 1941 Crop

EXTENSION OF REMARKS

OF

HON. CHARLES H. LEAVY

OF WASHINGTON

IN THE HOUSE OF REPRESENTATIVES

Tuesday, July 22, 1941

Mr. LEAVY. Mr. Speaker, on yesterday we passed H. R. 5300, and I was glad to give this bill my active support.

The bill was in the nature of an amendment having the effect of modifying the farm marketing quota for wheat in 1941, but it only applied to a single unjust and unfair situation that has revealed itself in giving application to the marketing quotas and parity payment loans on wheat. This bill takes care of the wheat farmer who was a noncompliance farmer at the time the quotas and increased parity payment loans went into effect, if he finds that his crop has been a partial failure, and the total wheat that he produces is less than the normal yield would have been on his quota acreage.

WHAT ABOUT OTHER WHEAT FARMERS?

Mr. Speaker, out in the far Northwest we have one of the greatest wheat-producing regions in the Nation. This year, generally speaking, we have a crop above the normal yield. At the time this crop was planted the penalty for producing wheat on excess acreage was 15 cents a bushel, and no farmer could have been advised that it would be otherwise when harvest time came. Later we changed the law increasing parity loans to 85 percent of parity. In giving application to this increased loan, however, the Agriculture Department deducts a freight differential of about 12 cents a bushel, and then calculates parity on that basis, thus resulting in a loan of about 86 cents per bushel to our farmers, instead of 98 cents per bushel. At the same time the law provides for a 50-percent penalty on parity loans without giving any consideration to the freight differential. In other words, farmers in my district are discriminated against. The penalty of 49 cents a bushel is calculated on a 98-cents-per-bushel loan instead of 86 cents per bushel that we can get. Therefore, our penalty in no event should be more than 43 cents.

If a wheat farmer in the State of Washington sees fit to harvest the wheat grown on excess acreage, and takes advantage of the maximum loan on such wheat, which is 60 percent of parity, he would be able to borrow 52 cents a bushel, and immediately be subjected to a 49-cents-a-bushel penalty, thus leaving a margin of but 3 cents a bushel gross. It should require no argument to convince anyone how unjust and unfair this is to such farmer. This is even more true when we consider that the excess acreage was planted at a time when no one could have known that the penalty would be more than 15 cents per bushel.

In addition to this injustice there comes the further injustice in the fact that the noncompliance farmer is not given the right to the 85-percent parity loan, or any loan, on the wheat that he produces on his quota land. Surely, when he complies, either voluntarily or by compulsion, he should not be denied the privilege granted farmers who were compliance producers in 1940. These injustices arise largely out of passing a retroactive law.

THE REMEDY

To remedy the inequitable and, in many instances, ruinous effect, we should go much further than the mere enactment of H. R. 5300, which only cares for subnormal crops.

First. We should recognize the fact that the noncompliance farmers are not law violators and should not be so treated, because the penalties being imposed grow out of a condition that did not exist when the crop was planted.

Second. We should permit all wheat farmers, since quotas have been imposed subsequent to the planting of their crops which they are now harvesting, to borrow from the Commodity Credit Corporation 85 percent of parity on all wheat produced on quota acreage.

Third. In calculating penalty on wheat produced on excess acreage, the freight differential should be taken into consideration and the farmer given credit for it, just as it is deducted when a Commodity Credit loan is made.

Fourth. The farmer should be permitted to feed to livestock so much of his wheat produced on excess acreage as he desires without penalty.

Fifth. Storage facilities and storage provisions should be both more adequate and easy of application insofar as they involve wheat produced on excess acreage.

Sixth. Finally, due regard should be given to the fact that representations in many instances were made, and perhaps honestly, that if the wheat farmers voted for quotas, such quotas would not be effective as against the crop already planted.

Now, Mr. Speaker, I have endeavored in this brief period of time to point out some of the outstanding injustices resulting from the situation as it now prevails. By the legislation that we have just passed we have afforded some relief to the farmer producing a subnormal crop, but there still are thousands of wheat farmers in my district and State that will sustain great losses by reason of the existing situation, and I am hopeful that the Committee on Agriculture will shortly report out legislation that will correct the evils I have mentioned.

It is true that the 85-percent parity loan substantially increases the current market price of wheat, and in the crop to be produced in 1942 will doubtless prove of great help to the American wheat farmer, but it is not in keeping with the principle of American justice and American fairness to place a penalty upon the thousands of honest, patriotic American wheat growers, who are not, and who had no thought of committing any act that would subject them to a penalty in connection with their wheat acreage planted in the fall of 1940 or the spring of 1941.

Creed of Life of John D. Rockefeller, Jr.

EXTENSION OF REMARKS

OF

HON. CLINTON P. ANDERSON

OF NEW MEXICO

IN THE HOUSE OF REPRESENTATIVES

Tuesday, July 22, 1941

Mr. ANDERSON of New Mexico. Mr. Speaker, under leave to extend my remarks, I desire to include in the RECORD

a statement of Mr. John D. Rockefeller, Jr., one of the country's great men of affairs. I consider his creed of life, which he enunciated recently in a radio program under the auspices of the United Service Organization's campaign, to be one of the most inspirational messages which it has been my pleasure to read. He reaches into the depths of his lifetime of experience and sets out 10 rules for conduct that have tremendous application today.

The moral philosophy of Mr. Rockefeller I conceive to be the essence of what has made America great. I wish that I were able to place this message into every home in the land, to every mother and every father, to every young man and young woman. The trouble and travail of today would melt away if these principles of conduct could find more general application here and abroad.

Mr. Rockefeller's rules are:

I believe in the supreme worth of the individual and in his right to life, liberty, and the pursuit of happiness.

I believe that every right implies a responsibility; every opportunity, an obligation; every possession, a duty.

I believe that the law was made for man and not man for the law; that government is the servant of the people and not their master.

I believe in the dignity of labor, whether with head or hand; that the world owes no man a living but that it owes every man an opportunity to make a living.

I believe that thrift is essential to well ordered living and that economy is a prime requisite of a sound financial structure, whether in government, business, or personal affairs.

I believe that truth and justice are fundamental to an enduring social order.

I believe in the sacredness of a promise, that a man's word should be as good as his bond, that character—not wealth or power or position—is of supreme worth.

I believe that the rendering of useful service is the common duty of mankind and that only in the purifying fire of sacrifice is the dross of selfishness consumed and the greatness of the human soul set free.

I believe in an all-wise and all-loving God, named by whatever name, and that the individual's highest fulfillment, greatest happiness, and widest usefulness are to be found in living in harmony with His will.

I believe that love is the greatest thing in the world; that it alone can overcome hate, that right can and will triumph over might.

William Brockman Bankhead

MEMORIAL ADDRESS

OF

HON. MARTIN J. KENNEDY

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Wednesday, June 18, 1941

On the life, character, and public service of Hon. WILLIAM BROCKMAN BANKHEAD, late a Representative from the State of Alabama

Mr. MARTIN J. KENNEDY. Mr. Speaker, we arrest our activities to pay tribute to Speaker BANKHEAD, who, well beloved and crowned with the most enviable honors that confidence and station can bestow, was taken from us in the midst of the performance of his duties at the moment of the highest possibilities of service. It is fitting that we should render the official tribute of respect, but the significance of this occasion is far deeper than that. It is the tribute inspired by love of country, as laying aside the differences and controversies, which seem but trivial in the face of man's adventures and God's providence, we stand united by the indissoluble bonds of common patriotism, knowing well that ungrateful republics cannot endure. The temples of democracy will be but as vain vestiges of a vanished faith if their altar fires are not kept burning by the memory of those who have met the supreme test and have laid down their lives in heroic fidelity and self-sacrifice. Above all, we give the tribute of the deep affection which moves us to speak in tender remembrance of a generous and kindly spirit who counted human fellowship more precious than all the pomp and circumstance of power. Not only those who had the privilege of intimacy, but the vast multitude who bowed in grief at his passing, had responded to the grace of his gentleness and called him brother and friend as well as Congressman.

It is difficult, while still we labor under the sense of personal loss to appraise fairly the qualities or to estimate justly the character of the departed friend. We are too apt at such a time to permit our emotions to color our judgment and to sway our verdict.

It is hard to restrain the ardor of friendship in writing of so widely gifted and attractive man, but a just appreciation should stand upon a foundation of understatement.

It was Macaulay who said that if one stopped under a doorway for a moment with Edmund Burke to escape a shower, he would be impressed with the certainty that he had met a kindly man. That was true of Speaker BANKHEAD.

His charm of manner, his musical voice, his unexcelled diction, his general knowledge made him a personality at once outstanding, remarkable, and pleasing.

His vigorous and penetrating mind, always at work, gained for him an immense extent and variety of knowledge. He had the learning of a philosopher, and to that learning he added the manners of a gentleman. His company was sought by the Members of Congress from all parts of the United States, for he was witty with a subtle sense of humor and a keen knowledge of proportion. He had an inexhaustible sense of discourse, with constant cheerfulness and high spirits.

Suffice it to say that for all of his adult life no great cause affecting his city or State has been discussed upon which he did not spread the luster of his talents, the spell of his eloquence, and the music of his voice. He was a strong partisan, but never permitted his loyalty to his party to interfere with his duty to his country. He was an aggressive advocate, but he always tried to be fair with an opponent, even when dealing his most telling blow. He believed intensely in his own side of an argument, but he was tolerant of opposition, and ever ready to applaud in an adversary that ability and character which bespeaks conviction and denotes sincerity. He has gone to his reward after having fought a good fight. May I now say in closing, as one who knew him, who admired his extraordinary talents and unrivaled attainments, that the great outstanding quality in his make-up was his intense and ever-present belief in the God of his fathers. WILLIAM BROCKMAN BANKHEAD was gifted and blessed above most of the men of his day and generation, but above all in that simple, childlike faith which was fostered at the knee of his mother, and which survived and grew with all the triumphs of his great career, and carried him onward into the next world with the fervor of a martyr and the certainty of one who knows.

May the Lord deal with him as one who has gained the palm and may his place in the world beyond the grave be even higher and more glorious than that which he won for himself among men.

Joint Income-Tax Returns

EXTENSION OF REMARKS

OF

HON. CLINTON P. ANDERSON

OF NEW MEXICO

IN THE HOUSE OF REPRESENTATIVES

Tuesday, July 22, 1941

ARTICLE FROM THE UNITED STATES NEWS

Mr. ANDERSON of New Mexico. Mr. Speaker, the news dispatches of this morning carried word that the Ways and Means Committee of the House of Representatives voted 15 to 10 to retain as part of its new tax bill mandatory joint income-tax returns for husband and wife. I think it pertinent at this time to insert in the RECORD a résumé from the United States News.

This indicates that the press of the country has correctly sensed that mandatory joint returns is not a matter which concerns only the community property States but will be felt in every State in the Union. It will be thoroughly unpopular and will not produce sufficient revenue to justify its adoption.

Further, it is bound to face the possibility that it may fail on constitutional grounds and thereby deprive the Government of $300,000,000 of badly needed revenue. It would be the part of wisdom to prepare adequately in the first place and leave out of our financial planning a provision which may be unconstitutional and certainly is unwise.

The item from the issue of the United States News for July 25, 1941, is as follows:

[From United States News of July 25, 1941]

MANDATORY JOINT TAX RETURNS: VIEWS OF THE NATION'S PRESS

The proposal of the House Ways and Means Committee that the new revenue act provide for mandatory joint income-tax returns

by husbands and wives living together is generally condemned by the commenting press. Many of the commenting editors describe the proposal a penalty on marriage, while others contend it would nullify the independent status of women, acquired through long years of struggle.

"Enactment of the provision," declares the New York Sun (independent), "as pointed out by John G. Jackson, president of the New York State Bar Association, would go counter to the laws of New York and other States that a married woman is entitled to her separate estate and separate income. The protests that have already been made against this proposal are only a foretaste of those that Congress will get if it is written into the bill."

"If it becomes law," according to the San Francisco (Calif.) Chronicle (independent), "it will mean that the wife's income must be merged with that of her husband for tax purposes, and thus be raised into the extremely high surtax brackets of the pending bill. It puts a penalty on husbands and wives who have separate incomes."

Emphasizing the fact that "at present the filing of joint or separate returns is optional," the Worcester (Mass.) Gazette (independent) argues: "The weight of the amount which the new scheme would be expected to raise would fall chiefly on couples of the middle class in moderate circumstances, couples that are trying to maintain homes and educate children, couples in which the wife is trying to earn a little extra to provide such home and education. This is not a case of soaking the rich. It is the imposition of a special burden on a special group. There need be no fear that couples with two incomes are going to get off lightly by allowing them to continue the present option of filing joint or separate returns. Nobody is going to escape under the forthcoming tax schedules."

"The Government estimates that this change in the law will net something over $300,000,000," says the Pittsburgh (Pa.) Post-Gazette (Republican), with the conclusion that "there are other and better ways of raising this amount." The Post-Gazette comments further: "Why should their taxes be higher than those of a single man and single woman who may work right beside them and have exactly the same earnings? And if the single man and single woman are considering marriage, they may count up the extra tax and consider it as a deterrent."

"Congressmen," according to the Fort Worth (Tex.) Star-Telegram (Democratic), "who in the past have violently condemned the separate return privilege as a piece of favoritism to the States which have community property laws investigated to find out just exactly how it operated in the country as a whole. They were more or less astonished to find that separate returns are filed everywhere. The discovery increased the likelihood that the fight of the community-property States to retain the separate return will be successful."

The Los Angeles (Calif.) Times (Republican) comments: "The fact that, in some cases, the surtax causes the aggregate payments of husband and wife to be somewhat smaller than if a single return were made is a peculiarity of the income-tax law which in no way affects the justice or validity of the community-property system. But if the wife's right to make a separate return is denied, then her right to half the property and income is also denied and the law declares her equality is voided."

"Against such a proposed invasion of constitutional rights," asserts the New Bedford (Mass.) Mercury (independent), "the House committee has offered only one argument—purely political—that a greater sum in taxes could be collected by the proposed method. Adding insult to injury, the committee was hypocritical in its attempt to justify the joint return, when it asserted that individual returns permitted 'avoidance' of surtaxes. Fortunately for the married taxpayers of the Nation, the tremendous growth of opposition to the committee's plan indicates public sentiment may force its abandonment."

H. R. 5336, Farm Credit Act of 1941

EXTENSION OF REMARKS

OF

HON. HAMPTON P. FULMER

OF SOUTH CAROLINA

IN THE HOUSE OF REPRESENTATIVES

Tuesday, July 22, 1941

SUMMARY OF PROVISIONS OF H. R. 5336

Mr. FULMER. Mr. Speaker, under leave to extend my remarks in the RECORD, I am inserting a summary of the provisions of the farm-credit bill, H. R. 5336, introduced on June 16.

This is a very important piece of legislation, and I am hoping that the Members of Congress, as well as all other interested parties, will give this legislation careful and serious consideration.

I expect to hold hearings on this bill sometime during the first of the coming fall.

The summary follows:

SUMMARY OF THE PROVISIONS OF PROPOSED FARM CREDIT ACT OF 1941

The basic objectives of the bill are two: First, to eliminate those factors which heretofore have caused break-downs in the national farm loan associations, which constitute the underlying structure of the Federal land-bank system, and to enable the system, on a sound, permanent, and self-sustaining basis, to extend credit to farmers at the lowest interest rates consistent with sound financing and operating practices; and, second, to provide specific authority for the Federal land banks and the Federal Farm Mortgage Corporation to identify and adjust to their true status those of their loans which so far exceed the capacity of the borrower to pay that there is no hope of his financial rehabilitation through mere adjustment in the terms and conditions of payment. It provides also a method, adequately safeguarded, for making practically effective the right conferred upon farmers by section 75 (s) of the Bankruptcy Act to repurchase at their real value farms which, at the present time, for want of credit facilities, they are unable to repurchase, despite the fact that the law as recently interpreted by the Supreme Court gives them the right to do.

In order to accomplish the first of these objectives the bill provides for reorganizing the Federal land-bank system on a membership and patronage basis in lieu of the present stock basis. Borrowers from the banks would become members of the national farm loan associations, which, in turn, would be members of the Federal land banks.

The bill would require the retirement at par, in accordance with the present statute, of all outstanding stock of the banks and associations. Membership interests of the new members would be acquired by the payment of a membership fee equal to 2 percent of the unmatured principal of their obligations held by the bank. The proceeds of this fee would be used by the association to purchase an equivalent membership interest in the bank and would remain available as capital in the system. Fifty percent of it would be subject to the satisfaction of losses on loans made through the associations. Generally the proceeds of the stock of present borrowers would be available for payment of the 2-percent fee and for application on existing loans.

The bill would not become effective until a number of borrowers adequate to enable the system to operate effectively as a system of membership cooperative organizations had agreed to pay the fee and participate as members.

The stock now held by the United States in the land banks, together with the amount contributed by the United States as paid-in surplus of the banks would be converted into a single flexible revolving fund of Government capital available for allocation within the system at those points where it is most needed to accomplish the objectives of the system.

Former borrowers from the system who, on the retirement of their stock in the past, have not received payment or credit for the full par value of their stock, would be paid the difference between what they received and the par value of their stock.

Three major sources of income would be provided for the associations. First, they would be assured each year of income in the form of special preference distributions equal to one-eighth of 1 percent of the unmatured principal of the obligations of their members to the bank, and authority would be provided whereby the banks, with the approval of the Farm Credit Administration, might pay out of net earnings, as additional preferential distributions, further amounts up to a total of one-half of 1 percent of the members' obligations. Second, provision is made for sharing net earnings of the system with the borrowers through patronage dividends to be paid to the associations. Third, provision is made for the banks and the Federal Farm Mortgage Corporation to compensate the associations for the services the associations perform on behalf of the banks and the Corporation in handling and servicing loans.

On the other hand, the losses which heretofore have fallen upon the local associations would be limited in the future to 50 percent of the losses incurred. In this way half of the loss which heretofore has been absorbed by the local asosciations and has remained to form a cumulative burden upon them would be absorbed in the first instance on a district basis. Thus, by broadcasting the cooperative base through which, initially, these losses are absorbed, the threat of insolvency to local associations would be cut in half at the outset.

To the satisfaction of this 50-percent share of losses to be borne by the association would be applied the income available to the associations except—in order to avoid penalties upon sound management—income derived from compensation for their services to the banks, and income obtained by independent enterprise or investment. One-half of the association's fee fund and all of the association's income from the banks, except its compensation for services, including the one-eighth of 1-percent special-preference distribution and distributions to be made to the associations out of net earnings in the form of additional preferential distributions or dividends, would be subject to satisfaction of losses occurring in any year on loans made through the association. Provision would be made also for the orderly establishment by the associations of reserves, which likewise would be available for the satisfaction of their 50-percent share of any losses which occur on the loans of their members. The associations would satisfy their liability for losses on loans of their members annually out of these funds. If a loss should exceed the combined amount of annual income available for the satisfaction of losses, the reserves and the portion of the fee fund subject to losses, any unsatisfied residue of that

year's losses would be borne by the bank and the association would start the next year free of obligation for prior losses.

In this way the individual association's responsibility for losses would be limited to an amount which the association would be in a position to meet annually out of its income, reserves established for that purpose and 50 percent of its fee fund. The rest of the losses would be absorbed on a district-wide basis. Through this method the concentration of losses which in the past has wrecked more than 60 percent of the associations would be dispersed and the associations would be kept constantly in a situation where it would be feasible for them from time to time to make distribution, as dividends to their members, of a share of the net earnings realized on a district basis. The result these provisions are designed to accomplish by thus spreading costs and losses on a wider basis than has been possible under existing law is to establish the cooperative participation of members in the system's gains and losses at a broader level and thereby to provide reasonable assurance that local losses resulting from uncontrollable local causes cannot wreck the local units as they have in the past and to permit the system's profits to be shared more evenly among its members.

Additional strength in the form of greater and more flexible capacity to meet local or district emergencies within the system would be provided through the creation of a system-owned revolving fund to be built out of earnings. This capital fund, as it grows, will be available in increasing amount as a fluid capital fund for the system as a whole to supplement or replace the Government capital.

On the basis of this principle of greater fluidity of the Government capital and the system-owned capital, the strength and effectiveness of the system's capital resources are proposed to be increased by making them more flexible than is permitted by present requirements, which have been found to tie the funds at places in the system where they have not been needed and withhold them from places where their availability would have enhanced the effectiveness of its operations.

The bill provides that the rate payable to the banks and the Federal Farm Mortgage Corporation should be continued at 3½ percent until July 1, 1946, when the last of the presently outstanding bonds of the Federal land banks are callable. The rate on loans made after that date would be computed on the basis of the average annual cost to the banks and to the Corporation, respectively, of the funds they procure through sale of bonds to finance the loans they make, plus a charge of 1½ percent to cover operating costs and losses, and in the case of the Federal Farm Mortgage Corporation an additional charge sufficient to maintain the rate on Land Bank Commissioner loans ½ percent above the rate on land-bank loans. Loans made between the effective date of the act and July 1, 1946, would be computed on a similar basis after the latter date, but would be subject to a top limit of 4 percent. Loans outstanding when the act becomes effective would be computed after July 1, 1946, on the same basis as new loans made after that date but would be subject to a top limit equal to their original contract rate.

The new basis for computing the interest on land-bank loans is designed to permit a better distribution of the maturities of the obligations issued by the banks in order to procure funds with which to make loans. Heretofore, with the loan rate tied to the last issue of bonds, it has not been considered feasible to take advantage of low rates available in recent years on short-term financing, inasmuch as the issuance of short-term bonds at low rates would result in disproportionately low interest rates to those farmers fortunate enough to have loans granted before the next issue of bonds at a higher rate. Utilizing, as the bill does, a basis of average money costs, automatically weighted to take into account the volume of bonds outstanding of various maturities, sharp fluctuations in the loan rate would be avoided and the banks' financing could be conducted on the basis most desirable in view of market conditions when the financing is undertaken. As a consequence it is probable that it would be possible to carry on the system's financing operations on a basis far sounder and more realistic than that possible under the present law and credit could be made available to farmers at lower rates not only without weakening the system but on the contrary, as the result of adoption of fundamentally sounder methods of financing, on a sounder basis than is presently possible.

During the period prior to July 1946, while the 3½-percent rate prevails, the banks and Corporation would continue to be subsidized from the Treasury to the extent of all bond interest paid by them in excess of 2 percent.

Under the bill presently outstanding bonds of the banks would be fully guaranteed by the United States. Those held by the Corporation would be immediately callable as long as they were in the hands of the Corporation, and could be refinanced at current, more advantageous rates. New issues of bonds, however, would not be directly guaranteed. Instead the Federal Farm Mortgage Corporation would be required to buy them if they could not be marketed within one-fourth of 1 percent of the market for guaranteed bonds.

The bill would make available also, as an additional source of financing for the land banks, discount privileges with the Federal Reserve banks.

The authority which the bill gives to the banks to refinance excessive indebtedness is limited to those cases where the bank or the Corporation is a creditor. Authority is given, however, to refinance the borrower's whole indebtedness in such cases up to but not beyond the appraised value of the land. Anything short of that would, of course, be a waste of effort.

The bill provides that committees selected by the local national farm loan associations shall have the responsibility of reviewing applications for refinancing. They are to determine, and to certify to the bank or the Corporation, whether the farmer has any reasonable expectation of being able to meet his indebtedness, or any reasonable expectation of being rehabilitated through adjustment of the terms of payment of the amount he owes, and whether he would be able to carry out the obligations required of him if he should be refinanced on the basis of his application.

This screening of applications by the association's committees would be supplemented by careful review of the applications by the Federal Farm Mortgage Corporation and, in the case of an obligation due to a Federal land bank, by the bank.

If the application is granted the farmer would be required to transfer title to his property to the bank or to the Corporation and operate it under a lease for a period of 5 years, at the end of which, if he has carried out the requirements of the lease and demonstrated his ability to carry on with the obligation, the property would be retransferred to him subject to a mortgage for the balance remaining after crediting an appropriate part of the amount he had paid as rent during the lease period. A similar method would be followed in connection with the refinancing of obligations of persons whose debts had been scaled down by the courts through proceedings under section 75 of the Bankruptcy Act and who had established the right under that act to refinance or repurchase their farms.

The bill provides also for limiting the taking and enforcement of deficiency judgments by the land banks and the Corporation to those cases where the borrower has not dealt fairly with the bank or the corporation or has available, or in reasonable prospect, means with which to pay his obligations without impairing his capacity to produce a living for himself and his family.

In order to facilitate the carrying out of the bill's provisions the time within which land bank commissioner loans may be made would be extended indefinitely, and the limits on the amount of such loans would be made to correspond with the land-bank limitations.

The bill contains other provisions incidental to these principal ones and amends or repeals those provisions of existing law which would be in conflict with the provisions which the bill makes effective.

Woman's Independence Day

EXTENSION OF REMARKS

OF

HON. JOHN W. GWYNNE

OF IOWA

IN THE HOUSE OF REPRESENTATIVES

Tuesday, July 22, 1941

Mr. GWYNNE. Mr. Speaker, Saturday, July 19, was the ninety-third anniversary of Seneca Falls Day, or Woman's Independence Day. It is an important day in the long history of woman's struggle for liberty and equality.

In 1840 two women delegates to a world antislavery convention in London were denied the right to participate in the sessions. They were Elizabeth Cady Stanton and Lucretia Mott, both Americans.

This denial led these women to examine the conditions under which women were living and the circumstances which denied them the right to participate in this very important convention. They found that women were living in a world of discrimination. They had no right to vote. In education, in industry, in the professions, and even in the church they had no equality with men.

On July 19, 1848, these women called a convention at Seneca Falls, N. Y., to discuss the future of women and to plan action to remove as rapidly as possible these many discriminations. Thus began a movement which spread all over America and had a marked influence even in other countries.

Gradually the rights of women in regard to their own property were extended. They became eligible to hold minor offices and to vote in certain localities on local issues. Eventually that part of the program culminated in the nineteenth amendment to the Constitution, providing—

> the right of citizens of the United States to vote shall not be denied or abridged by the United States or by any State on account of sex.

Participation by women in politics has now become an accepted fact. They hold many important offices in both the State and Federal Governments. In my own State of Iowa women some years ago were made eligible for jury service both on trial juries and on grand juries. It is now the overwhelming opinion among judges and lawyers that this step was

one of the greatest ever taken in the interests of law enforcement.

In the fields of education, business, and the professions important progress has also been made. In Federal legislation Congress has twice recognized the principle of equality since the adoption of the nineteenth amendment. The Nationality Act enables a woman to retain her citizenship even though married to a foreigner, and the Fair Labor Standards Act has given to women practically the same conditions as to men.

Although much has been accomplished, a great deal yet remains to be done. It was very fitting that representatives of the National Woman's Party who are now devoting time and energy to the struggle for equality for women should pause to pay tribute to these great pioneers in the field.

"Red" Soldiers Aid Democracies

EXTENSION OF REMARKS
OF
HON. JARED Y. SANDERS, JR.
OF LOUISIANA
IN THE HOUSE OF REPRESENTATIVES

Tuesday, July 22, 1941

EDITORIAL FROM THE ST. TAMMANY FARMER, COVINGTON, LA.

Mr. SANDERS. Mr. Speaker, to get real Americanism and a revelation of the sturdy, courageous spirit that has made America great, it is necessary sometimes to go out into the small towns and talk with these honest, God-fearing people who do not think that a dollar is the greatest thing in life, and who think that America is more than a stretch of land between two oceans. No factor has played a greater part in keeping alive this spirit of Americanism than the weekly country press.

Under leave to extend my remarks, I desire to put into the RECORD an editorial from the St. Tammany Farmer, a weekly published in Covington, La., in my district, which I believe is fairly typical of the viewpoint of our people back home on present world developments.

The editorial in question was published in the issue of July 11, 1941, and is entitled "'Red' Soldiers Aid Democracies" and is as follows:

[From the St. Tammany Farmer, Covington, La.]

"RED" SOLDIERS AID DEMOCRACIES

Few people in the United States would have expected a few months ago that the "red" army of Soviet Russia would ever carry the blessings of the British and American Governments in battle.

This strange turn-around that puts Soviet soldiers fighting in common, and dangerous enemy of every democracy is retributive in that the menace that now threatens Russia was loosed upon the world largely because Joseph Stalin attempted to be smart.

This strain of selfish and cynical acquiescence in the inexcusable aggression against other peoples has come home to roost in the Soviet barn. Much of the same attitude was adopted by Poland when Czechoslovakia was invaded. It was the pattern followed by other smaller nations as the Nazi machine wantonly invaded its neighbors, regardless of solemn professions of nonaggression.

Despite the lessons that are available from Europe, where victimized nations rue the day of indecision, there are people in the United States who still profess to believe that a negotiated peace with Adolf Hitler is worth considering. What has any nation in the world up to this time gained from any agreement with the Nazis?

It is a frightful conclusion to be convinced that there is no way to peace and order in the world except through force of arms, ruthlessly applied to the marauders who molest civilization and destroy culture. It is a bitter choice for a peace-loving people to decide that they must prepare for total war, regardless of their dislike of war and understanding its folly.

In the face of recent history no government in the world would be fit to serve its people or hold office if its responsible heads were unwilling to face the brutal truth and to tell all citizens exactly what the world situation is today. The time has surely arrived when those who believe in truth, freedom, and honor must be ready to give more than verbal support to the principles by which they profess to live.

The Massachusetts Gerrymander

EXTENSION OF REMARKS
OF
HON. THOMAS H. ELIOT
OF MASSACHUSETTS
IN THE HOUSE OF REPRESENTATIVES

Tuesday, July 22, 1941

EDITORIAL FROM THE BOSTON POST

Mr. ELIOT of Massachusetts. Mr. Speaker, with respect to the redistricting of Massachusetts, where the Republican legislature is planning 10 Republican congressional districts and 4 Democratic districts, even though the State is actually divided 50–50, I include an editorial from the Boston Post of July 20. The Governor, despite all his protestations about his faith in democracy, is said to approve of the plan. And nobody has heard the Republican Senator from Massachusetts protest against it, as he should—as all believers in honest representative government should.

The editorial is as follows:

[From the Boston Post of July 20, 1941]

THE GOVERNOR'S WORDS

Apparently the Republican Cliveden set of Massachusetts, which is desperately trying to anchor itself in political power for all the days of our generation, has failed to observe the one paramount issue in the rising tide of criticism that its actions have provoked.

There has been only one issue in all the spending program, in all the gerrymandering, in all of the political knifing, and in all the settling of scores.

The issue is simple honesty.

We contend, as do honest Democrats and Republicans throughout every district in the Commonwealth, that the gerrymander is a dishonest political maneuver, handed down to a sincere and trusting electorate, which deserves a better deal at the hands of its leaders.

The latest and most distressing example of this lack of straight dealing is the statement issued jointly by Speaker of the House Herter and Floor Leader King in defense of the plan for the embarrassment of Congressman TINKHAM as well as Congresswoman ROGERS, and the elimination of Congressman ELIOT and perhaps Congressman HEALEY.

Do not these men know that Representatives are elected to carry out the will of the people?

Do they not know that Congressman TINKHAM has been obeying the mandate of the people of his district, as he is required to do by sacred oath, and not the will of Republican whips on Beacon Hill? Do they not realize that Mrs. ROGERS also clings to the old-fashioned, but intrinsically honest belief that she is a representative of all the people, the poor and distressed as well as the wealthy and the privileged?

Is it getting so that a Representative in Congress has to obey like a robot the commands of this Cliveden set?

Can't we have a Congressman in this State who is able to carry out the bidding of the majority of people in his or her district, without suffering possible defeat because of the desires of a ring of bosses?

The people of Massachusetts will discount the paltry excuses of the Herters and the Kings, but will remember one salient and established fact.

This is, that the balance of power over the legislature is held by one man. He is Governor Saltonstall. The Bushnells, the Herters, the Goodwins, and the rest have not edged far enough into power to swing the heavy majority of the Republican legislators into line.

But the Governor can do this.

He still has in his hands the reins of power. He can swerve away from the new course he has pursued ever since he went into office for the second time.

He can remember his promise to be a good Governor, a servant of all the people, a man who was returned into office by more votes of the opposition party than any other in recent political history.

But will he remember? Were those words just campaign oratory?

We are forced to conclude that he will not remember and that his words were just so much campaign oratory.

Ninety-third Anniversary of the Equal Rights Movement

EXTENSION OF REMARKS
OF
HON. HOMER D. ANGELL
OF OREGON
IN THE HOUSE OF REPRESENTATIVES

Wednesday, July 23, 1941

DECLARATION OF SENTIMENTS AND RESOLUTIONS ADOPTED IN 1848

Mr. ANGELL. Mr. Speaker, July 19 marked the ninety-third anniversary of the equal-rights movement. It was begun in the United States by the calling of what has become known as the Seneca Falls Convention.

The men and women who assembled in that little village of New York State nearly a century ago adopted a declaration of sentiments and a set of resolutions.

Of the 12 demands made upon the Nation, only 1, that of the vote, has been completely won. For all the rest women are still struggling. The sentiments and the resolutions follow:

DECLARATION OF SENTIMENTS ADOPTED AT SENECA FALLS CONVENTION, 1848

The history of mankind is a history of repeated injuries and usurpations on the part of man toward woman, having in direct object the establishment of an absolute tyranny over her. To prove this, let facts be submitted to a candid world.

He has never permitted her to exercise her inalienable right to the elective franchise.

He has compelled her to submit to laws, in the formation of which she had no voice.

He has withheld from her rights which are given to the most ignorant and degraded men—both natives and foreigners.

Having deprived her of this first right of a citizen, the elective franchise, thereby leaving her without representation in the halls of legislation, he has oppressed her on all sides.

He has made her, if married, in the eye of the law, civilly dead.

He has taken from her all right in property, even to the wages she earns.

He has made her, morally, an irresponsible being, as she can commit many crimes with impunity, provided they be done in the presence of her husband. In the covenant of marriage, she is compelled to promise obedience to her husband, he becoming, to all intents and purposes, her master—the law giving him power to deprive her of her liberty, and to administer chastisement.

He has so framed the laws of divorce, as to what shall be the proper causes, and in case of separation, to whom the guardianship of the children shall be given, as to be wholly regardless of the happiness of women—the law, in all cases, going upon a false supposition of the supremacy of man, and giving all power into his hands.

After depriving her of all rights as a married woman, if single, and the owner of property, he has taxed her to support a government which recognizes her only when her property can be made profitable to it.

He has monopolized nearly all the profitable employments, and from those she is permitted to follow, she receives but a scanty remuneration. He closes against her all the avenues to wealth and distinction which he considers most honorable to himself. As a teacher of theology, medicine, or law, she is not known.

He has denied her the facilities for obtaining a thorough education, all colleges being closed against her.

He allows her in church, as well as in state, but a subordinate position, claiming apostolic authority for her exclusion from the ministry, and, with some exceptions, from any public participation in the affairs of the church.

He has created a false public sentiment by giving to the world a different code for men and women, by which moral delinquencies which exclude women from society, are not only tolerated but deemed of little account in man.

He has usurped the prerogative of Jehovah himself, claiming it as his right to assign for her a sphere of action, when that belongs to her conscience and to her God.

He has endeavored, in every way that he could, to destroy her confidence in her own powers, to lessen her self-respect, and to make her willing to lead a dependent and abject life.

Now, in view of this entire disfranchisement of one-half the people of this country, their social and religious degradation; in view of the unjust laws above-mentioned, and because women do feel themselves aggrieved, oppressed, and fraudulently deprived of their most sacred rights, we insist that they have immediate admission to all the rights and privileges which belong to them as citizens of the United States.

In entering upon the great work before us, we anticipate no small amount of misconception, misrepresentation, and ridicule, but we shall use every instrumentality within our power to effect our object. We shall employ agents, circulate tracts, petition the State and National Legislatures, and endeavor to enlist the pulpit and the press in our behalf. We hope this convention will be followed by a series of conventions embracing every part of the country.

RESOLUTIONS ADOPTED AT SENECA FALLS CONVENTION, 1848

Resolved, That such laws as conflict, in any way, with the true and substantial happiness of woman are contrary to the great precept of nature and of no validity, for this is "superior in obligation to any other."

Resolved, That all laws which prevent woman from occupying such a station in society as her conscience shall dictate, or which place her in a position inferior to that of man, are contrary to the great precept of nature and therefore of no force or authority.

Resolved, That woman is man's equal—was intended to be so by the Creator—and the highest good of the race demands that she should be recognized as such.

Resolved, That the women of this country ought to be enlightened in regard to the laws under which they live, that they may no longer publish their degredation by declaring themselves satisfied with their present position, nor their ignorance, by asserting that they have all the rights that they want.

Resolved, That inasmuch as man, while claiming for himself intellectual superiority, does accord to woman moral superiority, it is preeminently his duty to encourage her to speak and teach, as she has an opportunity, in all religious assemblies.

Resolved, That the same amount of virtue, delicacy, and refinement of behavior that is required of woman in the social state should also be required of man, and the same transgressions should be visited with equal severity on both man and woman.

Resolved, That the objection of indelicacy and impropriety, which is so often brought against woman when she addresses a public audience, comes with a very ill grace from those who encourage, by their attendance, her presence on the stage, in the concert, or in feats of the circus.

Resolved, That woman has too long rested satisfied in the circumscribed limits which corrupt customs and a perverted application of the Scriptures have marked out for her, and that it is time she should move in the enlarged sphere which her great Creator has assigned her.

Resolved, That it is the duty of the women of this country to secure to themselves their sacred right to the elective franchise.

Resolved, That the equality of human rights results necessarily from the fact of the identity of the race in capabilities and responsibilities.

Resolved, therefore, That, being invested by the Creator with the same capabilities and the same consciousness of responsibility for their exercise, it is demonstrably the right and duty of woman, equally with man, to promote every righteous cause by every righteous means; and especially in regard to the great subjects of morals and religion, it is self-evidently her right to participate with her brother in teaching them, both in private and in public, by writing and by speaking, by any instrumentalities proper to be used, and in any assemblies proper to be held; and this being a self-evident truth growing out of the divinely implanted principles of human nature, any custom or authority adverse to it, whether modern or wearing the hoary sanction of antiquity, is to be regarded as a self-evident falsehood, and at war with mankind.

Resolved, That the speedy success of our cause depends upon the zealous and untiring efforts of both men and women, for the overthrow of the monopoly of the pulpit, and for the securing to woman an equal participation with men in the various trades, professions, and commerce.

F. B. I. Cooperation With State Authorities

EXTENSION OF REMARKS

OF

HON. EDITH NOURSE ROGERS

OF MASSACHUSETTS

IN THE HOUSE OF REPRESENTATIVES

Wednesday, July 23, 1941

Mrs. ROGERS of Massachusetts. Mr. Speaker, under permission given me to extend and revise my remarks, I present the following copy of a bill which I introduced today, authorizing the assistance and cooperation of the Federal Bureau of Investigation with the local authorities in cases of felony:

A bill authorizing the Federal Bureau of Investigation to cooperate with State authorities in the investigation of certain crimes

Be it enacted, etc., That whenever there is reason to believe that a felony has been committed resulting in the death, or disappearance of, or serious injury to, any person, the Federal Bureau of Investigation may assist and cooperate with the local authorities in the investigation of such offense.

Many Camps Unsuited for Training of Soldiers

EXTENSION OF REMARKS

OF

HON. HAROLD KNUTSON

OF MINNESOTA

IN THE HOUSE OF REPRESENTATIVES

Monday, July 21, 1941

Mr. KNUTSON. Mr. Speaker, during the World War the War Department established training camps in a number of out-of-the-way places that were wholly unsuited for the purpose of training soldiers. At that time it was suspected that a number of the selections had been made largely to appease certain parts of the country or that they involved real-estate transactions that would not bear investigation.

It had been hoped that the War Department would not commit the same mistake should occasion again arise when it became necessary to establish camps to train men in future emergencies. Evidently the War Department is incapable of learning or profiting by past experiences.

Sheriff William J. Butcher, of Morrison County, Minn., recently visited four camps located in the deep South, which included Camp Claiborne. I quote from the Little Falls (Minn.) Daily Transcript of Monday, July 7, as follows:

[From the Little Falls (Minn.) Daily Transcript of July 7, 1941]

Poisonous snakes, spiders, mosquitoes, and stagnant water infest the area of the four big

camps, into which the Government has poured millions of dollars. Reports which Sheriff Butcher received at the camp, though not official, are that there will be no maneuvers and that all four camps have been condemned—the troops will have to move out.

"Don't go back to Little Falls and tell them that this is a good camp," one of the men admonished.

OFFICERS DOING GOOD JOBS

"But the officers apparently are doing all they can for the safety of the thousands of soldiers who are in training under these conditions," the sheriff said. Every possible health measure has been taken, but training is confined to the filled-in areas, which limits activities. Rumors are that the troops soon will be moved to some part of the country where climatic and topographical conditions will provide more efficient training. No mention was made of Camp Ripley in this respect.

Water stands everywhere except on highways and areas which have been built up. Animals roam the high places and go to sleep at night on the public roads. Motorists have to drive with extreme care to avoid striking them.

FABULOUS SPENDING IN EVIDENCE

Evidence of fabulous spending of the public's money is to be seen throughout the military areas, but Louisiana simply is no place for a white man to live, the sheriff declared. The food is good, but the drinking water is warm and insipid. And the heat is terrific.

Hundreds of boys are in the hospital for insect bites and stomach ailments, Sheriff Butcher was told. There were no local cases that he heard of. Morale among the Little Falls men is high. No member of Company D or Company E has been put in the guardhouse or a civilian jail.

All the boys wanted to say hello to everyone back home, which is a pretty big order, but Sheriff Butcher thought he could fill it through the Daily Transcript.

The State of Minnesota has on numerous occasions offered to transfer Camp Ripley to the Federal Government for training purposes. That camp has been pronounced one of the best camps in the country as to location, area, climate, drainage, transportation, and geographical location. For years it has been used by the National Guard from a number of Mississippi Valley States, and at times as many as 35,000 men have been garrisoned there at one time. Officers and men have pronounced it one of the best camps in the country. The Minnesota Legislature, at its last session, appropriated a million dollars to enlarge the camp so as to provide as much land as the Government could possibly use. The excuses given by the War Department for not designating Camp Ripley will not hold water. It may be true that there were not enough barracks available. To that excuse let me call attention to the fact that there were no barracks or buildings of any kind on sites that have been selected in the South—not even roads in some instances—where Ripley already had thousands of acres of cleared, high, dry, and accessible land that were all ready for maneuvers as compared to some of the swamp sites selected by the War Department in the South, that must be abandoned after the expenditure of millions of dollars. At this point I desire to quote from a report recently made on Camp Ripley:

Topography of Camp Ripley and the surrounding area, the report said, "is exceptionally well suited to military training and maneuvers and the soil will stand up under all types of weather conditions."

FAVORABLE WEATHER CITED

The report in addition pointed out:

"This area has more clear days and fewer rainy days than most parts of the country, and precipitation is well scattered through the year, assuring no prolonged interruption of training due to weather.

"The State of Minnesota has signified its intention of cooperation by appropriating $1,000,000 for land acquisition to enlarge the camp, which, with $4,000,000 already invested, brings to $5,000,000 the cost of development for Army use.

"AMPLE LABOR

"Ample labor exists in the area for any large expansion, and housing facilities for several thousand workers are available on the reservation.

"Camp Ripley is strategically located in almost the exact center of North America, has excellent railroad and highway facilities north, south, east, and west.

"The rich agricultural Northwest can easily supply an abundance of the best health-building foods obtainable.

"The camp is situated in the heart of the 10,000 lakes of Minnesota with all the attendant recreational advantages."

I do not know who is responsible for some of the selections that have been made, but I will say without fear of contradiction that the sites were selected because of political and other considerations that wholly disregarded the welfare of the country at large and of those who were to receive their training in these camps. I would suggest that civic and patriotic organizations, and the national committee cause the whole mess to be investigated and that the facts be made known to the American people who will take remedial action in November 1942. The facts, as I get them, present an indefensible situation that is little short of scandalous.

Time for Action

EXTENSION OF REMARKS

OF

HON. A. S. MIKE MONRONEY

OF OKLAHOMA

IN THE HOUSE OF REPRESENTATIVES

Wednesday, July 23, 1941

EDITORIAL FROM THE SAN FRANCISCO NEWS

Mr. MONRONEY. Mr. Speaker, under leave to extend my remarks in the RECORD, I include therein the following editorial from the San Francisco News of Tuesday, July 15, 1941, entitled "Time for Action."

[From the San Francisco News of July 15, 1941]

TIME FOR ACTION

Organized labor has a specially protected status under the Federal antitrust laws for a thoroughly good reason.

Strikes, boycotts, picket lines affect interstate commerce. Labor often gains its demands by restraining trade. But workers must have the right to act as groups—as unions—to seek better wages, shorter hours, safer working conditions.

And so Congress, on the sound principle that "the labor of a human being is not a commodity or article of commerce," has guaranteed this right. Unions per se are not to be treated as illegal combinations or conspiracies in restraint of trade. They and their members are not to be punished by the antitrust laws for using lawful methods to attain legitimate objects.

But the men who control certain unions have abused the right. They have restrained trade in order to increase building costs, to boost food prices, to prevent use of improved materials and more efficient methods, to compel the hiring of useless and unnecessary labor, to help certain employers drive competing employers out of business, to enforce systems of graft and extortion, and to injure rival unions.

The guaranty given by Congress to protect honest labor has been used as a screen behind which dishonest labor bosses prey on the public.

We do not believe Congress ever intended union leaders to be immune to antitrust prosecution when they do such things. The Supreme Court has held that they are not immune if they do such things in conspiracy with employers. But recent decisions of the Court interpret the intent of Congress to be that immunity shall apply to all restraint of trade by unions alone.

These decisions have encouraged "labor's hidden hold-up men" to believe that they have a special license to engage in their antisocial practices. It's up to Congress to remedy that bad situation by restating its own intent in language that labor bosses and courts cannot misunderstand.

So, again, we call attention to the Monroney and Walter bills now in Congress.

These measures clearly define the legitimate objects of unions—collective bargaining, wages, hours, working conditions, and the like. Thus they would strengthen the guaranty that labor shall not be punished for seeking these objects. They also define objects that should be illegitimate for labor, just as they are for everyone else—illegal price fixing, competition killing, graft, extortion, etc.—and provide that unions, union officials, and members shall be subject to the antitrust laws if they restrain trade to gain such objects. Thus they would give the public, including honest workers, greatly needed protection.

Both bills are before the Judiciary Committee of the House, of which Representative SUMNERS, of Texas, is chairman. Let's have action on them.

American Blood Demanded by Great Britain in Her Present War and the Permanent Occupation of Germany by the United States and Great Britain Planned

EXTENSION OF REMARKS

OF

HON. GEORGE HOLDEN TINKHAM

OF MASSACHUSETTS

IN THE HOUSE OF REPRESENTATIVES

Wednesday, July 23, 1941

ARTICLE FROM THE NEW YORK TIMES

Mr. TINKHAM. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following article from the New York Times of July 16, 1941:

[From the New York Times of July 16, 1941]

GREATEST UNITED STATES AID SEEN ONLY IN A. E. F.—VANSITTART, "SPEAKING PLAINLY," ON HIS RETIREMENT, ASSERTS OUR ARMY IS NEEDED

(By Craig Thompson)

LONDON, July 15.—Lord Vansittart, retired permanent Under Secretary of State for Foreign Affairs, today declared that the only

thing possible to be gained from the German attack on Russia is time—time wherein Great Britain and the United States can continue preparations—and he asserted that American help to Britain will be most effective when another American expeditionary force lands in France.

Lord Vansittart was permanent Under Secretary for Foreign Affairs from 1930 to 1938, and then was diplomatic adviser to the Foreign Office until his recent retirement.

In a remarkable meeting with a small group of correspondents today he made plain that he had long wanted to speak plainly to America, and now being outside the governmental strait jacket he intended to do so. Tomorrow he will take a seat in the House of Lords at the age of 60.

For the present he gave no credence to Japanese action on a large scale because he believed such action "would depend on the outcome of the European effort."

EXPECTS DEFEAT OF RUSSIA

He declared that the Germans had made substantial progress in Russia, and he doubted seriously any possibility except a German victory. His one hope was that the Russians would hold up the Germans long enough to permit the British and Americans to get into full swing production.

He subscribed fully to the theory that the German attack on Russia was at least partly dictated by the desire to release a million, or possibly two million men for production. These men are needed not only in German factories but also in those of occupied countries. In the German view, as understood here, that could only be achieved by immobilizing the Russian Army.

Lord Vansittart suggested that the only way a permanent peace can be obtained and maintained is by the British and Americans—if victorious—sitting on the Germans with knife in mouth prepared to break any sword raised.

"The present generation of Germans," Lord Vansittart declared, "are so poisoned with Nazi doctrine that there will be nothing to do but take them into protective custody. If the democracies expect to survive, they must be dominant. If their dominance affords protection, they must protect it."

WAR SEEN AS COUNTERREVOLUTION

Speaking as one who had had some hand in shaping British policy for the past few years, Lord Vansittart declared that the war against Hitler was not a world revolution but, in effect, a counterrevolution. He said nothing had been spread so rapidly as Nazi doctrine in the last few years. He expressed the belief that it had poisoned much of England and America. On the other hand, he regarded spread of Russian doctrine as far less dangerous or likely to make converts.

He asked, "Is Anglo-Russian alliance one more step in world revolution?" And answered, "I don't think so. Nazi-ism is a much more exportable doctrine and more efforts have been made to export it."

He added that in the 3 or 4 years wherein the Nazis have been exporting their doctrine to the United States and South America they had made more progress than the Communists in 20.

With a sigh of regret he declared that "it would have been a great gain if our diplomacy had succeeded in bringing Russia in on our side."

He predicted that a tender peace would be offered by Herr Hitler and it would be very specifically directed at America and the British dominions. He said the offer would be intended to give the Germans time to mobilize their forces for striking at the rest of the world, and any such peace would mean that the next war would come far sooner than the war that followed Versailles.

He used one figure of speech that Americans should remember: "World politics," he said, "is a bridge game and it is important to remember in bridge that a player must have a lock at his hand before he can bid."

Steam Plants Are Needed by United States

EXTENSION OF REMARKS
OF
HON. JOHN C. BUTLER
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES

Wednesday, July 23, 1941

ARTICLE FROM BUFFALO EVENING NEWS

Mr. BUTLER. Mr. Speaker, under leave to extend my remarks in the RECORD I include the following article, which appeared in the Buffalo Evening News on July 18, 1941.

In the light of the present cry of the President and his political mouthpieces or spokesmen that "more power is needed for national defense," this seems to be a very timely statement. Hearings on the St. Lawrence project before the Rivers and Harbors Committee have brought out the fact that steam plants can be more readily and cheaply constructed for an immediate emergency. Those opposing this unnecessary construction have continuously and constantly insisted that numerous steam plants should be constructed when and where needed instead of using a huge amount of men, money, and materials for the construction of the proposed St. Lawrence seaway.

[From the Buffalo Evening News of July 18, 1941]

STEAM PLANTS ARE NEEDED BY UNITED STATES

(By David Lawrence)

WASHINGTON, July 18.—Within the last 48 hours there was held at the White House a conference, the true significance of which has not been reported in the press. What was announced was the proposed expenditure through Government subsidy or loans of about $1,000,000,000 for new plants to take care of a shortage in electric power. What was inadvertently concealed was the real responsibility for the tragic situation in which the electric-power industry finds itself today as a consequence of a blunder in judgment made by President Roosevelt, aided and abetted by some of the very men who conferred with him on Wednesday, namely, Secretary Ickes; Senator Norris, of Nebraska; Ben Cohen, and the other advocates of public ownership who have influenced the President for the last several years to harass and smother the privately owned public utilities.

The death-sentence law, which has kept the executives of holding companies busily occupied for 18 months now in almost daily conferences at the S. E. C. instead of tending to their jobs, has had the effect of stunting the growth of electric power in America by preventing financing for needed expansion over a period of 7 years.

The present shortage of electric power was foreseen as far back as August 1937, in a memorandum submitted to the President by the Federal Reserve Board, but not made public. The Federal Reserve Board memorandum said in part:

"It takes ordinarily about 2 years to plan and equip a modern steam-generating plant and 3 years more to develop new hydroelectric stations. Apart from some large Federal hydroelectric projects, there are at present comparatively few important new central stations under construction, and if the expansion of generating capacity had to await the planning and completion of such stations, an acute power shortage would inevitably ensue before they could be brought into production.

What happened to this report? It was pigeonholed because the President, fearful of antagonizing the public-ownership school of thought in the New Deal, let matters drift and refused to accept the well-worked-out compromise for settling the whole electric-power problem submitted to him in confidence by Wendell Willkie in January 1938. Mr. Roosevelt allowed enough money to go into Federal-aid projects so that investors were frightened. This killed the market for the financing of common stocks from which utility companies have since been told by Government decree they must get their expansion money instead of by further issues of bonds.

Then in September 1938 the President admitted in a press conference that he feared an electric-power shortage in the event of war. Today the administration is to lend $475,000,000 a year for the next 5 years for new plants—a fraction of needed expansion—and recognizes at last that steam plants are an essential part of the electric-power plant of America, as contrasted with hydroelectric developments, and far more certain as has been proved now by the drought in the Tennessee Valley which at times seriously curtails power production.

If administration officials were not constantly seeking to shift the blame as they are repeatedly trying to do in the case of aluminum production, which is inadequate to meet the fantastic figures of needs being bandied about, there would be no inclination now to go back to the record as it would be much better if bygones could be bygones—a lesson apparently which Secretary Ickes refuses to learn and which the President does not encourage him to learn in the interest of national unity.

The Housing Problem

EXTENSION OF REMARKS
OF
HON. THOMAS D. WINTER
OF KANSAS
IN THE HOUSE OF REPRESENTATIVES

Monday, July 21, 1941

Mr. WINTER. Mr. Speaker, my attention has been called to an article appearing in Coronet magazine written by A. B. Lee, box 171, Benjamin Franklin Station, Washington, D. C., which has a peculiar interest to me.

Kansas is the State of pioneers in the kind of home construction, "Houses of earth," with which this article deals. With the coming of the earliest settlers the sod house came into being as the only kind of home available for those hardy pioneers. In 1855 Lawrence was a village of sod houses. Many of them had crude thatched roofs of prairie grass. In building a house on the homestead the line for the wall was usually drawn after dark

so that it could be located by the North Star. One pioneer said the whole thing "was made without mortar, square, plumb, or greenbacks." All that was needed was a pair of willing hands. Buffalo robes sometimes closed the windows and doors, but the poverty of those early settlers was shared by all. Occasionally the newcomer had a "bee," and the neighbors for miles around gathered at the "claim" and they would put up his house in a day. The principal tools of construction were a sod plow and a spade.

These houses were mighty comfortable in the winter and did not need much fire to keep them warm. Those constructed in later years had the luxury of frame roofs, windows and door sills, and gave the settler a substantial house which was warm in winter and cool in summer. Many a family whose children constitute the substantial citizens of Kansas today were reared in sod houses and some of them attended schools held in houses built of this material.

It seems particularly fitting that the State of Kansas should have recognized the earth structure wall as an "economic out" for the home builders, because our sod house frontier is a history of these dwellings and the University of Kansas has been exploring every possible method of earth structure walls and is now contemplating the erection of a building on the campus of this university at Lawrence, Kans., with walls of rammed earth. So, when I read this article in Coronet expounding the fact that anybody who owns a lot is standing on his own best building material supply, I was impressed with the possibility of accomplishing low-cost housing which will give our citizens the maximum of housing facilities at the minimum of cost. The findings of this author, who has published a booklet of complete and illustrated instructions on how to build these houses, are unqualifiedly supported by the findings of Dr. Lyman J. Briggs, Director of the National Bureau of Standards, and other eminent authorities. The Bureau of Standards, at the request of the N. Y. A. and Indian Affairs Commission, has made structural tests of rammed earth and adobe walls, and its preliminary reports appear in the Coronet article. I desire to call it to the attention of Members of Congress by including in my remarks both the article in an abridged form and the Bureau report, which is as follows:

HOUSES OF EARTH

(By A. B. Lee)

Since human beings stopped living in caves they have built their castles in the air or their cabins in the sky and hoped they would some day make them come true. But too often they faded with the mirage.

In our struggle toward a higher civilization we have standardized our way of life, and this new order to which we must conform has forced the many to become cliff dwellers in huge piles of masonry that are shelters, but never homes. For years a housing shortage has existed throughout the country for that great army in the low-income group. If their courage should exceed their caution, and they erected homes on plots they had acquired by small payments, they are weighed down for years by the tribute paid to contractors, unions, and material dealers. Added to this is the fear of foreclosure if these mortgage payments, "that are just the same as rent," are not met. A way out would be a godsend for those who long for a better way of life.

And there is a way out.

Back in 1937 the writer submitted an article titled "Houses of Earth," to Coronet magazine, and it appeared in the June issue of that year. It briefly told how castles in the air might be brought down to earth and built of the earth itself. There is nothing new about the method, for it is as old as recorded history, and is known in France as Pise de Terre.

The response to that article was immediate and amazing. Thousands of inquiries were received by the editors and the author asking for additional information on rammed-earth houses. Every State in the Union was represented, as also were such far places as China, South Africa, Australia, India, and many European countries. But when members of the building trades were approached for their views on this type of construction there was little enthusiasm evinced. Doubts were raised in the minds of a few as to whether all was well along the rammed-earth front.

EARTH WALLS WILL BEAR THE LOAD

The answer was forthcoming at the National Bureau of Standards, from a man who has demonstrated unusual ability in being able to know with given material what can and what cannot be done. This man is Dr. Lyman F. Briggs, noted for his intensive laboratory procedure. The problem laid before him was the ever-recurring contention by building contractors and private individuals that rammed earth walls would crumble when subjected to stresses and strains. Dr. Briggs' answer was emphatic and gratifying: "These walls will bear the load."

The following statement was made by Dr. Briggs:

"I feel that Coronet's articles on rammed-earth houses serve effectively to bring this type of construction to the attention of the public and to stimulate the interest of home owners.

"Although walls of earth have been known and used successfully since prehistoric times, there is very little data on their strength, weather resistance, and heat transfer; therefore, at the request of the National Youth Administration and Office of Indian Affairs, we included five earth-wall constructions in our program on the determination of the structural properties of low-cost house construction.

"We believe that the strength and other structural properties are adequate for one- and two-story houses if the work is done by persons who have had some training. There is reason to believe that anyone with a little instruction can build earth walls successfully.

"The fact that people having little money can build earth walls themselves with materials readily available appeals to me very strongly. Making information on earth constructions available through our reports is, I think, an effective way to help the people of this country to help themselves.

"Our study was planned by a group of experts who were experienced in such construction. The group included Mr. Thomas Hibben, who has built rammed earth houses under the Farm Security Administration; Mr. Elbert Hubbell, instructor of rammed earth, Office of Indian Affairs; Commander C. S. Stevenson, Navy Department, who has constructed field hospitals of earth in China; Mr. T. A. H. Miller, Bureau of Agricultural Chemistry and Engineering, a well-known authority on rammed-earth construction; and Mr. Francis MacDonald, consulting engineer, who developed the use of earth with admixtures of portland cement, called terracrete. Messrs. Hubbell and MacDonald supervised the construction of all specimens.

"Five types of earth construction were studied, adobe brick, bitudobe brick, monolithic terracrete, terracrete block, and rammed earth. The earth used was a mixture containing 50 percent of clay loam and 75 percent of sand gravel with moisture content between 10 and 12 percent. Analysis of the mixture showed it to consist of 43 percent of fine sand, 19 percent coarse sand, 22 percent silt, 17 percent clay, and 8 percent colloids.

"The weights of all five constructions were nearly the same ranging from 120 lb./ft. 3 for the bitudobe to 137 lb./ft. 3 for the terracrete block. The monolithic terracrete and rammed earth walls were 14 inches thick, the block walls approximately 12 inches thick. The adobe, bitudobe, and rammed earth walls carried compressive loads up to 11 lb./in. 2; the terracrete walls were stronger, carrying compressive loads up to 800 lb./in. 2, both under eccentric loading All of the walls withstood transverse loads such as are produced by the wind of 50 lb./ft. 2 or more. The performance under impact was better than that of many types of masonry walls, and, like masonry walls, the earth walls resisted concentrated loads extremely well, except near sharp corners. The racking strengths of the adobe, bitudobe, and rammed earth walls were of the order of 2,000 to 3,000 pounds per foot, while those of the terracrete walls were greater than 6,250 pounds per foot.

"From the point of views of the structural properties, all five forms of earth construction are quite satisfactory. Our measurements of heat transfer are not completed. Earth walls have high heat capacity which aids in reducing fluctuations of temperature and maintaining a more uniform temperature. In summer, the temperature inside an earth house does not rise to as high values as houses having walls of lower heat capacity. Earth walls are, of course, fireproof. Earth walls must be protected against the erosion of driving rains.

"The Bureau has made no special study of protective coatings for earth walls, but a large amount of work has been done at the Agricultural Experiment Station of South Dakota State College. In many climates protection can be secured by using an overhang on the roof.

"Members of the Bureau staff have had no personal experience in the construction of complete houses of earth and are not in a position to advise on the structural details. Some instruction is required, and the moisture must be held within definite limits. The cooperating experts referred to earlier in this letter are in a better position than we are to provide advice on the construction of houses. Whether or not earth walls will solve to a great extent the urgent problems of adequate houses for low-income groups must be decided by housing experts and by experience.

"Respectfully,

"LYMAN J. BRIGGS,
"Director."

The Coronet article continues:

One of the chief stumbling blocks to the use of rammed earth as a building material has been the attitude of the Federal Housing Administration. When approached on the subject of accepting rammed-earth houses as security for long-term loans, the requests were denied. Such a loan was sought by Mr. Henry Hassey, of Irvington, N. J., from both the Federal Housing Administration and the Farm Security Administration. He was refused this aid on the grounds that "at the present time no adequate basis has been developed upon which the permanence and durability of rammed-earth construction can be sufficiently predicted to justify F. H. A. acceptance as security for long-term loans." And yet F. H. A. had only to observe in Washington, D. C., a guinea pig of rammed hilltop earth in a house built in 1773 at 1300 Rhode Island Avenue NE. and still occupied and in excellent condition.

To Mr. Hassey it was a paradox that some Government Departments spent money on rammed-earth projects while other Departments of that same Government refused to earn money through loans on them.

Being a persistent person, he learned that several hundred rammed-earth houses had been erected in Puerto Rico by the Puerto

Rico Reconstruction Administration. He heard of the pisé houses built on the Indian Reservation in South Dakota by the Bureau of Indian Affairs and the work at Gardendale, Ala., by the Resettlement Administration. Among the letters received in his search for information on rammed-earth houses was one from Ralph L. Patty, chairman of the department of agricultural engineering, South Dakota State College, who wrote:

"It is not the cheapness of rammed earth walls that we are interested in. We are interested in the fact that they are the most valuable, and that it would be practically impossible to equal a wall of this kind, which is almost a perfect insulator; at the same time, being fireproof, soundproof, weatherproof, and proof against termites or white ants. We know that a rammed earth wall made of satisfactory soil and stuccoed properly is absolutely permanent in its construction. If the stucco is maintained intact, it should last indefinitely."

One of the most enthusiastic boosters for pise de terre construction is Col. Paul S. Bliss, of the Social Security Board, Kansas City, Mo. Colonel Bliss built a one-story farmhouse and large garage on his Scoria Lily ranch at Hettinger, N. Dak., and it has become the show place of that section. So many persons have visited his ranch to inspect and obtain information about rammed earth walls that Colonel Bliss has erected a large bulletin board on his premises, to which he has attached photographs of all the building processes, together with instructions on the method pursued. He states that it is "the best house I ever lived in." The cost of the house built by Colonel Bliss at Scoria Lily ranch was $1,700, of which the material cost $700 and the labor $1,000. Commander C. S. Stevenson, United States Navy, believes that such walls can be built from 12½ to 15 cents per cubic foot. The general estimate for the cost of rammed earth structures is placed at 70 percent for labor and 30 percent for materials.

The question most frequently asked about rammed-earth buildings is what they will cost. The answer depends upon the cost of labor in the building area being considered. If the builder is fortunate enough to have men relatives who will lend a hand, after the architect has completed his plans, the cost will be reduced to whatever carpenter work is required on the roof and inside the dwelling, together with the plumbing and electric wiring needed to modernize it.

We travel at breakneck speed over roads that have borne more intensive weathering than pise walls, yet the factors that protect them both are identical. By using the dirt under our feet we can have walls as enduring as rock; walls that harden with exposure and protect our homes from fire and storm hazards. All this we can have simply by using Mother Earth.

Other examples of pise construction near the Nation's Capital are to be found at Monticello, home of Thomas Jefferson. Several of the farm buildings there are of this material and Jefferson recommended this method for its low cost and permanency. In the suburbs of Washington there is a Dutch colonial house built 20 years ago by Dr. H. H. Humphrey, a scientist of the Department of Agriculture. The walls are of rammed earth taken from the cellar excavations, and are capable of supporting a weight of more than 2,000 tons.

At Lanham, Md., is an eight-room, two-story house of rammed earth built by the owner, Mr. Robert Cook, on week ends. The building was erected by unskilled labor under the direction of the owner, who is not a builder by trade.

Pise de terre construction has not been eagerly seized for commercial promotion, because there is very little money to be made from it by contractors and the building trades, yet the low-cost housing problem might well be solved if it were promoted with that thought in mind. However, an awakening to its possibilities is imminent, for a number of projects supervised by the officials of N. Y. A., C. C. C., and W. P. A. are now under way. Such a plan has been developed by H. Serkowich, industrial consultant, of Washington, D. C. His plan is well adapted to mass construction of houses of earth, by use of which individual developers can get more value from the citizen's home-building dollars.

So far it is the first commercial project launched for mass construction under the supervision of expert building authorities in close cooperation with Federal experts.

For those planning to build a house of earth, the most important thing to know is whether the soil they intend to use is of the proper mixture. Advice on soil analysis can be received by sending a letter self-addressed, etc., to Mr. Thomas Hibben, Vienna, Va., who will arrange to make the analysis or advise where such can be obtained.

War-Issue Poll

EXTENSION OF REMARKS
OF
HON. GEORGE A. PADDOCK
OF ILLINOIS

IN THE HOUSE OF REPRESENTATIVES

Wednesday, July 23, 1941

RESULTS OF POLL AND LETTER TO PRESIDENT PRINTED IN WAUKEGAN (ILL.) NEWS-SUN

Mr. PADDOCK. Mr. Speaker, Lake County, Ill., is representative of intelligent, patriotic American opinion. It contains prosperous farming territory, industrial centers, and residential suburbs of Chicago. The accompanying statement of a poll just completed by the Waukegan News-Sun is therefore an exceedingly interesting document. The poll is discussed and analyzed in a letter from the publishers to President Roosevelt.

[From the Waukegan (Ill.) News-Sun]

NEWS-SUN WAR-ISSUE POLL BY COMMUNITIES

Question: "Shall the United States enter the war to help defeat Hitler?"

EIGHTY-EIGHT PERCENT VOTE AGAINST ENTRY IN WAR—AID TO BRITAIN ALSO LAGS IN POLL CONDUCTED BY NEWS-SUN; FINAL FIGURES SENT TO PRESIDENT ROOSEVELT

(Editor's note: The following is an open letter to President Franklin D. Roosevelt, with copies to Secretary of State Cordell Hull, Senator C. Wayland Brooks, Senator Scott Lucas, and Congressman George Paddock.)

DEAR MR. PRESIDENT: The Waukegan News-Sun has just completed a poll of Lake County, Ill., asking its readers to answer the following questions:

"Shall the United States enter the war to help defeat Hitler?" and "Shall the United States give all-out aid to Great Britain short of actual war?"

Here are their answers:

Against entry into war: 88 percent, by a vote of 1,784 to 263.

Against aid to Britain: 53 percent, by a vote of 1,092 to 959.

The questions were framed so as to eliminate any propaganda angle. This newspaper advised no voter as to how it thought he or she should vote; this is purely a citizens' poll and not a newspaper poll.

TYPICAL MELTING POT

For your information, Mr. President, Lake County is a typical melting-pot community in northeastern Illinois. We represent a score of creeds and nationalities of all colors. We have heavy German populations in McHenry, heavier Italian populations in Highwood, British sons and daughters in strong numbers at Zion, all nations in the mammoth factories of North Chicago and Waukegan. There are Poles, Slovaks, Finns, Swedes, Lithuanians, and Russians. We have our unemployed John Does, our Armours, and our Swifts. In fact, we're pretty typical.

Ours was not a street-corner nor soap-box poll, Mr. President. It was a postcard poll in which ballots went out to our more than 10,000 home subscribers, newspaper readers who have been anxiously following the day-by-day events of this topsy-turvy world. Many others, newsstand buyers and members of families divided on the war issues, came into our three offices to sign separate ballots. Strikingly enough, there was not one flippant ballot turned in. And approximately 20 percent of all the ballots were returned, an unusually high return in such a poll. The answers were all serious, thoughtful.

SENTIMENT AGAINST WAR

You probably will not be surprised, Mr. President, to find the Midwestern sentiment against war so much greater than the senti-

ment you hear expressed in Washington and along the Atlantic seaboard. However, it may surprise you to see that 53 percent vote against aid to Britain.

We offer no propaganda and no advice, only the honest, accurate figures to the man we elected to lead us through these tremendous times.

Very sincerely yours,

THE PUBLISHERS.

Extension of Military Service of Selectees

EXTENSION OF REMARKS

OF

HON. JOSEPH CLARK BALDWIN

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Wednesday, July 23, 1941

LETTER PRINTED IN THE NEW YORK TIMES

Mr. BALDWIN. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following letter which was printed in the New York Times of today:

[From the New York Times of July 23, 1941]

LONGER SERVICE IS FAVORED—SELECTEE, RECOVERING FROM SHOCK, THINKS TERM SHOULD BE EXTENDED

To the EDITOR of the New York Times:

My first reaction to the request of the President to extend the period of service for selectees was one of chagrin and then disappointment. That response, I admit, was purely emotional. After applying logic to a situation which requires it, I have been compelled to conclude that President Roosevelt faced no other course.

It is conceded by all that this Nation needs a well-trained army to preserve peace, if possible, or to prepare to acquit itself ably in case of war. We must face realities before we decide on our course of action. One year's service is insufficient in which to knit together a powerful army, strong enough to deter others from forcing a war upon us and powerful enough to win, if that time ever arrives.

True, the normal lives of many of us selectees are disrupted by this period of training. Nevertheless, I would rather face the risk of disrupting my life than losing it. The time spent in the service is not wasted, even if we never make use of the knowledge we acquire in the Army.

Aside from the obvious benefits to the country as a whole, there are many advantages which accrue to the men. We have learned how to live compatibly with our neighbors. We have learned that no political group, religious faith, or economic class has a monopoly on patriotism. All this will contribute to making us better citizens after we return to civilian life.

The great majority of men are more than willing to continue their service for the duration of the emergency. The morale is extremely high, due, no doubt, to the solicitous attitude of our officers, the excellent living quarters, and the high degree of cooperation among the men. The gains to be realized by keeping us for an additional period so far outweigh any advantages to be gained by an early discharge, it should be apparent to every Congressman that there is but one possible way to vote on the impending legislation.

CORPORAL.

PINE CAMP, N. Y., *July 16, 1941.*

Out of Their Own Mouths

EXTENSION OF REMARKS

OF

HON. BARTEL J. JONKMAN

OF MICHIGAN

IN THE HOUSE OF REPRESENTATIVES

Wednesday, July 23, 1941

EDITORIAL FROM THE HOLLAND (MICH.) EVENING SENTINEL

Mr. JONKMAN. Mr. Speaker, under leave to extend my remarks in the RECORD I include the following editorial from the Holland (Mich.) Evening Sentinel of July 21, 1941:

[From the Holland (Mich.) Evening Sentinel of July 21, 1941]

OUT OF THEIR OWN MOUTHS

Those who are hot for getting us into a shooting war—Ickes, Knox, Stimson, and many others—expect the American people simply to take their word for it that the way they interpret the international situation is the only Simon-pure correct one. And when someone has a different interpretation he is called unpatriotic and is sometimes even said to be in league with Hitler. But only 3 or 4 years ago those same shouters for war were shouting just as loud from the other side of their mouths.

Examples aplenty could be given of this fact. Suppose we go right to headquarters and quote the President himself. On August 14, 1936, in an address at Chautauqua, N. Y., the President said these words:

"We can keep out of war if those who watch and decide have a sufficiently detailed understanding of international affairs to make certain that the small decisions of each day do not lead toward war and if at the same time they possess the courage to say 'No' to those who selfishly or unwisely would let us go to war."

That statement would seem to carry its own comment. That phrase, "the small decisions," seems so ironical in the light of the record of such small decisions since that have led us to the very edge of war that the President's severest critic could hardly have improved on his words.

The President has now, under pressure of congressional leaders, abandoned "for the time being" the proposal to acquire the right to send troops anywhere in the world where they may be needed. But the mere fact that the President could for a while at least back this proposal of General Marshall's gives an odd sound to these words spoken by the President in his fireside chat of December 29, 1940: "There is no demand for sending an American expeditionary force outside our own borders. There is no intention by any member of your Government to send such a force. You can therefore nail any talk about sending armies to Europe as deliberate untruth."

That was spoken only a little over 6 months ago. Those who oppose sending American boys outside America are basing their opposition on such and other statements by the President and by his chief aides. They are assuming that words mean what they appear to be saying. It is not unreasonable for them to expect that such pronouncements by the most responsible member of the Government can be depended upon.

And there are others. Speaking in Boston on October 12, 1940, Mr. Willkie said: "Our boys shall stay out of European wars. We must be strong." That is exactly what those who oppose entering the war stand for today: America must be strong and stay strong. Today Mr. Willkie is singing another tune. In Baltimore, October 30, 1940, Mr. Willkie said: "We are against sending our boys into any war other than the defense of our own country." Today it is easy for him to interpret any step as "defense." But the American people took those words of his and of the President's seriously. Yet today those leaders are wondering why Americans are not more war-minded than they are. Here they have the answer out of their mouths.

What of the Future Monetary Policies of the United States?

EXTENSION OF REMARKS

OF

HON. JERRY VOORHIS

OF CALIFORNIA

IN THE HOUSE OF REPRESENTATIVES

Wednesday, July 23, 1941

EXCERPT FROM BOOK ENTITLED "PLANNING FOR AMERICA"

Mr. VOORHIS of California. Mr. Speaker, a very significant book has recently come off the press, entitled "Planning for America." The book is edited by George B. Galloway, one of the ablest research men in the United States, and consists of chapters by a score of eminent people. The book is a frank and fearless appraisal of what we are up against and of the things we must do if we are to beat this economic problem. I take special pleasure in including herewith a passage from the book, taken from chapter 32, on Tools of Financial and Industrial Management, and written by Mr. Galloway himself:

MONETARY POLICY AND MANAGED CREDIT

The chief functions of monetary policy, as distinguished from fiscal policy, are to control the volume of money and credit and their distribution between alternative uses in order to promote the full and balanced use of the productive resources of the country. To this end, the guiding principle of monetary policy should be to stabilize the per capita supply of money, including credit created by banks which accounts for most of the Nation's money supply.

Prior to the New Deal, the Federal Reserve System relied largely upon market operations—the purchase and sale of Government securities—to regulate the supply of money, stabilize the general price level, control interest rates, and mitigate depression. Its easy money policy stimulated stock and real estate speculation and aggravated the unbalance in the distribution of the national income among farmers, wage earners, and investors. Prices were stabilized while costs of production were rapidly falling, thus widening profit margins. Meanwhile the weakness of the labor movement and the displacement of men by machines widened the disparity in income distribution and put the economic system seriously out of balance. Current demand for consumers goods was temporarily maintained by installment buying and the expenditure of the paper profits of speculation on the stock market.

New Deal banking policy has restored the financial soundness of the banks by R. F. C. loans and investments and by infusing fresh supplies of money into the economic system. But it has not sought to acquire permanent public ownership of the banking system. The divorce of the security affiliates was designed to increase the soundness of commercial banking practice, not to increase

State control. New Real banking measures have extended public control over monetary policy as distinct from commercial banking practice, but they have left the commercial banks comparatively free from public interference. Public planning in the field of financial policy has taken the form of monetary manipulation by open-market operations, public spending, and currency depreciation. The former raised industrial prices, while the latter was designed to help the farmers.

Gold imports, amounting to $14,000,000,000 since early in 1934, have created excess reserves in our banking system amounting to $7,000,000,000 and have reduced interest rates to unprecedentedly low levels. At the end of 1940 the volume of demand deposits and currency was 50 percent greater than ever before. Meanwhile these huge and increasing excess reserves provide a base for more than doubling the existing supply of bank credit. In the light of these facts, and in order to forestall the development of inflationary tendencies attributable to defects in the machinery of credit control, the Federal Reserve System submitted a series of recommendations to Congress on December 31, 1940. In the first place, it urged Congress (a) to increase the statutory reserve requirements for demand and time deposits in all banks to certain percentages; (b) to empower the Federal Open Market Committee to make further increases in the reserve requirements sufficient to absorb excess reserves; (c) to authorize the committee to change the reserve requirements from time to time; (d) to make them applicable to all banks receiving demand deposits, whether or not they are members of the Federal Reserve System; and (e) to exempt the reserves required under paragraphs (a), (b), and (d) from assessments by the Federal Deposit Insurance Corporation. In the second place, it recommended that various sources of potential increase in excess reserves be removed, i. e., the power to issue $3,000,000,000 of greenbacks, further monetization of foreign silver, the power to issue silver certificates against the seigniorage, and the power further to devaluate the dollar. It also suggested that the Federal Open Market Committee should be consulted before the stabilization fund is used. Its third recommendation in the field of monetary policy was that future gold acquisitions be insulated from the credit system and not restored without consulting the committee.

The measures proposed by the Federal Reserve System to prevent inflation should eventually be adopted in order to strengthen the machinery of credit control. But they should not be put into effect as long as idle capacity and idle labor are available. For there is no danger of general inflation before the point of full employment of resources has been reached. "The immediate danger today is not that we will produce inflation but rather that premature efforts to head off inflation might retard recovery, reemployment, and full defense."[1] Particular bottlenecks can be prevented by increasing capacity and training more skilled workers in those fields.

Huge supplies of idle money have accumulated in recent years due to the alleged lack of profitable outlets for private investment, because private enterprise has found it more remunerative to leave productive resources unemployed, and because industry to a large extent has been "rolling its own," i. e., financing its capital needs out of its own reserves. The Government has put some of this idle money to work by borrowing it at interest from the banks or their depositors and using it to promote the fuller use of human and material resources by means of a public-works program. This policy has greatly increased the Federal debt and its annual burden of interest charges.

[1] Mordecai Ezekiel, Full Production Without Inflation, Common Sense, February 1941, pp. 35-38.

A much better course of action would be for Congress to exercise its constitutional power to "coin money and regulate the value thereof" and itself create the money, paying no interest for its use, but limiting the amount created to that required to effect full use of the available productive resources. There is no earthly reason why the Government should pay interest for the privilege of borrowing from banks money which the banks have created in the exercise of a privilege conferred by the Government. If the Government manufactured its own credit, it would get its public works for nothing, and at the same time obtain fuller use of productive resources. The creation of new money without interest would not create a new debt, nor would it be any more inflationary than for banks to loan money they have made by entering credits on their books. Inflation would not follow because the newly created money would be offset by the public works and social assets (houses, utilities, etc.) which the public credit would be used to produce. Moreover, the repayment of temporary bank loans may lead to a subsequent deflation, which would not happen in the case of publicly created credit because it would constitute a permanent addition to the money supply. If this were done and "Congress exercised the sovereign right of the Nation to create its own money, then the mystery of money would disappear, and no longer would the financial pundits be able to deceive the people into thinking that fiat credit created by banks is sound money, while national currency created by the people's Government is not."[2]

The problem of financing the defense program directs attention anew to this tool of credit management. President Roosevelt has estimated the total cost of this program at $28,400,000,000, not including the cost of aid to Britain. If this huge sum were entirely raised by borrowing, it might lead to inflation and would increase the national debt by so much. It should be financed in part by borrowing, in part by tapping new sources of taxable income, and in part by national interest-free credit. The way to avoid national bankruptcy, as Congressman VOORHIS of California has long argued, is to employ our vast metal stocks ($20,000,000,000 of gold buried in the Kentucky hills) as a base for national money and credit, or use stock piles of critical and strategic raw materials as reserves behind monetary issues (proposed by Benjamin Graham),[3] or to buy the capital stock of the 12 Federal Reserve banks (it would cost $132,000,000) and make them a real bank of issue, employing national credit to reduce the public debt by retiring outstanding Government bonds and saving the taxpayers the interest on them. This simple reform in the method of public finance is one sure way of financing our defense and public-works programs and of reducing the public debt.[4]

The problem of the distribution or direction of credit, as distinguished from its volume, could be managed through a central bureau or a national investment board. Such a board would supervise the relative growth of individual industries and also the financing of new industries, forbidding new investments in industries which had expanded too rapidly. The planned distribution of credit would lead to a more balanced development of production. It would be the function of the national investment board to distribute the available supply of capital among different uses in accordance with the requirements of the national plan as determined by a central planning authority.[5]

[2] From a speech on When Is a Nation Bankrupt? by Representative JERRY VOORHIS in the House of Representatives, August 19, 1940.

[3] Cf. Benjamin Graham, Storage and Stability. New York, McGraw-Hill, 1937. The Graham multiple commodity reserve plan would provide a monetary base of essential, storable raw commodities in common use, against which currency would be issued, by which it would be secured, and in which it would be redeemable, thus according the same monetary treatment to a composite group of specified commodities as was formerly accorded to the single commodity, gold. This plan is advocated by the Committee for Economic Stability, 80 Broad Street, New York City.

[4] See Dollars and Sense, remarks of Representative JERRY VOORHIS in the House of Representatives, June 6, 1938.

BALANCING SAVING AND SPENDING

The tools for financial management examined in this chapter—taxation, public expenditures, the compensated and capital budgets, and monetary and credit management—are not offered as a panacea that will prevent depressions and solve all our problems. They are techniques that can help, if wisely used, to balance saving and spending. Taxation can help by converting excess savings into public investments segregated in a capital budget. The compensated budget can be used, as described above, to counteract the ebb and flow of private investment. Planned control of the volume and distribution of credit will also help to promote a better balance and prevent inflation.[6]

Insofar as these devices have been used they have helped to correct rather than prevent unbalance. They need to be sharpened and refined. They give promise of facilitating the fuller use of resources, but they are limited by the restrictive nature of the system within which they operate. Monetary policy is not an independent tool of public policy, but only the necessary complement or auxiliary of general national planning. Financial planning affords us no escape from the task of economic planning.

Refinement of these tools of over-all financial planning and the formulation of coherent long-run fiscal policies wait upon the evolution of suitable "organs of fiscal thought" within the Federal Government. It is a nice question, as yet unanswered, just where the function of long-range fiscal-policy planning should be performed—in the Bureau of the Budget, the Federal Reserve Board, the Treasury, or the National Resources Planning Board. Each of these agencies is concerned with financial policy, each is working on some aspect of it, and each has its champions. The proper place for the coordination of fiscal policy would appear to be the Bureau of the Budget, leaving monetary policy and credit control to the Federal Reserve Board and tax policy to the Treasury. The proper place for the over-all articulation of fiscal policy with monetary and credit policy, tax policy, natural-resources planning, industrial planning, public-works planning, social welfare, and

[5] G. D. H. Cole, Economic Planning, p. 328-329.

[6] In addition to the devices described above, Mr. Adolf Berle has recommended three steps which he thinks would provide the elements for a "modern financial tool kit." First, creation of a Public Works Finance Corporation which would undertake the direct financing at flexible rates of interest of the self-liquidating public works of the Federal, State, and local governments. Second, a bill to insure loans to small business so that the little fellow will have as good access to the capital markets and to banking facilities as the large corporation. Third, the creation of a new system of capital credit banks to provide capital for public and private construction, such capital to be derived from ordinary savings or from bank-created credit or both, and to be controlled by open market operations, flexible rediscount, interest, and amortization rates, and the power to limit or suspend rediscount privileges. (New Directions in the New World, p. 124.)

defense planning would seem to be the National Resources Planning Board. For fiscal policy is only one element of financial policy, and fiscal planning is at best an instrument of national economic and social planning. In the event, however, the answer will probably be determined empirically by the ability of the leadership of these rival agencies to effect the greatest concentration of expert talent in this field.[1]

The "Two-Thirds" Argument

EXTENSION OF REMARKS

OF

HON. ANTON J. JOHNSON

OF ILLINOIS

IN THE HOUSE OF REPRESENTATIVES

Wednesday, July 23, 1941

EDITORIAL FROM THE NEW YORK DAILY NEWS AND WASHINGTON TIMES-HERALD

Mr. JOHNSON of Illinois. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following editorial printed in the New York Daily News and the Washington Times-Herald of July 23, 1941:

THE "TWO-THIRDS" ARGUMENT

We quote from the President's July 21 message to Congress:

"I need scarcely emphasize the fact that if and when an organized and integrated company, battalion, regiment, or division is compelled to send two-thirds of its members home, those who return to civil life, if called to the colors later on, would have to go through a new period of organization and integration before the new unit to which they were assigned could be depended on for service."

UNTRUE PICTURE

This is the main point brought forth to date by the President and Chief of Staff Marshall in their pleas for power to scrap the 1-year limit on active service for draftees, National Guards, and Reservists. The implication is that the Army is threatened with sudden disappearance of two-thirds of its officers and men on a single day—which would indeed be a calamity.

But the picture is not an accurate one. The fact is that the approximately 600,000 draftees now in service entered the Army in this fashion:

November	13,806
December	5,521
January	73,633
February	90,238
March	153,159
April	123,207
May	56,896
June	79,522

Therefore, the largest number of draftees who will leave the Army in any month up to next July under the present law will be 153,159, scheduled to go home next March. That will be a shade over 10 percent of our present Army. It will not be anywhere near the 66⅔ percent envisioned by Messrs. Roosevelt and Marshall as quitting on 1 day.

We'd recommend a little more frankness on this point.

We think, too, that a compromise could be arranged. Terms could be extended in enough cases to prevent more than 100,000 men leaving the Army and being replaced by 100,000 novices in any 1 month. We do not see how this could discommode the Army or imperil the Nation, and it would build up the Reserve at a rapid rate.

We do not believe, though, that the administration is interested in compromise. We believe its object is to freeze the present contingents into the Army indefinitely, lift the 900,000 lid off the number of draftees usable at one time, and build a huge Army to send to Europe to lick Hitler.

[1] Cf. Arthur N. Holcombe, "Over-All Financial Planning Through the Bureau of the Budget," Public Administration Review, Spring, 1941. Prof. Roswell Magill, former Undersecretary of the Treasury, has suggested the formation of an Advisory Council on Fiscal Policy. (See Investor America, March 1941.)

"Young Man, Young Woman, You're Hired"

EXTENSION OF REMARKS

OF

HON. JERRY VOORHIS

OF CALIFORNIA

IN THE HOUSE OF REPRESENTATIVES

Wednesday, July 23, 1941

RADIO ADDRESS OF JERRY VOORHIS, OF CALIFORNIA

Mr. VOORHIS of California. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following address which I delivered over the radio on July 19, 1941:

I am talking tonight, I hope, to thousands of young men and young women. I am afraid many of you have been saying what I know some of my young and very close friends in California have been saying. They have been writing to me and asking questions like these:

"What is going to happen to us after this national-defense work is over?"

"Will we find ourselves in another depression with unemployment and poverty all about us?"

"Where are we going to get jobs then?"

"Why are we being asked to sacrifice for national defense if these other problems are not solved?"

"Where will I find an opportunity to build a real future for myself and, I hope, a family?"

But it is not only you young men and young women who have been asking these questions. Older people, and especially men and women who are past 50 years of age, have been and are asking these questions.

I know it is common practice now for us to worry about our future and complain about what a mess older generations have made of the world. And no one would deny that there are problems, terrific problems confronting us—probably greater problems than any American generation ever faced before. But this is no hour to complain—we haven't time—and real men and real women neither seek nor accept sympathy.

There has never been an age of great opportunity that was not borne out of great problems and great trials. And people have never learned to be great men or great women except in times when they had to be big and broad—yes; and great—in order to carry through at all.

We live in such a time.

Not in hundreds of years has the world seen a time so fraught with possibilities for good or ill for mankind as is the case today. Which of these it is going to be depends to a very great extent on what you and other American young people like you do about it. And the purpose of this speech is to show you that there is something you can do about it.

There is one immediate task we have before us.

There is now before Congress a resolution known as the Wagner-Voorhis resolution which, if passed, would create now an outstanding commission composed of Members of Congress, people from the executive branch of the Government, representatives of farmers, labor, business, cooperatives, and the church. The job of the Commission will be to work out a program for the basic, long-range solution of the unemployment problem and to make certain that a depression does not result when this period of great defense spending is over. One thing we can all do is help to get this resolution passed. And after that, if the Commission is created, I would hope with all my heart that the young people of America would follow its work day by day, send in suggestions and proposals, consider it a sort of clearing house for our work of building a new world.

And now to take up our main message again.

In 1929, an old order died. It would be a waste of your time and mine to talk about it. But it died. As a matter of fact it had been dying for years. It was sick unto death with unemployment, with poverty, with injustice, with the cancers of selfishness.

It is true that under that old order great material progress was achieved. We built railroads and made them run. We learned to build airplanes, but we did not learn how to keep them from being used to destroy cities. We built machines, but we did not learn how to prevent them from taking jobs away from people. We were content to think in terms of money and material progress and profits while men and women and little children were destroyed. It wouldn't work. It never will work. I am no revolutionist in saying this—I am only repeating the words of some of the greatest of spiritual leaders. In fact, I am repeating what has been said in effect by some of the great encyclicals of the Catholic Church itself.

We are not going back to the old world of before 1929. We are not going back to it primarily because we couldn't if we wanted to. Many of us are not going back to it because we wouldn't want to even if we could. Either we are going to prepare wisely, with vision, and with devotion to live in a new world—or else we are probably not going to really live at all.

And so we have a job to do. Part of that job is understanding and believing in and protecting the principles for which our country stands. She stands today for the hope of equality of opportunity, and she is the only nation that ever came anywhere near giving it. She stands for the principle that one citizen is exactly as good as any other citizen, that each stands equal before the law and the ballot box. She stands for an incessant, unrelenting war against privilege of every sort—economic, social, political—and for the right of her people to carry on that war and to use their whole soul, minds, and hearts for that purpose. Above all, America stands for the right of all her people, rich and poor, of whatever race or creed, to be free in their homes and lives from arbitrary action against them by their Government. America stands for the principle of government by consent of the governed. Making democracy work simply means making real these ideals and principles for which our country stands but which, of course, we have never fully achieved.

It is a hard job to make democracy work. And the reason is because it depends for its success upon the voluntary, unselfish devotion of its people.

You young men and young women, whether or not you have gained a profound religious faith—and with all my heart I hope you have that—you young men and women must know from hard experience that there is eternal war going on in this world. I do not mean the war between Germany and England or between China and Japan.

I mean war between the worst in us and the best, the war between greed on the one hand and devotion on the other, the war between our selfish desires and our spirits and souls. The easy thing to do is to slough off responsibility, to let a dictator take that over, and then to be free to enjoy the eating and drinking part of life without concern for the future of oneself or anybody else.

It is a lot harder to fight temptation, a lot harder to seek hard work, to seek to serve others, to abandon pleasures for the sake of a job that needs doing. It is harder to follow the eternal voice within our souls. But it is of soul and mind and conscience that democracy is born and by which democracy lives.

And you will never escape from the cry of the soul. The cry for freedom of the spirit will always haunt you. Francis Thompson in his great poem, The Hound of Heaven, tells the story of how God pursues man in the effort to save him—and it might well be added, that just so does our conscience which is of God pursue us all and attempt to make us worthy to live in a democratic nation.

Our job is no simple job. It includes building a great military defense—not because we want to but because we must. But it includes far more than that. For it includes taking such measures with regard to our domestic problems as will give promise to our people and the world that we are indeed building an American new world—a free, not an enslaved world, a world far more glorious and full of hope than any so-called new order in Europe put forth by a swashbuckling dictator of whatever stripe.

The promise of that American new world must include that we shall refuse to see hunger and surplus side by side. There shall be no farm surpluses because we will use them to feed hungry children.

That promise must include that we shall refuse to waste the ability, skill, or labor of a single willing worker. There shall be no unemployment and no idle men. That promise must include that we shall refuse to see our Nation go on paying tribute to private creators of credit. There shall be asserted the right and duty of the Congress to create the Nation's money and regulate its value.

That promise must include not governmental aid or subsidy, but encouragement to every cooperative effort, movement, or organization among groups of the American people, that there shall be no stumbling block placed in their way. For cooperation is the opposite of dictatorship and of monopoly, of regimentation, of totalitarianism, of governmental control. Cooperation is, I am convinced, the basic hope of democracy.

Why do I say that? I do so first because the pattern of a solution for our problem has already appeared within the framework of the free economic order of other nations before this war broke over Europe. That pattern was found in the cooperative movement of such nations as Sweden, Denmark, England, and some other countries. With the work of such movements many people are familiar but few of us realize, I think, that here in America we have as a matter of fact an extremely healthy, sound, and inspiring cooperative movement of our own. Very briefly that movement consists of 20 national and regional cooperative organizations with 1,115,000 families affiliated as members. It includes the Cooperative League of America, a great Nation-wide organization existing primarily for education of the Nation in cooperative principles and practices, with offices in Chicago, in New York, and in Washington.

Then there is National Cooperatives, Inc., a Nation-wide purchasing federation set up by the various cooperative societies. Through cooperation among cooperatives this organization has succeeded in bringing to the consumer members the great savings and advantages of large-scale buying operations. By similar methods thousands of American farmers have materially improved their conditions. And in most parts of the country we have only scratched the surface of what can be accomplished by the application of this principle of one member, one vote mutual aid to our problems.

Our cooperatives now own oil refineries in Kansas and in Indiana, leases on oil lands, gathering pipe lines, motor transport, paint factories, fertilizer factories, feed and seed mills, a small tractor-manufacturing plant, coffee-roasting mills, baby-chick hatcheries, the fifth largest casualty-insurance company in the country, a life-insurance company, and several banks. They are now doing business which runs close to three-quarters of a billion dollars each year, and they are saving millions of dollars for their members, through whose hands it flows back into the stream of active consumer-buying power. There are a million farm families which are associated with farm marketing or producing cooperatives; and there are several million persons who are now solving their personal loan problems through credit unions, which are, of course, credit cooperatives. Nor does this include the 1,000,000 or more members of rural electrification cooperatives—the cooperatives that are literally lighting up the farm homes of the whole United States.

All these things are the work of people like you. People who started with little, if any, money but who were equipped with certain essential knowledge and understanding gained through study and who saw clearly that problems which no individual could cope with were, however, capable of solution if a group organized and tackled them together.

Let me relate a little story. In Nova Scotia some years ago the people were in far worse plight than we are now. Compared with what most of us have, they had nothing. But they found a leader and a great idea and principle.

They found an old priest known as Father Jimmy Tompkins—and, by the way, one of his ablest assistants now is a Presbyterian minister, I am told. Father Jimmy went out among his people to tell them the hard truth, and to let them tell the same hard truth to him. He never talked to them about their troubles without making them tell him what they thought caused them. He made them wonder why they did not ask themselves about these causes in the first place. He got them to thinking. He got them into little discussion groups, then into study clubs. Every study club was organized with one determination—they would study for a definite, immediate purpose, to find out why, for example, they could not get a fair price for their fish; why clothing cost so much; why they could not afford shoes. They studied to solve each problem, one by one. And the best of it is they largely succeeded.

For out of these study groups came the great consumer cooperative movement of Nova Scotia. But something more came out of it. The men and women of Nova Scotia rapidly began to acquire an education. They began to solve their problems. They began to own their stores and their farms and their homes. As one of their leaders said, "Our people in Nova Scotia are too busy getting an education to go to college."

They are becoming the best-educated people in this part of the world. We can do that, too. All that happened in Nova Scotia can happen here.

But it will take people to do it. It will take the right kind of people—not people who will expect to step into lucrative jobs, but people who have sufficient faith in their fellow men to work both with and for them in the building of organizations for the promotion of the economic health and well-being both of their own membership and also the Nation as a whole. For no cooperative can be successful unless it is fundamentally unselfish. The very genius of cooperation lies in the fact that the more people it benefits the better off it is. The interest of a true cooperative is identical with the interest of the Nation itself. I have said this movement needs people and the right kind of people, but especially it needs young people—young people who have a vision of the future, a vision which does not require the achievement of a Utopia all of a sudden by the passage of some oversimplified and far-reaching piece of legislation, but a vision which sees that the great accomplishments of mankind have always been constructed stone on stone, and mostly by the hands of humble people whose names have been but little known.

One or two suggestions of the specific things you can do:

Get 10 of your young friends, men and women, into a study group and vow the night you meet to stick with your study and your work until you solve your problems.

I have already told you there are literally millions of people who are members of successful credit unions in this country—people organized into groups paying interest to each other on their savings and borrowings from each other at reasonable rates when they need to. The Cooperative League can tell you about it. So can the Farm Credit Administration in Washington. Write one of these organizations or to me if you are interested. You see, you're hired to work at these things because you can hire yourself.

But you must study in your study groups before you can make progress. You've got to grow your wings before you can fly.

In the few minutes that I have this afternoon, it is, of course, impossible for me to describe in detail all the different sorts of things that America's young people can do, in and for existing cooperatives, or new ones that they might help to start. But if you are interested and will write to me about it, I will see that you are referred to the nearest going cooperative to your home. And you will find people there who are not making speeches like I am making this afternoon, but who are conducting businesses not for their own benefit or profit but for the welfare of the people who do business with them. They are actually living out a principle which many of us have preached, the principle that through service one achieves the greatest welfare for himself. Through cooperatives the power of monopoly over our people can be broken. Through cooperatives the purchasing power of our people can very largely be spread so as to stimulate vast amounts of additional employment. Through cooperatives our farmers can achieve a price for their products which will enable them to recover a fair rate for their basically essential labors.

I do not say, nor can anyone say, that they offer a cure for all the ills of the world, but grown large enough they might well be the answer in America to the problem of overgrown government on the one hand and monopoly industry and monopoly finance on the other.

There must be born a dynamic faith in America—the sort of faith that has sent out missionaries to work and perish in far-off lands. It must be a faith practical and realistic, but with its sights fixed on a new world that we are beginning now to build. It must be faith in something better, something far, far deeper than a bill for an expanded program of public works.

Can there be such a faith?

Can the answer to unemployment and monopoly and farm distress and dependence on government be found?

I believe so. I believe the cooperative movement can give America that faith. And I believe it can supply these answers. I believe it is democracy in practice, the antithesis of dictatorship, monopoly power, and the rule of force. I believe—and I say it reverently—that it is the translation into everyday economic terms of the basic principles of the Christian faith as well as of every great religion that man has even known.

Many, Many Congratulations Upon Your Forceful Leadership In the Matter of Parity Privileges for Farmers

EXTENSION OF REMARKS

OF

HON. HAMPTON P. FULMER

OF SOUTH CAROLINA

IN THE HOUSE OF REPRESENTATIVES

Wednesday, July 23, 1941

Mr. FULMER. Mr. Speaker, it is very encouraging to a conscientious, hard-working Congressman to receive letters, many of them coming from districts and States other than his own district or his own State, expressing appreciation of the efforts of the Congressman in the interest and welfare of the great masses of the people.

During all of these years there have been three classes of people who have not been getting a square deal in the way of beneficial legislation in line with special privileges given to other groups under legislation passed by the Congress.

I refer to laborers, farmers, and consumers.

It is true that under the present administration, after many years of struggling, the wage earners of this country have been able to secure helpful legislation, and these wage earners should be proud of the fact that they have men connected with the Labor Board who are standing up and demanding that to which labor is entitled.

However, up to this good hour we have passed too many bills in the name of the farmer which, in the last analysis, either because of the manner in which they are written or administered, have failed to give to farmers that which they have been promised and that to which they are clearly entitled.

The great, consuming public, including farmers, who are large consumers today, as during all the past years, are just as hopeless and helpless as can be in securing value received in spending their hard-earned money.

What I mean by this statement is that under the present old, wasteful, and disgraceful marketing and distributing system speculators and thousands of parasites, operating between farmers and consumers, are sapping the very lifeblood out of producers and consumers.

Today in the South we are shipping beautiful vegetables and fruits. However, farmers are not receiving a price sufficient to pay the expense of gathering, crating, and shipping these products, while in all of the large marketing centers of the United States consumers are paying a fixed price containing numerous profits in the way of a spread between the producer and the consumer.

It is high time for the consuming public, including the farmers of this country, through the representatives of these two large groups, to demand that type of legislation which will bring about a proper marketing and distributing system, weeding out this tremendous spread and giving to farmers and consumers a fair price.

I am inserting herein a letter just received from Mr. M. G. Montrezza, 764 Stone Avenue, San Jose, Calif., who is deeply interested in the farm credit bill, H. R. 5336:

SAN JOSE, CALIF.,
July 20, 1941.

Hon. H. P. FULMER,
Congressman, House of Representatives
Office Building, Washington, D. C.

Re H. R. 5336 bill—Farm Credit Act 1941.

MY DEAR CONGRESSMAN: First of all, many many congratulations for your forceful leadership in the matter of parity privileges for farmers. I hope you will carry on with the same directness of purpose, and farmers throughout the Nation will be grateful to you. God knows how much we need friends to help us out of a rather distressed price situation.

Then again profuse thanks for the introduction of the Farm Credit Act of 1941. We all hope you will not permit any time to be lost on this bill and will report it out on the floor without delay. You know, I am sure, that the F. C. A. and the Agricultural Department made fools of us all last year by dropping the Wheeler-Jones bill, after all the promises of former Secretary Wallace which were never kept. Farmers are no longer in the mood of having their legs pulled and this piece of legislation is sorely needed, as all know. In our county alone, out of some 20,000 fruit growers and farmers, 95 percent are about bankrupt, unless liberal credit for a long-range reconstructive period is extended to them.

Messrs. Wickard, Black, Appleby, Woolcott, Milo Perkins, and the rest of these gentlemen know our story well, as no doub' you do, and we feel that the time for dilly-dallying and procrastination is past and farmers demand action and not hidden political deals, whereby the farmer is left to carry the bag and go hang after election. Pardon me, honorable sir, for writing rather excitedly about all this, but I assure you that we have reasons to feel aroused over the neglect of the farmer's plight and the continuous threat of dispossession.

Let me, and for all our farmer friends, thank you for your aggressive attitude on behalf of the farmers' interest, and God may guide your steps in your legislative labors.

With kindest personal regards,
Faithfully yours,
M. G. MONTREZZA,
Director of State Agricultural
Association, Fifth District.

P. S.—I would appreciate having a few printed copies of H. R. 5336 and such brief analysis as you may have.

M. G. M.

Mr. Speaker, I am inserting also a letter just received from Mr. Richard Stearns, 49 Wall Street, New York City, as follows:

GERTLER, STEARNS & CO.,
New York, N. Y., July 22, 1941.

Congressman H. P. FULMER,
House of Representatives Building,
Washington, D. C.

DEAR MR. FULMER: I want to thank you very much for your kind letter of the 11th and I would have answered it before this only I have been out of town.

It certainly is most gratifying to know that men like you are in Washington, and while it may seem strange for a New York City man to write you in reference to the farmers, I have been fortunate enough to have spent a great deal of my time in the country over the past 40 years and realize only too well the vital problem the farmers present to the country.

I have a summer home in Hampton Bays, Long Island, and a great many of the people in the town make their living digging clams. This entails arising every morning at 4 o'clock and working anywhere from 12 to 14 hours. These men, I am told, receive $1.50 per bushel basket for their clams, and I understand a bushel basket contains approximately 450 of them. As we both know, any average restaurant charges about 30 to 40 cents a half dozen.

Down my way potato farmers are also very plentiful, and now that the defense program has taken a great many young men away from the farms it is necessary for most of the womenfolk to get out with the men to make the crop possible. These people receive very small recompense for hard and laborious work. I definitely am for a platform with a minimum for farm prices, but I am more in favor of decent prices so the farmer cannot only pay off his mortgage, but have something left to aid him in making his later years in life more comfortable. I wish you all the success in the world in getting legislation like this through Congress. Certainly the American citizens making up the farmers are richly deserving of it when one thinks of the tremendous wages paid to the C. I. O. and A. F. L. union members.

With kindest regards, I am
Sincerely yours,
RICHARD STEARNS.

Mr. Speaker, it is very heartening to me to receive a letter from a resident of New York, especially Wall Street, who fully realizes the problems of the farmer and the consumer.

In the third paragraph of this letter Mr. Stearns gives you definite information in regard to what I have been talking about, which clearly indicates the tremendous spread between the producer and the consumer.

Democracy Has an Obligation to Our Aged

EXTENSION OF REMARKS

OF

HON. BERNARD J. GEHRMANN

OF WISCONSIN

IN THE HOUSE OF REPRESENTATIVES

Wednesday, July 23, 1941

Mr. GEHRMANN. Mr. Speaker, with so many voices raised in a cry for war and a way of death, I presume that one voice calling for a way of life will have

small audience. By way of life I mean an American way—an American standard and design for living for the aged.

We are stirred with great compassion when we see the pictures of the aged refugees of other lands who have been made destitute and homeless by wars. This is as it should be. The great collective heart of America rises to the occasion, and we become the Good Samaritan for all the world.

But we have the aged and homeless here, too. When the pathetic picture of senior Americans in shabby tenements, in overcrowded homes for the aged, in poorhouses, in bethels, and other institutions is shown it seems that the great heart skips a beat and our national conscience goes to sleep.

Why do so many of us refuse to recognize this problem? Are we ashamed to admit that in the wealthiest land in all the world we have not been able to care for our elders? They are the people who built this great industrial economy, the ones who with great sacrifice pushed our frontiers to the very limits of our land, now they are neglected and conveniently forgotten.

Here is the greatest deliberative body of any of the great governments of the world and the majority of the Members are choosing to ignore a situation which bids fair to question our very moral integrity as a nation. There must be a reason unannounced because an examination of the pledges of the men who now sit in Congress—within whose province it is to do something—reveals that they are all on record to insure the right of the oldsters to spend their twilight of life without want.

We are on the threshold of a great war to keep democracy alive in distant lands, we are in the midst of herculean efforts to assist those embattled democracies by industrial production—we are spending untold billions of dollars to accomplish this. I am grateful for a chance to live under a democratic form of government in a free country.

To me democracy has always meant that all shall have a voice in being governed. That the lawmakers shall consider all the ways presented, to question their soundness, examine their feasibility, and subject them to debate and vote, at the very least to consider them in open hearings. This should be true without partisan consideration as to the origination of the bill at hand. Since when has the creative mind of man gained more brilliancy or impetus from his political label or association?

I am sorry to say that today my ideal of democracy is not working. We have the problem of the aged before us; it is getting more acute with present rising costs of living; it must be solved by Congress; it should be solved by this Congress. The Townsend recovery plan, the one bill designed to do the job effectively, has been introduced year after year. Instead of considering it in a democratic manner it has been autocratically buried in committee. For years I have been a member of the steering committee which has been fighting for a fair hearing, to get the bill on the floor of this House so that it can be debated and considered in an impartial and democratic way. We have had to dissipate our efforts in attempts to get signatures on a discharge petition to force it out of committee. In the meantime the aged, with little help, with little hope, wait for action and aid. This is not democracy working! The people believe in this system of government; they believe in the fairness of their representatives. In order to keep faith with them I urge you, now, today, to respond to this call for fair play and add your name to those who believe in democracy, to those who believe in a government of, by, and for the people, by signing discharge petition No. 7 for H. R. 1036. Signing this petition does not commit you to vote for the bill, but it will bring the bill on the floor so that we all may express our views on how to provide security for the aged and jobs for the younger generation. In fairness to yourself and the people you represent, sign today so we may consider this most important problem while we are not pressed for time and are waiting for future developments.

Flag-Dedication Exercises at St. Stanislaus Orphanage, Nanticoke, Pa.

EXTENSION OF REMARKS

OF

HON. J. HAROLD FLANNERY

OF PENNSYLVANIA

IN THE HOUSE OF REPRESENTATIVES

Wednesday, July 23, 1941

ADDRESS OF HON. ANTHONY B. DREIER

Mr. FLANNERY. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following address of Assistant District Attorney Anthony B. Dreier, an outstanding young lawyer of Luzerne County, Pa., at the flag-dedication exercises held at St. Stanislaus Orphanage, Nanticoke, Pa., July 20, 1941:

Ladies and gentlemen, standing here on the occasion when the national emblem is to be raised over this institution, it is altogether fitting that we allude for a moment to the glorious history of that flag.

Its origin is an authentic legend. Before the Declaration of Independence in 1776 each of the Thirteen Colonies had its own individual flag or emblem. In that year General Washington stepped into a small upholstery shop on Arch Street, in the city of Philadelphia, which shop still stands as a national shrine, with a new design for a flag to be adopted by the Thirteen Colonies. He asked the proprietor whether she could make one from the rough design which he himself had drawn. The woman he spoke to was Betsy Ross. In that simple transaction originated the symbol which was to fly over millions of free and independent people. The origin of our national emblem has a unique place in civilized history. It symbolized for the first time in the recorded pages of man's struggle with oppression, a successful and enduring Nation of free and equal people whose Government derived its right from the consent of the governed. And it is the only flag symbolizing any nation in 5,000 years of history which has never known defeat.

Only once before this year of 1941 has it been seriously threatened, and that only from within our own Nation, at the fateful battle of Gettysburg in 1863.

Among America's most important historical documents is Colonel Haskell's description of that battle. I quote that part of his notable eyewitness account wherein he speaks of the flag:

"General Gibbon rode down the lines, cool and calm, and in an unimpassioned voice he said to the men, 'Do not hurry, men, and fire too fast; let them come up close before you fire; then aim low and steadily.' Cap boxes slid around to the front of the body; cartridge boxes opened; officers opened their pistol holsters. The trefoil flags, colors of the brigades and divisions moved to their places in the rear; but along the lines in front that grand old ensign that first waved in the battle of Saratoga in 1777, and which these rebels would rob of half its stars, stood up, and the west wind kissed it as the sergeant sloped its lance toward the enemy. I believe that there was not one above whom it waved but blessed his God that he was loyal to it, and whose heart did not swell with pride toward it, as the emblem of the Republic before that treason's flaunting rag in front."

What I have just read to you was written by the aide to General Gibbon, who later fell mortally wounded in defense of those colors.

That emblem was to go on to other victories; it was to fly over many a victorious army or American ship, it was the flag which eventually would lead a million Americans into France to fight for the preservation of the democratic way of life.

But greater than its victories in war was its victory in peace. We who are the blessed heirs of all that this flag represents, standing at this great distance from the struggle of our forefathers, who created under it the free institutions we now enjoy; separated by three generations from that heroic struggle on American soil, of those who fought to preserve those institutions; I say that without occasions such as these that we might tend to forget those sacrifices, might tend to take for granted as natural heritages the institutions of free speech, freedom of divine worship, and the right to be represented in the affairs of government, and to freely choose those who are to govern us. But they are not natural heritages. When our forefathers made this flag proclaim the equality of man, this was the only land on the face of this oppressed and troubled earth where that principle had been written into law or actually observed.

In 1775, when that principle had been established here, France was under the despotic rule of Louis XVI, and pinched in cruel famine; Russia was sweating and bleeding under Catherine; Poland, where the lamp of freedom was first lit, was still licking the wounds that Alexander of Russia had inflicted; even in the freedom-loving British Isles, the people suffered the oppression of a half-lunatic king. Here, and only here were the people really free to carve out their own glorious destinies.

From the success of that experiment in government, from that first proclamation of the rights of man, came gradual, painful development of freedom and democracy in other civilized lands, until that first threat against it in 1914. The men who fought and suffered in that war, did so to preserve that principle, as they believed, forever.

But not then, nor any time during the bloody wars and revolutions during that development have we stood as dangerously close to the brink of disaster as we are today.

The weakness with the republican form of government is that it is designed to pro-

cure the blessing of peace at the expense of efficiency in war. It promotes the maximum of comfort in all phases of life for the individual. It must be thoroughly aroused or alarmed to cope with a nation that is willing to throw away its liberty and who become the fanatical slave of its masters. Such nations forfeit all that mankind in its struggle toward civilization has given them. They have forfeited their right to be considered as human beings in order that they might crush smaller and weaker, but more enlightened neighbors, who have devoted their lives to the arts of peace instead of preparing themselves for the bloody butchery of war.

Never in the last century and a half have we stood as close as we stand today to the loss of everything that we, as free Americans, hold dear. Not at Valley Forge, when the American Army only had General Washington to stand between order and complete disintegration; not at Brandywine, when a hungry army retreated to Philadelphia; not at Bull Run, when a disillusioned Union Army faced complete rout or disaster; no, not even in 1917, when the German Imperial Army was close enough to sight the spires of Paris, was that spirit represented by the flag as close to disaster as it is today. Here and in England only does that spirit still live.

That is why these occasions of raising our flag become solemn and significant. They reawaken the fighting spirit of America. They represent a new awareness of danger, and a willingness to sacrifice anew as the spirit of America turns the wheels of industry to forge our weapons of defense with the resource and intelligence to be found only among truly free men.

Today we do not raise our flag in the atmosphere of empty oratory or confused symbolic language. We raise it in the spirit of America getting ready after a period of sleep, to grid itself once more to lead the world in the forward march of civilization. At this dedication, then, let us also dedicate ourselves to the spirit of these glorious Stars and Stripes that they may continue to wave.

A Secretary for Air

EXTENSION OF REMARKS

OF

HON. GEORGE H. BENDER

OF OHIO

IN THE HOUSE OF REPRESENTATIVES

Monday, July 14, 1941

Mr. BENDER. Mr. Speaker, Americans are still looking very hopefully at the broad expanses of the Atlantic and Pacific Oceans as our chief bulwarks of defense against the wars raging abroad. But like far-sighted citizens of the last great democracy in the world, we are not relying exclusively upon the waters which separate us from both Europe and Asia. We are making tremendous preparations for any possible combination of foes. As observers of the world's most horrible war in recorded history, we are in a unique position to learn some very valuable lessons without the necessity of experiencing the horrors occurring on the battlefield.

There is one obvious lesson which has been suggested at least a thousand times by important and intelligent men and women which we have completely ignored. It is a lesson which cannot be long delayed if we are to guarantee for ourselves and our posterity the peace we cherish so highly.

The No. 1 lesson of the war in China and throughout Europe is the lesson of aviation. The military experts who have regarded aviation as merely an auxiliary force to supplement the basic work of land and sea forces are far behind the times. Aviation is a separate, independent arm which must, of course, work in coordination with the others. But it possesses a unique striking power even without such coordination. Aviation demands recognition as a truly vital part of the defenses of our country. This recognition has been mighty slow in coming.

A decade or so ago, Arthur Brisbane wrote daily columns seeking to impress upon the American people the real need for recognition of aviation as the most important single branch of military preparedness. When he died, aviation lost its most compelling spokesman. The Nation remembers all too well the sad case of Billy Mitchell, who shocked his Army superiors by public demands for an independent air arm. For his pains he was court martialed and died without seeing the fruition of his dreams.

America today must recognize the validity of Arthur Brisbane's arguments and Billy Mitchell's martyrdom. We need a Secretary for Air who will sit in the Cabinet of the United States and take part in the promotion of a really great air force. If we are to build the 50,000 planes our President has envisaged, if we are to man, equip, and keep them flying, we shall need an experienced leadership devoted exclusively to this field.

We have a Secretary of War in the Cabinet of the President whose job it is to keep the armed forces of our country in complete readiness. In time of peace the task of our Secretary of War becomes one of administrative routine. We have in the Cabinet of the United States a Secretary of the Navy whose job it is to see that our fleet patrols the seven seas wherever Americans seek to travel and wherever the American flag is flying. In time of peace the job of our Secretary of the Navy also becomes one of administrative routine.

A Secretary for Air would be valuable to our country not only in time of war or threatened war, but also in the days of peace. His task would be the development and coordination of air lines, of stimulating commercial aviation, of building this newest development of man's ingenuity into a vast American industry girdling the entire globe with American transportation.

A Secretary for Air would be one of the most valuable additions to the President's Cabinet in days like the present. Our country has become aviation-minded in the short space of 5 years. Our young men are eager to fly the skies. This is the time for us to take one more step in the protection of our country. Let us have a Secretary for Air—now.

The Power Utilities Are Asking the Federal Government to Help Them Further Enslave Arkansas

EXTENSION OF REMARKS

OF

HON. CLYDE T. ELLIS

OF ARKANSAS

IN THE HOUSE OF REPRESENTATIVES

Wednesday, July 23, 1941

Mr. ELLIS. Mr. Speaker, the Teapot Dome scandal was a baby as compared with what the Power Trust is trying to do to the people of Arkansas and other States of this Union.

The Office of Production Management was for several months ready, willing, and anxious to locate an aluminum plant in Arkansas, but it needed 120,000 kilowatts of firm power. The same utility companies that had fought the Government's effort to produce power in the area through hydroelectric projects, and the same companies who were at the same time running full-page ads in the Arkansas papers to the effect that they had ample power for defense industries were called upon to furnish power for an aluminum plant for the State. They made their proposal, and when we got into it we found that they were promising 20,000 kilowatts of power from the Possum-Kingdom Dam on the Brazos River in Texas that belonged to the Rural Electrification Administration, and that they were promising 32,000 kilowatts of power from the Pensacola Dam on the Grand River in Oklahoma that did not belong to them. Actually they were able to show a grand total of 33,000 kilowatts of their own power, and all of it was to come from outside Arkansas.

My attention has been called to a press release of the Arkansas Power & Light Co. in which the company says that it can furnish ample power for an aluminum plant anywhere in Arkansas. This statement is for public consumption and by the company's own admission to the Office of Production Management is wholly untrue.

The Rural Electrification Administration proposes to furnish the power at cost for the aluminum plant. Their proposal has the full endorsement of the Federal Power Commission.

Actually what the Arkansas Power & Light Co. wants is for the Federal Government to lend it the money to build new plants and new transmission connections so that it can strengthen the clutches of its monopoly and continue to bleed the people of Arkansas with its high and exorbitant rates. It wants to furnish power for the aluminum plant at an enormous profit.

An aluminum plant of 110,000,000 pounds of annual capacity was allocated to Arkansas on the basis of the R. E. A. proposal to furnish the power.

The Power Trust has failed the American people in this critical hour of need for more and more power; it has caught

our people with their backs to the wall, and it is trying to love us and stab us at the same time.

I am convinced that Director General William S. Knudsen and J. A. Krug, head of the Power Division of the O. P. M., are doing their best to hold the fort, but they have been besieged now for about 30 days with a Power Trust blitzkrieg, and we can only hope their strength will hold out.

View of Kansans on the Retention of National Guard Men, Reservists, and Selectees

EXTENSION OF REMARKS

OF

HON. JOHN M. HOUSTON

OF KANSAS

IN THE HOUSE OF REPRESENTATIVES

Wednesday, July 23, 1941

ARTICLES FROM THE NEWTON (KANS.) EVENING KANSAN-REPUBLICAN AND THE WASHINGTON TIMES-HERALD

Mr. HOUSTON. Mr. Speaker, under leave to extend my remarks, I insert in the RECORD a press dispatch printed in the Newton (Kans.) Evening Kansan-Republican of July 21, 1941, and an item from the Washington Times-Herald of July 23, 1941, as follows:

[From the Newton (Kans.) Evening Kansan-Republican of July 21, 1941]

HOUSTON FAVORS HOLDING SELECTEES—FIVE OF KANSAS' REPRESENTATIVES IN CONGRESS OPPOSE NEW DRAFT ACT

WASHINGTON, July 21.—Five of Kansas' seven House Members expressed outright opposition in interviews to Gen. George C. Marshall's proposal that selectees, National Guard men, and Reserve officers be kept in training more than a year.

One said he was inclined to oppose the Presidentially approved suggestion now but might change his mind later.

Only Representative HOUSTON, the delegation's lone Democrat, said he favored the plan.

"I am for keeping them in more than a year in view of statement made by the Chief of Staff," Houston said. "We should take the advice of military experts and hold the Army at the required strength."

Representative HOPE said he was "inclined to oppose the suggestion" at this time, but added he still had "an open mind."

Representative GUYER said in his opinion efforts to keep the men in service was just another step toward participation in war.

"I'm opposed to it unless my mind can be changed," said Representative WINTER. "These men were taken into the Army for 1 year's training. I feel that when that year is up the Government should keep it's word to them."

"I'm against it," commented Representative LAMBERTSON. "It is natural for a soldier to want to keep his men together a long time."

Representative CARLSON also voiced disapproval.

"We promised the men they would have 1 year's training," he said. "I feel we have violated several other pledges. We should keep this one. If any of the men wish to volunteer to remain longer that would be all right."

Representative ILLES said the selectees, guardsmen, and Reserve officers should be released after 1 year of training unless the Nation is at war or Congress has declared a national emergency exists.

"It would create a better feeling to release them for that was the understanding," he said. "They can be called back if necessary. They will not leave the service all at once and as small groups go other men can take their places."

[From the Washington Times-Herald of July 23, 1941]

BACK ROOSEVELT, WHITE URGES—"CONGRESSMEN WHO DON'T FACE DEFEAT"

EMPORIA, KANS., July 22.—William Allen White, outstanding Kansas editor, today warned Kansas Congressmen that continuous voting against President Roosevelt's foreign policy would work to eventual repudiation by their constituents.

In an open letter to the "boys" in his Emporia Gazette, the former chairman of the Committee to Defend America by Aiding the Allies called attention to the support which the President has enjoyed from the people in regard to every "incident."

Scoring the Kansas delegation for their almost unswerving isolationist record, the editor said, "you are entitled to think that he (President Roosevelt) is leading us into war if you want to. But most folks think that he has been right * * *

"Ninety-nine percent of America would vote to keep out of war. But every poll printed shows more than 65 percent of the American people are in favor of aid to Great Britain so far as the President has given it—to date," the letter continued.

Warning that "we are likely to be in war" within 60 days, White indicated the threat would probably come eventually from Japan, at the instigation of the European Axis Powers. In such case, he said, "watch out for a record vote which you can never explain if this country is in war in 1942."

Dedication of the New Wing of the Royal Norwegian Legation

EXTENSION OF REMARKS

OF

HON. SOL BLOOM

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Wednesday, July 23, 1941

ADDRESSES AND FOREWORD OF PROGRAM

Mr. BLOOM. Mr. Speaker, under leave to extend my remarks in the RECORD, I include therein the addresses delivered during the dedication of the new wing of the Royal Norwegian Legation, in the city of Washington, on Tuesday, July 22, 1941. I also include the foreword from the program issued for the occasion, entitled "Norway Looks Ahead," because it contains an inspiring message of faith which I am sure will be of interest to Members of the Congress:

NORWAY LOOKS AHEAD

On this little spot of free Norwegian soil the representatives of the lawful Government of King Haakon and of the Norwegian people are happy to welcome officials of the United States Government, members of the Supreme Court and Congress, representatives of the brave nations that are fighting against Nazi oppression, members of the American press, and the many other distinguished friends of Norway.

The adding of this new wing to the Royal Norwegian Legation—while answering urgent practical needs—is also a concrete symbol of Norway's faith in victory and freedom.

Though temporarily overrun by foreign aggressors, the Norwegian people—both inside their country and beyond its borders—are continuing their struggle for independence. For Norway, like her allies large and small, has confidence in the final defeat of rule by force and looks ahead to the establishment of a world where justice, good will, and civilization shall prevail.

ADDRESS BY HON. WILHELM MORGENSTIERNE, MINISTER OF NORWAY

May I wish you all a hearty welcome. We are happy to see here, on this July afternoon, so many friends of ours, of Norway's, of the things for which we fight: Freedom, democracy, and international faith.

This little piece of glorious American soil, today Norwegian territory, on which this building has been erected, was given to us a few years ago by American friends of Norway's, for a garden, a playground. Little did we know that so soon we should need it desperately for a workshop.

But we do. At the time of the invasion of Norway in April last year there were eight of us at the legation. Today we are 40 strong.

In itself it is not a very remarkable thing, of course, to build a new wing—some new office rooms. Thousands upon thousands of them, I suppose, are coming into being these days. But when, in spite of this, we asked you to come, it was because we hoped that perhaps you might feel as we do, that the idea is bigger than the house; that, if I may say so, this is a wing with wings. We hoped that the very fact of our expanding at this time, when Norway temporarily is being occupied and raped by foreign masters, might symbolize to you, to the world—yes, to the aggressors themselves—that we defy them, that we are building for the future, that we have abundant faith in victory and freedom.

Was there not a famous general who said something like this: "My left has been turned, my center smashed; the order of the day is forward"?

Norway was one of the most peace-loving countries in the world. We were pioneers in the field of international understanding and conventions. The great Swedish industrialist Alfred Nobel left it to a Norwegian committee to distribute the annual Nobel peace prize.

Today we are at war. In the dead of night, without warning of any kind, without the slightest provocation on our part, the Nazis broke into our peaceful land, bombing our cities, towns, and farmhouses, killing our men, women, and children.

From the first moment, in the face of the overwhelming mechanized forces of the invaders, our leaders and people stood up and refused to accept the slave terms offered to a proud and free people. Experience has shown only too clearly what happens to those who attempt to appease the insatiable aggressors.

Under the leadership of our great King Haakon and the legal Norwegian Government of Prime Minister Nygaardsvold, the Nor-

wegian people fought for 2 months on Norwegian soil.

They fight today on the home front, a bitter, heroic fight with weapons of the spirit, of the will, and love of country. They fight in such a way that nazi-ism in Norway today has suffered one of its greatest ideological defeats.

We also fight on the external front, and we are proud to fight side by side with the incomparable, heroic British and our other friends and allies. May I say how particularly happy we Norwegians are to see here as our guests today the representatives of our valiant brothers in arms, and in ideals and aspirations.

Yes; we are at war, we peace-loving Norwegians. We have learnt reluctantly, by bitter experience, that there is something still greater than peace. That life has little meaning without freedom. That there is something still more abhorent than fighting—and that is to have Quislings within one's gates.

There is a beautiful saying: "God gave us memory that we might have roses in December." Yes; what sustains the Norwegian people in these days of darkness and trial is the memory of those roses, of that life of freedom under the law, of protection and not persecution by the authorities, of safety and peace for the family around the hearth, of that way of life which was ours and still is yours, and the blessings of which are not fully realized until lost. Perhaps they cannot be realized until the heel of the barbarians is on one's back and the monstrous "new order" in deadly practice has become a bitter daily reality.

I cannot close without trying to express what the understanding, sympathy, and aid of this our mighty sister democracy has meant and means today to the Norwegian people. The vision of your great President and Congress in realizing the true nature of the present World War for freedom and the determination of the American people to aid the fighting democracies immeasurably strengthens our faith in victory and freedom. Among Norwegians at home and abroad it was a day of joy when our friends the Americans landed in Iceland. We like to be your good neighbors. You cannot come close enough.

We are honored and happy to see here on this occasion so many distinguished men and leaders of this great Nation, and again I wish them, and you all, a hearty welcome.

ADDRESS BY HER ROYAL HIGHNESS CROWN PRINCESS MARTHA OF NORWAY

I am happy to be here today at Norway's Legation in the United States.

Having lived in this country for almost a year now, I think perhaps I can bear witness to the fact that the American people increasingly realize that, in spite of everything which has happened, Norway still lives and fights.

Some of you may ask, "Why has the Norwegian Government built this addition to its Legation, now that the legions of Hitler have overrun our country?"

The answer is quite simple and clear. As the Minister just said: Norway is at war. It is fighting with all its strength and all its resources, to regain that freedom and independence which was our precious possession until 15 months ago.

The great Norwegian merchant marine of 4,000,000 tons and its 25,000 sailors are sailing the seas for our common cause, under the Norwegian flag and the management of the free Norwegian Government in London.

Norwegian soldiers, sailors, and pilots are training in Norwegian camps in Great Britain and Canada.

The Norwegian Government also under present conditions are upholding their unbroken tradition of never defaulting on an obligation. Interest is being paid, for instance, on all our dollar loans in the United States.

Yes; the free Norwegian Government is a going concern. It makes its great daily contribution, on land and sea, to the common fight of the democracies against the aggressors.

And so I raise here for the first time the unsullied and unyielding flag of Norway. I thank my people at home and abroad for their faith and courage, and I pray that Norwegians everywhere will always keep Norway's name as clean and honored as it is today. May this flag soon fly again over my beloved land, over a Norway that is once more free and happy and a good neighbor to the whole world.

ADDRESS BY THE HONORABLE SUMNER WELLES, ACTING SECRETARY OF STATE

We are met here today to join in the dedication of the new wing of the Norwegian Legation in Washington.

These ceremonies are surely symbolic of the hope and of the faith with which we meet.

Those of us who are citizens of the United States are taking part in these dedication ceremonies not only because of the welcome privilege which it affords us of rendering this tribute to our traditional friends, the heroic people of Norway, but also because we can thus best evidence our conviction that the Kingdom of Norway of the past, as we have known it, some day—and we trust that day will come soon—will once more be free and independent.

We here in the United States will always remember the superb courage with which the Norwegian people fought in the defense of their homes and of their liberties against the overwhelmingly superior strength of an invader who had treacherously taken them by surprise. We know how bravely they are still fighting with their Allies on sea and land in many parts of the world.

We shall always remember the heroism of their monarch and of their crown prince. And we have heard with emotion the words of that same monarch when he said to his people only a few days ago, "Hold out. Don't lose courage. And be assured that Norway will once again be free and independent, provided that we all continue to do our duty and our utmost to reach our goal in the battle which is now being fought."

Those words seem to us to exemplify the soul of a people which will never admit defeat and which will never be cowed by alien domination.

But in a larger sense these ceremonies constitute an act of faith in the ultimate victory of the forces of human liberty; in the triumph of civilization itself over the forces of barbarism.

I feel that there are joined with us in spirit here today, as silent witnesses, the peoples of all of the other countries which have been mercilessly overrun during these past 2 years. I know that they believe as we do that out of this holocaust into which the nations of the earth have been plunged by the criminal obsession of world conquest of one man and of the satellites who surround him, there can come no peace until the Hitlerite government of Germany has been finally and utterly destroyed.

For I am confident that the cause of liberty and of freedom will not go down to defeat. The determination and courage of free men and women everywhere must now be exercised to the full limit of endurance until their victory is won.

And yet I do not doubt that millions are asking tonight—millions in England and in China—millions of enslaved peoples in Norway and in the other countries now temporarily occupied—millions in the countries which have not experienced war—yes; and millions in Germany and in Italy—are asking, What does the future hold for us after this struggle is over?

Does the end of the present carnage mean only a return to ruined homes; to the graves of slaughtered wives and children; to poverty and want; to social upheaval and economic chaos; to the same gray and empty years of confusion and bitterness, so barren in vision and in human accomplishment, which marked the decades after the termination of the last war?

It seems to me that those of us who are fortunate enough to be able to live as citizens of the free American republics have our great responsibility in the framing of the answer to that question.

For we, all of us, now see clearly, if we did not before, that no matter how great our American capacity for defense may be, no matter how perfect our hemispheric system may become, our future welfare must inevitably be contingent upon the existence in the rest of the world of equally peace-minded and equally secure peoples who not only will not, but cannot, become a source of potential danger to us in the New World.

I feel it is not premature for me to suggest that the free governments of peace-loving nations everywhere should even now be considering and discussing the way in which they can best prepare for the better day which must come, when the present contest is ended in the victory of the force of liberty and of human freedom, and in the crushing defeat of those who are sacrificing mankind to their own lust for power and for loot.

At the end of the last war, a great President of the United States gave his life in the struggle to further the realization of the splendid vision which he had held up to the eyes of suffering humanity—the vision of an ordered world governed by law.

The League of Nations, as he conceived it, failed in part because of the blind selfishness of men here in the United States, as well as in other parts of the world; it failed because of its utilization by certain powers primarily to advance their own political and commercial ambitions; but it failed chiefly because of the fact that it was forced to operate, by those who dominated its councils, as a means of maintaining the status quo. It was never enabled to operate as its chief spokesman had intended, as an elastic and impartial instrument in bringing about peaceful and equitable adjustments between nations as time and circumstance proved necessary.

Some adequate instrumentality must unquestionably be found to achieve such adjustments when the nations of the earth again undertake the task of restoring law and order to a disastrously shaken world.

But whatever the mechanism which may be devised, of two things I am unalterably convinced:

First. That the abolition of offensive armaments and the limitation and reduction of defensive armaments and of the tools which make the construction of such armaments possible, can only be undertaken through some rigid form of international supervision and control, and that without such practical and essential control, no real disarmament can ever be achieved; and

Second. That no peace which may be made in the future would be valid or lasting unless it established fully and adequately the natural rights of all peoples to equal economic enjoyment. So long as any one people or any one government possesses a monopoly over natural resources or raw materials which are needed by all peoples, there can be no basis for a world order based on justice and on peace.

I cannot believe that peoples of good will will not once more strive to realize the great

ideal of an association of nations through which the freedom, the happiness, and the security of all peoples may be achieved.

That word "security" represents the end upon which the hearts of men and women everywhere today are set.

Whether it be security from bombing from the air, or from mass destruction; whether it be security from want, disease, and starvation; whether it be security in enjoying that inalienable right which every human being should possess of living out his life in peace and happiness, people throughout the length and breadth of the world are demanding security and freedom from fear.

That is the objective before us all today—to try and find the means of bringing that to pass.

"Not in vain the distance beacons."

ADDRESS OF SIR ARTHUR SALTER, BRITISH SHIPPING MISSION

Lord Halifax, who is in the West of America, has asked me to represent him at this ceremony, which he is extremely sorry to be prevented from attending himself. He has, however, sent a message which he wishes me to give to you in his name. "No people," he says, "have met the trials of the present time with a more stanch courage than the people of Norway, and their resolution has excited the admiration of the free world.

"Day in, day out, through every hazard, Norwegian seamen are doing their duty with single-hearted devotion. In the stout hearts of the Norwegian people, loyal to their king and their country's cause, freedom has one of its strongest guaranties of victory."

May I, as head of the British Shipping Mission in the United States, say how wholeheartedly I agree with what Lord Halifax has said? When Norway was invaded, the Norwegian Government at once offered their great mercantile marine, freighters, tankers, and passenger ships for service in the war effort. The great bulk of that fleet, with the exception of what was trapped in enemy waters, has since been carrying vital supplies in the war zone. The rest of the Norwegian vessels, which have been engaged in useful but less dangerous work, chiefly in this hemisphere, are now also coming into the war zone. The officers and crews of these additional vessels will doubtless show the same courage and devotion as their compatriots who have long been in this service. All together share with British seamen the perils and the pride of combatants in the battle of the Atlantic; and in one respect they bear a heavier burden than British crews in that they are cut off from their wives and families until the day when victory is won and Norway is again free. They are sustained by their native hardihood, by the assurance that victory will in time be achieved, and that they themselves will have made a vital contribution to it. For the issue of the battle of the Atlantic—still being fought, and hard fought on both sides—is the issue of the war itself; and the prize of victory, whose symbol "V" is now passing like a torch throughout the occupied territories, will be freedom for all of us.

It is a thousand years since Norsemen braved their way through the perils of the North Atlantic to the Western Hemisphere. Now, a millennium later, their worthy descendants are braving new perils in the same stormy seas to bring the resources of a free world to the rescue of the enslaved continent. Norway's great instrument of victory is her merchant fleet and the men who man it. And her government, people, and seamen alike have made it clear that this instrument will be used 'till victory, and with victory, liberation is achieved and assured.

Voorhis Resolution Advocating Economic Advisory Commission

EXTENSION OF REMARKS

OF

HON. SAMUEL A. WEISS

OF PENNSYLVANIA

IN THE HOUSE OF REPRESENTATIVES

Wednesday, July 23, 1941

Mr. WEISS. Mr. Speaker, a few weeks ago I appeared before a labor subcommittee of which Congressman ROBERT RAMSPECK is chairman. This subcommittee was then conducting hearings on the resolution introduced by the able and distinguished statesman from California, Congressman JERRY VOORHIS, which provides for the creation of an economic advisory commission to study post-war conditions. When speaking to the committee members, I informed them that I heartily favored the creation of such a commission as is proposed in the Voorhis resolution, to earnestly study this vital problem of post-war demobilization of industry and manpower so that we can build an economy and a post-war period of prosperity, unparalleled in our youthful Nation's history. I have great faith in, and personal admiration for, the sponsor of this resolution, and do not believe that any Congressman is more sincerely interested in the welfare and well-being of the people of this Nation than the studious gentleman from California. I believe a well-composed commission with a highly competent research staff could render a service to our Nation that would stand as a monument to democratic government and dispute the challenge of the dictators. I think it is essential to the preservation of our democracy to create a commission of this nature. This commission, in order to carry on a constructive program, must be created immediately to plan for the mobilization of all our resources, human and material, in a youthful nation rich with natural resources, for a happier living and a more equal distribution of the wealth of the Nation among all the people living in a world at peace.

I am herewith submitting an editorial that appeared in the July 5, 1941, issue of the McKeesport (Pa.) Daily News, one of the outstanding liberal newspapers in my district. Said newspaper is edited by W. D. Mansfield, former senator of the Commonwealth of Pennsylvania and former commissioner of Allegheny County, Pa. This editorial heartily supports the Voorhis resolution:

[From the McKeesport (Pa.) Daily News of July 5, 1941]

AFTER-THE-WAR PROBLEMS

One of the soundest congressional proposals in months has been made by a subcommittee of the House Labor Committee.

The subcommittee has given its support to a resolution introduced by Congressman JERRY VOORHIS, of California, which would set up a commission to study social and economic problems which will arise after the war.

Of course, there are many more pressing problems confronting Congress, the administration, and the people of the Nation, the most important being defense, foreign affairs, and the preservation of some sort of stable economic structure during the war.

There are even some persons who assume that the war and gigantic Government spending will have solved our economic troubles by the time the war has ended. Defense production has served in some measure to blot out the idea that limitation on productivity, a policy of scarcity, is to be desired, but on the whole the war has aggravated our economic ills more than it has alleviated them. Present prosperity is deceptive; we haven't been presented with the bill yet.

It is not too early to begin plotting the course that we will take in peace. Our post-war policies will have to be well planned if they are to be successful, because there will be many difficulties in the way.

The success of such a social and economic study will depend upon the attitude of the members of the commission.

If the study is unduly influenced by the pet theories of some of its members or by political considerations it will only muddy waters which will be dangerous enough to navigate when clear.

The Voorhis resolution holds a great opportunity. We hope proper use is made of that chance for keeping the Nation on the rails in the post-war years to come.

H. R. 965—Fourth-Class Postmasters Salary Bill

EXTENSION OF REMARKS

OF

HON. THOMAS G. BURCH

OF VIRGINIA

IN THE HOUSE OF REPRESENTATIVES

Wednesday, July 23, 1941

Mr. BURCH. Mr. Speaker, by passage of H. R. 965, the House of Representatives has recognized the wisdom of placing postmasters at fourth-class post offices on an annual-salary basis in lieu of compensation on the basis of cancelation.

The purpose of H. R. 965 is to eliminate the present cancelation system for payment of compensation to postmasters of the fourth class and substitute therefor fixed annual salaries, based on postal receipts, under the same plan as that in effect in post offices of the first, second, and third classes, which would provide a uniform system for all classes of postmasters.

The present cancelation system, which provides for commissions of 160 percent of the first $75 value of stamps canceled, 85 percent of the next $100, and 75 percent of the remainder during 3 months' quarterly period as compensation to postmasters, is a very complicated system, which has proven unsatisfactory to the Department as well as to the postmasters.

First. The system is complicated and subject to errors.

Second. Postage purchased from a Presidential post office and used on mail matter deposited at a fourth-class office

results in two payments of compensation for one service.

Third. The cancelation system makes every postmaster his own accountant with no accurate method of determining the correct basis of claims. While this privilege is seldom abused, it unfortunately directs suspicion against the integrity of any and all postmasters of the fourth class.

Fourth. There is no way to determine advanced compensation, as the cancelations fluctuate daily and the postmasters cannot under any cancelation system accurately determine their compensation until the end of a 3-month period.

Fifth. Because of the complicated system fully 50 percent of the quarterly reports require audit corrections, which is expensive to the Government.

There has been a growing demand for a change of the method of payment of compensation to postmasters of the fourth class for more than a quarter of a century, but no definite steps were taken to accomplish this purpose until the latter part of 1939, when the Post Office Department appointed a committee of post-office inspectors to thoroughly investigate receipts and cancellations of these offices and to determine, insofar as possible, a fixed annual rate of pay in line with the present compensation.

The salary schedule contained in H. R. 965 embodies the plan drafted by the committee of postal experts, and it is believed to be a solution to this problem.

On January 1, 1941, there were 28,973 post offices of the fourth class which would be affected by the passage of this measure. The postmasters are strongly favorable to this proposal, which will remove the guesswork as to their compensation through the fixing of definite annual salaries.

The Department's report, compiled by the committee of inspectors, submitted with the draft for this legislation, indicated that approximately 22,000 postmasters would have their compensation slightly increased, while 6,918 would be reduced in compensation. Of the number reduced, 3,620 will be reduced 5 percent or less; 1,680 will be reduced more than 5 percent but less than 10 percent; while the postmasters, numbering approximately 1,500, who would be reduced 10 percent or more are protected under the provision contained in the bill for a period of 2 years to enable the Department to investigate and confer with the postmasters in such offices with a view of bringing about a normal average between receipts and mail dispatched insofar as possible, and to readjust the salaries at the end of 2 years in the proper salary grade. This provision will not increase the cost of the service in such offices but will actually reduce it by relegating it to the grade below for a period of not exceeding 2 years.

Under the present cancelation system the compensation of postmasters of the fourth class ranges from a few dollars up to $1,100 per annum, with the average compensation of $533 per annum. However, more than 9,000 postmasters receive less than $300 per year.

There will be savings resulting from the measure which are impossible to estimate, but it is believed that these savings will almost, if not entirely, eliminate the additional cost indicated by the Department.

The bill will eliminate padding of cancelation accounts by indiscreet postmasters; it will reduce expensive errors in counting cancelations, and will prevent duplicate payments of compensation to two post offices where mail is diverted.

This is sound legislation, and will put into effect a businesslike system which has long been needed. Postmasters generally will give hearty approval to this constructive measure.

Trouble to the South

EXTENSION OF REMARKS

OF

HON. JOHN M. HOUSTON

OF KANSAS

IN THE HOUSE OF REPRESENTATIVES

Wednesday, July 23, 1941

ARTICLE BY ERNEST K. LINDLEY

Mr. HOUSTON. Mr. Speaker, under leave to extend my remarks, I insert in the RECORD a timely article by Ernest K. Lindley which appeared in the Washington Post of July 23, 1941, as follows:

[From the Washington Post of July 23, 1941]

TROUBLE TO THE SOUTH—THE NAZIS IN LATIN AMERICA

(By Ernest K. Lindley)

At least four events and statements of the last few days must be considered together:

1. The Nazi putsch quashed in Bolivia.

2. Under Secretary of State Welles' statement that the United States has information that Germany is planning new steps of aggression against remaining independent countries in Europe—meaning Spain and Portugal. (There are only two others—Sweden and Switzerland.)

3. The President's declaration to Congress: "I do believe—I know—the danger of today is infinitely greater." (Meaning "than a year ago.")

4. General Marshall's testimony before the Senate Military Affairs Committee that the United States has been in imminent peril for 2 months, and that if he told all he knew it "might result in something like the sinking of the *Maine* or the Zimmerman note."

The putsch nipped in Bolivia was not imaginary. The Bolivian Government had documentary evidence that a conspiracy to overthrow it with the aid of pro-Nazi Bolivian Army officers was being planned by Nazi agents, working through or in close cooperation with diplomatic representatives of the Nazi Government.

The date for the putsch had not been set. A well-informed guess is that it would have been timed to coincide with similar attempts in a few other Latin American nations. All of them might have been synchronized with a Nazi move into the Iberian peninsula and the shoulder of Africa.

Serious Nazi activities in Latin America may seem implausible now while the main Nazi armed forces are engaged in the invasion of Russia. But many military observers believe that the Nazis, even if they have not destroyed the Russian regime, will have pushed what is left of the Russian armies to the Urals by mid-September. Then, it is conjectured, they will turn their attention to Spain, Portugal, the South Atlantic islands, the shoulder of Africa, and South America.

In our Government there are, broadly speaking, two schools of thought concerning Nazi activity in Latin America. One is that it is intended to divert our attention from the main theaters of war; to make us hesitate to give all the aid of which we are capable to the British. As a rule, but not in all cases, this view is held by those who think that if Britain goes down, we are lost.

The second view is that, whatever the motive, a serious Nazi thrust toward the lower half of this hemisphere is being planned and that it must be frustrated, by armed force if necessary.

But among our well-informed officials there is no doubt that Nazi activity in Latin America is being intensified. It is passing from propaganda of a general type to what appear to be definite plans for action.

Suppose that about the time the Nazis headed into Spain and Portugal there were putsches in several Latin American countries. Suppose also that the Nazis should succeed in landing troops in the Azores or the Cape Verde Islands. With such forces as we now have we would face a serious military predicament.

As General Marshall pointed out, the marines had to be sent to Iceland because Regular Army units contained selectees and Reserve officers whose terms of service under existing law will soon expire. The Marine Corps units in Iceland have had special training in landing operations under fire. They might be needed in case of trouble in Latin America or if the Nazis got to the Azores, and selectees can be sent anywhere in the Western Hemisphere, the present 1-year service law for the latter two is an effective barrier to their use in Brazil, let us say.

We are pledged to the defense of Latin America. Many Latin American army heads have had their advanced training in Europe, including Germany. Some of them perhaps admire the Nazi scheme of things. Many of them, in any case, have indicated doubt about our ability to defend the Western Hemisphere. The Nazis know this and are capitalizing on it.

The idea, accepted by some of our isolationists, that the defense of the Western Hemisphere is easily within our capacity does not seem to have made much of an impression on some of the military experts in Latin America. They want proof, and lacking it, tend in some cases to gravitate toward the Axis.

As a soldier, General Marshall is not given to loose talk. When he alluded to an incident like the sinking of the *Maine* or the Zimmerman note he was not speaking idly. In World War I the notes of Chancellor Zimmerman of Germany offered Mexico definite inducements, including the recovery of Texas, New Mexico, and Arizona, to ally itself with Germany in the World War.

The Zimmerman notes probably were intended only to divert our energies. But one can never be sure when some Nazi-influenced government or group may take the bait. General Marshall did not indicate whether he was referring to a certain Latin American nation or to Japan. But he plainly indicated that he knows that the Nazi are offering specific inducements to certain nations to ally themselves with Germany in war against us.

The President's strong references to defense of the Western Hemisphere in his message to Congress underlines the same situation.

Beneath the Bolivian counterputsch and the statements of the President, the Chief of Staff, and the Acting Secretary of State there is plenty of TNT in our own backyard.

Peace Rather Than War

EXTENSION OF REMARKS

OF

HON. LEWIS D. THILL

OF WISCONSIN

IN THE HOUSE OF REPRESENTATIVES

Tuesday, July 22, 1941

RADIO ADDRESS BY HON. LEWIS D. THILL, OF WISCONSIN

Mr. THILL. Mr. Speaker, under leave to extend my remarks, I include the following radio address delivered by me over the red network of the National Broadcasting Co. on July 23, 1941, through the facilities of station WRC in Washington:

Fellow Americans, more than a century and a half ago, as Benjamin Franklin stepped out of the historic room in which the Constitution of the United States had just been drawn up, he made one of the greatest American statements which has reverberated down the corridors of time. A bystander called out, "What do we have, Mr. Franklin, a monarchy or a democracy?" Benjamin Franklin responded with these simple but significant words, "It's a republic, if you can keep it." Today, as this country faces the serious problems of keeping our national credit or going bankrupt, of retaining government of the people here at home, as against adopting a foreign system of fascism, of protecting and preserving the independent destiny of the United States and the Western Hemisphere, as against giving up our independence and merging our destiny with Europe's by joining in the endless wars which have scourged that continent, Benjamin Franklin's warning takes on new significance. Indeed, we have a republic in this country—if we can keep it.

Whether or not we can keep it depends almost entirely upon whether or not we go to war or stay at peace. Even many of the war group, who are today urging that we send our men, our money, and our materials to join forces with a foreign country, are honest enough to admit that the United States cannot fight in this war and remain a republic. They grant that if we go to war, we must have one-man government here just as Germany, and Italy, and Russia have one-man governments over there, and just as Britain herself grows more and more totalitarian and dictatorial every day, as her war effort saps more of her strength and denies additional rights and privileges to her citizens. In other words, it is now generally believed by serious students of government on both sides of the question of war or peace that if we go to war the first casualty in this country will be the loss of our liberties here at home. Labor will lose its right of collective bargaining and its social gains certainly for the duration of the war, and no man can safely predict for how many long years after the end of the war; private property and industries, already threatened, will be taken over by the Government and conscripted for war needs; farmers will find themselves working their fields to produce food to be sold under price-fixing regulations which will condemn them to the virtual role of European peasants; and Congress itself will come more and more to be a mere committee in Government with the President and his personally selected advisers running the country by Executive decree. Under the pretense of trying to stop Hitler over there we have already copied many of Hitler's methods over here. If we follow the pleas of the war crowd and again send our men to fight and die on foreign battle fronts, we shall find ourselves setting up dictatorship in America under the false slogan of stopping dictatorship in Europe.

Ever since this war began, nearly 2 years ago, we have been subjected to the greatest propaganda program in history. Fortunately the propaganda agents of Germany and Italy have now been checked and many of them have been sent home where they belong. But the propaganda agents of England and Russia are being given the run of this country. Certain newspapers, radio commentators, moving-picture companies, and even some administration spokesmen have joined in the propaganda chorus of such titled Englishmen as Sir Josiah Wedgwood and Lord Halifax. And now the great underground subversive system of the Communist Party in America is engaged in an all-out effort to push this country into the war. No stone has been left unturned in the stupendous endeavor to propagandize America into another war. The effort has been made to repeat the performance of 1917, when after spending over $150,000,000 to propagandize America into war, with success crowning their efforts, the British turned the job of winning that war over to American soldiers. Later on Winston Churchill wrote a book condemning us as "meddlers" because we got into the war. Thus Uncle Sam concluded his first adventure into European power politics with the title "Uncle Sap."

The war propagandists are reviving the slogans they used 24 years ago, hoping that Americans have forgotten the devices used to plunge us into that conflict. Again they shout over the radio to the unsuspecting, or flash upon the pages of newspapers in which they spend thousands of dollars for advertising space, "This is a war to end war," "this is a war to protect democracy," "this is a war to preserve Christianity." Again the moving-picture industry is lending itself in large part to spreading propaganda through distorted news reels and hate-stimulating pictures. By every trick known to the propagandists, and with every scheme that money can buy, the war promoters in America, and the foreign agents working with them, are trying to scare or entice this country into war. But America is not so easily fooled a second time. Persistently and consistently, in every public-opinion poll that is taken, the people who have to fight the wars are telling the people who try to make the wars that the people want no part in the wars. Four-fifths of the people in America are opposed to entering this conflict; even in New York City and New York State the latest poll shows over 70 percent of the people opposed to joining this war; in Congress, today, in the Senate and House combined, less than 40 men could be found who would vote to put this country into the battle overseas.

America is telling the war crowd, America is warning the agitators from foreign countries, America is serving notice on its President who secured his coveted third term on the solemn promise to keep this country out of war, that it is united today in its opposition to entering another foreign war. America is telling Benjamin Franklin across a century and a half, "We have a republic where the people rule, and we propose to keep it; and we know that the only way to keep it a republic is to stay out of this war."

The overwhelming determination of America to remain at peace is making itself felt. A significant demonstration of this was reported in the Washington Times-Herald of July 18. Under the headline "Paramount bans propaganda in films," Neil F. Agnew, vice president of Paramount Pictures, Inc., is reported as telling a Paramount sales conference in Chicago—and I quote his words:

"It's purely a matter of dollars and cents. The public has shown that it does not want propaganda on the screen. So far as Paramount is concerned, there will be no propaganda in its pictures."

This demonstrates once again how the people in a republic can get what they want.

Frequently people write their Congressman asking what they can do to help keep America at peace. The statement I just read you suggests one answer to that question. If you are among the vast majority of real Americans who want peace, who put their flag and their country ahead of any other, if you are really Americans first, last, and all the time, you can win this fight if you will work for peace one-hundredth as hard as you must work if we get into war. Here are some specific things you can do if you really want peace and are willing to work for it. Take the movies, for example; you can let your theater manager know that you will not support his place of business if he persists in putting war propaganda on his screen; you can also assure the loyal American theater manager who does not use his theater as a sounding board for the war propagandists that you will patronize him. When you hear radio commentators trying to propagandize for war write the companies sponsoring them and register your protest. When you hear commentators who are fair and honest, send your encouragement to their commercial sponsors. There are many more things you can do to offset the millions of dollars the war crowd is spending in an effort to stir up your emotions or confuse your judgment to the point where you will be forced to send your sons to die fighting in Russia, China, or Africa. You can and should write the President a personal letter asking him not to break his contract with you, asking him to keep the good faith with you and to fulfill his freely and frequently given promises to keep this country out of war. You should write to your two Senators often and frankly ask them to become active in the fight against the war-propaganda machine. You should write your Representative and tell him that you want more than just his vote against war and his vote against further steps into war; tell him you depend upon him to render real service in this hour of need by taking an active part in the peoples' fight to protect and preserve the peace of America.

Letters reaching Washington are being carefully read these days, both in the White House and in every office on Capitol Hill. A recent poll shows a 3-percent increase in the sentiment against our entering the war. It shows that the war crowd has begun to lose ground despite its expensive campaign to stampede confused Americans into another foreign war. Your efforts have produced results and you should now devote increased time to the task of defeating the war propagandists once and for all. Opposition to war here in Washington is gaining ground every day. Many who a few months ago were weakly saying, "We are in the war," are now convinced that America can win its fight to stay out of the war. If America responds with an emphatic and permanent "no" to the enticements of the foreign agents, the communistic "fifth columnists," and the war promoters, we can be sure that never again in our history will public men seriously suggest that we send our sons to fight and die for a foreign cause. I cannot impress upon you too strongly how effective the people's crusade for peace has become and how important it is that you do your part with personal letters to hold the gains for peace which have been made.

If you who want peace, you who comprise the united majority of this country, if you

who love freedom in America more than you hate the foreigners of any land, if you who place the Stars and Stripes above the emblem of the swastika, the hammer and sickle, or the union jack—if you will exert your influence upon your elected public officials by petitions and letters which is your right and privilege under our form of government, the cunning campaign of the war group in America will be held in check and your country and mine will show to all the world that America is determined to keep faith with Benjamin Franklin and the founders of our Republic.

Alabama Youth Day

EXTENSION OF REMARKS

OF

HON. LISTER HILL

OF ALABAMA

IN THE SENATE OF THE UNITED STATES

Thursday, July 24, 1941

ADDRESS OF HON. JOHN H. BANKHEAD 2D, OF ALABAMA

Mr. HILL. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD a very interesting address delivered by my colleague the senior Senator from Alabama [Mr BANKHEAD], on National Youth Day at Birmingham, Ala., on June 26 last, captioned "Alabama youth defense day."

There being no objection, the address was ordered to be printed in the RECORD, as follows:

I am happy to be present on this occasion to speak to you on the place of youth in the national-defense program. It has been my happy privilege to have had some part, as a Member of the Senate of the United States, in planning and providing for the youth program which we recognize here today. It is with a great deal of pride in its achievements that I address you.

I am sure that I need not emphasize the supreme importance of our national defense. Whatever confidence we may once have had in the impregnability of our ocean frontiers, the modern airplane has destroyed. Whatever belief we may have had that men without arms fighting in the defense of their country have a supernatural strength which can match that of any conqueror has been left in the wake of the Nazi juggernaut as we have seen it sweep over the continent of Europe. The men of Poland and of Norway and of Yugoslavia and of Greece lacked nothing in courage or patriotism. They were fighting for the preservation of their national existence; yes, even for the preservation of their homes and families. Yet with all their courage and effort each of these nations fell under the onslaught.

With the fall of France we here in America began to see more clearly than we had ever seen before that war today is truly total war. No longer may a nation send its army out to fight while "business as usual" carries on at home. Whether its purpose be aggression or defense the modern nation must be prepared to wage total war if it is to have any hope of success or survival.

Behind the Army and the Navy there must be an efficiently functioning industrial system; there must be a never-ending flow of supplies and equipment; there must be swift communications; and equally important, there must be a united people with a firm belief in the principles they are defending.

We in America have realized the mistakes of the wishful thinkers of Europe, and we are determined to build a system of national defense which will withstand attacks from any source. We know that to accomplish this end we must have more and more production of war materials. We must build plants and we must man those plants with skilled workers. We must turn out airplanes, tanks, guns, and munitions in ever-increasing quantities.

Your Government is fully aware of the needs of the hour and is rapidly bringing this national-defense program into top-speed operation. Agencies have been established to supervise the construction of defense plants, to plan their activities, to insure the sources of supply of raw materials, to see that prices do not get out of reason. A selective-service system has been set up to provide a trained Army adequate for our needs. A civilian defense program is being set up with a place for every citizen who wishes to serve his Nation.

Fortunately we have not been faced with the necessity for setting up new agencies to deal with every phase of the national-defense program. Six years ago today Franklin D. Roosevelt, President of the United States, by Executive order established the National Youth Administration. For 6 years young men and women have been going from National Youth Administration shops and projects into American industry. Thousands of young American workers are better qualified today because there was a National Youth Administration to give them work experience. This has been a wise investment by the American people—an investment which today is paying rich dividends in terms of national defense. This agency, established through the wise foresight of the greatest advocate of democracy in the world today, originally planned to give assistance to needy youth, has become in the truest sense a bulwark of our national defense. Today as the requirements for experienced workers in defense grow hourly the National Youth Administration stands ready to supply those experienced workers.

Three hundred and seventy thousand young people are now employed by the National Youth Administration on its out-of-school work program. One hundred and fifty thousand of these are employed on shop projects and are receiving experience which will fit them for jobs in defense industries.

These young people are ready for places of responsibility in this emergency. If theirs is the task of keeping the factory wheels turning so that men at the front line will lack nothing in equipment or supplies, they will be prepared to take up their tools and do the job. If their assignment lies in the maintenance of the vital communication systems of the Nation, they will be ready to do their part. If it be their lot to wear their country's uniform in service on land, on the sea, or in the air, they will be better prepared to defend their homeland.

Under national-defense appropriations many large factory-type work centers have been established where young workers are now producing useful goods for the armed services, including equipment, supplies, arms, and parts for ordnance depots, arsenals, and Army camps. N. Y. A. now has more than 5,307 such shops, and of these at least 1,000 are expected to be used intensively under the new defense work experience and training program. Most of these will be operated with two and three shifts a day to meet the emergency need for new workers in defense industries, which, according to the Bureau of Labor Statistics, may amount to more than a million eight hundred thousand during this year. If all defense plants go on a three-shift basis, which is a likelihood, 6,000,000 more workers will be required.

Not only is N. Y. A. making its contribution through the preparing of young workers for jobs in defense industries and in the production of defense materials, but in many other ways. Fifteen thousand young N. Y. A. workers are now employed in Army posts, cantonments, and other military establishments throughout the country. Some of these youth live at their homes and are transported to the project where they work under skilled Army supervision on nonmilitary duties, such as the repair of buildings and facilities and clerical work. This work has particular importance, because it frees the Army personnel for a greater amount of military training. In addition, a large number of youth have been assigned to provide clerical assistance to selective-service boards all over the country, thus rendering service in this gigantic undertaking.

I am proud of the record of the Alabama Youth Administration in this great work. Two thousand Alabama boys and girls are living in resident centers while working on projects and in shops, many of which may be classed as defense plants. Twenty-five hundred others are employed on nonresident workshop-production projects, gaining experience in such types of work as sheet-metal work, welding, automobile maintenance and repair, machine shop, and electrical and radio work. Three thousand others are working on construction projects. About 500 Alabama N. Y. A. young men and women are employed on projects in connection with military establishments under the supervision of Army officials. Numbers are assisting their local selective-service boards with their work. The work record of these young people not only is a credit to themselves and to the Youth Administration, of which they are a part, but to the State of which they are young citizens.

Today we find youth fired with the flame of patriotic fervor, devoted to the cause of democracy, willingly giving their best efforts to the defense of their Nation. We find the doors of industry opening to those whom the N. Y. A. and other agencies have prepared for jobs. We see them happy in finding work to do. Contrast this picture with that of a few short years ago. The world was sunk in the depths of the great depression. In every nation youth suffered most severely from economic dislocation. Here in the United States there were 6,000,000 young people unemployed and with no hope of employment. The only doors open to youth in those dark days were the doors of empty freight cars, of the corner pool halls, and the back alleys. American youth suffered a tremendous loss in those years—a loss in morale, and of the educational experience which comes from holding down a job. They left their high schools and colleges with high hopes, but those hopes were soon shattered with the endless denials of their requests for jobs. They had no experience. There weren't jobs enough for the experienced workers, much less for inexperienced youth

The stage was set for action. In other nations we saw this action take violent forms. We saw youth, unable to get jobs in normal ways and set up homes and bring up families of their own, don black shirts and brown shirts and learn to goose-step at the command of leaders who promised them a way out of unhappiness into glory. Today these youth carry the torches which daily add to the flames in Europe. There is no unemployment for them, for they are employed in the business of destruction.

American youth had the same problems. Undoubtedly they had the same temptations to take the road of violence and destruction. But fortunately for the future of our democracy, they were made of a firmer stock, and

they found a leadership devoted to building a better life for all within the framework of democratic government.

While the youth of other nations were being regimented in their activities, with opportunities for free employment and free education restricted, the United States, under the leadership of President Roosevelt, embarked on a program designed to expand the services for employment and education offered to youth instead of restricting them. The Civilian Conservation Corps was established early in the present administration to give employment to youth whose activities had been confined to tramping the streets or roaming the open road. Then on June 26, 1935—6 years ago today—the National Youth Administration was established. Its purposes were to give employment to youth who were out of school and unemployed, and to give work to students who were still in school and in need of funds to continue their studies.

The value of this program can never be computed. Over one and a half million unemployed youth were given jobs and new opportunities during the first 5 years of the N. Y. A. One million seven hundred and fifty thousand students were given work which enabled them to earn the money necessary for them to remain in school. This very year 473,277 students in 30,118 American high schools and colleges were enabled to continue their education through part-time employment on the N. Y. A. student work program. N. Y. A. has meant a great deal to these youth. It has turned despair into hope; it has opened doors that once were closed; it has brought opportunity in the place of disappointment; it has given eager youth a chance to work and learn.

If we were to eliminate from our consideration the other manifold contributions of the National Youth Administration to national defense, the improvement of the morale of unemployed youth in making democracy real to them, would warrant its being placed in the highest rank of defense agencies. When the call to service comes, it will receive a ready answer from these thousands of young men and women whose faith in democracy has been renewed and whose courage has been strengthened.

From its establishment down to May 1 of this year the National Youth Administration has spent $8,627,367 in the State of Alabama to provide new opportunities for Alabama boys and girls. Of this sum $2,344,286 went to students in our high schools and colleges, giving hundreds of youth an opportunity for greater educational advancement than would have been possible if there had been no National Youth Administration. That these students have been worthy of the interest of our Government is demonstrated by the fact that they have maintained scholastic records superior to the average of their fellow students.

This very month of June 4,200 students are graduating from 1,385 schools and 26 colleges and universities in Alabama who would have been unable to complete their education without the part-time work provided by the N. Y. A.'s student work program. Six million two hundred eighty-three thousand and eighty-one dollars have been expended on the out-of-school work program, furnishing employment to approximately 50,000 Alabama youth in the past 6 years.

We now have 38 resident work centers employing 1,954 youth and 3 new centers are under construction. There are in addition 63 workshops employing 2,538 youth. In both these shops and resident centers Alabama youth are getting experience in jobs related to defense industries. N. Y. A. is also assisting in the development of vocational education in rural areas by constructing farm shops. Nineteen of these have already been completed and 25 additional ones are in the process of construction. In these farm shops, which are connected with the local school systems, rural youth in Alabama will gain experience of a vocational nature which is much needed in our present emergency.

The success of the N. Y. A. program both in its national-defense and in its youth-serving aspects must be measured by the number of youth whom it prepares for places in industry and who subsequently do find those places. The statistics are striking. During the 5 months December 1940 through April 1941, 151,949 young men and women left the rolls of the National Youth Administration in the country to take jobs in private industry. At least 50,000 of these received jobs in manufacturing industries which are directly or indirectly related to national defense. In the 4-month period December 1940 through March 1941, 1,546 Alabama N. Y. A. youth received jobs in private industry. These young people are now employed turning out iron and steel to strengthen our defense arms, building aircraft to guard the skies, manufacturing radio equipment to maintain communications with our farthest outposts north and south, east and west, building ships to carry the life-sustaining flow of supplies to the valiant defenders of democracy in other continents, and in a thousand other ways working to make our Nation stronger.

When we are thinking of these statistics let us not lose sight of the individuals. Behind every figure of these placements in industry there is a youth. It may be the boy who discovered while on N. Y. A. that he liked to work with machines and who, because he found what he wanted, has a good job in a ship-repair plant. It may be the girl who worked on an upholstery project, and now is employed by an automobile company to do the work for which she is fitted. Every figure is the story of a youth who has learned how to work, whose way in the world of business is more sure because he has had experience, and who is a citizen ready and willing to be of service to the country which gave him his opportunities.

The National Youth Administration has carried on a great work. The results of its activities will be felt for many years to come as its finest products—the youth themselves—take their places in American life as workers and as citizens. We will see as the years roll on that our money and our effort was well spent in giving American youth an opportunity to achieve a better life within the framework of our democracy.

In closing, I wish to address a word to you young men and women present here today who are employed by the National Youth Administration: You and your supervisors in N. Y. A. have worked faithfully and well. Almost every community in our Nation can point to tangible benefits which have come as a result of the National Youth Administration. In working you have added to your skills. You have new talents to offer your future employers. I congratulate you on your achievements, and I know that you yourselves are filled with the just pride that comes from a job well done. There is much for which we should be thankful; there is much with which we are highly pleased. But the job is not yet completed. We must not now rest on our laurels. You and I and every loyal American has a job to do in the defense of America. Let us each put the best we have within us into that job. Do not be content with less than the best. If we do that much—you on your N. Y. A. projects and later on in your jobs in private industry, the rest of us in whatever position in this emergency we may fill—God willing, this Nation of ours will survive the threatening tempest, and democracy will stand unbowed.

My Reply to Secretary Knox

EXTENSION OF REMARKS

OF

HON. CHARLES W. TOBEY

OF NEW HAMPSHIRE

IN THE SENATE OF THE UNITED STATES

Thursday, July 24, 1941

ADDRESS OF HON. CHARLES W. TOBEY

Mr. TOBEY. Mr. President, I ask unanimous consent to have printed in the RECORD an address delivered by me over the Columbia network on July 16 last.

There being no objection, the address was ordered to be printed in the RECORD, as follows:

I speak tonight particularly to the fathers and mothers of America.

Near the end of my term as Governor of New Hampshire I visited the veterans' hospital at Bedford, Mass, to make a personal call on the New Hampshire World War veterans among the several hundred mental cases in that institution.

Our reception committee was a brass band, made up of mentally sick veterans, doing their best to play the national anthem. It was a pathetic sight. Those shell-shocked patients, who 13 years before had been fine specimens of American manhood, the pride of loving parents, and who had left their homes, their wives, their children behind them on a venture into the hell of war on the European Continent, on the promise—on the promise, I tell you—that the statesmen, the world politicians, would make the world safe for democracy and would see to it that there would be no more wars in the world.

We went from bed to bed in that veterans' hospital, and when I came out into the open air again, mightily moved by what I had seen, I made a solemn vow to Almighty God that if any future attempt should be made to launch my fellow men on an expeditionary force into another European war I would crack it, and crack it hard.

Since the outbreak of the present war I have kept faith with that solemn vow, and so long as I have the strength to carry on I shall strike out at the continual sinister moves of those so-called leaders who seem bent on involving us in the ruinous, drawn-out death struggle in Europe, Asia, and Africa.

It is high time to speak frankly. The interventionist leaders of the Nation are using subtle propaganda, deceit, and misrepresentation to push the American people into the war. Someone has defined a lie as the intent to deceive; and in this crucial hour deception, rather than truth, is the weapon used by the warmongers to steal the minds of the people.

On October 30, in an appeal for votes for reelection, the President addressed the people of the Nation from Boston. The highlight of his message was the following promise: "And while I am talking to you fathers and mothers, I give you one more assurance. I have said this before, but I shall say it again and again and again, your boys are not going to be sent into any foreign war. They are going into training, to form a force so strong that by its very existence it will keep the threat of war far away from our shores. The purpose of our defense is defense."

And on November 2, he definitely said, "Your President says this country is not going to war."

Fathers and mothers of America, that assurance could not have been more definite—could not have been made any stronger—by any use of the English language. The people believed him. Relying on that assurance, they reelected him. We demand that he keep those promises.

Yet in the face of these assurances, the Secretary of the Navy, Mr. Knox, has, with the consent of the President, declared for immediate warfare by our naval forces, in direct violation of his promises before the Senate Naval Committee when he sought confirmation. On that occasion, he testified that he was opposed to any steps by the United States Government, which would involve this country in the war. He further testified that he would not go to war under any circumstances. On the strength of those promises, the Senate voted to confirm him. But now those promises have gone with the wind.

On this record of broken faith with the people of America, I say that this is truly a solemn, sad, and crucial hour in our Nation's history. There is great need in America right now of a revival of common honesty and integrity.

Mothers and fathers of America, let us get together and make the only kind of promise that cannot be broken—a collective promise to each other, that we will do everything within our power to keep America out of the battlefields and oceans of Europe, Asia, and Africa. Let us promise each other to work and arm America so that our shores will be impregnable to the combined forces of a war-torn and war-devastated world.

Any interventionist who says that we of America, 130,000,000 strong, with a productive capacity greater than all Europe combined, cannot make our shores impregnable must admit, by the same reasoning, that we are far from ready to launch ourselves onto the battlefields abroad with any hope of overcoming the highly mechanized armies of Europe. And yet they would have us do just that.

On July 7 General Auchinleck, commander of British forces in the Middle East, urged the United States manpower as necessary to win the war on Germany's own soil. He was following the advice given many years ago by Winston Churchill in his book, who said, "Nothing will bring American sympathy along with us so much as American blood shed in the field."

Of his interview with General Auchinleck, the New York Times correspondent wrote as follows: "If America adopts a status of active belligerency, she must prepare to wage war on the Continent of Europe compared to which our expeditionary force of 1917-18 was an Elks' picnic. * * * She must be prepared not only to enter on a grand scale but quite possibly to bear the brunt of it. This time, in all probability, we shall not go into the existing battle line as we did in the nick of time in the last war. Quite probably we shall have to make our own landing somewhere in the Eastern Hemisphere, for, as Auchinleck said and Wavell indicated, the war can really be won only in Europe and probably only in Germany."

As pointed out by the well-known writer, Bill Cunningham, stripped of all romantic language it would result in permitting the British Army to revert to the status of home guards, while we send our richest blood on the highly questionable task of shooting out a landing place somewhere in Europe and launching, unaided and at tremendous loss of life, a desperate expedition at the end of the longest and most dangerous lines of supply in the history of the world's military endeavors.

It would mean fighting and dying and paying out billions on a venture costly in blood and with direful results. That is the picture, and that is what the interventionists and false promisers are heading us into.

It is an unnecessary, unpardonable, reckless scheme. I say this because it is obvious to those who have studied the situation, that Hitler has built up so many hates in Europe that he will never be able to untangle the potential fifth column against him, which exists throughout Europe, should he live a thousand years.

Each new conquest—each new country he invades—only weakens him and hastens his downfall. He cannot turn his back on the people of Europe and Russia and threaten the United States. And economically, as testified by Bernard Baruch, Germany, not the United States, will be the loser of an economic struggle for world trade, even though she wins the war in Europe.

For the administration to launch the people of America into the war would be an act of reckless and criminal disregard of the interests and lives of the people. In addition to the promises made to keep the people out of the war—in addition to the moral aspect of the case, I cite the editorial of the New York Times of July 3, which reads as follows:

"The evidence mounts that all is not well with the national-defense program. Our military reporter, Hanson Baldwin, finds that after a year of expansion and preparation, the United States is still months away from adequate combat efficiency. Not a single division is yet ready for war. In many cases the unfit are in positions of responsibility.

"None of our four armored divisions has as yet received a single new medium tank. There is not today a single Army dive bomber available. Ammunition shortages are still acute. This report is confirmed in many particulars from high quarters."

The simple truth is that we are far from prepared to go to war. As has well been said: "If anything calls for us to keep out of the war now, it is just this unpreparedness; can we not recall the experience of France and England, in launching unprepared wars?"

I sincerely want Britain to win and I detest Hitler and his philosophy. Let us give England all aid possible, but I am under conviction that the best interests of the American people demand that America stay out of this war. We should be governed by self-interest on this issue. Great Britain has demonstrated time and again that this policy of self-interest governs her every move. Because of self-interest Britain sacrificed Czechoslovakia to Germany. She egged on Poland to fight Germany, by empty promises of aid; she did the same to Belgium and France, to Rumania, Yugoslavia, and Greece—one after the other. Because of Great Britain's self-interest she has now blockaded the people of Greece, who recently repeated the heroisms of their ancestors in the passes of Thermopylae.

Today the Russians are dropping bombs on the defenseless civilians in the cities of little Finland. Do you recall the lip service which the President paid to the people of Finland when Russia did this earlier in the war? But today, what does he say? On July 11 Mr. Roosevelt sent a message to the Soviet Government in Moscow. I quote from his message: "The American people are bound with strong ties of historic friendship to the Russian people. It is, therefore, only natural that they are observing with sympathy and admiration the valiant struggle which the Russian people are waging at the present time in self-defense. On behalf of the Government and people of the United States, as well as on my own behalf, I thank you for your friendly greetings. I extend best wishes for yourself and for the welfare and success of the Russian people." End of quotation from the President's message.

Small comfort for brave little Finland in that message.

Our Nation has just observed Independence Day, the anniversary of the signing of our Declaration of Independence. The fundamental provision of that declaration is that governments derive their just powers from the consent of the governed, the people.

Therefore, people of America, write the President and Congress of your convictions. Demand that we shall not enter upon a shooting war without the people's representatives in Congress voting thereon.

Let him who swore to preserve, protect, and defend the Constitution keep that oath, by first securing the consent of Congress, which has the sole power under the Constitution to declare war. That way lies national unity.

In conclusion, I use the closing words of a recent speech of Herbert Hoover:

"Here in America today is the only remaining sanctuary of freedom, the last oasis of civilization, and the last reserve of moral and economic strength. If we are wise, these values can be made to serve all mankind.

"My countrymen, we have marched into the twilight of a world war. Should we not stop here and build our defense while we can still see? Shall we stumble on into the night of chaos?"

God forbid!

A Die-hard Defender of Judicial Sabotage

EXTENSION OF REMARKS

OF

HON. ALBEN W. BARKLEY

OF KENTUCKY

IN THE SENATE OF THE UNITED STATES

Thursday, July 24, 1941

EDITORIAL FROM PHILADELPHIA RECORD

Mr. BARKLEY. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an editorial from the Philadelphia Record entitled "A Die-Hard Defender of Judicial Sabotage."

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

[From the Philadelphia (Pa.) Record]

A DIE-HARD DEFENDER OF JUDICIAL SABOTAGE

Until William M. Hargest, president-judge of the Dauphin County Common Pleas Court, was elected last June the Pennsylvania Bar Association had a long-standing rule against judges serving as officers of the association.

In the light of Judge Hargest's intemperate tirade against Federal and State administrative agencies in his speech at the annual convention in Bedford it seems demonstrated that the bar should not have broken its rule.

Hargest deplored modern trends in government. Forgetting the complete failure of the courts in the good old days to protect consumers, he denounced the various Federal and State administrative boards, such as the utilities commission, I. C. C., Federal Power Commission, and other regulatory bodies created to protect the public from unrestrained exercise of monopolistic power.

In the old days it was much nicer. A corporation-controlled judiciary would simply grant injunctions when corporations wanted them, approve interminable delays, and uphold whatever rates the utilities wanted—and the public had to like it.

Today it doesn't work that way. As Public Utility Commissioner Richard J. Beamish points out in his forceful statement resigning from the bar association and denouncing Hargest:

"We now have in the administrative agencies power to impose temporary rates upon companies that seek to delay justice to consumers. Through the Federal Reserve Board banking has been stabilized; through the insurance clauses of the National Banking Act deposits are secure; through the Interstate Commerce Commission rebating by railroads and chiseling by truck companies have been curbed; through the Securities and Exchange Commission Wall Street and piratical holding companies are being curbed; through the Federal Power Commission cooperating with the Pennsylvania Public Utility Commission, the manipulations of Hopson and his gang have been exposed and their practices abolished. You pass over all the good that has been accomplished by these agencies to take a crack at young lawyers who are used as examiners in investigations by these bodies."

There is the story in a nutshell.

These regulatory agencies were created because the courts, Federal and State—and notoriously the courts of Pennsylvania—failed to protect consumers and taxpayers, and behaved precisely as one would expect corporation lawyers to behave when put upon the bench.

Judge Hargest's own court is probably the most notorious example of an obstructive judicial agency that we can bring to mind. Its record is enough to curl the hair. His Dauphin County court is on record as having—

1. Delayed operation of the Pennsylvania Pawnbrokers' Act for 2 years, by use of the injunction, at a cost of $2,000,000 to borrowers;

2. Killed the law creating a 44-hour workweek in Pennsylvania;

3. Blocked, by injunction, the full-crew bill;

4. Blocked, by injunction, the liberalized Workmen's Compensation Act put through by the Earle administration;

5. Blocked transfer of Byberry to the State;

6. Blocked a State probe of an alleged gasoline monopoly;

7. Lent itself to the notorious political inquisition into the Earle administration, which ended as a complete fiasco.

We could name other instances of shocking behavior by Judge Hargest's court. But these samples should be enough to refresh the memory and to show exactly that kind of judicial obstruction, delay, and political influence which discredited this court and nullified the public usefulness of so many other courts.

It was only after the courts had failed in so many instances; only after the United States Supreme Court tried for years to plant itself in the path of progress, that our regulatory agencies were created.

They were created to protect a helpless public from being gouged by monopoly, the lawyers of monopoly, and the courts of monopoly. And that very pressure has had much to do, since, with improving the personnel of the courts themselves, and leading most of them to march forward with the times.

Not so Judge Hargest. The Dauphin County court remains one of the few strongholds of special privilege in these parts, and Judge Hargest remains one of its few champions.

We are glad to see Commissioners Beamish and Buchanan telling the judge off. He had it coming to him. It is unfortunate that the really important applause for his attack will be confined to Tory dinner tables.

One way to judge judges is by those who cheer them.

Veterans' Statistics

EXTENSION OF REMARKS

OF

HON. JAMES E. VAN ZANDT

OF PENNSYLVANIA

IN THE HOUSE OF REPRESENTATIVES

Thursday, July 24, 1941

Mr. VAN ZANDT. Mr. Speaker, many of us are under many misconceptions as to the extent of our Nation's expenditures on behalf of its veterans and their dependents, currently and as to past years.

Mr. Millard W. Rice, national service director for the Disabled American Veterans, recently compiled some statistics, which he secured from the Veterans' Administration, the War Department, the Navy Department, the Treasury Department, and so forth, which are so illuminating that I feel they will prove of interest to my colleagues:

I am sure that some of you have been of the impression that the Federal expenditures on behalf of veterans constitute a very substantial sum, but I want to point out that during the current fiscal year it will approximate only about 2½ percent of all Federal appropriations, and probably a much smaller percentage before the year is over. Since the inception of our Nation, expenditures on behalf of veterans have constituted only about 13 percent of all Federal expenditures of nearly $200,000,000,000, of which more than three-fifths has been incurred directly for preparation against or for war, participation in war, and to provide for the human aftermath of war.

Less than 9 percent of all living World War veterans receive any Government compensation by reason of service-incurred disabilities, and 60 percent of them receive less than $40 per month compensation, whereas more than 80 percent of them receive less than $60 per month compensation.

Less than 10 percent of all living World War veterans receive any kind of monetary benefits from the Federal Government.

World War veterans are now dying at the rate of 103 per day, Spanish War veterans at the rate of 24 every 24 hours, and Civil War veterans at the rate of 3 a day.

Although the average age of World War veterans is now about 48 years, it is interesting to note that there are nearly 766,000 who have not yet reached the age of 45, and there are only slightly more than a million who have passed the age of 50.

Although more than 200,000 World War veterans were wounded during their active service, only 77,772 are now receiving any compensation from Uncle Sam because of such wounds.

The compilation by Mr. Rice is as follows:

VETERAN STATISTICS AS OF JUNE 30, 1941

4,057,101 served in Army, 2,059,629 overseas.

596,073 served in Navy and 104,066 in Marine Corps, about 50 percent overseas.

24,234,021 registered for the selective draft.

2,810,296 were inducted after draft selection.

250,240 were discharged from the draft after being called.

10,250 Army men were dishonorably discharged.

130,128 total deaths.

39,362 were killed: 37,568 Army, 1,454 marines, and 340 Navy.

14,009 died of wounds: 12,942 Army, 1,008 marines, and 59 Navy.

53,371 were combat deaths: 50,510 Army, 2,462 marines, and 399 Navy.

75,460 died of diseases: 69,446 Army, 701 marines, and 5,313 Navy.

1,297 died of other causes.

201,325 wounded, not mortally: 193,611 in Army and 7,714 in marines.

349,779 World War veterans—less than 9 percent of all—receive compensation for service-connected disabilities: 32,455 on temporary partial ratings, 1,514 on temporary total ratings, 282,322 on permanent partial ratings, and 33,488 (9.57 percent) on permanent total ratings.

27 percent of all service-connected disabled World War veterans receive less than $20 per month compensation; 46 percent less than $30; 60 percent less than $40; 66 percent less than $50; 81 percent less than $60; 91 percent less than $100; and only 8.8 percent receive compensation of $100 or more, an average as to all of $39.71 per month ($39.77 year ago).

72,333 World War veterans receive pensions for permanent total non-service-connected disabilities of $6 (single men in facilities) or $30 per month.

37,926 disabled Regulars were receiving pensions averaging $31.90 per month (only $31.48 year ago).

1,560 Civil War veterans were receiving pensions.

1,955 Indian war veterans were receiving pensions.

152,591 Spanish-American War veterans were receiving pensions (Philippine Insurrection and Boxer Rebellion) averaging $55.90 per month ($54.96 a year ago).

2,617 emergency (including 5 provisional) World War officers were receiving retirement benefits, also 4 retired Reserve officers (Public, 18, sec. 5, 76th Cong.).

161,107 service-connected death claims have been allowed; 96,491 are now active, providing pensions for 29,478 widows, 31,462 children, and 77,885 parents at an average monthly payment of $46.65 per case.

21,903 deceased World War veterans who died by reason of some disability other than their service-connected disabilities, provide pensions for 18,527 dependent widows and 32,104 children at an average monthly payment of $35.31 per case.

60,589 deceased Spanish-American War veterans provide pensions for 58,148 widows, 7,451 children, and 328 parents, a total of 65,927 dependents.

3,836 deceased Indian war veterans provide pensions for 3,798 widows, 68 children, and 10 others, a total of 3,876 dependents.

43,313 deceased Civil War veterans provide pensions for 41,279 widows and 2,211 children, a total of 43,490 dependents.

107 widows of Mexican War (1848) veterans receiving pensions.

1 deceased War of 1812 veteran provides pension for 1 daughter.

251,761 veterans received hospital treatment during the last fiscal year, of whom only 26,141 were for service-connected disabilities.

57,988 persons were in hospitals on June 30, 1941, of whom 12,825 were veterans with service-connected disabilities.

51,838 were World War veterans, of whom 10,829 were service-connected, 40,731 non-service-connected, and 278 observation cases; 3,301 were other war veterans; 2,849 disabled Regulars, 38 allied veterans, 127 C. C. C. and W. P. A. employees; and 90 miscellaneous.

34,257 were neuropsychiatric patients, 18,691 general medical and surgical patients, 4,758 were tubercular patients and 535 observation and non-V. A. not classified.

30,724 veterans were admitted for domiciliary care last fiscal year; 13,926 remaining on June 30, 1941, of whom 12,831 were World War veterans (12,134 non-service-connected).

80,596 beds—61,849 hospital and 18,747 domiciliary—in 91 Veterans' Administration facilities.

2,570 beds in other Government hospitals (Army, 705; Navy, 995; Public Health Service, 790; and Interior Department, 80).

39,097 veterans were under guardianship.

4,121,543 veterans and dependents have applied for adjusted compensation involving $3,766,840,086.74.

4,500,000 World War veterans applied for war-risk insurance, involving $39,000,000,000.

613,320 Government life-insurance policies were in force with face value of $2,567,154,350.

356,789 national service life-insurance policies in force, with face value of $1,159,296,000.

766,476 World War veterans were then less than 45 years of age, 2,102,566 between 45 and 50, 1,068,447 between 50 and 60, 3,241,322 more than 45, 1,138,756 more than 50, 70,309 more than 60, and 25,688 more than 65.

4,007,798 living World War veterans now constitute about 3.18 percent of the total population and about 4.7 percent of total adult population of the United States.

$579,693,162 appropriation to Veterans' Administration for year ending June 30, 1941, is only about 2.5 percent of all Federal appropriations for year.

$24,706,700,000 has been expended because of relief to veterans and their dependents since Nation was founded, which, however, is only about 13 percent of the grand total of all Federal expenditures of about $198,000,000,000, of which more than 60 percent was incurred directly because of preparation against or for war, participation in war, and to provide for the aftermath of war.

Age and death rate in 1941

	World War	Spanish-American War	Civil War	Indian War
Average age of all veterans in 1941	48	66	96	81
Average age of widows on rolls in 1941	47	62	79	
Average age of emergency officers in 1941	53			
Estimated number of veterans dying per day in 1941	103	24	3	1

National Morale of Vital Importance in Modern War

REMARKS

OF

HON. ROY O. WOODRUFF

OF MICHIGAN

IN THE HOUSE OF REPRESENTATIVES

Thursday, July 24, 1941

Mr. WOODRUFF of Michigan. Mr. Speaker, in olden days armies went out to do battle either offensively or defensively and lived and maintained themselves very largely as they traveled except for a base of supplies such as ammunition, rifles, cannon, and so forth. The populace generally had comparatively little to do with the business of fighting. The armies usually foraged and lived on the sections through which they marched, ravaging the countryside like locusts.

In those days, military commanders recognized the vital necessity of a high morale and a high state of esprit de corps among the soldiers. What the populace thought about the war made comparatively little difference in the military outcome.

In modern war, armies operate through airplanes, trains, ships, motorized transports, sometimes hundreds of miles away from their bases, and hundreds of miles over or in the interior of the countries with whom they are at war. Modern warfare is no longer a matter of an army in uniform on parade with flying banners and blaring bands. It is unromantic science, technology, and machinery. Therefore, all the populace, all of the people, men, women, and children, because of employment in necessary industries and the bombing of the cities and those industries, are just as much in the war, and are just as much a part of the fighting forces of their country, as are the uniformed soldiers, whether those soldiers be uniformed in gaudy colors or drab overalls.

It has, therefore, become a matter of vital importance that the morale and the esprit de corps of the citizens in general be kept at as high a point as that of the actual soldiers themselves.

The first objective of modern war strategy is to suddenly and quickly crush the morale of the people behind the army. If that can be accomplished, the army has no base of operations to fall back on and its cause is lost.

All of these things being accepted facts, and vital facts, among the best military strategists today, it becomes a matter of grave import as to the effects upon the morale of the American people, which may be wrought by continued broken promises, inconsistencies, contradictions of policy, concealments of mistakes and motives, and the employment of hair-splitting technicalities and "weasel words" to fool the people step by step into a shooting war in which they want no part.

It makes no difference whether it is the term for which the conscriptees and the National Guard shall be held in service, or the progress of airplane production, or the concealment of the sending of troops to Iceland, or the secret building of bases in Ireland and Scotland.

All such moves hurt national morale. The people feel that they are entitled to know the truth from their Government. The administration and its political strategists may think they are getting away with something clever, but the fact is that, blow by blow, and step by step, this sort of thing breaks down the public morale and must, if persisted in, eventually destroy the confidence of the people in the administration. When that point is reached, if it ever is, in this country, the morale of the people will be gone, the esprit de corps of Americans will be damaged or destroyed, and any war would be lost before we went into it.

The President of the United States is, by virtue of his office, Commander in Chief of the armed forces of the Nation. In time of national peril the President is supposed to rise entirely above all political or personal feelings and to think and work and act only for the best interests of all the Nation. If the people of the United States get the fixed idea their President is playing politics, or trying to force through some new social theories under the guise of a national preparedness, or if the people become convinced New Deal political bureaucrats or strategists are utilizing the war and national preparedness for personal or political purposes, the damage to the national morale might well become irreparable.

Gen. Hugh S. Johnson has time and again referred to the strategy of New Deal politicians and bureaucrats as being "too damned clever," and some of us in Washington are beginning to wonder if this cleverness may be "too damned clever" for the security of the country.

Every clear-thinking person must realize that it is vitally important for all the people to have unbounded confidence not only in the Commander in Chief of the armed forces and the military and naval leaders, but they should have the same degree of confidence in those civilians who are placed at the head of important work, like Harry Hopkins, Sidney Hillman, and others engaged in equally as important functions. Thomas Jefferson was right when he once said:

> In a government like ours it is necessary to embrace in its administration as great a mass of confidence as possible by employing those who have a character with the public of their own and not merely a secondary one through the Executive.

Having mentioned Thomas Jefferson, it might be well for us to also remember that he said:

> I have ever deemed it fundamental for the United States never to take active part in the quarrels of Europe. Their political interests are entirely distinct from ours. Their mutual jealousies, their balance of power, their complicated alliances, their forms and principles of government are all foreign to us. They are nations of eternal war. All their energies are expended in the destruction of the labor, property, and lives of their people. On our part, never had a people so favorable a chance of trying the opposite system of peace and fraternity with mankind, and the direction of all the means and faculties to the purposes of improvement instead of destruction. * * * I do sincerely wish that we could take our stand on a ground perfectly neutral and independent toward all nations. * * * After plunging us in all the broils of the European nations, there would remain but one act to close our tragedy—that is, to break up our Union. * * * I hope we may still keep clear of them, notwithstanding our present thralldom, and that time may be given us to reflect on the awful crisis we have passed through and to find some means of shielding ourselves in the future from foreign influence, political, commercial, or in whatever form it may be attempted. I can scarcely withhold myself from joining in the wish of Silas Dean—that there were an ocean of fire between us and the Old World.

We must guard, and guard well, the morale of the American people, and to do that we must maintain—and merit—the confidence of the people in the administration. Only the administration can do that.

The Cloakroom

EXTENSION OF REMARKS

OF

HON. WILLIAM P. LAMBERTSON

OF KANSAS

IN THE HOUSE OF REPRESENTATIVES

Thursday, July 24, 1941

Mr. LAMBERTSON. Mr. Speaker, I am ashamed of the feeble stand I have taken for peace.

The generals do not want to let the boys return home, for they have given them so little that they are ashamed of it.

It is reliably reported that two American companies of private enterprise have recently bought aluminum from England.

To Hades with the Roosevelt-Willkie foreign policy which will destroy us, win or lose. Attention William Allen White: This is not partisan.

At a picture show I had to see four fat-headed Russian generals decorated by their Henry Stimson, and the propaganda was paid for by our taxpayers.

The Chief wants selectees for the duration of the emergency. The emergency will last as long as F. D. R. is President, and he will be President as long as he can.

There is only a very remote possibility that Germany will take us some day, but for the present we are under another foreign power. Our flag is always accompanied now.

They are planning on taking the 24,000 employees in the War Department from the 17 buildings they now occupy to a new plant, within a year, on 67 acres next to Arlington. The Department and the cemetery should snuggle.

We passed a $7,000,000,000 bill Thursday for Army-Navy-maritime deficiencies in 2 hours, and the Senate will debate for 30 days on a tax bill half as large, which the House committee has worked on 4 months. Where is sense?

Whether the selectees are kept or released is not the important question. The real issue is, Shall we add the cloak of congressional constitutional sanction to the thin-iced emergencies declared by another branch for 2 years? If they win, it is a green light.

Proposed Federal Communications Commission Investigation of Newspaper Ownership of Broadcasting Stations

EXTENSION OF REMARKS

OF

HON. EARL C. MICHENER

OF MICHIGAN

IN THE HOUSE OF REPRESENTATIVES

Thursday, July 24, 1941

STATEMENT OF POSITION OF THE DETROIT NEWS

Mr. MICHENER. Mr. Speaker, on August 20, 1920, the Detroit News founded the first commercial broadcasting station, WWJ, and this station has operated daily since then. WWJ is outstanding in its field and is greatly appreciated, especially by the people of Michigan and surrounding territory.

In response to a request from the editor of Editor and Publisher for a statement of the position of the Detroit News, with respect to the proposed Federal Communications Commission investigation of newspaper ownership of broadcasting stations, they submitted a statement and, pursuant to permission granted me to extend my remarks in the RECORD, I submit that statement, which is as follows:

> It seems to the Detroit News that the Federal Communications Commission has an obligation to the public to see that radio stations are operated in the public interest, and that naturally entails its seeking assurance of the responsibility of those seeking licenses to operate. As the founder of the first commercial broadcasting station WWJ which we have operated daily since August 20, 1920, we ask for nothing more than a dispassionate examination of our record of service for 21 years including our pioneer efforts toward the development of broadcasting in ultrahigh frequency, and more recently in the frequency modulation fields. The traditions of ethical journalism are wholly harmonious with the Commission's purpose to see that radio operates in the public interest, convenience, and necessity. We could ask no better witness than the competitive stations in our own area and the public we have sought so diligently to serve. The original intent of the Detroit News in entering the radio field was to further reliable methods of communication as a natural step in the advancement of journalism, and increase our service to the public. To this end we operated our station for 5 years without accepting any revenue of any kind from any source. It is now, as always, our aim to maintain those standards of integrity in advertising which characterize not only good stations but good newspapers, and to put the public welfare and interest ahead of profit at all times. It would seem to us fundamentally unjust to judge any applica-

tion for a new license or the continuance of an old one on any other basis than the good character, fitness, and responsibility of the individual applicant.

Stop Hitler From Sending His Spies Here—Close the Door Against European "Isms"

EXTENSION OF REMARKS
OF

HON. A. LEONARD ALLEN
OF LOUISIANA

IN THE HOUSE OF REPRESENTATIVES

Thursday, July 24, 1941

ADDRESS OF HON. A. LEONARD ALLEN, OF LOUISIANA, BEFORE THE NATIONAL COUNCIL, JUNIOR ORDER OF UNITED AMERICAN MECHANICS, AT THE ANNUAL NATIONAL SESSION HELD IN WASHINGTON ON JUNE 17, 1941

Mr. ALLEN of Louisiana. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following address delivered by me before the annual national session of the National Council, Junior Order of United American Mechanics, at the annual session held in Washington June 17, 1941:

Mr. Chairman and gentlemen, I am glad to have the opportunity of addressing you. I am glad because I realize that I am talking to an organization of red-blooded, true Americans. I have known something of your fine, patriotic order and of your very high and noble purposes. I am honored, therefore, this evening by your kind invitation.

We are facing what is probably the most critical time in the history of our country. You have heard that before. It is no news to you. Some of you may know more about it than I do.

I came here at your kind invitation primarily to discuss with you the question of immigration. I will necessarily have to be brief. In this day of chaos and world strife, when nation is arrayed against nation, the question of immigration presents a serious problem. It has always been a serious problem but it is more serious now than ever because of the existence of widespread national and international treachery. In our country here we have citizens who believe that the door should be shut against aliens from Europe for the present, and those who believe that we ought to let the Europeans come in freely. I readily admit that I belong to that group that believes that we ought to close the door for the time being at least. In other words, I am a restrictionist. I am not antialien but I am pro-American. I have no hatred against anybody or any group, but I have a deep devotion for America and her institutions and I do not want to see anything done at this time that might in any manner endanger our country.

A few days ago you read statements in the papers attributed to high officials in the Government to the effect that America should continue to be the asylum for the oppressed peoples of Europe. You hear it said that we are all the sons of immigrants—that we all got here somehow and from somewhere. They use that as an argument that we should continue to hold the door open to those of other lands who wish to come here at this time.

The fact that most of our ancestors came from Europe certainly is no argument that we should receive Europeans with open arms now. Conditions have changed. Europe is filled with distrust, hate, and fear. It is the breeding place for every sort of ideology and philosophy contrary to our American concepts of government. Those who come from such surroundings certainly bring with them their own preconceived ideas and philosophies, and many of them strive to propagate them in America. I would not argue that all of them come for such purposes. Unquestionably some of them come with the best of motives, but can we afford at this critical time to take a chance on those who come with a wrong motive? Now, back to the argument that America should be the asylum of the world. That is a fallacy. It is a fallacy because, unquestionably, we cannot take care of all of the oppressed peoples of Europe. Europe is exploding. The fires of hate and oppression have been kindled all over Europe. Hundreds of millions of people are oppressed. It is ridiculous, therefore, to contend that America can be the asylum of these people. We sympathize with those who are oppressed, who do not enjoy our liberty, but we cannot relieve the situation, and I am unwilling to endanger the peace, happiness, and security of a hundred and thirty million Americans by taking the chance at this time of admitting the hordes from Europe, some of whom certainly would be "fifth columnists" and Quislings. Away with that slogan that America should be the asylum of the world. It will not work now. Some contend that it is contrary to the fundamental principles of America to place restrictions on immigration. Since when did it become un-American to try to guarantee to a hundred and thirty million Americans the right to be free from the infiltration of "isms" from Europe? I am reliably informed that Hitler is sending men here now to America with the instruction that they must report to him what they see and hear. In some cases members of their families are held as hostages, so to speak, and those who come here under such circumstances are compelled to report to Hitler or their loved ones will suffer. How can anyone say that we should not stop them from coming here? Do you remember a few days ago, when the British left Greece and went to Crete and the press reported that the very boat that carried the British to Crete carried also some so-called refugees who were supposed to be running away from Hitler? The same news dispatch informed us that when these British got to Crete these same refugees who went with them changed in a moment and became "fifth columnists." In these days of treachery how can we know what an immigrant's real position is? How can we know what his real motives are?

A few days ago we read in the papers of ships coming from France to the island of Martinique in the West Indies. These news accounts told us of how the water was strewn with letters and papers which many on board, fearing detection, had thrown into the water.

My friends, we should certainly beware of those who come from Hitler-dominated regions. I repeat, we have no way of knowing whether Hitler sent them or not. We do know that he sent them to Norway, that he sent them into France, and that he sent them into Greece and other countries. This is a time when we should be on guard. Let every man take his stand today for America. Some of us on Capitol Hill are waging a fight to keep those from coming here who might cause us trouble. We need your help and your cooperation. We intend to continue the fight because we are fighting for America.

The records show that we have received over 10,000 visitors this year. Our danger at the present time is not so much from the quota immigrants. Our danger lies chiefly, in my opinion, in those who came in as visitors and they are coming every day. Those in that class as a rule are the intelligent ones, who are in most cases highly educated and capable of deceiving. We read in the papers a few days ago where a famous German visitor, supposed to be a German businessman, who had been in this country for several months, turned out to be, according to reports, one of Hitler's chief agents. There was secured from the State Department a few days ago a list of a thousand people who have come in recently. Mind you, this is only about one-tenth of those who have come in this year as visitors.

Listen to this partial list: In this 1,000 there were 90 classed as journalists, writers, and authors. Can you imagine the type of journalist, writer, or author that we would now get from Russia or Germany or France, all dominated by Hitler and Stalin? In the list there are 32 attorneys and lawyers. I think we have no need for them here. There are listed 25 professors and teachers; 70 artists, art dealers, and lecturers; 15 physicians and doctors; 8 social workers, and so on. Can you imagine the type of social worker that we would expect to get out of Russia and Germany now? They tell us that they are particular about the type of people they let in. Well; this same list includes 40 under the heading "No information." In other words, in that group they admit that there are 40 persons concerning whom they have no information. Can anyone argue that it is safe now to admit from Stalin's domain, Hitler's domain, and other sections dominated by them, these journalists, writers, authors, teachers, professors, social workers, and so forth? I do not believe that our American schools need these European teachers now. I do not believe we need these European doctors, these social workers, and others. My friends, this infiltration from Europe is going on. I repeat that we should be on guard.

A few days ago Col. John Thomas Taylor, national legislative representative of the great American Legion, came to me and told me of a situation which he considers alarming. He revealed to me how England had taken into custody certain foreigners at the outbreak of the war in 1939; how England considered these foreigners dangerous to her own safety and sent a part of them to Canada and other places. Some 2,500 of these people that England considered unsafe to run at large were sent to Canada and Canada also considered it unsafe to give them their freedom. Colonel Taylor learned of a diabolical scheme to bring these persons interned in Canada into the United States. I introduced a bill, H. R. 4873, to prevent that. As usual, certain interests, who delight to welcome the hordes from Europe to our country, are fighting this bill. We do not say that all of those persons interned in Canada are bad, but it is safe to conclude that some of them are bad and we take the position that if England considered them unsafe for her, and if Canada considered them unsafe for Canada, in the name of common sense we have no business taking a chance on letting them come into our country.

I have recently introduced another bill, H. R. 4861, dealing extensively with this question of immigration. The American Legion and other patriotic groups are behind it also. I have just been informed that your splendid organization has endorsed both of these bills which I have introduced, and I want to thank you for it and I appreciate the fact that you have taken this forthright stand. This latter bill undertakes to regulate the conduct of aliens in the United States and to deport where possible. It further undertakes to keep undesirables from Europe out of this

country. It does not exactly stop immigration completely, although I would like to see that done for a while at least.

In passing I wish to mention another bill, H. R. 3, which is known as the Hobbs bill and which in its present form is very dangerous. A part of that bill meets my entire approval, but a great portion of it is bad. It would go far to destroy our quota system. That bill is being opposed by the American Legion and other patriotic groups, and I am happy to know that your fine organization is included in that list of opponents.

My friends, we are still fighting. We are fighting against odds. We are fighting against great influence. Great pressure is being brought to bear now to cripple our immigration laws and admit the peoples of Europe. Let us stand with America and for America. Let us stand against Hitler, Stalin, Mussolini, and their agents. In the name of America and all of the people of America let us not take a chance on further infiltration of undesirables from Europe. We must carefully watch the "fifth columnists" who are here, and we ought to make it impossible for any more of them to come in. That is our job. I implore all Americans to be on the job and help to protect this country.

Letter of Thomas Jefferson

EXTENSION OF REMARKS

OF

HON. WILLIAM G. STRATTON

OF ILLINOIS

IN THE HOUSE OF REPRESENTATIVES

Thursday, July 24, 1941

EXCEPPT FROM LETTER TO GEN. THADDEUS KOSCIUSKO

Mr. STRATTON. Mr. Speaker, under leave to extend my remarks in the RECORD, I include a portion of a letter written by Thomas Jefferson to Gen. Thaddeus Kosciusko. At that time, as today, the world was torn with war and bloodshed. The following words of Jefferson are worthy of serious consideration in this present trying hour, when the passions and excitement of war threaten to overcome common sense and the interests of the American people.

EXCERPT FROM THOMAS JEFFERSON'S LETTER DATED APRIL 13, 1811

But when we see two antagonists contending ad internecionem, so eager for mutual destruction as to disregard all means, to deal their blows in every direction regardless on whom they may fall, prudent bystanders, whom some of them may wound, instead of thinking it cause to join in the maniac contest, get out of the way as well as they can, and leave the cannibals to mutual ravin. It would have been perfect Quixotism in us to have encountered these Bedlamites, to have undertaken the redress of all wrongs against a world avowedly rejecting all regard to right. We have, therefore, remained in peace, suffering frequent injuries, but on the whole multiplying, improving, prospering beyond all example. It is evident to all that in spite of great losses, much greater gains have ensued. When these gladiators shall have worried each other into ruin or reason, instead of lying among the dead on the bloody arena, we shall have acquired a growth and strength which will place us hors d'insulte. Peace, then, has been our principle, peace is our interest, and peace has saved to the world this only plant of free and rational government now existing in it.

The Negro Discriminated Against in Our National Defense Program

EXTENSION OF REMARKS

OF

HON. ARTHUR W. MITCHELL

OF ILLINOIS

IN THE HOUSE OF REPRESENTATIVES

Thursday, July 24, 1941

RADIO ADDRESS OF HON. ARTHUR W. MITCHELL, OF ILLINOIS

Mr. MITCHELL. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following address, which I am making over the radio today:

In the first session of the Seventy-fourth Congress, early in the year of 1935, I introduced several bills which had for their purpose the improvement of race relations in this country and the securing for the Negro the same rights and privileges enjoyed by American citizens of other races. Among these bills was H. R. 5733, a bill to create an industrial commission on Negro affairs. The purpose of that bill was stated in section 4, which reads as follows:

"That the duties of the Industrial Commission on Negro Affairs created by this act shall be to study the economic conditions of the Negro; to study the labor problems in which the Negro is fundamentally interested; to stimulate and encourage thrift and industry among the Negroes of this country; to promote the general welfare of the Negro in industrial pursuits, and to encourage his general uplift; to work out plans looking toward the solution of the different problems confronting the Negro race of the United States; to consider all questions pertaining to the Negro that may be referred to said Commission by any department of the United States Government; and report a suggested solution of any and all problems that may be presented to the Commission by any officer of the United States, the Governor or attorney general of any of the States, or labor department of any State in the United States; to recommend what may be necessary for the stability of labor in the different States; to discourage subversive doctrine and propaganda; to work toward the formulation of a policy for mutual understanding and confidence between the races; to report to Congress through the President of the United States all their acts and doings; and to make such recommendations for the solution of any problem or problems affecting the Negro that they may deem advisable."

I have reintroduced this bill in the Seventy-fifth, Seventy-sixth, and Seventy-seventh Congresses. It is now before the Judiciary Committee of the House and is know as H. R. 109. As early as June 18, 1935, the Judiciary Committee held rather extensive hearings on this bill but has never reported the bill out for the consideration of the Congress. Sometime during 1935 I had a conference with the President of the United States in which we discussed at some length the provisions of this bill and the necessity of its passage, and the far-reaching effect it would have in the general improvement of the status of the Negro as an American citizen. With this as a background, it is not difficult for anyone to understand that the major effort which I have made as a Member of the Congress of the United States during the past 7 years has been to bring about a larger degree of justice, economic opportunity, and civic recognition for America's largest minority group, the Negro.

I am deeply gratified at the action of the President of the United States in his order of June 25, 1941, which provided for the appointment of a Committee on Fair Employment Practice. This, as everyone must know, is only one of the many provisions of my bill, the passage of which I have urged over a long period of years, and which bill should have the endorsement of every American citizen believing in fair play for American citizens. Who can say that this bill is asking too much of a nation leading the fight for genuine democracy for the world? At present, we are making a desperate effort to create and maintain stronger friendship and better relations with South American countries so as to protect democracy in the world. It is my candid opinion that our task in this connection is made most difficult because of our failure to practice these very principles among ourselves, and to extend the proper recognition and justice to the Negro who is an American citizen, living in this country and performing every duty imposed upon him by the Government, and whose loyalty to this Government has never been questioned and cannot now be questioned.

At this very moment when this country is straining every nerve and fiber to prepare itself for defense against subversive doctrines and activities; calling loud and long for workers in every field, the Negro is not included except in the most limited way. Let me state briefly the results of a survey recently made on the employment status and practice of employment by large industries and factories in the manufacture and production of our material and defense equipment.

J. H. Kindelberger, president of the North American Aviation, Inc., announced to the Kansas City Star, March 1941, that Fairfax Bombing Plant, which North American Aviation, Inc., will operate at Kansas City, Kans., would not use any Negro skilled workers, no matter what his ability or training. This announcement was made despite the fact that Negro freeholders had voted 4 to 1 for bond issue to purchase property upon which the plant was to be built.

Vultee Aircraft Corporation in California informed all applicants and Negro organizations that employees in their plant would have to be of the Caucasian race only.

Baldwin Locomotive Co., of Philadelphia, flatly refused to consider hiring Negroes in the tank-production work, despite the fact of an acute shortage of labor in the plant. White workers are being recruited from all parts of the Atlantic coast. They are also taking 40 white defense trainees every month but are refusing to accept any Negro trainees at all.

Fairchild Aviation Corporation, of New York, announced through its personnel manager that they are not at all interested in employing Negroes and that they will not employ any Negro workers in the plant. About 900 workers are now being employed and they will employ two or three hundred more in the next month. The personnel manager stated that they would only employ Negroes if the law made them do it.

Glenn L. Martin Co., of Baltimore, has employed about 18,000 workers in the last few months and has flatly refused to hire Negroes. Mr. Martin himself stated recently before the Tolan Committee that if he put any Negro workers in the plant the white workers would quit immediately. This statement is refuted by the fact that in the Edgewood Arsenal located near the Glenn L. Martin plant Negroes comprise 12.5 percent of all

employees. Both races work well together in that plant. Mr. Martin's plant will eventually hire 40,000 workers, and he stated that none of them will be Negroes.

This survey disclosed further that the following international unions bar Negroes through constitutional bans, thus preventing their employment in any industry dominated by these unions:

Airline Pilot Association, A. F. of L.
Brotherhood of Railway Clerks, A. F. of L.
Brotherhood of Railway Car Men, A. F. of L.
Brotherhood of Dining Car Conductors, Railway Brotherhood.
Grand International Brotherhood of Locomotive Engineers—Railway Brotherhood.
Brotherhood of Railway Firemen and Engineers, Railway Brotherhood.
Railway Mail Association, A. F. of L.
International Organization of Masters, Mates and Pilots of America, A. F. of L.
Switchmen's Union of North America, A. F. of L.
Order of Railway Telegraphers, A. F. of L.
Train Dispatchers Association of America, Railway Brotherhood.
Brotherhood of Railroad Trainmen, Railway Brotherhood.
Railroad Yardmasters of America, Railway Brotherhood.
Wire Weavers Protectors Association of America, A. F. of L.
Order of Railroad Conductors, Railway Brotherhood.
Brotherhood of Sleeping Car Conductors, A. F. of L.
Commercial Telegraphers Union of North America, A. F. of L.
International Brotherhood of Blacksmiths, Dropforgers, and Helpers, A. F. of L.

Could these conditions exist in a real democracy? I point to this defect in our present democracy as being the weakest point in our fight for world democracy. While I am interested in the spread of democracy to all parts of the world, I do not see how we can afford to overlook and to neglect the important matter of setting our own house in order, so that no one can point to the beam in our own national eye while we engage in removing the mote or beam from our brothers' eye.

Crossing Over Delaware River Near Wilmington, Del.

EXTENSION OF REMARKS
OF
HON. PHILIP A. TRAYNOR
OF DELAWARE
IN THE HOUSE OF REPRESENTATIVES

Monday, July 21, 1941

Mr. TRAYNOR. Mr. Speaker, on July 21 the House passed without one dissenting vote H. R. 5110, providing for a vast defense roads program, and as a member of the Roads Committee I was more than glad to be able to give this measure my support. I wish to congratulate our able chairman of that committee, the Honorable WILBURN CARTWRIGHT, for his efficient and capable handling of the bill.

On July 7 I introduced H. R. 5250, providing for the creation of a Wilmington, Del., bridge authority, to construct and maintain a suitable crossing over the Delaware River near Wilmington.

Delaware has needed a high-speed crossing for years, but recently, with the increase in traffic and with national defense being uppermost in the minds of all, it is especially desirable at this time to proceed with all possible haste to erect a suitable crossing to take care of the traffic demands that are now so urgent, particularly in Delaware, the Delmarva Peninsula, points south, and the southern part of New Jersey, as well as the northern Jersey points and New York City. The enabling act which I have introduced, seems to be the most feasible method by which this crossing can be accomplished. The legislation is designed to protect the public and within a given number of years, the crossing, whether it be a bridge or a tunnel, will be given back to the joint States, New Jersey and Delaware, free of encumbrance. Provision is made in the bill to take care of any existing facilities and so far as can be seen by experts, the legislation is very desirable.

As a member of the Roads Committee of the House of Representatives, I feel that this crossing will fit in very well with the program of strategic highways provided for in H. R. 5110, our national-defense program. It will give this area a vital crossing which can be used to quickly transport convoys of men and equipment from one State to another.

Recent large-scale movements of troops and equipment from northern camps to southern maneuvers resulted in unusual and unnecessary delays, account of there not being sufficient crossings in this particular area.

A recent report indicated that the present bridge facilities in the Philadelphia area must be heavily taxed with traffic. The more than 7,000,000 vehicles crossing this bridge in 1926 are now to be matched against the nearly 15,000,000 of the fiscal year, 1940–41, the best year in the history of the span. With the important assistance of hindsight, it is now possible to judge how conservative were the views of even the rosiest optimists on the utility of the Delaware River Bridge. In comparison, I feel that there will be more to tell of the filling of a great necessity by the construction of a crossing in the Wilmington area.

A Superhighway System

EXTENSION OF REMARKS
OF
HON. VIRGIL CHAPMAN
OF KENTUCKY
IN THE HOUSE OF REPRESENTATIVES

Thursday, July 24, 1941

ADDRESS OF HON. BUTLER B. HARE, OF SOUTH CAROLINA

Mr. CHAPMAN. Mr. Speaker, under leave to extend my remarks, I am including a very timely and interesting address delivered by the Honorable BUTLER B. HARE, Representative in Congress from South Carolina, at a meeting of representatives of chambers of commerce, civic and automobile clubs of Ohio, Kentucky, Tennessee, North Carolina, and South Carolina, in Knoxville, Tenn., July 18, 1941:

Mr. Chairman, there is sufficient evidence at hand to justify the thought and conclusion that this country has been marked for invasion by the organized and combined world leaders of those forces of government which have long hungered and fought for the destruction of democratic systems of government; that they have made their plans, arranged their programs, and are reported to be on their way.

More than a year ago we were told by military experts and those in our executive departments who are in a position to form fair and definite conclusions that there was a pressing necessity for inaugurating a large and increased national-defense program. We were told that such a program was indispensable; that we should have a two-ocean Navy, a greatly enlarged Army, an almost unlimited air corps, and that there was also a great necessity for better and enlarged transportation systems throughout the Nation. My remarks this evening will be confined to the last-mentioned phase of the suggested program, and in this I shall not go into any great detail but will endeavor to confine my discussion of one outstanding century-old proposal.

In case of an attempted invasion of this country the necessity for an efficient transportation system in our national-defense program approaches in importance the need for any other military facility; and from a military standpoint we are probably more deficient in adequate transportation facilities than in any other defense unit. So far less attention has been given to this matter than to any other phase of our defense program.

This is not a criticism, for I am not saying we have made a mistake by giving priorities to other units or other facilities, but, on the contrary, I think we have acted well and wisely so far, but since the groundwork is approaching completion and the preparation for other military facilities are well under way and approaching the peak of construction and production it is highly important that our attention be directed to putting our transportation systems in military order.

I know it is contended by some that we are in little or no danger of invasion and that expenditures for increased transportation facilities are unnecessary. We all hope they are correct in their guess, and if we were certain about it there would be no necessity for much of the expenditures in our defense program, but since we are not absolutely certain and since we are laboring under the necessity to make ample preparation for defense we insist that our transportation systems should be enlarged and improved, particularly our highway systems.

With the rapid recurring events in Europe within the past 18 months, it is now easy to vision that if the Nazi Powers continue to succeed in their program, and the contemplated invasion of the Western Hemisphere becomes a fact, the assembling or maneuvering grounds for our Army, Navy, and air forces will be found in the South Atlantic and Gulf States, and if the assembling process should become necessary at any time within the near future we feel that our present transportation facilities in this section are totally inadequate to cope with such an emergency, and to await the arrival of this emergency with the information now before us without taking any action would be almost suicidal. In an attempted analysis of the pictures before us we were reminded about a year ago that this is not the first time in history when the thought or threat of invasion aroused the apprehensions and fears of our national and business leadership and forced them to a similar conclusion.

Following the war of 1812 when increased interest arose out of a careful study of the operations of the American and British Navies in that conflict, our political as well

as military leaders felt that in case of a future conflict with any of the European nations the South Atlantic seaboard would not only be the scene of conflict by the navies but would be the battling ground between the contending armies and they were firmly impressed of the great military necessity for better transportation systems leading from the granaries of the Midwest to the South Atlantic States. They considered the matter sufficiently important to warrant the construction of such a system at public expense.

Therefore, the suggestion of a super-transportation system between the two sections is not a new proposal. It is a century or more old. The value and wisdom of the propcsal was recognized by President Jackson in 1832 when he designated Army engineers to assist in making preliminary surveys of several proposals with this same objective in mind. It is reported that a number of routes to provide adequate transportation between the two sections were considered but study and investigation revealed that instead of crossing the Allegheny Mountains it would be advisable to go farther south where a system could be constructed with shorter mileage and at less expense.

It was agreed that probably the most feasible route would be from Cincinnati, Ohio, by way of Knoxville, Tenn., Walhalla and Columbia, S. C., to Charleston, S. C.

Both military and business experts considered the proposal as being essential for the proper defense of the Southern and Midwestern States in case of an attack or invasion by armed forces. They felt it would enable them to be better prepared in securing the necessary materials in the manufacture of munitions and implements of war, in supplying coal and equipment to our Navy, and in the transportation of an army from one section of the country to another.

Following the appointment of an Army engineer a tentative survey was made from the mouth of the Nolichucky River in Tennessee through the Blue Ridge Mountains by way of Walhalla, S. C., to the head of the Congaree River made by the confluence of the Saluda and Broad Rivers at Columbia, S. C.

Robert Y. Hayne, a former United States Senator and Governor of South Carolina, manifested a great deal of interest and enthusiasm in the proposal from the standpoint of both national defense and commercial development of the entire country. In discussing the proposal November 4, 1832, he is reported to have said:

"The period has arrived when the work can no longer be neglected without a criminal supineness and fatal disregard of our own best interests as well as the duties which we owe to ourselves and to posterity."

The first great national economic depression in 1837 seems to have been responsible for delayed action on the part of the Government. However, it is interesting to observe that while the States and the Federal Government were slow in completing the project as a military necessity, those who saw the commercial value of the proposal practically captured or appropriated the idea and proceeded to inaugurate plans to construct a road with private capital. A company or corporation was soon formed and a charter obtained proposing the construction of a railroad from Maryville, Tenn., to Columbia, S. C., connecting with other transportation systems at each terminus, the estimated cost being placed at $11,884,046. The road was surveyed and most of it graded both east and west of the Blue Ridge and Great Smoky Mountains territory, all but about 80 miles being actually built and put into operation.

Twelve or thirteen small mountains were to be tunneled, 1 or more of which were partially completed, and about two-thirds of the 5,800 feet through solid granite in what is known as Stump House Mountain was completed before the project was abandoned at the beginning of the Civil War. The distance remaining to be constructed proceeds west from Walhalla, S. C., across the Blue Ridge Mountains through what is known as Rabun Gap, down the Little Tennessee River toward Knoxville, Tenn., to Maryville.

Apparently, representatives of the Federal Government were very much interested in this proposal, and there is little doubt but what a substantial grant would have been made had it not been for the panic of 1837 and the local opposition based upon the ground that it would be an unwarranted invasion upon the rights of the States. Some of the local newspapers violently opposed the suggestion that the road should be built by the Federal Government, even though it was admitted to be of great military and commercial value to the country.

Their attitude is well illustrated by an editorial which appeared in the Athenian, published at Athens, Ga., March 17, 1829. I quote:

"The South has thus far kept aloof from all participation in the pecuniary gifts and loans of the Federal Government; our hands remain untainted with these indirect bribes; we have always opposed them when extended to others upon principle; and we are sorry to see agents from South Carolina, men of standing, members of the legislature, knocking at the doors of Congress, and with cap in hand begging a portion of the Treasury scraps. Still more should we regret to see them succeed. We know the language held by pliant politicians on such occasions, that while these good things are going we might as well take our share. This is bad reasoning and will produce bad consequences. It is admitting by our acts what we deny by our words, the power of Congress to make such grants. And it will be a most pernicious example to our younger sisters of the South. If we hope ever to bring Congress to a rigid adherence to the letter of the Constitution and prevent them from assuming every power by construction, we should abstain from all participation in the unholy thing, and instead thereof steadily assert our principles and show by our example what we really believe and wish to establish, what we are contending for."

Looked upon from the standpoint of local commercial value, this view may have been well taken, but from the standpoint of internal improvement or national defense I do not know of any reason why such a project could not be sponsored by the Federal Government, particularly at this time when Congress has only recently said to the world that we intend to uphold and if necessary defend the Monroe Doctrine. A study of the map in the light of present world conditions removes every doubt as to the necessity and wisdom of immediate and favorable consideration of this proposal; that is, if the Congress meant what it said a few weeks ago when it adopted a resolution reasserting the Monroe Doctrine, it is no time to back-track or quibble about making the preparation necessary to execute this purpose.

If it becomes necessary to defend the Monroe Doctrine, our South Atlantic coast will certainly furnish the rendezvous for our military activities, the loading place for naval supplies, the storehouse for every implement of war, and there should be no delay in providing transportation facilities that will mean shorter mileage by both land and sea to the scene of operations, for speed, distance, and direct transportation are vital factors in any defense program.

Some of the many reasons that may be assigned in support of this project as an aid to national defense we submit as follows:

1. It will facilitate the transportation and concentration of the many essentials in wartime to the South Atlantic ports that will be indispensable should an attempt be made to attack the United States through the countries south of us—and our military experts are saying that if attacks are made they will come from that direction.

2. It will afford easier access to those sections of the country where, on account of climatic conditions, our soldiers are trained in peacetime and would be assembled in wartime.

3. It will afford better connection with the textile and munition plants, the iron and steel plants, the munitions factories, and storage plants in both the South and Midwest areas.

4. It will in time of war furnish quick service in the delivery of coal, iron, etc., to plants engaged in the manufacture of munitions, war implements, etc.

5. The territory immediately adjacent to the project furnishes most desirable locations for underground storage places for fuel oil, gasoline, tin, manganese, rubber, and other materials used in the manufacture of explosives and other war essentials.

6. It will be an outlet for the transportation systems of the interior to the South Atlantic seaports from which South America and the Panama Canal Zone will necessarily be served in case of war, particularly if air and naval bases are to be established and developed on nearby possessions recently obtained from England.

7. It will furnish a right-angle route from the interior to the navy yard at Charleston, the marine barracks at Parris Island in South Carolina, the ports at Savannah and Brunswick, Ga., the increasingly large air base at Pensacola, and other ports on the Gulf coast.

8. It will mean that all the steel mills, munition plants, airplane factories, packing plants, grain elevators, cheese factories, garment factories, and other industrial or military enterprises between the Allegheny and Rocky Mountains on the one hand and the T. V. A. and the Great Lakes on the other will be from 200 to 300 miles nearer the southeastern seaboard—the base of concentration of our every military agency, including the Army, Navy, and Air Corps—should this country become involved in the war we are now trying to obviate or are preparing to meet.

9. In addition to facilitating transportation, the suggested superhighway could easily be made a further vital factor in the defense program by having runways or landing fields thereon at points varying from 10 to 15 miles apart so as to accommodate the landing or taking off of any type of airplane. The terminal of this highway should, of course, be on the Atlantic coast and some central point in the interior, probably Charleston, S. C., on the coast and Cincinnati, Ohio, in the interior, and possibly extending northwest from there to Chicago and St. Paul and northeast to Cleveland or Buffalo. Such a highway will be a dependable outlet or feeder from the industrial center of defense industries to the assembling ground of defense implements.

10. Press reports say that if the invasion of Britain does not come this fall or winter, it will come when and if Germany manages to smash the railroads and highways to be used in bringing men to the scene of attack, showing that the transportation facilities in Britain today is one of its great military assets.

In addition to the reasons already submitted in support of the proposal, it should be said that a great deal of work has already been done in the Blue Ridge Mountains between Walhalla, S. C., and Maryville, Tenn., in the way of constructing fills, excavating tunnels, and installing culverts, and we might suggest, in passing, that some of these tunnels should afford excellent sites for underground munition plants and storage of war materials, explosives, etc.

Proceeding from Walhalla to Charleston, S. C., the proposed route parallels the Savannah River, only a few miles distant, for about 150 miles and passes near Clarks Hill, where Army engineers and other govern-

mental agencies have recommended the construction of a dam for flood-control and power purposes, and when the dam is completed there will be sufficient power for any war industries that may strategically be located nearby. The system would be equally near the inexhaustible kaolin deposits found in Tennessee, western South Carolina, and eastern Georgia, which would be of unusual strategic military value should it at any time in the future become necessary to obtain aluminum from such deposits for use in the construction of airplanes, for it is quite conceivable that the present source from which 60 or 65 percent of aluminum material is obtained in French or British Guiana may no longer be available and we would then be forced to obtain aluminum from kaolin or other sources.

Furthermore, the proposed route would pass through the T. V. A. area where a number of defense industries are located; it would pass through the heart of the textile business of South Carolina—an industry of extreme importance in case of war or in the preparation for defense; it would pass within sight or a few miles of the recently constructed Buzzard Roost power project at Greenwood, as well as the power plant on Lake Murray, near Columbia, and the Santee-Cooper power project now under construction between Columbia and Charleston, S. C., all of which go to emphasize the strategic military value of this proposal.

This proposal was submitted nearly a year ago to the President of the United States for attention and consideration. In his report several weeks later he stated that the matter of studying the relationship of highways to the national defense had been submitted to the general staff and so far no recommendation had been made for this particular road. However, he concluded by saying:

"While I have no doubt that a superhighway connection such as you propose would be a meritorious project and contribute much to the national good, I am sure you will agree that under existing conditions our efforts should be concentrated on work certified by their proper authorities as of primary importance."

I thoroughly agree with the President's conclusion and have so indicated, but in view of the fact that the defense matters which have been given priority are well under way, we are of the strong conviction that this proposal should now be certified as one of the pressing projects in our defense program.

Several plans have been suggested by which funds may be obtained and the project constructed, but as I have already spoken too long, I will not detain you further by attempting to outline or discuss them. I would suggest, however, that a committee or organization be perfected to study, devise, and present ways and means to the proper officials in charge of our national-defense program for further determination.

Definition of "Security" Under Securities Act of 1933

EXTENSION OF REMARKS

OF

HON. GEORGE A. PADDOCK

OF ILLINOIS

IN THE HOUSE OF REPRESENTATIVES

Thursday, July 24, 1941

Mr. PADDOCK. Mr. Speaker, H. R. 5065, which I introduced a few days ago, will beneficially affect many thousands of American workingmen, and hundreds of corporations, situated in each of the 48 States.

This bill amends the definition of the term "security" under the Securities Act of 1933, in order to make it clear that interests of employees under certain employee-benefit plans are not securities and subject to the exacting and expensive requirements of registration with the S. E. C.

There are two types of plans which fall within the express language of this amendment. First are trusts which form a part of employers' stock bonus, pension, or profit-sharing plans and which meet the requirements of section 165 of the Internal Revenue Code. This section grants tax advantages to such trusts, and in order to qualify for those advantages a trust must be part of a plan for the exclusive benefit of some or all of the employees, and the trust assets must be so kept that they cannot be diverted to any purpose other than for the exclusive benefit of participating employees. Contributions to the trust may be made by both employers and employees. A provision similar to the present section 165 was first included in the Federal Revenue Act in 1921 for the purpose of encouraging such plans, and since that time there has been continuous congressional favor shown toward plans of this character.

The second specific exclusion from the definition of "securities" covers employees savings account plans. A good many corporations have permitted employees to build up savings accounts by regular salary deductions. Under these plans the employer, in order to encourage and reward thrift, guarantees principal and interest, and employees may withdraw the whole or any part of the amount on deposit upon demand.

It is not believed that either trusts under section 165 or savings account plans involve the issuance or sale of securities under a proper interpretation of the Securities Act of 1933. Neither the language of the act nor the intent of Congress supports the view that employees participating in such plans are buying securities. Many plans of both kinds were in operation at the time of the adoption of the Securities Act, and many more have been put into operation since that time. Yet for at least 5 years it did not apparently even occur to anyone, either in industry or in government, that there was any need for registration of such plans as securities.

About 2 or 3 years ago, however, the Securities and Exchange Commission evolved the theory that such plans were investment contracts and a few employers were approached with requests for registration. There has been uniform disagreement with the interpretation placed upon the act by the Commission, although several such plans have now been registered in order that controversies with the Commission might be avoided.

A number of the leading proponents of the principle of profit sharing have continued to resist the requests of the Commission, firm in their belief that these plans do not involve any issuance or sale of securities nor any public offering thereof. These companies further believe that the cause of profit sharing and of pension or retirement programs, which have been so long fostered and encouraged by our Federal Government, will be dealt a serious blow if they are to be subjected to the needless and expensive burden of registration under the Securities Act of 1933.

It is not my desire nor intention to judge the merits of this controversy insofar as the language of the present act is concerned. It is, however, important to remove the doubt and uncertainty which now exists. It is certainly not the wish of the many reputable concerns operating these employee benefit plans to violate the Securities Act. Yet they hesitate to use the funds, which would otherwise go to employees in the form of pensions or retirement incomes, to compile and print lengthy and involved registration statements and prospectuses which they believe would serve no useful purpose. On the other hand, the Securities and Exchange Commission undoubtedly will welcome a clear expression of congressional will so that it may be certain that it is correctly administering the law.

There are two basic reasons why I believe, Mr. Speaker, that these employee benefit plans should be specifically excluded from the requirements of the Securities Act. First, such exclusion is in harmony with the will of Congress as expressed in other legislation. Second, and most important, there are no benefits in registration comparable with the serious burdens and substantial expenses involved. It should be worth while to consider each of these points in turn.

Reference has already been made to section 165 of the revenue act and the 20 years of congressional approval and encouragement of profit sharing under that section. Mention should also be made of the study and report of the subcommittee of the Senate Finance Committee which so thoroughly investigated profit sharing under Senate Resolution No. 215. Most direct evidence of congressional intent is found, however, in the terms of the Investment Companies Act of 1940. This law, which was intended to expand the regulatory power of the Securities and Exchange Commission, expressly excludes employees' trusts under section 165 of the Revenue Code from the definition of "investment company." An examination of the Investment Companies Act discloses that there would be much more reason for including these employees' trusts under that act than there would be for bringing them under the Securities Act of 1933. It seems hardly conceivable that in view of this legislative history there could have been any intent to include these employees' trusts as securities under the 1933 act. The form of the amendment proposed in this bill has been adopted almost exactly from the exclusion of the same type of trusts from the Investment Companies Act. Thus there is reason to adopt this bill in the interest of uniformity.

There is also some interesting legislative history with regard to savings account plans. Section 21 of the Banking Act of 1933 imposed certain obligations upon the business of accepting deposits. A question arose as to whether that section applied to employee savings account

plans. In 1935 an amendment was adopted to make it clear that such employee-benefit plans were not covered and did not need to submit to examination and publication of reports of condition. The report of the Committee on Banking and Currency stated that—

> Hundreds of corporations * * * permit employees to leave part of their wages on deposit * * * so as to encourage thrift.

Fear was expressed that employers would abandon such plans if required to submit to the requirements of the Banking Act. It does not seem reasonable that Congress could have intended these plans to be subject to the even more burdensome requirements of the Securities Act of 1933. Thus this bill, which is intended to make it clear that these savings account plans do not fall under the terms of the Securities Act, is in harmony with prior legislative action under the Banking Act.

While uniformity of legislation on the same subject matter is of importance, this bill must stand or fall primarily on its own merits. In view of the undoubted desire of Congress to encourage these employee-benefit plans, and in view of the substantial expense which would result if registration is necessary, the sole question would seem to be whether such registration is necessary for the protection of employees.

In my opinion, registration of these plans would add nothing of real value. Section 165 of the Internal Revenue Code is the result of long experience in the field of profit-sharing, and compliance with the condition of that section should afford adequate protection to participants. No part of the amounts deposited by employees ever reaches the employer's treasury. The trust must also be so set up that neither the contributions of the employer or of the employees can be diverted to any purpose other than for the exclusive benefit of participants. Thus there is no opportunity for misappropriation of the trust assets. Unless the plan contains this protection for employees, it would not qualify for exemption under this bill.

Perhaps of even greater importance is the fact that the only possible value of such plans to the employer lies in the increased good will and cooperation of employees which flows from the operation of a successful employee-benefit plan. The cost to the employer under these plans is great. The money spent cannot be recovered. To produce value the plan must work out to the financial benefit of employees, and must create employee satisfaction. Thus there is neither incentive nor opportunity for defrauding employees. This is not to say that there are not, and will not be, plans under which employers defraud or attempt to defraud their employees. It is to say, however, that such schemes will not qualify for exemption under this bill, as they could not meet the requirements of section 165.

It should also be kept in mind that registration under the Securities Act of 1933 would not give the Commission any regulatory powers over these employee-benefit plans. This act was passed to provide "full and fair disclosure of the character of securities." This is of great value and filled a real need in connection with public offerings of securities. There is no such value or need for registration and issuance of prospectuses in connection with these employee-benefit plans. This is true because it is already an accepted practice for employers to give employees full explanations of plans of this character, in much more understandable form than a prospectus meeting S. E. C. requirements.

There is no case within my knowledge of any abuse by employers in this regard, and consequently no indicated need for corrective legislation. The reason for this is obvious and stems back to the fundamental nature and objective of all such plans, that is, creation of employee good will and satisfaction in their jobs. No employer is going to adopt a plan which employees have the option of accepting or rejecting, without giving them full opportunity to understand the offer. A plan of this character is of value to the employer only if it is sufficiently attractive to induce a major portion of the employees to participate, and if these employees continue to regard the plan as satisfactory.

It is believed this bill meets all the requirements of good legislation. It will eliminate an existing controversy as to the proper interpretation of a present law. It will remove a possible obstacle in the way of employee-benefit plans which have long been in legislative favor. It would be in harmony with existing laws relating to the same subject matter. Finally, it would save great expense for employer or employees, or both, though sufficiently limited in scope to insure protection of employees' interests.

Ochiltree County Wheat Festival

EXTENSION OF REMARKS

OF

HON. EUGENE WORLEY

OF TEXAS

IN THE HOUSE OF REPRESENTATIVES

Thursday, July 24, 1941

ARTICLE FROM OCHILTREE COUNTY (TEX.) HERALD

Mr. WORLEY. Mr. Speaker, I am very glad to direct the attention of the other Members of Congress to the first wheat festival ever held in the United States. This plan, formulated by the people of Ochiltree County, Tex., is unique in that the people are so thoroughly sold on the good that the United Service Organizations are doing that they believe in participating in an actual and concrete fashion by pledging to the U. S. O. one bushel of wheat for every man, woman, and child in that county. Ochiltree County has long been known as one of the most important units in the world's "bread basket" and as a county of 100-percent native-born white Americans. Because of these unique facts, and because I am justly proud of the patriotic spirit of these fine American people, I take pleasure in calling this festival to the attention of the Members of Congress and their constituents by presenting an account of the affair which appeared in the July 3, 1941, issue of the Ochiltree County Herald:

[From the Ochiltree County (Tex.) Herald of July 3, 1941]

With band music blaring, wheat threshing on Main Street, 13 beautiful aspirants to the crown of "wheat queen of the world," and the main address by E. B. Germany, United Service Organizations director for the States of Texas, Oklahoma, Arkansas, and Louisiana, broadcast from Perryton over the entire Texas State network, Ochiltree County's first wheat festival held Saturday was a grand success. The unique feature of the festival, the pledging of 4,213 bushels of wheat, 1 bushel for every man, woman, and child in Ochiltree County, to the United Service Organizations, centered the eyes of the Nation on Perryton and Ochiltree County. Donations are now pouring in from the good people of Ochiltree County to fulfill this pledge.

GERMANY LAUDED OCHILTREE

E. B. Germany, Dallas, State chairman of the Democratic Party and regional United Service Organizations director, arrived by plane shortly after noon. He was accompanied by Jay Taylor, eighteenth district United Service Organizations chairman; Cedar Puckett, Potter County United Service Organizations chairman, and Adjutant W. T. Johnson, of the Amarillo Salvation Army.

Mr. Germany was profuse in his praises of Ochiltree County for making the highest per capita donation of any county in the United States. He declared, "Our soldiers have nothing to fear in support from such citizens as yours." He also brought out in his address, which was broadcast over 116 radio stations of the Southwest, the fact that Ochiltree County has the highest percentage of native-born white American citizens of any county in the United States.

The Perryton Equity Exchange, one of the world's largest and most successful cooperatives, owned and operated by the farmers of the Perryton area, bid in the 4,213 bushels of wheat at 90 cents per bushel. L. R. Conner, prominent in farm organization circles auctioned the wheat.

Music for the program and broadcast was furnished by the Perryton Ranger Band, under the direction of Glenn A. Truax. Mayor W. H. Lance presided at the program and introduced Mr. Germany.

Selective Service

EXTENSION OF REMARKS

OF

HON. GERALD W. LANDIS

OF INDIANA

IN THE HOUSE OF REPRESENTATIVES

Thursday, July 24, 1941

Mr. LANDIS. Mr. Speaker, I am opposed to extending the period of service for our selectees while America remains at peace. It is important to morale at home and in camp that the Government should keep faith with the men whom it has conscripted. Congress made a contract with the selectees that they stay in service for only 1 year. Let us keep that contract and let us keep our promises to the American people.

Is this a training program to have our boys ready to defend America or is it a program to police the world by sending an American army to every continent in the world? The people have a right to know the attitude of the administration on this question.

According to the Constitution of the United States, article I, section 8:

Congress shall have power to make rules for the Government and regulations of land and naval forces; to provide for calling forth the militia to execute the laws of the union, suppress insurrections and repel invasions; to provide for organizing, arming, and disciplining the militia, and for governing such part of them as may be employed in the service of the United States, reserving to the States respectively, the appointment of the officers, and the authority of training the militia according to the discipline prescribed by Congress.

Congress should not give up this right. It has already transferred too much power to the President.

If we discharge the selectees at the end of a year's service they can be replaced each month by new draftees. According to information I have received from the national headquarters of the selective-service system, the following number of men were inducted, by months: November, 13,806; December, 5,521; January, 73,633; February, 90,238; March, 153,159; April, 123,207; May, 56,896; June, 79,522. You can readily see that these men can easily be replaced each month without disrupting the present training program.

Canada and Australia do not conscript men for overseas service. Canada pays her men $1.30 per day for home service. Give our boys $40 per month and a guarantee that they will not have to fight on foreign soil and Uncle Sam will have more volunteers than he can handle.

Here in our Republic we lead our people, but under a dictatorship they drive them. Our President should realize by now that he cannot drive our farmers, laborers, and businessmen, and I do not believe that he can drive the young people of America.

The future of America depends upon the youth of our land. They must rekindle not only the fires of patriotism, but there must be a willingness to do the practical things that make a Government strong and enduring.

News From the Training Camps

EXTENSION OF REMARKS

OF

HON. GEORGE A. PADDOCK

OF ILLINOIS

IN THE HOUSE OF REPRESENTATIVES

Thursday, July 24, 1941

ARTICLES FROM THE MESSAGE CENTER, FORT ELISS, TEX.

Mr. PADDOCK. Mr. Speaker, news from the training camps is just as important as news from Washington. The attitude of our soldiers toward their training is as noteworthy as the views of Congressmen on legislation. From all reports, the men in the camps are doing their work with a loyalty, efficiency, and high morale, which may well be an example and inspiration to us, their Representatives.

The Message Center is published by the Two Hundred and Second Coast Artillery, antiaircraft, one of our fine Illinois regiments, now stationed at Fort Bliss, Tex., and commanded by Col. Charles C. Dawes, a veteran of World War No. 1. The Message Center is an excellent newspaper, and from my own 1917 experience at Camp Grant I can appreciate the value to the regiment of such a publication. These quotations from its columns will be of interest not only to Members of the House but also to that large audience of Americans throughout the country who read the CONGRESSIONAL RECORD.

[From the Message Center, Fort Bliss, Tex.]

THE LADIES FROM HEAVEN

We heard them say:

"You look grand, son," and "Sweetheart, you're heavier and harder and handsomer," and "O Bud, we miss you so at home, but, gee, you're looking fine."

They were mothers, sweethearts, and sisters, 300 of them, and they swarmed from a Chicago limited onto a cactus-covered field just beyond the Two Hundred and Second area.

Three hundred women who rode 1,500 miles, yet sprang, fresh and eager, to hug and squeeze their loved ones. Unmindful of the burning sun, not heeding the stares of strangers, asking a million and one questions, and answering them at the same time.

More than 300 soldiers from this regiment were manhandled, or should we say womanhandled, and they loved it. More hundreds stood off to one side and felt lonesome; many rough hands of hard-boiled soldiers brushed mists from in front of their faces; collars were tight on throats that tightened; Adam's apples did flip-flops.

The ladies from heaven, and that's what they were the morning they arrived.

Shortly after the men from the Two Hundred and Second were inducted a women's Two Hundred and Second auxiliary was formed in Chicago, under the leadership of Mrs. Pierce. From the start they planned a trip to Fort Bliss to see their sons. The movement gained momentum. Sweethearts and sisters clamored to come along. They did.

Hustled aboard the huge Army trucks, they were escorted through Fort Bliss, into the city of El Paso, and lodged in comfortable quarters.

After a short rest they eagerly boarded the trucks once more and drove out to the homes of their menfolk. A khaki canvas city on the slope of the towering Franklin Mountains extended them a warm welcome.

Colonel Dawes and his staff were on hand to greet them. One thousand five hundred men stood by to serve their every wish. Cooks worked overtime so that mothers, naturally critical cooks, would have the finest meal they ever had. Men scrubbed and polished everything in sight. They remarked, these visitors, the streets were clean enough to eat from.

Men who have been heard grumbling about the hot Texas sun gladly took part in a regular field meet. They chased the greased pig, they ran potato and three-legged races. They competed in sprints and track events. They played at tug of war. And a more sincere effort to win was never witnessed anywhere.

Immediately after supper they all adjourned to the boxing arena. In the cool of the shade of Mount Franklin these visitors watched the muscular soldiers put on a boxing exhibition to rival any sports arena.

After dark the giant searchlights spread daylight over the area and the women trooped to the recreation hall to see the regimental play, All Bliss and Two Hundred and Two. The play was good. They enjoyed it immensely. They laughed until their sides ached and applauded the soldiers' efforts until their hands were sore. That night they were taken to their quarters by truck. The cool night air was conducive to sleep.

Returning to camp early next morning they arrived in time to see the regimental ceremony. The thrill of a parade was doubled when they watched their "own" march by. The throb of drums counting steps and the bray of brass with its stirring measures brought them cheering to their feet. However, when the colors marched by the atmosphere was charged with something that couldn't be seen—it was felt. It was the women of America at attention.

For the most part Saturday afternoon was spent visiting and shopping in Juarez, Mexico. Saturday evening, another rendition of All Bliss and Two Hundred and Two brought many back for a second time.

Sunday morning several different church services were held for the benefit of those wanting to attend. Later a general service was conducted by Chaplain Cunningham.

Sunday evening came all too soon for most. At the last minute, however, many decided to stay until Thursday, last day of the excursion schedule. For the most part these latter spent the days in between visiting the historical spots of the surrounding country.

In the past, El Paso has been invaded many times. Never before was an invasion so welcomed. Particularly were the officers and soldiers of the Two Hundred and Second elated over the invasion. We hope to have many more of the same nature.

To those of you who were fortunate enough to have guests, those of us who were not so fortunate express our thanks for the splendid hospitality you showed in inviting us to join you in your happiness.

To mothers, especially mothers of the Two Hundred and Second who made this trip possible, we are grateful.

OUR CLUB

Looking just a little like a dumpy old lady from the outside, the A. A. T. C. Service Club belies this first impression when you enter. Consisting of a large common room for dancing, a balcony replete with magazines, writing desks, and innumerable games, like monopoly, chess, checkers, a fine modern lending library of 5,000 volumes, and a first-class cafeteria and soda fountain, it offers the men of the Two Hundred and Second more in the form of relaxation and recreation than anything this side of Chicago.

Under the supervision of Lt. Peter Ball, A. A. T. C. recreation officer, and the able guidance of Mrs. Juanita Pratt, senior hostess, and Mrs. Connie Diehl, recreation hostess, the club is launching a comprehensive program for the entertainment of the men of the six antiaircraft regiments, the reception center, and the Thirty-ninth Brigade Headquarters Battery.

Monday evenings are devoted to special classes in Spanish, English, dancing, and bridge. These classes are open to everyone in this command and all are urged to attend. Should you have a yen for any subject not too individualistic, the hostesses will request the services of a qualified teacher through the Army Recreation Service in town.

Tuesday evenings are the only ones reserved for special parties. This is the time for you to get up that battery dance you've been talking about or join up with two or three batteries for a real blow-out. The hall is free and will be reserved for your group if a week's notice is given. Dinner and supper dances are possible at a nominal cost

through the cooperation of the cafeteria. During such functions the cafeteria is reserved during the serving of meals or refreshments. The Two Hundred and Second Band is always willing to oblige, for a fee, as is the good old battery fund. So pull up your socks and get party-minded. Last but by no means least, the gals are El Paso's prettiest, and, as those of experience will testify, they are plenty pretty.

Wednesday evenings are amateur nights. A different regiment will sponsor the Wednesday evening programs each week, but all are welcome to participate or watch. Whether you make bird calls or do the nigger-toe shag, you'll want to participate to win a handsome prize. And everyone is an amature, despite previous fortunes accumulated on Broadway.

Thursday is the day set aside for harmonizers and shouters. Each Thursday evening a different regiment will conduct a community sing complete with piano accompanist, swing band, or whatever it desires. Words to popular songs will be given out, and from that point on it will be every man for himself.

Friday is casino night, gamblers to the fore. Each man on entering the club that night will be given a certain amount of stage money. From then on it's up to him to pad his wad on horse races, bingo, and a dozen other chance games. The man holding the money at the end of the evening wins a prize.

Saturday night is a night open for suggestions. There will always be a program, but it will not be of any certain type or form. This Saturday, for example, those of us appreciating really top-notch singing by a fine voice will ankle over to listen to Salvador Trivizo, a supporting member of the Metropolitan Opera Co. in New York, who has generously offered his talents to the A. A. T. C. for the evening. Accompanied by Paul Moor, who is a virtuoso in his own right, Mr. Trivizo will offer a varied program—lots of light popular numbers along with your favorite airs. Mr. Trivizo is a tenor.

Sunday gives each regiment in turn the opportunity to show off its band. The weekly concert will start at about 2:30 and will be followed by tea dancing.

At all times an excellent juke box is available to jitterbugs and dream dancers alike with a frequent change of records. Ping pong tables are on hand for experts and those who only think they are. Bats and balls can be had by applying to the hostesses or to Willy, the ever helpful caretaker.

It's our service club and with its attached guest house where mothers, fathers, and relatives can stay for 50 cents per night, it offers us a real rendezvous where we can find a home away from home.

If you know where you can find more, let us in on it.

They Should Be Retained

EXTENSION OF REMARKS

OF

HON. CLIFFORD DAVIS

OF TENNESSEE

IN THE HOUSE OF REPRESENTATIVES

Thursday, July 24, 1941

EDITORIAL FROM THE MEMPHIS COMMERCIAL APPEAL

Mr. DAVIS of Tennessee. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following editorial from the Memphis Commercial Appeal of July 16, 1941:

[From the Memphis Commercial Appeal of July 16, 1941]

THEY SHOULD BE RETAINED

The decision as to whether the National Guard, Reservists, and selectees are to be retained in military service beyond their original year has now been placed squarely up to the Congress.

Viewing the situation in all its realities, it seems incredible that any decision other than that of retention could be reached.

To release the categories mentioned would be to dissipate two-thirds of the present Army—none too large numerically—at a time when none can predict what terrible thing is going to occur within the next 24 hours.

Unpleasant as the situation will be for selectees and their parents, there are some realities which must be faced.

The transition from a state of nonbelligerency to that of all-out war can occur at any moment, a transition which might require far greater trained manpower than is now available.

The question of use of guardsmen and selectees beyond the Western Hemisphere has been momentarily sidetracked, but the question of using Regulars in possible battle sectors remains alive if never mentioned. Trained men would have to take up the jobs and posts left vacant by regular combat troops.

Selectees now in service are nowhere near trained to a point where they could be turned into the Reserve pool. They are not trained sufficiently for many reasons, not the least of which is the fact that those who were to train them—Reserve and National Guard officers—required further training themselves, needed a stepping up in their zeal, and a vast improvement in their own efficiency. The Army has not yet been able to rid itself of the incompetent officer class. It has not undergone the thorough shaking-down process it requires. Coming maneuvers have been designed for that purpose.

The Army has not had, does not have, the equipment it needs. For that the Nation can thank lack of foresight, lack of coordination, and the obstructive tactics in planning and production.

It can thank, in a large measure, those obstructive labor groups which have promoted strikes in defense industries on the theory that self-interest comes ahead of the national weal and security.

That's not a pleasant thought for selectees in service, but truth is not always pleasant.

Should the Congress refuse to retain the National Guard, for instance, the movement of National Guard troops out of Hawaii would have to start on August 15, due to deficiencies in the shipping situation. Japan is making some nasty gestures in the Far East right at this moment.

Getting down to rock bottom, the imposition of so many selectees, the terrific expansion of the small Regular Establishment, imposed insuperable training burdens on the Regular Army cadres. Too much was asked of them in too short time.

Should the selectees be released, the entire Army structure would be torn apart. Whether it could be reassembled in time is highly questionable. We do not believe that it could be. There are some units in the Corps of Engineers, for instance, which have as high as 80 percent selectee personnel.

To release any selectees now would mean that the Army would have to go through again all that it has gone through during the past year. A total of 900,000 selectees was authorized in the first call. Less than 700,000 have been absorbed into the Army, yet the time for the first to be released is nearly here.

In the meantime the totalitarian threat grows greater and its conquering forces advance. Either this threat of totalitarianism is starkly real or else we are all the victims of a terrible hallucination.

The Commercial Appeal believes it to be real. It believes the security of all free men wherever they live to be in terrible danger. That being so, it believes, then, that every possible precautionary step should be taken. The development of a capable field fighting force of adequate size is the first step.

As a people we are yet equivocating, we are yet refusing to face realities, we are not, by any means, fully awakened to the need for tremendous sacrifices. We are yet doing by indirection what should be done forthrightly.

The Chief of Staff of the United States Army says that retention of the selectees is a vital necessity. So be it. Let them be retained, but on the day the Congress makes that decision let it also decide that an end must be had to any process, plan, or technique which hinders maximum equipment production, or in any way betrays those men of the armed services over whose destiny the Government assumes full control.

There has been too much one-sided sacrifice, too much subserviency to politics, and to obstructive groups. The defense theories have been fine. Their execution, in some respects, has been putrid. If selectees must forego freedom from military service, others must forego selfishness.

The Groton Shipyard

EXTENSION OF REMARKS

OF

HON. WILLIAM J. FITZGERALD

OF CONNECTICUT

IN THE HOUSE OF REPRESENTATIVES

Thursday, July 24, 1941

EDITORIAL FROM THE NORWICH (CONN.) BULLETIN

Mr. FITZGERALD. Mr. Speaker, under leave to extend my remarks in the CONGRESSIONAL RECORD, I wish to include the following editorial taken from the Norwich (Conn.) Bulletin in reference to the Groton shipyard:

[From the Norwich (Conn.) Bulletin]

THE GROTON SHIPYARD

Following the visit of the Subcommittee on House Naval Affairs to New England points, including Groton, there were intimations that some use ought to be made of the facilities at the Groton Iron Works, long since idle, as a shipbuilding plant.

Then it didn't seem to be advisable to utilize it for naval construction, but in the report which has been made to the full committee there is the recommendation that the yard be used for the expansion of the Electric Boat Co., which has been building submarines, which has been expanding its plant and which has many submarines to be built as rapidly as possible.

The inference to be gained from this report is that the subcommittee doesn't believe that the Groton facilities should be allowed to stand idle at a time when there is such need for getting the naval-construction program completed as quickly as possible, and when there is the need for more and more vessels of other kinds.

The subcommittee tempers its recommendation with the observation that the six idle ways should be employed if sufficient labor is obtainable. That has been one of the points raised whenever the use of the yard

has been considered. But while nothing has been done about that yard, the construction of entirely new yards has been authorized without any question being raised concerning the needed hands to operate them.

Whether the Groton yard is put to use for the building of submarines or for the construction of cargo ships or tankers makes little difference. It is unfortunate that such a plant, which could be made ready for use in a comparatively short time, is allowed to remain in disuse when there is such a demand for more ships.

What the full Naval Affairs Committee of the House will do with the recommendations of the subcommittee there is no way of telling, beyond the fact that as long as the few were designated as the investigators for the committee it is reasonable to expect that careful consideration will be given to their findings. Otherwise such an inspection trip wouldn't amount to much, and the opinions of those who have been on the ground wouldn't be of any greater value than those without first-hand knowledge of the situation.

During the prolonged efforts which have been made to awaken an interest in the utilization of the yard, the Maritime Commission has displayed its opposition. It is nevertheless calling for more ships, arranging for the building of more of them elsewhere at either new yards or expansions of existing ones. Plans are being made to turn out a big tonnage at the end of next year, but the quicker that tonnage can be acquired and put into use, the quicker the ship problem is going to be solved, and it is through the use of such yards as that at Groton, practically in condition for production to start, that the greatly desired speed-up can be accomplished.

The chance of getting desired results the quicker exists whether the yard is used for submarines or other types of vessels.

Inland Shipbuilding

EXTENSION OF REMARKS

OF

HON. WILLIAM J. FITZGERALD

OF CONNECTICUT

IN THE HOUSE OF REPRESENTATIVES

Thursday, July 24, 1941

EDITORIAL FROM THE SUN

Mr. FITZGERALD. Mr. Speaker, under leave to extend my remarks in the Appendix of the CONGRESSIONAL RECORD, I wish to include the following editorial from the Sun in reference to inland shipbuilding:

INLAND SHIPBUILDING—FAILURE TO TAKE ADVANTAGE OF THE GREAT LAKES FACILITIES

To the EDITOR OF THE SUN:

SIR: Predicated upon the experience gained in the past war and anticipating that an even more acute shipping shortage would develop in the present conflict, as long ago as September 27, 1939, the writer addressed a communication to the United States Maritime Commission in which certain observations were made with respect to the matter of constructing 10,000- and 12,000-ton ocean-going cargo vessels and tankers on the Great Lakes.

During the World War period 430 ocean-going steamers were constructed on the Great Lakes with aggregate cargo-carrying capacity of 1,612,500 tons. The 12 yards participating represented more than 25 percent of the Nation's steel shipbuilding output.

Although 21 months have elapsed since this matter was first directed to the attention of the Maritime Commission, not a single seagoing, cargo-carrying steamer is today being built at any shipyard situated on the Great Lakes. In responding to the writer's letter of September 27, 1939, the Commission merely made a formal and bland acknowledgment under date of October 9, 1939, to the effect that its program of vessel construction was being handled satisfactorily with the then-existing facilities. Yet only a few months later this same Commission established a policy of wholesale subsidization of new yards at ports remote from sources of essential supplies.

As an indication of the incongruous nature of such a fatuous vessel construction program, makeshift plants have been hastily thrown together at such places as Wilmington, N. C.; New Orleans; Orange and Houston, Tex.; San Diego, Los Angeles, and Richmond, Calif.; Portland, Oreg., and Seattle. Since all of these ports are remote from the mills which roll the steel and the places where boilers, engines, and ship auxiliaries are built, one wonders what possible reasons justified the selection of sites almost completely bare of everything entering into the construction of vessels.

As the emergency grows more acute daily, railway cars and boats must be taken out of essential national-defense services in order to drag more than 75 percent of these shipbuilding materials halfway across the continent. This is a strange sort of economy to conserve the Nation's transportation resources.

Indeed, it is most extraordinary that these improvidently subsidized, mushroom shipbuilding plants which build no boilers, engines, or any other auxiliary machinery should have been brought into being at the expense of the Nation's taxpayers, while old-established, financially strong, and adequately equipped yards—situated just across the streets from the mills which roll the steel—are without a single order from the Maritime Commission.

LOUIS I. KEHOE.

NEW YORK, *June 23.*

Keep Faith With Our Boys

EXTENSION OF REMARKS

OF

HON. BERNARD J. GEHRMANN

OF WISCONSIN

IN THE HOUSE OF REPRESENTATIVES

Thursday, July 24, 1941

Mr. GEHRMANN. Mr. Speaker, the Congress has been asked to change the selective-service law so as to permit the Army to keep the draftees indefinitely or for the duration of the emergency. Personally, I believe that such action would be a most dangerous one, in that it will undermine the faith in our Government, and thereby weaken the morale of the Army.

I have no apologies or excuses to make to these men or their families, because I did not believe it necessary to draft men in peacetime, and therefore voted against the conscription bill last year. But the administration and those that voted for it assured the country that these men would be returned to private life after 1 year's training. That bill was passed shortly before election, and most everyone that voted for the bill made certain to explain to his constituents that 1 year was all that was required of them, and that every safeguard had been provided to hold their positions open for them, so that they could step right back into it at the end of a year.

The boys, as well as their mothers, wives, and sweethearts, marked down the date of their return; so did his employer, who advised the man that took the draftee's place that in a year he would have to step down and turn the position over to the man that left to serve our country a year. The President and most Members of Congress, over the radio and in campaign speeches, assured our people that no expeditionary force would be sent across the ocean, and that all we expected of the boys to be drafted was 1 year of military training, so that in case of an attempted invasion we would have several million men with fair training. What will be our excuse to these boys, their families, and employers for keeping them on indefinitely, when no one has thus far officially advised us of any greater danger of attack against the Americas than existed when the draft started about 9 months ago, and even considering the need of aid to Britain now as compared with a year ago when the conscription bill was being prepared. Is her position any worse now than it was then? Did we not all fear last fall that Hitler would be able to cross the Channel and conquer the British Isles? Has nc her position and her ability to match Hitler's air force been greatly improved since the two arch enemies of democracy—Hitler and Stalin—are clasped in a death struggle? It is almost certain that Hitler will be well occupied in Russia the rest of this year, thereby giving England still more time to strengthen her position. No; I do not believe that Hitler is in any better position now to conquer the world than he was last year after the fall of France and Belgium. He has to police ever-increasing territory, and even though he may gain in foodstuffs and other materials, his army has to be constantly kept on the job policing conquered countries to guard against the possibility of preparing for a revolt.

I am certain that our leaders did not dare to come out before election last year and say or do what they are doing now. That is not being fair with the people and cannot strengthen democracy or the much-discussed and badly needed unity. Did not everyone of us who were seeking votes last fall promise to oppose another expeditionary force or involvement in Europe's war unless we were attacked? General Marshall last year stated that a well-trained and modern-equipped army of 380,000 men were sufficient to defend our country from invasion. Then, if an expeditionary force is not contemplated, why is it now stated that to permit draftees to return at the end of the year it would take away two-thirds of the Army? The total Army strength now is nearly 1,500,000. Approximately 600,000 have been drafted

from November up to July 1. If we live up to our agreement, only 13,806 would return home during November, 5,521 during December, 73,633 during January, 90,238 during February, 153,159 during March, 123,207 during April, 56,896 during May, 79,522 in June of next year. Therefore the largest number of draftees who will leave the Army in any month up to next July, under the present law, will be 153,159, scheduled to go home next March. That will be about 10 percent of our present Army.

It seems to me we should be honest with the people and state actual facts, and not attempt to make our people believe that two-thirds of our Army would be dropped all at once. I am certain that a great many of our men, especially officers in the National Guard and the Reserve, will volunteer and remain in the Army. They get fairly good pay and intend to make Army life their career. Why not keep our promise and permit those that want to go home, and encourage volunteers? Letters are pouring into my office on this subject and thus far not a single person has asked me to vote for the indefinite retention of the boys. Due to the fact that General Marshall says "saboteurs are at work among the boys in training camps," I am forced to guard the identity of the boys who have written to me, and therefore will quote only one letter which is typical. I am certain that 99 percent of all our boys will be glad to offer their services and their lives if necessary for the defense of our country, but so far the large majority do not feel that we are in immediate danger of being attacked, and they cannot see why they should be asked to offer their lives on the battlefield of Europe or Asia. The law provides that they be placed in reserve after the training period and are subject to be called at any time for further service if the President deems it necessary. They will have had a year of training, why not train others, and permit these boys to enjoy home life and its advantages for awhile.

By all means, let us consider what it means to the morale of these young men if we force them to doubt promises made by their Government. What is most important, morale and unshakeable confidence in our Government or a little more military training? Following is one letter similar to a great many others:

Congressman GEHRMANN,

MY DEAR CONGRESSMAN: I would like to enter my protest against the passage of the bill to declare a national emergency which will prolong the tenure of service of the said emergency.

Just what has suddenly disrupted our national safety? What violent change has taken place? I am only one of many selectees who would like to know the answers to these questions. We are thoroughly bewildered knowing not what to believe. Can it be that our patriotic fervor is being taken advantage of to satisfy the whims of a small group of men? If, on the other hand, we knew definitely that our national safety is imperiled, we would more than gladly render our services for the duration of the emergency.

I volunteered my services for the 12-month training period firmly believing that I would be discharged upon the expiration of that period. Now on the eve of discharge for many selectees, we learn that the peril has increased—that we must remain in service indefinitely. We have kept faith; why can't you keep faith?

There are 22 men in our department, and of that number 22 are of the same opinion. Prove without a doubt that a national emergency exists, and we will stay without a grumble.

Cordially yours.

Senatorial Ostriches

EXTENSION OF REMARKS

OF

HON. LUTHER A. JOHNSON

OF TEXAS

IN THE HOUSE OF REPRESENTATIVES

Thursday, July 24, 1941

ARTICLE BY RAYMOND CLAPPER

Mr. LUTHER A. JOHNSON. Mr. Speaker, under leave to extend my remarks, I submit herewith an article by Mr. Raymond Clapper, the well-known columnist, appearing in the Washington Daily News of July 22, 1941.

In one of the never-to-be-forgotten sermons delivered by the Master of Men while He was on earth, and recorded in the New Testament. He upbraided His hearers and compared them to those who have eyes to see and see not, and ears to hear but who hear not.

Mr. Clapper applied this admonition to our present crisis, and points out that some of the critics of our foreign policy are as blind and as deaf as were those listeners of nearly 2,000 years ago.

Unfortunately, the ostriches of which Mr. Clapper speaks are not confined alone to a few in the Senate and House, but some of the organized propagandists, whose criticisms of our Government's policy, are giving aid and comfort to Hitler, also come within this category.

The article is as follows:

[From the Washington Daily News of July 22, 1941]

SENATORIAL OSTRICHES

(By Raymond Clapper)

The most baseless complaint is that which comes from some Senators who say they are not being told the facts that make the situation of the United States as grave as the administration insists it is.

The essential facts are plain enough for anybody who will allow the facts to speak for themselves. They are available to anybody who reads the newspapers.

Senators and Representatives, least of all, have complaint on the ground that facts are being withheld. Senator WHEELER knew about the plan to occupy Iceland before the public knew it. Senator TAFT knew, before the public did, that American contractors were building naval air bases in Ireland for the British Government.

In fact Senators and Representatives on both sides have had the situation spelled out to them time and again. Confidential military information concerning the details has been given to them. Members of the House and Senate Military Affairs Committee have been told more military secrets than any except our highest Army and Navy officers know. The whole picture has been laid not only before Democratic leaders but before some of the Republican leaders such as Senator AUSTIN, of Vermont, and Representative WADSWORTH, of New York.

But that is not necessary. The military secrets are not essential to an understanding of the picture. The picture is clear without knowing just where our Panama Canal defenses are located, how many marines we have in Iceland, and where in Latin America we are building air fields. The facts that count in this situation are plain to all except those who read with blind eyes. They are the facts that have been in the war news for weeks and months. They are the facts that shout at you from the map. They are the facts that you read in the dispatches now from Bolivia, which has just frustrated a Nazi-inspired attempt to overthrow the government and has had to kick the German Minister out of the country. They are the facts such as the simple geographical fact that South America is nearer to Africa than to the United States. They are the elementary strategic facts such as the fact that the British Navy in German hands would completely alter the balance of the Atlantic world.

These facts have been spelled out day after day. They are not military secrets.

It isn't any military secret that if Hitler licks Russia, as most military experts expect, there will be left nowhere in the world any army or any combination of armies capable at this time of putting up a fair fight as of today. It isn't any military secret that if Hitler had occupied Iceland, he would have been able to use that strategic spot for flank attacks on shipping to England. It isn't any secret that if Hitler cracks down on weak Portugal and Spain and takes possession of the Azores, the Canaries, and the Cape Verde Islands, he will have bases from which to attack shipping in the south Atlantic. It isn't any military secret that we have 25 or more outposts and bases that must be garrisoned, at which air defenses and protection for naval craft must be maintained, and that it takes an army of considerable size to spread out over these posts.

The cry that unless military secrets are disclosed the country can't make up its mind is bunk. The cry that we are not being told the situation is bunk. You can find the warnings from Secretary Hull beginning back at the time of Munich. Events time and again since then have demonstrated that these warnings were soundly based.

The only trouble is that some people have refused to listen, have refused to think, have stuffed cotton in their ears, and have done nothing except to run around screaming that Roosevelt is trying to get us into war.

The Tax Bill

EXTENSION OF REMARKS

OF

HON. RAYMOND S. SPRINGER

OF INDIANA

IN THE HOUSE OF REPRESENTATIVES

Monday, July 21, 1941

Mr. SPRINGER. Mr. Speaker, the new tax bill will soon come before the House for debate and vote. The people of our country are greatly exercised over the provisions of this revenue law, because they have suffered from every plan of control over business, agriculture, and industry to the extent that their earning capacity has been minimized greatly, all of which has been asserted by their National Government. Yet in the face of

this situation, and in the face of their greatly lessened ability to pay, they are confronted with the largest tax bill this Nation has ever imposed upon the people. This is the result of 8 years' excessive spending by the administration now in power. The untold billions which have been spen by this administration, much of which was uselessly spent, if available now, would lend material aid to our defense program. But that spending is in the past. The past cannot be recalled. However, the exercise of business judgment throughout the past 8 years, in the slightest degree, would have made available now, when we are in need, that revenue which has been wasted and frittered away by this spending administration.

Mr. Speaker, at this very hour, when our peril is great and when our people are struggling to pay their taxes, this administration continues the mad rush of spending the taxpayers' money for useless nondefense items. I have urged repeatedly that the spending of the taxpayers' money, in the face of our defense preparations, be limited to those items which are absolutely essential to the maintenance of our Government and defense items. Every nondefense item should be cut down and reduced. In the nondefense items I am confident at least $2,000,000,000 can be deducted therefrom and the functions of our Government be not impaired thereby. These reductions should be made, and this ruthless spending of money must be curtailed to the end that the financial structure of our Nation may remain intact. If this constant spending of the taxpayers' money is continued, without regard to the ability of the people to meet their debt, we will soon face a general financial break-down and utter chaos in our country. This Nation cannot finance the world and prepare for our own defense in this country. We cannot withstand the continuous increase of the spending of money for nondefense items and at the same time prepare for our own defense. This policy of the administration will quite soon hurl us into the throes of a wild inflation which will result in disaster to our Nation and to our people.

Mr. Speaker, I desire to extend my own remarks in the Appendix of the RECORD and to include therein a short article which appeared in the Indianapolis Star, of Indianapolis, Ind., of recent date, for which I ask unanimous consent, which article reads:

TAXING WAGE INCREASES

The idea of raising taxes as a means of preventing inflation is a prize example of killing the goose that lays the golden eggs. Administration economists have proposed an increase in social-security taxes to cut the consumer purchasing power that results from higher employment and salaries. They are becoming disturbed over the indications of inflation, as they well may be, but are mistaken when they figure the preventive would be to tax the wage earner so that he would not have more to spend.

If wages go up and the workers have increased buying power, there will be greater industrial activity. The manufacturer, the retailer, and others will be unable to make money with which to pay the advances in pay rolls. If the employee's wage increase is taken by any form of taxation, there will be no addition to the volume of business. Industry will not be able to earn the money to meet the increase in pay roll, to say nothing of contributing to the Treasury through increased profits taxes.

Industry does not manufacture profits or cash. It acquires them through the purchasing power of the ultimate consumers. If they are not permitted to spend more than at present, industry will be in no position to shoulder additional pay-roll burdens. While we do not want inflation, we cannot have a one-sided prosperity. If wages and salaries are to go up those called on to meet the increases must be permitted to earn the money through greater purchasing power of the consumer. A program which takes a wage increase by taxation would hamstring industry and be an imposition on the earner.

National Grange Supports Seaway Project

EXTENSION OF REMARKS

OF

HON. WILLIAM A. PITTENGER

OF MINNESOTA

IN THE HOUSE OF REPRESENTATIVES

Thursday, July 24, 1941

STATEMENT BY LOUIS J. TABER, MASTER OF THE NATIONAL GRANGE

Mr. PITTENGER. Mr. Speaker, under leave granted to extend my remarks in the RECORD, I submit herewith statement in connection with H. R. 4927, a bill to ratify the agreement between the United States and Canada for the completion of the St. Lawrence seaway project. This statement was made by Louis J. Taber, master of the National Grange, before the Rivers and Harbors Committee of the United States House of Representatives on July 17, 1941, and is as follows:

Chairman MANSFIELD and gentlemen of the committee, I appear before this committee representing the National Grange and its million dues-paying members in 37 States, because of resolutions passed by our national organization favoring the completion of the St. Lawrence project.

We advocate it on the broad principle that as we improve our transportation facilities and create additional power we are thereby adding to the national wealth and contributing to the general welfare.

The Grange favors every constructive step that will aid in the military and economic defense of the Republic and promote its social advancement. Every agency that adds to the detvelopment of the resources of this Nation is a benefit to all our citizens. True conservation requires the utilization of our natural resources, the prevention of exploitation, and also the elimination of waste. Power resources wasted prevent the creation of needed national wealth.

In my first master's address at the Atlantic City session of the National Grange in 1924, this statement was made in dealing with conservation and waterpower:

"The Great Lakes-St. Lawrence waterway should be built because of the benefits conferred on the entire Nation." (See p. 18, 1924 Journal of Proceedings.)

Later in that same session, the Committee on Forestry and Conservation reported:

"We recommend the building of the Great Lakes-St. Lawrence waterway." (See p. 217, 1924 Journal of Proceedings.)

Thus, 18 years ago, the National Grange definitely and for the first time came out for the completion of the St. Lawrence waterway. This position of the Grange has been reaffirmed on more than one occasion and never at any time since 1924 has the Grange taken adverse action on this question.

BILL PROVIDES FOR MODERNIZATION OF AN EXISTING TRANSPORT FACILITY

One very important feature of the pending bill, which should not be overlooked, is the fact that it authorizes the modernization of an existing waterway, not the undertaking of an entirely new development.

The United States and Canada have already improved the connecting channels of the Great Lakes to a minimum depth of more than 20 feet. From the Atlantic up the St. Lawrence River, a channel 35 feet deep has already been provided 1,000 miles inland to the port of Montreal. Just above Montreal the rapids of the St. Lawrence River form a bottleneck which today blocks off deep-water navigation from the east and from the west. This bottleneck is less than 80 miles in length. The rapids are at present bypassed by outmoded, antiquated, 14-foot canals.

The building of the works authorized by this bill and the completion of less extensive improvements in the Canadian section of the river will provide a minimum depth of 27 feet throughout the 2,687 miles of the entire Great Lakes-St. Lawrence system.

This will give the United States a fourth seacoast. It will permit the great agricultural and industrial areas of the Midwest to ship their products by deep water without transshipment or change in bulk. By spending less than $200,000,000 in new Federal funds, we shall thus greatly enhance the value of the investments already made by the United States and Canada on the upper Lake channels, the Welland Canal, and the other great improvements now in use. In addition, we shall make available 2,200,000 horsepower of the cheapest hydroelectricity in the world, to be divided equally and distributed by public agencies of the State of New York and the Province of Ontario.

PROJECT INCLUDED IN LEGISLATIVE PROGRAM OF THE NATIONAL GRANGE FOR 1941

The completion of the Great Lakes-St. Lawrence project is included in the legislative program of the National Grange for 1941, which we submitted to the President and to the Members of the House and Senate upon the convening of the first session of the Seventy-seventh Congress.

I quote from the statement of policy accompanying this program:

"The first and foremost duty of the Nation is to defend America and to preserve American ideals. We must build a system of defense that will be strong enough to meet any emergency, and we must do it with the utmost speed.

"As a part of our scheme of national defense, it is vital that agriculture, our fundamental industry, should be given proper consideration and placed on a sound basis. Agriculture asks for fair treatment rather than special privilege. It seeks economic justice rather than subsidy."

In item 15 of this program the Grange states its position on the project now before this committee in its general relationship to the whole transportation picture. I quote:

"The Grange is firm in the belief that each type of transportation should be allowed to develop and operate without undue restrictions or handicaps on the part of the Government. * * *

"We favor the speedy elimination of all artificial and unnecessary transportation barriers as between the several States.

"Since the Federal Government over a period of many years has expended large sums of money for the development and improvement of our inland waterways, which, in addition to their great value in times of peace, enter into our scheme of national defense, we are opposed to the adoption of any policy which will destroy this wise investment. Our water-borne commerce should not be hindered or restricted by unnecessary regulation or interference on the part of the Government.

"We favor the completion of the St. Lawrence seaway project."

As the oldest general farm organization in the United States, the Grange has supported the improvement of the Great Lakes-St. Lawrence system, on the broadest grounds of public benefit. The 8,000 granges among our membership are so well versed in the fundamental principles of Grange philosophy that it is safe to say not one of them would advocate or oppose any project under consideration by Congress on narrow, sectional grounds.

The Grange has consistently favored the completion of the Great Lakes-St. Lawrence seaway for the same reasons, and in the same spirit, that it advocated the creation of the Department of Agriculture with Cabinet rank in 1876, led the movement for rural free delivery of the mails, urged the establishment of the Parcel Post as early as 1887, gave pioneer support to the creation of postal savings banks, experimental stations for agriculture, and the Pure Food and Drugs Act. Early in the seventies, the Grange endorsed legislation to encourage the building of transcontinental railroads. It was the first national farm organization to give its unqualified support to the building of the Panama Canal.

The Grange has constantly adhered to a policy calling for the wise conservation and use of our natural resources, and has opposed their exploitation by selfish monopolies. It has favored the preservation of forests, mineral wealth, and the power sites of our rivers for the benefit of all the people. For more than a generation it championed the cause of rural electrification. The Grange originated the movement for farm-to-market roads.

In its support of these and many other constructive measures, the National Grange learned that it sometimes requires 10 or 20 years of constant effort and struggle before a great public improvement can be achieved. This has been the history of the St. Lawrence project since commissions set up by the United States and Canada first recommended the seaway and power development and the Grange endorsed it.

DEVELOPMENT OF OUR INLAND WATERWAYS EXPRESSED AS A CARDINAL PRINCIPLE OF THE GRANGE IN ITS DECLARATION OF PURPOSES, 1874

The support which the Grange has given this project is wholly in accord with the declaration of purposes, adopted in 1874 at St. Louis, soon after the organization of the Grange in Washington, D. C., December 4, 1867.

From this historic expression of Grange philosophy I quote:

"We shall therefore advocate for every State the increase in every practicable way of all facilities for transporting cheaply to the seaboard or between home producers and consumers all the productions of our country. We adopt it as our fixed purpose to open out the channels in nature's great arteries, that the lifeblood of commerce may flow freely. * * *

"We cherish the belief that sectionalism is, and of right should be, dead and buried with the past. Our work is for the present and the future. In our agricultural brotherhood and its purposes, we shall recognize no North, no South, no East, no West."

GRANGE FAVORED PROJECT APPROVED BY MAJORITY OF CONGRESS IN 1933–34

Many years of negotiation through the administrations of Presidents Wilson, Harding, Coolidge, Hoover, and Roosevelt contributed to the pending agreement now before this committee.

Had the 1932 draft treaty with Canada been ratified, as the Grange recommended, the seaway would now be in operation, serving the defense needs of the present emergency. Seagoing merchant and naval vessels would be building in the developed shipyards of the protected waters of the Great Lakes. And 2,200,000 horsepower of hydroelectricity would today be available on the St. Lawrence in an area which has a serious shortage of power for defense industries.

A majority of the Senate approved the seaway treaty of 1932. A majority of the House adopted the St. Lawrence power resolution of 1933. The Grange gave the reasons for its advocacy of the project and strongly supported the position then taken by a majority of both branches of Congress in a statement issued January 13, 1934, as follows:

NATIONAL GRANGE RESOLUTION OF EXECUTIVE COMMITTEE

"The National Grange has for years advocated a ship canal from the Great Lakes to the sea to open up the heart of the continent to the benefits of ocean navigation. The Grange believes that this provision of cheap transportation, linking a great economic area with the markets of the world, will either directly or indirectly benefit not only those engaged in agriculture but also the Nation as a whole.

"The area directly tributary to the seaway produces more of the cereal crops of the Nation than all other sections of the country combined, and many other important agricultural interests are centered there. Both leading dairy areas are located on the seaway.

"The opportunity to further rural electrification through public development of St. Lawrence power as a part of the project is also of vital interest to many of our local and State organizations.

"The fact that at least 90 percent of the seaway mileage is already available for navigation by ocean-going cargo vessels is a cogent argument for removing the few remaining barriers which still bottle up this important agricultural area.

"Every Chief Executive since President Wilson, regardless of party, has advocated this improvement and contributed to the negotiation of an agreement essential to any joint undertaking affecting two neighboring nations. President Roosevelt is to be congratulated upon his decisive action to make the project a reality.

"FRED J. FREESTONE,
"Chairman, New York.
"E. A. ECKERT,
"Secretary, Illinois.
"ROY W. GILL, *Oregon.*
"LOUIS J. TABER,
"Ex Officio, Master of the National Grange, Ohio.
"Executive Committee of the National Grange.
"WASHINGTON, D. C., *January 13, 1934."*

The resolution adopted by the Grange 7 years ago summarized what we still believe are compelling reasons for the immediate completion of the Great Lakes-St. Lawrence project.

PENDING BILL AN IMPROVEMENT OVER PREVIOUS PLANS

In some respects the bill before the committee, H. R. 4927, is an improvement over previous plans. It provides for a single-stage power development, as advocated by the United States engineers and the Power Authority of New York, instead of the more costly two-stage development formerly proposed for the International Rapids section.

The major portion of the works to be erected under this bill will consequently be built on the United States side of the international boundary. The bill also preserves American sovereignty over Lake Michigan and leaves the Chicago diversion problem where it rests under the decisions of the United States Supreme Court.

As introduced by Chairman MANSFIELD, the bill clearly conforms to the requirements of the International Boundary Waters Treaty, ratified by the Senate in 1910. That treaty provided that the United States and Canada might authorize future projects for improvements in the Great Lakes-St. Lawrence system by means of concurrent legislation.

NEW YORK'S POWER PROJECT, UNDER THE FEDERAL-STATE ACCORD, PROVIDED FOR IN SECTION 2 OF THE BILL

Section 2 of the bill provides for the adoption, by mutual agreement, of a Federal-State accord on the conduct and operation of the power works to be built in the State of New York.

In 1934, when the Grange supported the St. Lawrence project as presented at that time, we likewise approved the Federal-State accord of 1933. This accord was embodied in a bill passed by the House and recommended by the Senate Committee on Foreign Relations. It has since been approved by every official agency which has passed upon it and is similar to the Federal-State agreement contemplated by section 2 of the pending bill.

Section 2 provides that the power facilities to be built in New York may be transferred to the power authority, a public agency of the State, upon such terms and conditions as Congress may later approve, upon provision by the power authority for the payment of $93,375,000, the sum allocated by the engineers as the construction cost of these works.

Heretofore private utility interests have opposed many power developments on the ground that such projects should not be conducted by the Federal Government but should remain the exclusive concern of the States.

The Grange has supported the development of our power resources under legislation which covers a wide range of Federal and State responsibility. On the Columbia River, Federal agencies undertook the tremendous task of developing and operating the Grand Coulee and Bonneville projects which no single State was in a position to assume.

The 2,200,000 horsepower of hydroelectricity to be developed on the St. Lawrence under the pending bill will be made available in the International Rapids section, lying wholly within the State of New York and the Province of Ontario. The Province of Ontario has already been accorded the responsibility of conducting the power project on the Canadian side of the river, as it was in connection with the 1932 treaty. The maintenance of the Federal-State accord would give the State of New York a similar responsibility on the United States side of the same section of the river. This would be in keeping with our previous policy of dealing with the St. Lawrence development as a cooperative enterprise. There is no doubt that the public agency of the State of New York, which has guarded this resource against private exploitation for many years, will be able to furnish St. Lawrence power to public power districts and rural cooperatives in neighboring States.

BENEFITS OF PROJECT NATIONAL RATHER THAN SECTIONAL IN SCOPE

In accordance with its traditional policy, the National Grange supports the Great Lakes-St. Lawrence project as a public improvement that will bring permanent benefits to the entire Nation, and not merely to one class of our people or to one section of our country.

Several members of the committee have raised the question as to what effect it will have upon the great agricultural and stock-raising regions lying west and southwest of the Great Lakes to the Rocky Mountains. Undoubtedly, the people of this whole region will benefit from the project, both as producers and consumers. Farmers in the Missouri River Valley, Arkansas, Colorado, Wyoming, and other interior States today ship vast quantities of farm products by rail to markets on or near the Great Lakes and thence by rail or lake-rail to the great consuming centers of the East. Similarly, the people in this interior area consume many products of the East which move by the same route. In both instances, the St. Lawrence seaway offers a net reduction in transportation costs which will immediately be reflected back to this interior region.

The interior sections of the West will of course continue to use the railroads for much of their shipping. But they should get the benefit of lower rates and the full extent of the savings in costs which will result from bringing ocean freight vessels more than a thousand miles closer to their primary markets. This will be of advantage not only to the great agricultural areas but also to other sections in the development of our intercoastal as well as our foreign trade.

The use of all our transportation facilities, including the St. Lawrence seaway, to reduce the cost of shipping our products to market, will obviously help our entire country, not hinder it, in meeting the competition of other countries in the post-war period. Protection against cheaply produced foreign goods will not be increased by making our methods of transportation expensive. We must utilize each of our transport facilities that can be developed with maximum efficiency. In addition, we can and should revise our tariff schedules wherever necessary to insure to our producers the full benefit of the home market.

The St. Lawrence project can be completed in 4 years, according to the estimates presented to the committee by the Corps of Engineers, United States Army.

The new locks at the Panama Canal cannot be provided before 1945 and many of the battleships now building as a part of a two-ocean navy will require as long as 7 years for completion. What the world situation may be in 1945 we cannot now foresee. We know, however, that the St. Lawrence project will contribute to our national well-being and that when the emergency ends it will be available for centuries to come to serve the needs of all our people. We, therefore, renew our recommendation to Congress to complete this great public improvement on the St. Lawrence, by enactment of the pending bill.

Why Don't We Arrange to Produce War Minerals at Home?

EXTENSION OF REMARKS

OF

HON. JOHN R. MURDOCK

OF ARIZONA

IN THE HOUSE OF REPRESENTATIVES

Thursday, July 24, 1941

Mr. MURDOCK. Mr. Speaker, now that the bill under consideration making supplemental appropriations for national defense for the year ending June 30, 1942, and for other purposes, is to be held over for another legislative day, I would like to present some views having a remote bearing on it. I did not take up time earlier today, for I had hoped that the measure would be put through with little delay. Of course, there is no opportunity now for further amendment under the rules. Therefore, the suggestions I have to offer are intended only for subsequent legislation or for the administration of this measure in some of these broad powers and blanket appropriations.

I notice an appropriation item in the bill for nearly $82,000,000 for military posts. After exhaustive study, the War Department no doubt desires further development of those military posts located in the most strategic, as well as favorable spots, where soldiers can be best stationed, maintained, and trained with the highest degree of efficiency and the greatest amount of protection to our country. I am heartily in favor of this item in the appropriation and regret that it was pared down $2,000,000 from the estimate. However, this is a technical question, both as to the nature and the amount of the need, on which I am not qualified to speak. I am trusting the War Department in this matter to get the most for the money.

There is another technical matter about which I may be unable to speak scientifically but cannot refrain from mentioning it. It is a matter of strategic materials. For 5 years now I have been following the lead of Western mining Members in urging the development of war minerals and other strategic materials within our own borders. It seems to me extremely unwise that we continue to depend upon foreign sources for these vitally needed minerals and metals. It is strange what reluctance is shown to get these things out of the ground at home when our very national safety depends upon our having them and our former supply abroad has been jeopardized or entirely cut off. I doubt whether we are in a very good position now with respect to those war materials of which we planned to lay in a stock pile, just before the beginning of the second World War. I am not inclined to say, "I told you so," but I am in a position to say that certain Members of this body, long before I arrived in Washington, had been trying to prevent our getting into the very difficulty we are now in because of the lack of these strategic minerals and metals.

It is to be earnestly hoped that we do not have the experience again which the country had in the first World War. At that time we were caught in a predicament and our Government set up a great cry, asking the mining regions to go ahead and produce and making some provision against loss for those new producers if the war should close soon. The result was that many small mining men invested heavily getting ready to produce the war minerals and found even before their plants were constructed or completed that there was no longer a need for their anticipated output. This severe individual loss was not fully compensated for in all cases and it has left a bitter memory in the minds of many mining men. I am positive that we have within our limits almost all of the strategic minerals, but we have done little or nothing to encourage production. Time will not permit the suggestions that come to my mind as to the best way for us now to encourage such home production.

This matter occurs to me today because of a relatively small amount that I find in this bill for the Bureau of Mines and its study. I believe it has been suggested that something ought to be done toward developing western coal fields. I wonder if it has ever been pointed out that there is coal in Arizona? Yes; there's a lot of coal in Arizona, but perhaps most of it is on the Indian reservations. I assure you it is well locked up on an Indian reservation. There is a lot of natural wealth in my State and in other Western States locked up by the action of this Government and some of it locked up by governmental inaction. I am told by men who know that there are great quantities of manganese on an Indian reservation in Arizona. Of course, under present law, it will stay right there even if we have to have some other country to make our steel. I doubt whether the Indians will ever make use of it for themselves but they might be willing to permit its use in a matter of national defense, especially if some royalty were paid them. The whole matter, Mr. Speaker, seems to hinge upon this, that we know what we need but apparently we do not know that we have it.

Extension of Service Time Under the Selective Service Act

EXTENSION OF REMARKS

OF

HON. WILLIAM H. LARRABEE

OF INDIANA

IN THE HOUSE OF REPRESENTATIVES

Thursday, July 24, 1941

Mr. LARRABEE. Mr. Speaker, under leave to extend my remarks in the RECORD, I offer a statement of my views favoring the extension of the service time of selectees under provisions of the Selective Training and Service Act of 1940.

The question of extending time of selectees in military training under provisions of the Selective Training and Service Act of 1940, while very unpleasant to consider, can be based only on the question of national necessity—the necessity of making adequate provision for the security and protection of our Nation, our people, our homes, and property.

We should have learned from recent events, in which we have seen one nation after another, unprepared to defend themselves against ruthless invasion, fall to brutal and unprovoked attack of war-mad dictators. If we have learned nothing else, we must have learned that we cannot wait until attack has been launched against us, or war has been declared, to prepare an adequate defense force. France, Belgium, the Netherlands, the Scandinavian countries, the Balkans, Greece, and other nations who felt that the military and naval forces they had

created prior to the attack would be sufficient to insure their security, awakened too late to the bitter realization that they had listened too long to dictates of sentiment.

The most loyal and patriotic service we can render today is to make every effort within our power to be prepared for any eventuality, whenever it may come. Recent developments abroad were such that we must realize our Nation is in far greater peril today than it was 1 year ago, when some officials, including some Members of Congress, were led by sentiment to give vocal assurances that service under the Selective Training and Service Act would end within a year. That was wishful thinking. The days of wishful thinking are past.

Today we must consider facts alone. The facts are that if we hold to the much-discussed implied contract that draftees would be limited to 1 year of service, we shall wreck our armed force. Another year will be required to train another minimum force to a meager minimum of efficiency.

Army officials have labored at top speed to organize and develop an impregnable army, based upon the small force of Regulars that were in service 1 year ago. They have scattered the selectees among the older, trained, and seasoned troops for training purposes and the new troops are being developed to a status of satisfactory efficiency. However, if we now permit the discharge of these draftees, we shall be right back at the place where we started 1 year ago, with a very small force of Regulars, among whom several thousand new draftees, without any training of any nature, will be infiltered for training. All that we have gained during the year, in effect, will be lost, and we will have presented Army officials with the impossible task of guarding the United States territory with an army that will keep fading away.

Efficiency in modern military tactics may be upheld only through the maintenance and continual improvement of the personnel of available units.

Had there been developments abroad during the past year which would have given us reason to believe that the peril facing our national interest had diminished, then there would be no reason to require continuation of the men in service. Since conditions have grown more grave rather than improved, the necessity for this unpleasant action is increased.

Opponents of the extension of service time place stress on the so-called "implied contract between the Government and the draftees" to release them to private life after 12 months of training.

The act, in fact, provides for release only in the event of national interest is not in peril at the end of the 12-month period. The law is specific in this provision. The act also gives the Commander in Chief of the Army the authority to keep the men in service without referring the question to Congress for decision or action. The President has given definite proof of his desire to be meticulously scrupulous in handling this important matter by refraining from using all the powers granted in the act, and by referring the matter back to Congress so that the elected representatives of the people may decide the issue. I appreciate this attitude on the part of the President.

The principal provisions of the act were—

> Each man inducted * * * shall serve 12 consecutive months * * * except that whenever Congress has declared that the national interest is imperiled, such 12-month period may be extended by the President to such a time as may be necessary in the interests of national defense.

Thus, all that is required to keep the men in camps is a resolution of Congress holding that it is found that the national interest is imperiled. The President and Army officials have indicated their desire that the matter be treated in the democratic way after open hearings and debate in Congress. This is possible, even in the emergency, because it will be several weeks before any of the men will have completed their year of training.

Congress went all the way in providing for eventualities in drafting this act. The law further reads that—

> Each such man [selected for service under provisions of the act] after completion of his period of training and service * * * shall be transferred to a reserve component of the land or naval forces of the United States; and until he attains the age of 45, or until the expiration of the period of 10 years after such transfer, or until he is discharged from such reserve component, whichever occurs first, he shall be deemed to be a member of such reserve component and shall be subject to such additional training as may now or hereafter be prescribed by law.

The law clearly intends that the men be not entirely severed from obligation to such additional defense duty as may be necessary. The law does not provide for actual or complete discharge after 12 months, but for automatic transfer to the Reserve forces.

As Reservists they then become immediately subject to active duty at such time as the Commander in Chief feels their services are needed.

Accordingly the President could, without breach of faith and without usurpation of any powers which have not already been granted him by the Congress and the Constitution, recall every man to additional duty for duration of the emergency as soon as the routine of his transfer from the 12-month training period as a selectee to the Reserve forces had been completed.

In refusing to resort to this section of the law, the President has held to his faith in democratic processes and his faith that Members of Congress will be fearless and able enough to rise above political expediency and consider and act upon the question in the interests of the Nation.

However, if it should develop that Congress does not authorize the suggested extension by a new and specific act, or adoption of a resolution declaring the national interest to be imperiled, the President will most likely be required to authorize the War Department to resort to the alternative of transferring the men, immediately, to the Reserves and then call them up from those ranks under authority of existing law for further service.

I feel that it would be very dangerous for Congress to force the President and Army officials into this necessity.

There is some misapprehension also as to the extent of the expression or action desired of Congress at this time. It has been misstated that it is proposed in pending or suggested legislation to authorize the President to send selectees outside the Western Hemisphere. There definitely is no such clause or provision in proposed new legislation which would give the President and Army officials such authority. It is my personal opinion that if the time should come when the President would feel it to be in the national interest to take such action he will call upon Congress to decide whether or not such action is to be taken. This should clear up the question of foreign service for selectees, at least until such time as the emergency may become more acute.

The President has expressed his desire that provision be made to relieve individual cases of undue hardship, and also to relieve older men whom he feels in justice, should be permitted to resume civilian life as quickly as their services can be spared.

It is encouraging to note that the Chief Executive has taken into consideration the desirability of discharges for some when their discharge will serve to relieve suffering in their families or serve other good purpose.

Congress should have no difficulty in making provisions for the relief of such cases, and I feel certain that these situations will be taken into consideration and adequate provision will be made for proper and early action.

It is obvious that those best able to evaluate the needs for adequate defense are unanimous in their opinion that the national interest is sufficiently imperiled as to require the proposed extension of service time. It is likewise obvious that most of those who are opposing the extension of service time are neither qualified by knowledge available to them or knowledge of the requirements for adequate defense to sit in judgment of this question, on which the future security of our Nation may depend.

It is also deeply significant that not one voice of opposition that I have heard raised against the proposed extension even so much as suggests consideration of the question of whether or not the national interest is imperiled.

Most of those who are opposing extension of service time—at least most of those voices of opposition that I have heard—seek to base their case on the charge or claim that the Government "made a sacred obligation with the selectees not to continue their training period for more than a year."

I find nothing in the law, nothing in the record, which bears this out, although it is true that such assurances may be implied from some of the debate on the bill. The law, quoted above, surely sets forth no contract for discharge of men from training at the end of 12 months in the event of continued, increased, or extended peril.

I do not believe that there are many persons anywhere who in their own minds feel that the national interest is not in peril. In the light of most recent developments abroad it is clearly obvious that so long as the present conflict continues, even on foreign lands, our own national interest is in peril.

It is evident that ever in the heat of the debate on the original Selective Service Act, a year ago, Congress realized the necessity of providing for this eventuality, and made provision in the drafting of the law. In the light of sober reasoning, the anticipated eventuality for which provision was made a year ago is a sober fact today.

From the recommendations the Chief of Staff of the Army has made and the statements made by the President, it is obvious, however, that the President feels that it is best in the interests of harmony, and unity of spirit and purpose, for Congress to assume the responsibility of making the decision as to whether or not the service of the men shall be extended. In so doing, the officers of the Army and the President have made it plain that in a matter of such importance they do not wish to assume the power that has already been granted them, and which power appears to not have been thoroughly understood. It appears that they prefer that the people have an opportunity, again, to be heard through their elected representatives on this subject.

The service of the men in training in the armed forces, or at least many of them, is seriously needed. The President knows this and he knows that he has the power to keep them in service, under terms of existing law, without further action by Congress. The fact that he does know it, and the fact that he has asked Congress to decide, should be adequate proof that the President has every desire to be conscientiously scrupulous in dealing with the problem.

Perhaps many of the men now in training could be persuaded by appeal to patriotism, by other inducement, or their liking for the service, to sign up for an added 2 years, equaling a Regular Army enlistment.

But those who may be needed most for their skill or training to keep combat and technical groups intact, might prefer to return to private life and that action could easily result in complete disorganization of the entire defense force.

Army officers have pointed out that draftees necessarily have been filtered in among the Regular and National Guard troops in order to make the most use of their civilian skills, that some of them fill key positions in specialized task units, and that some are on duty in Hawaii, Alaska, or Atlantic bases where their transfer and replacement would act to disrupt the program for months.

A year ago when Congress passed the selective service law, many Members of both Houses of the Congress were hopeful that developments abroad would be such that it would be unnecessary to consider the question of training of men for periods of longer than 12 months. We did not know whether or not the existing threat would exist at the expiration of the first year's training period. We did hope and pray that it would not long continue.

Today, we do know that the emergency has not cleared. We do know that the danger continues, and that, in fact, the threat against the national interest has become even greater.

For the conditions that exist and the increased danger we now must realize is facing us, we are required to plan and prepare. However unpleasant the fact may be, the time is past to regard Army draft service as just 1 year of good training. Congress is forced, or soon will be, by conditions over which we in the United States have no control, to require unlimited service for draftees. Congress is, or soon will be, forced to keep present service men in service or work out a compromise.

The only alternative is to offer Gen. George C. Marshall, Chief of Staff, the impossible task of guarding the United States with an army that will keep fading away.

We face enemies with armies of millions of men. The Regular Army of the United States, a year ago, was made up of some 200,000 men experienced in cooperation as combat or defense units. These were broken up and to them some 600,000 draftees were added, to spread them for more adequate training of the new recruits. Surely it is quite plain that to discharge so many partially trained men in the face of existing conditions would serve only to give new courage to the aggressor nations.

There is also another factor of utmost importance that we must consider. Modern armies must be technical as no army before has been. It is necessary that complete familiarity with tanks, new types of armored cars, new types of guns; some of them, such as antiaircraft guns and long-range field rifles, requiring the highest degree of skill to operate—a skill that is not easily developed in a year of training, especially when it has been difficult to obtain implements and materials as quickly as they should have been placed at the disposal of the Army officials.

Coupled with training in the skill of operating these defense machines is the requirement of skill in mobility—the skill to move the machines quickly from one field of operation to another. And, in our defense program, we are required to prepare to move the defense machines to any possible place of entry of any possible aggressor. Our lands are broad. Our borders and shore lines are long. Our defenders must be trained adequately in the art of moving as small units, or as large units, or perhaps, as as entire force, from one point to another far distant. They must be skilled in moving at a pace that no other army has ever moved.

We are told, and the information comes from those best qualified to know, that we need an army skilled in these defense tactics, of about 1,000,000 men. And that we will likely need this army more in the future than we have needed it in the past year is beyond doubt or question—regardless of whether or not we may be attacked. We know now that if an attack should come it will be in the future and for that date we must be prepared.

To the highly skilled army of 1,000,000, we are best advised, we should have another 2,000,000 trained men that could be called in for grave emergency, to repel an actual attack or invasion attempt, should such arise.

Those opposing a large army say that Hitler conquered France with about 12 panzer units comprising some 200,000 men supported by some 3,000 pilots of attack planes and dive-bombers. That may all be true, but at the same time many thousands of other men were in constant training, or were on guard at other borders. Hitler had no such expanse of land as that of the United States to guard, and it is also known that he managed to rotate his troops, replacing the worn and injured men at the front at intervals with well-trained, fresh troops quickly transferred from quiet guard posts on other borders.

We will do well to learn our lesson in modern warfare from those who have been successfully prosecuting modern war abroad and be so prepared that aggressors will have no desire to attempt to lodge an attack upon us.

Another argument brought forth by those who oppose continuation of draftees in service is their claim that the defense production program has failed to provide adequate arms, implements, and machines for the proper training for men and that there is an insufficient supply on hand to warrant continuation of men in training service.

It is my opinion that if their claim of inadequate supply were true, that fact alone would be sufficient reason to hold the men in service—to require that they be held in training until they have at least had ample opportunity to be schooled in the actual usage of mechanized equipment.

However, the figures released this week by the War Department at the request of the Senate Defense Investigating Committee do not support these claims of insufficient materials.

The figures released by the War Department are as follows:

Ordnance: Procurement of latest types of weapons is continuing at an accelerated pace, with approximately $2,000,000,000 having been spent for equipment and $60,000,000 for new plants.

Aviation: The industry has orders for 74,000 military aircraft, and it delivered $625,000,000 worth of equipment in 1940, a 250-percent boost over 1939; 22 manufacturers already have increased 1941 deliveries 300 percent over those of 1940.

Construction: The Quartermaster Corps has completed or is completing on schedule a 250-project construction program costing $1,900,000,000.

Motorization: There were 29,867 vehicles on hand July 1, 1940. A total of $296,176,000 was appropriated for motorization during the past year; of the 233,084 new vehicles provided for, 209,541 have been ordered and 103,395 delivered.

Engineers: Of $638,969,811 made available for Air Corps construction work,

such as bases and schools, $490,000,000 has been obligated; not including work on overseas bases, 41 percent of this work has been concluded. A total of $26,377,000 has been spent for the past fiscal year, and $44,000,000 is slated for expenditure this year.

The new Army appropriation bill, officials of the War Department point out, will enable the Army to procure "a great deal more equipment" for its mechanized divisions.

While it is frankly admitted that greater production speed will be required in order to provide necessary supplies to replace expendable materials and equipment which it must be assumed might be lost or destroyed in use or worn out in training activity, it appears from the above figures that we need have no fear concerning an adequate supply of arms, ordnance, and mechanical equipment for successful training activity.

Officials of the Army, possessed of the best available information on this subject have given us this assurance and on this assurance we are required to rely.

In the face of these facts, these possibilities, and in view of our definite knowledge that the ultimate crisis at least has not passed, probably has not yet developed, I can see my way clear to follow no course other than that of supporting the request that Congress act to continue the service period of the selectees for the duration of the emergency.

I am not willing to be a party to any act, regardless of how distasteful the duty of this decision may be to me, that may endanger the future security of our Nation and all of the people of our Nation.

Beware of Foot-and-Mouth Disease

EXTENSION OF REMARKS

OF

HON. HENRY O. TALLE

OF IOWA

IN THE HOUSE OF REPRESENTATIVES

Thursday, July 24, 1941

Mr. TALLE. Mr. Speaker, as pointed out in the preface to Farmers' Bulletin No. 666 issued by the Department of Agriculture the "foot-and-mouth disease is one of the most universal diseases of cattle as well as one of the most difficult to suppress." It is a disease which takes its toll not only among cattle but it strikes at other farm animals as well. That it is difficult to eradicate once it has taken root is attested to by the fact that "in most European countries the disease has gained such a foothold that it has probably become a permanent infection."

At the present time this dread disease does not exist in our country but in years past it has been a costly evil. In the bulletin already quoted it is stated that—

The United States has suffered nine foot-and-mouth visitations, ranging in date from 1870 to 1929. Fortunately, after persistent efforts by the Government, the States, local authorities, and individual stockmen, each outbreak was entirely stamped out.

It is, therefore, a threatening evil at all times, and alert attention should be paid to the timely warning of Dr. H. A. Seidell, chief of the division of animal industry in my State, as emphasized in the following letter:

STATE OF IOWA,
DEPARTMENT OF AGRICULTURE,
Des Moines, July 22, 1941.

Hon. HENRY O. TALLE,
House of Representatives,
Washington, D. C.

DEAR SIR: House file 502, if enacted, would give authority to the Secretary of the Treasury to lift the sanitary embargo on chilled and frozen meat carcasses from countries where foot-and-mouth disease and rinderpest exist. The recent ruling of the Attorney General admitting frozen mutton and lamb carcasses from Tierra del Fuego perils the livestock industry and the human health of this country.

Congress should enact legislation that will protect this Nation from the disastrous condition that would result from the lifting of this embargo which is our only defense against the introduction of these two most dreaded diseases, namely, rinderpest and foot-and-mouth disease. The latter is the most dreaded of all livestock diseases and affects all cloven-hoof food-producing animals as well as others.

The virus or germs of these diseases are not affected by freezing and can be carried on shoes, clothing, or by poultry, birds, dogs, etc., that have been in the immediate vicinity of the infected animals. Furthermore, this virus is carried in the lean or muscular tissues, the bony structures, the internal organs, the hide, etc., of the diseased animals. Science has proven that this virus or germ will live in frozen carcasses for a period of 9 months or longer.

At the present time the United States and Canada are the only countries free of rinderpest and foot-and-mouth disease. During the winter of 1914 and 1915, we had quite a severe outbreak of foot-and-mouth disease in Iowa and some of the other States which cost the States millions of dollars to destroy all animals on the infected farms.

If it is necessary for us to import meat products from the foreign countries where these diseases exist, they should be in a canned form where the meat has been properly cooked as that is the only sure means of destroying the organisms that cause these diseases.

Thanking you for any consideration you will give us on this measure, I am

Very truly yours,

H. A. SEIDELL,
Chief, Division of Animal Industry.

Mr. Speaker, farming involves many risks and hazards. Some of the risks such as droughts and windstorms cannot be controlled. But experience over a long period of years has proved that the foot-and-mouth disease can be eradicated, although the remedy is a costly one. It is saner and cheaper to prevent it from taking root. The old adage that "an ounce of prevention is worth a pound of cure" was never more fully applicable than in a matter of this character. Let us beware of the foot-and-mouth disease.

General Welfare Act

EXTENSION OF REMARKS

OF

HON. PAT McCARRAN

OF NEVADA

IN THE SENATE OF THE UNITED STATES

Monday, July 28, 1941

ADDRESS OF HON. WILLIAM LANGER, OF NORTH DAKOTA

Mr. McCARRAN. Mr. President, I ask unanimous consent to have printed in the RECORD a very interesting speech by the junior Senator from North Dakota [Mr. LANGER] on the General Welfare Act now pending in Congress.

There being no objection, the address was ordered to be printed in the RECORD, as follows:

Senator LANGER. Mr. Chairman and friends, I bring you greetings from each and every one of the United States Senators interested in a decent pension for our senior citizens. I am here to tell you that we in the Senate are not lagging in interest in your measure, the General Welfare Act, H. R. 1410. In talking to my colleagues on the Senate floor and in the cloak rooms, I find a growing sentiment for a reasonable flat Federal annuity for our senior citizens.

SENATE SEEKS GUARANTY FOR ALL

This demand has resulted in a resolution (S. Res. No. 129) being adopted by the United States Senate to appoint a special committee of seven Senators to inquire into the workings of the Social Security Act and to investigate the ways and means for bringing about the early realization of a minimum pension for all reaching the age of retirement who are not gainfully employed.

GENERAL WELFARE ACT ONLY MEASURE FILLING THE BILL

While I am supporting all old-age pension measures, there is only one measure pending before the United States Congress which falls squarely within the purview of this resolution, and that is the General Welfare Act, H. R. 1410, of which I have introduced a companion measure in the Senate known as Senate bill No. 1178.

COMMITTEE APPOINTED

The Vice President has, pursuant to the resolution I mentioned, appointed the following members of the Senate to serve on this committee: SHERIDAN DOWNEY (Democrat), of California, who introduced the resolution; TOM CONNALLY (Democrat), of Texas; CLAUDE PEPPER (Democrat), of Florida; THEODORE F. GREEN (Democrat), of Rhode Island; ROBERT M. LA FOLLETTE, Jr. (Progressive), of Wisconsin; JOHN THOMAS (Republican), of Idaho; and C. WAYLAND BROOKS (Republican), of Illinois.

WILL ASSIST AT HEARINGS

This committee is already functioning, and hearings on the whole subject of social security will be begun very soon. I understand that your national executive and legislative secretary, Arthur L. Johnson, has written the chairman of this committee asking the privilege of being heard. He will be able, I know, to present valuable data to the committee, which he has accumulated in the 4½ years he has been in Washington working on this sub-

ject. I shall help him all I can. In this way, we expect to see another definite step taken toward universal security for people in the sunset of life cast aside by industry.

TOOK ON AN OBLIGATION

Personally, it needed no persuasion on the part of your legislative representative to get me interested in the General Welfare Act. Like Dr. LARRABEE, who introduced the bill in the House, I looked Mr. Johnson up and told him of my interest. And the whole subject of old-age pensions is by no means new to me. When I was Governor of North Dakota I was proud to be called the farmers' friend, and I sponsored many measures to alleviate the distress of the poor and the aged. I realized, however, that these were mere palliatives and that the real remedy must come from our Nation's Capital. So when I got into the race for the United States Senate, I accepted a very definite obligation, an obligation which I am now endeavoring to fulfill through my work in behalf of your measure, which I think is the best in the pension field.

FOR PROTECTION, NOT EXPLOITATION

Merely reading the measure you will see that Mr. Johnson is more concerned with giving real protection to the aged than with leading them on with false hopes to an unrealizable Utopia. First he decided that the old people must be protected by a proper floor under pensions, something to keep them from falling into the basement. No one else in the pension field seemed to care about that. They were all concerned with how much they could hold out to our needy elderly citizens as a maximum or top pension regardless of any actual chance of getting it. Not so with your legislative representative. He said that the old people must be protected, not exploited. So he put in a floor of $30, below which pensions must not be allowed to fall in any State or under any circumstances. This feature attracted my attention especially.

RESERVE FUND TO PROTECT AGED

Reading further, I noticed that he had even provided for a reserve fund to make certain that the annuitants would really get the guaranteed pension called for in the bill. This set me to thinking as to what would really happen if the war should end suddenly and all our defense industries should stop. Would not the revenue under the bill drop appreciably and would not more of our aged be thrown out of work and be forced to apply for the pension to which they would thereby become entitled? I could see that there might be a squeezing of both ends against the middle and that the aged would be the victims unless a proper reserve fund were provided in the bill—something to guarantee that they would actually get the $30 each month without fail and not $28 or $18 or $8, due to a falling tax yield and an increasing pension roll.

EVEN FUNERAL BENEFITS PROVIDED

As I read further, I said to myself, why he has even provided for funeral benefits in this bill—another absolute essential of any program aiming at decent care for our aged.

SOUND TAX BASE MOST IMPORTANT

Then I checked on the tax base to support the measure—which, in my opinion, is the main thing in a measure of this type. Could it be that the measure also had a sound tax base? If so, I said to myself, I will jump right in and support it to the limit of my ability. I turned the pages of the measure. Yes; the proper deductions from gross income were there to make the tax base sound—deductions for the cost of materials or of the product or property sold so that in no case would there be a tax on a deal in which there was a loss instead of gain and so that the tax would not pyramid its burden upon the poor by a tax upon tax upon tax upon tax on the same product every time it changed hands, which would be an inconceivably vicious tax base—deductions also for the first $80 per month or $960 per year of gross income so as to protect the farm groups and the low-wage groups in all walks of life and not tax the purchasing power of the very poor. By Jove, I said to myself, here is a measure I can really support wholeheartedly.

SECURING SENATE SUPPORT

I contacted Mr. Johnson immediately and told him of my decision. So I presented the measure in the Senate as Senate bill No. 1178 and am now doing everything I can to get support for it on the Senate side.

PROGRESS TO DATE MARVELOUS

Mr. Johnson has done a marvelous job on the House side. Never before in the history of America has there ever been such a document as you have on exhibit here today—a steering committee resolution with 7 feet of congressional signatures thereon. Just think of it—a steering committee of 157 Congressmen, all eager to see pensions taken out of the football field and put into the stomachs and around the shoulders of those who built America and made it what it is today—the greatest Nation on the face of the earth.

A MOST PRESSING PROBLEM

I am glad indeed to be able to be here with you today. I congratulate you upon the progress you have made and upon your sound approach to a practical solution to the old-age pension problem—a problem with which America is squarely faced today and one that must be solved if we want to survive as a Nation. It will be solved, and we are the ones to do it.

Certainly Not Treason

EXTENSION OF REMARKS

OF

HON. HARRY S. TRUMAN

OF MISSOURI

IN THE SENATE OF THE UNITED STATES

Monday, July 28, 1941

EDITORIAL FROM THE NEW YORK SUN

Mr. TRUMAN. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an editorial from the New York Sun of Friday, July 25, 1941, under the heading "Certainly not treason." The editorial has reference to certain statements which have been made about the Senator from Montana [Mr. WHEELER] and his right to say what he wants to say. I do not agree at all with what the Senator from Montana is doing or what he has been saying, but I will fight for his right to say it.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

[From the New York Sun of July 25, 1941]

CERTAINLY NOT TREASON

This newspaper holds no brief for Senator WHEELER, nor does it sympathize with the course he has pursued with regard to national defense, but it must insist that one of the things Secretary Stimson said about him yesterday was plain nonsense. Accusing the Senator of having written to Army officers and men urging them to oppose American entry into the war, the Secretary of War went on to assert:

"I think this comes very near the line of subversive activities against the United States, if not treason."

That is a strange use of the word "treason" to be made by a distinguished member of the bar. Surely Mr. Stimson must know how the Constitution of the United States defines treason. That crime, it says, consists only in levying war against the United States or in adhering to their enemies, giving them aid and comfort. The United States Supreme Court has declared not only that no other facts than these can be declared to constitute the offense, but also that Congress can neither extend, nor restrict, nor define the crime, having only the power to prescribe punishment for it. That tribunal has also declared that to constitute the specific crime of treason, war must actually be levied against the United States. In *United States v. Bollman* (1 Cranch C. C. 372), it was said that, however flagitious might be the crime of conspiring to subvert by force the Government of the United States, such conspiracy is not treason; that to conspire to levy war and actually to levy war are distinct offenses; that to complete the crime of levying war against the United States there must be an actual assemblage of men for the purpose of executing a treasonable design.

Since this country is not now at war and does not now acknowledge as its enemies any of the countries that are waging war, whatever else may have been said of Senator WHEELER'S acts, they certainly do not in any true sense constitute treason or come anywhere near constituting it. The propriety of his writing to officers and men of the Army to the effect reported is seriously open to question. Officers and men who followed the advice imputed to him could easily get into trouble under the Articles of War. But to attach to such impropriety an imputation of treason is to be a little extreme, not to say ridiculous.

Dedication of New Wing of Norwegian Legation

EXTENSION OF REMARKS

OF

HON. THEODORE FRANCIS GREEN

OF RHODE ISLAND

IN THE SENATE OF THE UNITED STATES

Thursday, July 24, 1941

ADDRESS BY HON. SUMNER WELLES

Mr. GREEN. Mr. President, day before yesterday I attended the dedication of the new wing of the Norwegian Legation in Washington. The Acting Secretary of State, Hon. Sumner Welles, delivered a thoughtful and statesmanlike address on that occasion, which seems to me to be worthy of wide reading and careful consideration. With Mr. Welles' approval I had intended to ask for unanimous consent that it be printed in the Appendix of the RECORD. However, it has just been brought to my attention

that it was offered in the House of Representatives which met yesterday and printed in the Appendix of the CONGRESSIONAL RECORD as a part of the whole program entitled "Dedication of the New Wing of Norwegian Legation." I now ask unanimous consent that it be printed in the Appendix of the RECORD as part of my remarks.

There being no objection, the address was ordered to be printed in the RECORD, as follows:

We are met here today to join in the dedication of the new wing of the Norwegian Legation in Washington.

These ceremonies are surely symbolic of the hope and of the faith with which we meet.

Those of us who are citizens of the United States are taking part in these dedication ceremonies not only because of the welcome privilege which it affords us of rendering this tribute to our traditional friends, the heroic people of Norway, but also because we can thus best evidence our conviction that the Kingdom of Norway of the past, as we have known it, some day—and we trust that day will come soon—will once more be free and independent.

We here in the United States will always remember the superb courage with which the Norwegian people fought in the defense of their homes and of their liberties against the overwhelmingly superior strength of an invader who had treacherously taken them by surprise. We know how bravely they are still fighting with their allies on sea and land in many parts of the world.

We shall always remember the heroism of their monarch and of their crown prince. And we have heard with emotion the words of that same monarch when he said to his people only a few days ago, "Hold out. Don't lose courage. And be assured that Norway will once again be free and independent, provided that we all continue to do our duty and our utmost to reach our goal in the battle which is now being fought."

Those words seem to us to exemplify the soul of a people which will never admit defeat and which will never be cowed by alien domination.

But, in a larger sense, these ceremonies constitute an act of faith in the ultimate victory of the forces of human liberty; in the triumph of civilization itself over the forces of barbarism.

I feel that there are joined with us in spirit here today, as silent witnesses, the peoples of all of the other countries which have been mercilessly overrun during these past 2 years. I know that they believe as we do that out of this holocaust into which the nations of the earth have been plunged by the criminal obsession of world conquest of one man and of the satellites who surround him, there can come no peace until the Hitlerite government of Germany has been finally and utterly destroyed.

For I am confident that the cause of liberty and of freedom will not go down to defeat. The determination and courage of free men and women everywhere must now be exercised to the full limit of endurance until their victory is won.

And yet, I do not doubt that millions are asking tonight—millions in England and in China, millions of enslaved peoples in Norway and in the other countries now temporarily occupied, millions in the countries which have not experienced war; yes, and millions in Germany and in Italy—are asking, What does the future hold for us after this struggle is over?

Does the end of the present carnage mean only a return to ruined homes; to the graves of slaughtered wives and children; to poverty and want; to social upheaval and economic chaos; to the same gray and empty years of confusion and bitterness, so barren in vision and in human accomplishment, which marked the decades after the termination of the last war?

It seems to me that those of us who are fortunate enough to be able to live as citizens of the free American republics have our great responsibility in the framing of the answer to that question.

For we, all of us, now see clearly, if we did not before, that no matter how great our American capacity for defense may be, no matter how perfect our hemispheric system may become, our future welfare must inevitably be contingent upon the existence in the rest of the world of equally peace-minded and equally secure peoples who not only will not but cannot become a source of potential danger to us in the New World.

I feel it is not premature for me to suggest that the free governments of peace-loving nations everywhere should even now be considering and discussing the way in which they can best prepare for the better day which must come when the present contest is ended in the victory of the forces of liberty and of human freedom and in the crushing defeat of those who are sacrificing mankind to their own lust for power and for loot.

At the end of the last war a great President of the United States gave his life in the struggle to further the realization of the splendid vision which he had held up to the eyes of suffering humanity—the vision of an ordered world governed by law.

The League of Nations, as he conceived it, failed in part because of the blind selfishness of men here in the United States, as well as in other parts of the world; it failed because of its utilization by certain powers primarily to advance their own political and commercial ambitions; but it failed chiefly because of the fact that it was forced to operate by those who dominated its councils as a means of maintaining the status quo. It was never enabled to operate as its chief spokesman had intended, as an elastic and impartial instrument in bringing about peaceful and equitable adjustments between nations as time and circumstance proved necessary.

Some adequate instrumentality must unquestionably be found to achieve such adjustments when the nations of the earth again undertake the task of restoring law and order to a disastrously shaken world.

But whatever the mechanism which may be devised, of two things I am unalterably convinced:

First, that the abolition of offensive armaments and the limitation and reduction of defensive armaments and of the tools which make the construction of such armaments possible, can only be undertaken through some rigid form of international supervision and control, and that without such practical and essential control, no real disarmament can ever be achieved; and

Second, that no peace which may be made in the future would be valid or lasting unless it established fully and adequately the natural rights of all peoples to equal economic enjoyment. So long as any one people or any one government possesses a monopoly over natural resources or raw materials which are needed by all peoples, there can be no basis for a world order based on justice and on peace.

I cannot believe that peoples of good will will not once more strive to realize the great ideal of an association of nations through which the freedom, the happiness, and the security of all peoples may be achieved.

That word, security, represents the end upon which the hearts of men and women everywhere today are set.

Whether it be security from bombing from the air, or from mass destruction; whether it be security from want, disease, and starvation; whether it be security in enjoying that inalienable right which every human being should possess of living out his life in peace and happiness, people throughout the length and breadth of the world are demanding security and freedom from fear.

That is the objective before us all today—to try and find the means of bringing that to pass.

"Not in vain the distance beacons."

Fight for Freedom

REMARKS

OF

HON. BARTEL J. JONKMAN

OF MICHIGAN

IN THE HOUSE OF REPRESENTATIVES

Monday, July 28, 1941

Mr. JONKMAN. Mr. Speaker, on page 4 of this morning's Washington Post there appears a quarter-page advertisement of Fight for Freedom, Inc. It pictures a hideous figure representing nazi-ism purporting to attack the United States via Siberia, the Bering Straits, and Alaska. The folly of such a bogeyman scare is as preposterous as it is self-evident. This tommyrot characterizes the entire advertisement and shows the lengths to which the war makers will go to mislead that portion of the public which is confused and uninformed.

The advertisement asks a number of plausible but unrelated questions, for instance, "Do you think Joe Louis could win a fight if he were not allowed to cross the middle of the ring?"

If the President, his four horsemen, Knox, Stimson, Ickes, and Wickard, as well as Fight For Freedom, Inc., really wished to take a page from the book of Joe Louis, they might recall that a few years ago a Nazi by the name of Max Schmelling came to America to fight Joe Louis. Like his prototype, Adolf Hitler, he had spent a long time preparing a highly specialized offensive good only if he could catch Joe Louis without a defense for the same. It was a right to the jaw and catching Joe Louis without preparation for the same, like Hitler's blitzkrieg, it worked. It knocked out Joe Louis and flabbergasted the fight world just as Hitler's blitzkrieg against defenseless nations flabbergasted the whole world. This is the position we would be in now if Hitler could come over here, which he will not, however, for a long time to come.

After that experience with nazidom, did Joe Louis in his then condition go chasing into Europe or sticking his chin out to Max Schmelling? No; Joe Louis stayed right here and prepared and perfected a defense for this one blitzkrieg weapon that Max Schmelling had. And when Max Schmelling came to America a year or two later to again attack Joe Louis, he found a defense against his blitzkrieg offensive, and he was just a flat-footed push-over.

If we would take a lesson from Joe Louis, we would prepare our defense at home and make ourselves so impregnable that any time Hitler came over here he would be a flat-footed push-over. Instead of that, we are sticking our nose into Europe, sticking our chin out, and doing everything except to prepare our defense.

If we would really take a page from the book of Joe Louis and prepare our defense at home, we would not have the problem of whether the President is going to break his promise to keep us out of the European war unless attacked; we would not have to break faith with our National Guard and trainees on the 1-year training bill; we would not have disunity on the question of whether Britain, who never fights her own battles but has others fight them, is pulling us into this war. In short, we would have a unity and solidarity which would be the best guaranty of not only our safety but the perpetuation of free constitutional government.

W. P. A.—Dinosaur Bones and Tracks

REMARKS

OF

HON. WESLEY E. DISNEY

OF OKLAHOMA

IN THE HOUSE OF REPRESENTATIVES

Monday, July 28, 1941

Mr. DISNEY. Mr. Speaker, I am now addressing myself solely to the seven Members who stood up with me when the gentleman from New York [Mr. TABER] offered his motion to reduce W. P. A. to $500,000,000. The rest of you need not listen. This is a report of the community-service program of the Work Projects Administration in Oklahoma, and it is entitled "Major Accomplishments From October 1, 1940, to July 1, 1941," and they recite the following accomplishments:

Fifty-five blocks containing a series of large dinosaur tracks from Cimarron County.

One thousand one hundred and twenty-eight large dinosaur bones from Cimarron County cleaned and prepared.

Three thousand five hundred and seventy small bones and fragments from Cimarron County cleaned and prepared.

Seventy-eight dinosaur bones from Atoka County cleaned and prepared.

One hundred and sixty fragments from Atoka County cleaned and prepared.

One hundred and twenty-three plaster casts of specimens prepared.

Four hundred and seventy-nine photographic prints and slides prepared.

Three hundred and seventy-six blocks of dinosaur and alligator bones from Cimarron and Atoka Cos. excavated.

Three Buettneria skulls (Triassic amphibian).

One complete skeleton of Diplocaulus (Permian amphibian) mounted.

One complete skeleton of Elephas columbi mounted.

One technical paper on Pliocene mammals from Optima, Texas County, Okla.

Work is progressing on two dinosaur mounts from Montana, one small dinosaur mount from Atoka County, Okla., one Dimetrodon skeleton, one Permian reptile mural, one elephant skull from Lawton.

Four thousand nine hundred and sixteen counted visitors to the museum; 670 counted visitors to the laboratory. Among these visitors were many groups from high schools and college science classes.

If this project continues to operate, we expect to complete the following program:

1. Excavate two new dinosaur-bone sites and complete one Jurassic alligator and fish site in Cimarron County. In addition, we expect to do research for the preparation of two technical papers on these specimens.

2. Complete the survey of southeast Atoka County for new Cretaceous dinosaur sites and to excavate two sites which are now awaiting development. These Cretaceous dinosaur remains are the first to be found in Oklahoma and present a new field for paleonotologic research which may change our present theories on the stratigraphy and sedimentation of this region.

3. We expect to prepare and paint a number of dioramas and murals illustrating the mamals, reptiles, and other fossil life which we are collecting.

4. We expect to secure larger exhibition space from the sponsor and to mount some of the larger specimens which have heretofore been cleaned and stored.

5. We shall collect data for the preparation and publication of several technical papers to be written by the sponsor's director. Dr. Stovall.

6. We shall continue to catalog, photograph, and exhibit specimens as they are prepared and strive by means of conducted museum tours, lectures, feature articles, and other publicity methods to keep the public informed on all of our activities. Our files are always open to reputable scientists and we have always invited and encouraged high school and college science groups to visit our museum.

American Blood to Defend the British Empire

EXTENSION OF REMARKS

OF

HON. GEORGE HOLDEN TINKHAM

OF MASSACHUSETTS

IN THE HOUSE OF REPRESENTATIVES

Monday, July 28, 1941

EDITORIAL FROM THE WASHINGTON TIMES-HERALD

Mr. TINKHAM. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following editorial from the Washington Times-Herald of this morning:

[From the Washington Times-Herald of July 28, 1941]

DESIGN FOR A SHOOTING WAR

To repeat some things we've said before:

On July 4 last General Sir Archibald P. Wavell, British commander in chief in the Middle East, was quoted as follows in an interview at Cairo with Harold Denny, of the New York Times:

" 'Can you win the war without America's full-scale participation?' "

"General Wavell answered with a slow shake of his head, then he said, "We shall have to have airplanes, tanks, munitions, transports, and finally men.' "

" 'When?' "

" 'The sooner the better,' was the reply. 'But that depends on when you are ready, doesn't it? I suppose when you get into all-out production you will be able to equip any number of men for anywhere in the world.' "

Lt. Gen. Sir Claude J. E. Auchinleck presently succeeded General Wavell in the British Middle East command; and on July 7 the United Press had this report from Cairo:

"Lt. Gen. Sir Claude Auchinleck, new British Middle East commander, said today that American manpower eventually would be just as necessary 'to win the war properly' as it was in the World War."

And Cecil Brown, C. B. S. Cairo correspondent, quoted General Auchinleck as saying American manpower would be needed "within the next 12, 14, or possibly 24 months."

We remarked at the time that this must be the voice of Churchill, though the words were those of Wavell and Auchinleck.

We have a hunch that it was not the voice of Churchill alone. Mr. Churchill and President Roosevelt are known to be in constant and sympathetic communication regarding the conduct and course of the war. We think it is reasonable to assume, though we have no proof of it, that Generals Wavell and Auchinleck would not have made those public remarks about American manpower in this war without the sanction of Mr. Roosevelt as well as the authority of Mr. Churchill. We think it certain they wouldn't have made them if Mr. Roosevelt had said he didn't want such things said.

WHAT GOES ON, ANYHOW?

It is important to repeat these things, we believe, because they seem to us to be key pieces in the jigsaw puzzle of this administration's real plans and hopes regarding this war.

Further pieces in the puzzle are: (1) President Roosevelt's message to Congress asking removal of the 1-year time limit on service of draftees, National Guards, and Reserve officers; (2) Chief of Staff Marshall's insistence on this measure, and on removal of the limit of 900,000 draftees usable in the Army at one time; (3) Marshall's rejection of Senator TAFT's proposed compromise on a 16-month top for non-Regular Army soldiers' service; (4) Acting Secretary of State Sumner Welles' talk about a post-war league of nations to impose the "four freedoms" on the whole world after Britain and ourselves have smashed Germany.

We think all this adds up to an administration plan to build up a big army for eventual use abroad in an effort to lick Hitler.

WHAT IS THIS AWFUL PERIL?

The plea that our peril is infinitely greater now than it was a year ago looks hollower with each day the Russian-German war lasts.

Hitler and Stalin have been at it since June 22 in the morning, or 37 days today. No signs of a quick, decisive German victory are apparent as yet. If and when Hitler beats Russia, he will have to rest a lot of troops, repair a lot of panzer equipment, replace a lot of planes, and pacify a lot of Russians before he can turn again on Britain. If Stalin beats Hitler, Stalin will be a black cloud overhanging all Europe; but the Russians never have proved good offensive fighters outside Russia.

Where, then, is our immediate peril, that makes it imperative to freeze the Army at its present size of about 1,450,000 and pour new men into it without stint or limit?

We don't think there is any such immediate peril; and we're still waiting for those who claim they can see it to point it out convincingly to the American people.

The World as a Junior Sees It

EXTENSION OF REMARKS

OF

HON. FRANCIS CASE

OF SOUTH DAKOTA

IN THE HOUSE OF REPRESENTATIVES

Monday, July 28, 1941

ESSAY WRITTEN BY DONNA JEANNE WRIGHT, OF GREGORY, S. DAK.

Mr. CASE of South Dakota. Mr. Speaker, under leave to extend my remarks in the RECORD, I wish to include an essay written by Donna Jeanne Wright, of Gregory, S. Dak., which was awarded first place in the American Legion Auxiliary's national essay contest for junior members.

Donna Jeanne has been a junior member of the American Legion Auxiliary all her life, and is now serving as first vice president of the Gregory, S. Dak., junior American Legion Auxiliary group. She has won several honors in essay writing and in dramatic declamation, winning State honors 3 consecutive years while still in grade school.

For her essay, The World as a Junior Sees It, Donna Jeanne was awarded a State prize of $2 and a national prize of $35, with which she says she intends to buy defense-savings bonds.

The prize-winning essay follows:

We, the juniors of the American Legion Auxiliary, see the world today as a world of strife and distress in which America stands out as the land of plenty and freedom.

Many peoples of the world today have forgotten to worship God and to "love thy neighbor." If brotherly love, instead of hatred, could be instilled in the hearts of men they would find a much better method of settling their differences than by human slaughter, such as is now being done in Europe and Asia. Only when differences of nations can be settled through honest and sincere discussion and friendly deliberation can we hope for enduring peace.

In 1917 and 1918 our fathers served in the World War, a war to end all wars and for the preservation of democracy. Today these World War veterans are a disillusioned group of men for they realize that that war was in a measure fought in vain and that it has again become necessary for the United States to become involved in another European entanglement. No wonder tears come to their eyes as they see their sons leave for military training. Will every generation be called upon to defend democracy?

We see a bleeding Europe looking to the United States for aid, that millions of people now forcefully ruled by the brutal iron hand of Hitler, may again enjoy peace and independence. Will the United States have to police the world in order to maintain peace?

Perhaps the war scene in Europe would have been somewhat different if the request of the American Legion for an adequate national defense had been favorably regarded in the past. The United States would then have been better prepared to meet the emergency of today and aggressor nations would not have been so bold in overrunning weaker countries. But we also realize that guns and ammunition will be of little use if the youth of our land do not have a genuine desire to defend our democracy. Therefore true Americanism and love for our country must be taught in our schools.

We see un-American activities promoted by the German Bund, National Youth Congress, Jehovah's Witnesses, and other subversive organizations in an attempt to overthrow our democratic form of government. This has become a matter of deep concern to the members of the Junior American Legion Auxiliary as we have benefited greatly by the patriotic teachings of our parent organizations, the American Legion and its Auxiliary. We believe that only through love of country, courage, and steadfast faith in the American way of life can democracy survive.

Our prayer is that democracy will endure and that Americans will continue to defend it in every crisis.

We see in this world of struggle for supremacy a world of hope, where once again peace and good will will prevail; a world where God will reign supreme, and a more sympathetic understanding between nations will govern mankind.

The American Destiny

EXTENSION OF REMARKS

OF

HON. GEORGE A. PADDOCK

OF ILLINOIS

IN THE HOUSE OF REPRESENTATIVES

Monday, July 28, 1941

EDITORIAL FROM THE ANTIOCH (ILL.) NEWS

Mr. PADDOCK. Mr. Speaker, this interesting and thoughtful editorial recently appeared in the Antioch (Ill.) News, a paper which for more than 50 years has given leadership and inspiration to a loyal and patriotic community.

Congress has voted enormous sums and has delegated unprecedented powers to create an impregnable national defense. However, if the use of these powers results in a break-down of our great American institutions, we have met a more disastrous defeat than could come from any invader. We can and will defend America, but it must be the same America we have known and loved.

[From the Antioch (Ill.) News of July 24, 1941]

THE AMERICAN DESTINY

The world knows what appeasement and vacillation mean to a nation confronted by an aggressive and ruthless enemy. It leads to one certain goal—disaster. The once proud nations which have bowed their heads in defeat, are grim proof of this. Today's dictators give no quarter. They are after but one thing—total victory. The nation which gives a little, eventually gives all.

What is true in international affairs, is true in domestic affairs And that is a truth that must be brought squarely home to the Nation's leaders in both industry and government. There are those in high places who argue that our basic freedoms cannot be wholly maintained in a changing world. They say that the private enterprise system cannot be kept intact. They would, in short, appease and attempt to conciliate with forces which are as dangerous to our existence as a free people, as any potential military aggressor.

We see this in governmental inroads into the field of business. When government goes into business, the private enterprise system—which is the democratic system—becomes a little weaker. It loses a little ground. The political bureaus grow in number and power and extent. The hand of government is felt in more homes. And government gradually grows great beyond necessity, and the traditional democratic balance is slowly lost.

There are two types of offenders against the American way of life. First, there are those men in government whose real goal, though they may not admit it, is to establish some form of socialistic totalitarianism here. They would use the world crisis to gain their ends. In the name of national defense they would appropriate basic industries which are vital to our survival as a free people.

Second, there are men high in industry whose instinct is to make deals—in short, to appease, to compromise with socialism. They seem afraid to fight for the principles of individualism that are at stake. They see temporary personal gain by going part way along the road to totalitarianism. They forget that, in all the history of the world, no nation has long endured which has attempted to reconcile two diametrically opposed principles of life and living. Lincoln said no nation can exist half slave and half free. By the same token, no nation can exist half socialistic and half free.

The President has lately talked of our fundamental rights which must not be sacrificed. Those rights inevitably involve the right to own property, to go into any legitimate business, to be free from political persecution and government competition with private endeavor, to live in a land where the government exists for the people, not the people for the government.

The man who does not fight for those eternal principles for which this country stands has no place in this country. We now have the opportunity to prove to all the world that a free people, working in a free economy, can outmatch the dictators and their slave peoples in any contest of any kind. That is the American destiny.

The New War Department Building

EXTENSION OF REMARKS

OF

HON. RAYMOND S. SPRINGER

OF INDIANA

IN THE HOUSE OF REPRESENTATIVES

Monday, July 28, 1941

Mr. SPRINGER. Mr. Speaker, a collossal expenditure of money is embraced in the deficiency bill, now under consideration, by which it is proposed to allocate the huge sum of $35,000,000 for a new War Department Building. It has been suggested that this will be the largest office building in the world when it is completed, and this is a permanent construction. The building is to be located, we are advised, across the Potomac River, in the State of Virginia. The proposed location for this mammoth structure will be in the low land immediately adjacent to the river, and near the west end of Memorial Bridge. This land is wholly unimproved; there are no

sewers, and the drainage is not established; the only means of ingress and egress to and from this site is Memorial Bridge, with the use of Fourteenth Street Bridge, which is far down the river, a possibility and the further use of Chain Bridge, far up-stream, as another possibility. The construction of a new and permanent War Department Building at the location now proposed will entail the expenditure of huge sums of money for the incidental improvements required for such an extensive office building. The original cost of $35,000,000 for this new building is merely the beginning of the spending for this project. No one can now predict what the cost will ultimately be.

Mr. Speaker, we have a huge War Department Building, located on Constitution Avenue, where all incidental improvements are already constructed, and which building is in use; just recently an addition was constructed to this and the Navy Department Building; those buildings have served us well, and they are now serving us well; they have housed this vast army of employees to this very hour, and if there should develop a great need for more room in the War Department or the Navy Department, we can well construct temporary quarters which will well serve our purpose during these critical times. Such temporary quarters for additional employees would be insignificent in the amount of the cost thereof, and the demand for a huge outlay for permanent construction, such as is contemplated, would not be required. If we are not to become militaristic in the future, why the construction of this huge building for our War Department. It is unnecessary and we can well do without it. We should conserve the taxpayers' money and we should think of some of the needed equipment for our own defense of our country, our people, and our institutions. This staggering project, which will cost the people a staggering sum of money, should be entirely eliminated at this time. No one appears to know whose suggestion it was that brought this tremendous building into the pending bill. This expenditure should be entirely eliminated from this proposed legislation. Our present War Department Building will well serve all present needs. We do not want a militaristic nation in the future, and therefore we do not need the largest office building in the world for our War Department.

Mr. Speaker, I ask unanimous consent to extend my own remarks in the Appendix of the RECORD, and to include therein an editorial which appeared in the Washington Evening Star of recent date, which editorial follows:

[From the Washington Evening Star]

A STAGGERING PROJECT

The $35,000,000 War Department Building project planned for Arlington County, Va., is so staggering in its proportions as to be difficult to grasp on short notice—and the notice was so short that even such customary planning agencies as the National Capital Park and Planning Commission and the Fine Arts Commission were not consulted by the House Appropriations Committee before it reported the proposal favorably to the House yesterday. That the plan was drawn in haste is evident from testimony given before the committee. Brig. Gen. Brehon B. Somervell of the Quartermaster General's Department of the Army, who was identified as author of the plan, told the committee he had not had time to confer with the Fine Arts Commission. He explained, moreover, that the Park and Planning Commission was not consulted because "of course it is outside of the jurisdiction" of the Commission. This view, however, is in conflict with the act of April 30, 1926, which gives the Commission authority to develop a plan not only for Washington proper but for its environs.

Since the record of the hearings shows that the project was first described to the House committee on Tuesday of this week, it is natural that questions should arise as to practical as well as esthetic aspects of the plan. Disregarding the long-approved Northwest rectangle program, which called for the new War Department Buildings near Virginia Avenue and Twenty-first Street and a new Navy Building west of the Naval Hospital, the new plan provides for a structure on the old Arlington Experimental Farm large enough to accommodate 40,000 employees, about 15,000 persons less than the present population of Arlington County and some 18,000 more employees than work in all of the buildings of the present Federal Triangle. The cost will approximate that of New York City's Empire State Building and the area of its three floors will be about double that of the Empire State Building, according to General Somervell, although other figures contest the accuracy of such a comparison.

A building of such colossal size requires adequate sewerage, water, and other utility services. It is assumed the War Department and Congress will take into consideration the fact that Arlington County's water and sewerage facilities in the proposed area already are undergoing strain.

County officials recently declared that a new sewage disposal plant and other equipment would be required to serve any large new Federal buildings on that site. Bridge connections with Washington are taxed to capacity by existing traffic. The committee was told that the bulk of War Department employees live in the District, which means that additional facilities for crossing the Potomac may be necessary.

Surely Congress will not adopt so far-reaching and revolutionary a project without affording the Park and Planning Commission and other interested agencies or officials an opportunity to pass upon the technical, artistic, and other aspects of the undertaking. It may well be that careful studies by building and planning experts will show that the proposal is feasible and, in view of emergency conditions, altogether desirable. To ignore the advice of experienced planners, however, would be a serious mistake that might bring disastrous complications later.

Lincoln Holiday Bill

EXTENSION OF REMARKS

OF

HON. EVAN HOWELL

OF ILLINOIS

IN THE HOUSE OF REPRESENTATIVES

Monday, July 28, 1941

JOINT RESOLUTION BY THE LEGISLATURE OF THE STATE OF ILLINOIS

Mr. HOWELL. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following joint resolution recently adopted by the Legislature of the State of Illinois:

Senate Joint Resolution 40

Whereas the Sixty-second General Assembly of the State of Illinois has by law declared the birthday of Abraham Lincoln to be a legal holiday in this State; and

Whereas it is altogether appropriate that the birthday of Abraham Lincoln be made a national legal holiday; and

Whereas Senator BROOKS, on June 9, 1941, introduced in the Senate of the United States a bill declaring the birthday of Abraham Lincoln to be a national legal holiday: Now, therefore, be it

Resolved by the Senate of the Sixty-second General Assembly of the State of Illinois (the House of Representatives concurring herein), That we respectfully importune the Seventy-seventh Congress of the United States to enact the Brooks' Lincoln holiday bill; and be it further

Resolved, That copies of this preamble and resolution be forwarded to the President of the United States, the President of the Senate and Speaker of the House of Representatives, and to each Congressman and Senator from Illinois, by the Secretary of State.

Adopted by the Senate, June 20, 1941.

HUGH W. CROSS,
President of the Senate.
EDWARD H. ALEXANDER,
Secretary of the Senate.

Concurred in by the House of Representatives, June 30, 1941.

ELMER J. SCHUECHEULING,
Speaker of the House of Representatives.
R. R. RANDOLPH,
Clerk of the House of Representatives.

Let Reason Guide American Course

EXTENSION OF REMARKS

OF

HON. HAROLD KNUTSON

OF MINNESOTA

IN THE HOUSE OF REPRESENTATIVES

Monday, July 28, 1941

ADDRESS BY HON. HJALMAR PETERSEN

Mr. KNUTSON. Mr. Speaker, on July 4 Hon. Hjalmar Petersen, former Governor of Minnesota and now railroad warehouse commissioner of that State, delivered a very thoughtful address entitled "Let Reason Guide American Course," which I consider timely and worthy of careful consideration by the Congress. Under leave granted me, I desire to have Mr. Petersen's address printed in the Appendix of the RECORD. His remarks follow:

When we think of world conditions today, and compare them with conditions in America, we have abundant reasons for being thankful and to really celebrate this one hundred and sixty-fifth anniversary of the signing of the Declaration of Independence, which made America a free country. The Fourth of July is a great day—it is a joyous day in the lives of all Americans—and it marks a significant day in the history of all the world.

The Pilgrims came to American shores at Plymouth Rock back in 1620, because they were seeking religious freedom. To be sure,

these religious people in the very early history of our country, encountered the hardships of pioneer life, but they were free to worship God in their own way. That torch of religious freedom has been held uppermost in America ever since 1620, and its later embodiment in our Constitution.

FREEDOM GAVE GROWTH

As the original Thirteen Colonies developed in farming and industry, and the population increased, there also developed friction with the mother country, England. It is well for Americans today that their forebears severed connections with England, and that the United States of America became a free and independent country. Had we remained under England, we would likely have been another Canada, Australia, New Zealand, or any one of the many other countries under English rule, instead of a nation today of over 130,000,000 people.

Prior to the signing of the Declaration of Independence, the Original Thirteen Colonies were obliged to fight in several wars in behalf of England as the other English colonies have had to do all along. Today, there are forces in America whose purpose it is to again join us up with the British Empire. The result of such a union would be to nullify our Declaration of Independence.

In the Declaration of Independence, Thomas Jefferson, Benjamin Franklin, John Adams, John Hancock, and the other signers, listed a long train of abuses and usurpations on the part of the English Crown. They told the world that the King kept standing armies in the Colonies without the consent of the legislatures. Militarism was made superior to civil power and in general there was delayed justice; they burned towns and killed people; they erected a multitude of new offices and appointed officers to harass the people; our trade was cut off from the rest of the world; there was taxation without representation, and tyranny over the Colonies.

NO FOREIGN WARS

The Declaration of Independence was adopted on July 4, 1776, at Philadelphia. Not so long ago there was another meeting in the City of Brotherly Love. That was in 1940. It was the national convention of the Republican Party, at which time nominations were made for the offices of President and Vice President, and a party platform was adopted. That 1940 platform states: "The Republican Party is firmly opposed to involving this Nation in foreign wars."

Another national political convention was also held in 1940. The Democratic Party platform, adopted at Chicago, states: "We will not participate in foreign wars, and we will not send our Army, Navy, or air force to fight in foreign lands outside of the Americas, except in case of attack."

There we have the platforms, in a nutshell, from both of the dominant political parties in 1940, with reference to war and foreign affairs. The people were led to believe that either President Roosevelt or Mr. Willkie, if elected President, would keep us out of the European conflict, unless we were attacked.

We are not in the war, and it is to be hoped that we will never enter another European war. We had that experience 24 years ago and that is enough. Those who want war say that the American people have spoken, but certainly the American people did not vote for war when the President was reelected. On the basis of the political platforms, the American people would not have voted for war either had they elected Mr. Willkie as President.

If the people had become dormant and permitted things to drift, we would likely have been in the war already, but the White House heard from the people.

MUST KEEP PROMISES

What the American people have a right to demand, and what the great majority is demanding, is that the promises made in the 1940 campaign be kept. The form of government that we have can last only when elected public officials and servants of the people keep their promises.

Before a huge crowd at Dubuque, Iowa, on June 21, Archbishop Francis J. L. Beckman, of that city, reminded the President of his commitments to the American people. He said:

"You have given the people of these United States your solemn pledge that the youth of our land will not be sent to fight in any foreign wars. To repudiate that pledge, Mr. President, would be to break down the last vestige of public trust in Government.

"Your pledges will be kept because we will help you keep them.

"For my part, Mr. President, I would rather go down fighting the cause of peace, suffering any abuse and persecution, than to stand idly by while millions of our youth are prepared for the slaughter.

"If Christ Himself were this moment to return and confront these modern Herods, and Pilates, and Neros, for their crimes before the world, He, too, would be crowned by them a bundist."

We can help the President keep his pledges by writing to the White House today.

NOT OUR WAR

The passage of the lend-lease bill by Congress is another incident that the war-minded throw up as an indication that America should enter the conflict. Passage of the lend-lease bill and appropriations for aid to Great Britain do not mean that America should risk another war to give that aid. Furthermore, we were told by advocates of the lend-lease bill that it would be a measure to keep America out of war.

These questions might be asked: How many countries are giving aid to Great Britain in this war without cost to Britain? Are they lending, leasing, or giving materials, or are they selling the goods to Britain? Is England giving or is she selling goods to other countries? And in the final analysis: Is it our war or is it the war of other countries?

America, a country of free speech, free press, and religion, wants nothing of the Hitler philosophy of totalitarian government, nor does she want the Stalin communistic dictatorship. Those two dictators are now at war, and certainly democracy is not at stake between Germany and Russia.

WANT STRONG DEFENSE

Military experts are agreed that America is not prepared for war, but our people are agreed that we should have an impregnable defense and be prepared against attack. Setting up a strong defense here in America will cost plenty without plunging ourselves into a European war.

America would have had a stronger defense today had the Government followed the advice of the American Legion which also advocates conscripting of wealth as well as manpower in war.

When the smoke of battle has cleared away, those unfortunate people in the war-torn countries, who are unemployed, hungry, starving, and bewildered, will need aid and guidance. It would be well then that there be one country in the world, with natural resources and manpower, where conditions are fairly normal. Then America can be of aid and guidance to a bewildered world. Then we will not be isolationists, for the American people have always been willing to give aid and comfort to people in need. Isolation means isolation from war—it does not mean that America is not interested in the people of other lands.

Aside from our part in the World War in 1917–18, America has adhered to the policy of refraining from entering the European border disputes, which have taken place for centuries. We have followed the advice of Washington and Jefferson, and have adhered to the policy of protection for the Western Hemisphere and leaving Europe to itself.

RISING ABOVE WAR

Even today, we still have many Americans who are natives of foreign countries, naturalized citizens who are good Americans, and we have descendants from Great Britain, Germany, Finland, the Scandinavian countries, Poland, Czechoslovakia, France, Italy, and many other countries. It is natural and proper that there be friendly feelings and sympathy toward the homelands of our forebears, whatever country we may have come from, so long as America is not at war with any of those countries. But, today, we are Americans—we came to these shores of our own volition. We, or our ancestors, came here because we wanted to work, build homes, and rear our families in a country that is not everlastingly at war with other nations. We came here because we love the freedoms that America has given us. Let us, as Americans, keep America free.

We learned through the World War of 1914–18, that we cannot force our way of life, our free democratic institutions, upon other nations. We went into that war on the slogan to "make the world safe for democracy." But what a sad result!

WILSON ASKED FAIR PLAY

President Woodrow Wilson was undoubtedly sincere in desiring that peace reign over the world after that great holocaust. He presented his 14 points to Congress on January 8, 1918, and enlarged upon those points in later addresses. President Wilson wanted freedom of navigation on the open seas in peace or war. He wanted removal of economic barriers, equality of trade, reduction of national armaments to a point consistent with domestic safety. He requested mutual guarantees of political independence and territorial integrity to great and small states alike.

President Wilson wanted peace that would be permanent and settlements to be fair and just to bring that about. He said in one of his speeches to Congress: "Every territorial settlement involved in this war must be made in the interest and for the benefit of the populations concerned, and not as a part of any mere adjustment or compromise of claims amongst rival states."

But when Lloyd George of England, Clemenceau of France, and Orlando of Italy got through with the so-called peace conference it was an entirely different matter. America fought for an ideal in that war. The European leaders were not idealists but played the old game of power politics and they had their way. Wilson surrendered his peace points for a League of Nations that the European leaders knew they could and would control.

SENATE REFUSES TO RATIFY TREATY

We had helped part of Europe defeat another part of Europe, and in doing so we lost over 100,000 brave sons and crippled for life tens of thousands more. We burdened our country with a $25,000,000,000 debt. We loaned over ten billions to various European nations which they refuse to repay and which is now being paid by the American taxpayer. After the World War was over we helped to draft one of the worst peace treaties in all history, so bad, indeed, that our own Senate refused to ratify it.

Instead of ending all wars and making the world safe for democracy, we helped create the situation that brought on countless more wars, including those now raging. We helped prepare the soil of Europe for the dictators that are now battling for supremacy.

Today we have people among us who would repeat the stupid blunder of 1917. It is a wise child that stays away from the fire after having once been burned.

We are interested in the welfare of America and interested in preserving liberty and

democracy in this country. We are interested in keeping America strong so that she will be in a position to help rebuild the world after this disastrous war is over. Therefore, we must let reason, and not our emotions, guide our course. Our indignation must not replace our reason.

HATE PROPAGANDA SPREAD

Students of history will recall reading about the propaganda spread in America for America to help the French Revolutionists and, also, for America to save the world from Napoleon.

Former President Herbert Hoover, who directed the work of the Belgium commission during the World War, reports that he saw the pernicious technique of propaganda developed for 8 years in Europe. He dealt with leading officials of the various countries. Mr. Hoover states: "Daily I read of atrocities on both sides that, to my knowledge, were sheer inventions. They were invented by the thousand to create hate."

Mr. Hoover, who speaks from experience and first-hand knowledge, says that "if we go into another World War liberty will be lost to America. Surely the voice of experience calls to us that we are little likely to emerge again without great impairment, if not total loss, of our American system of liberty. What shall it profit a nation that loses its own soul?

"During the World War we professed we were fighting only the dictator over the enemy people. Then we punished the enemy people for the war.

"The social regeneration of nations must come from within. It cannot come from without."

A JUDGE AFFECTED

Let me give you another illustration of what war propaganda and hysteria can do to people. The elder La Follette made a speech in the United States Senate in which he embodied an Associated Press dispatch of October 1, 1917, from Houston, Tex., as follows:

"Judge Waller T. Burns, of the United States District Court, in charging a Federal grand jury at the beginning of the October term today, after calling by name Senators Stone, of Missouri; Hardwich, of Georgia; Vardaman, of Mississippi; Gronna, of North Dakota; Gore, of Oklahoma; and La Follette, of Wisconsin, said: 'If I had a wish, I would wish that you men had jurisdiction to return bills of indictment against these men. They ought to be tried promptly and fairly, and I believe this court could administer the law fairly, but I have a conviction as strong as life that this country should stand them up against an adobe wall tomorrow and give them what they deserve. If any man deserves death, it is a traitor. I wish that I could pay for the ammunition. I would like to attend the execution; and if I were in the firing squad, I would not want to be the marksman who had the blank shell.'"

COMPARED WITH LINCOLN'S POISE

Imagine a Federal judge wanting five United States Senators shot to death for having voted against entering the World War and wishing that he could buy the ammunition and be part of the firing squad that would kill them. Yet that is what propaganda and war hysteria does to people otherwise considered sensible. What a difference between the words of this pseudo patriot and those of Lincoln who said in the midst of war, "With malice toward none, with charity for all."

Here in Minnesota the elder Lindbergh was hounded by the mobs for being a real American and trying to keep us out of war. Senator Shipstead's house was painted yellow. The late Senator Lundeen was thrown into a refrigerator car in the middle of winter by an un-American mob because he opposed our entry into the war and our joining the League of Nations.

As Senator La Follette, in the speech referred to, said, "A declaration of war is the highest and most awful exercise of sovereignty."

The most un-American thing, short of treason, that an American citizen can do is to abuse a duly elected Representative or Senator for voting his honest conviction on the question of peace or war.

THE VOTER IS MASTER

The great Henry Clay, speaking at Lexington, Ky., on the 13th day of November 1847, while the Mexican War was taking place, took a strong position in behalf of the right of the people to freely discuss every question relating to the war, even though the discussion involved a strong condemnation of the war policy of the Executive.

As to the question of declaring war aims, Clay, in the same speech, said: "Either Congress or the President must have the right of determining upon the objects for which a war shall be prosecuted. There is no other alternative. If the President possesses it, and may prosecute it for objects against the will of Congress, where is the difference between our free government and that of any other nation which may be governed by an absolute czar, emperor, or king?

"The right to control their own government according to constitutional forms is not one of the rights that the citizens of this country are called upon to surrender in time of war."

We should remember that Congress alone has the right to declare war and Congress alone has the right to declare the objects of war. We should further remember that the Congressmen are the elected servants of the voters who place them there. How ridiculous for anyone to say that the master cannot criticize the acts of the servant. Under our form of government the voter is the master, and must always be the master, if liberty and democracy are to be preserved.

WEBSTER AND OTHERS SPOKE UP

In the midst of the Mexican War Abraham Lincoln, then a Congressman, severely criticized the President for his conduct of that war. During the same war Daniel Webster said: "We are, in my opinion, in a most unnecessary and therefore, unjustifiable war."

I have quoted from these great men to show that even while a war is on the true American policy is to permit free speech and open discussion of all the issues relative to the war. Yet, in America today, we have some people in high places who are criticizing distinguished American citizens for urging that we keep out of the European war.

Secretary Ickes states that he thinks Lindbergh has an understanding with Hitler. It would be just as unfair for you or me to accuse Mr. Ickes of having an understanding with the King of England to drag us into the war.

Secretary Ickes goes on to say: "If it is not to be 'America next,' we must leave nothing undone to help England repel the brutal hordes of Hitler and to destroy them."

NAME CALLING AND PLEAS FOR WAR

Ickes called Colonel Lindbergh an "ex-colonel," "our Knight of the German Eagle," "Hitler's stooge," "an American Quisling," and a "Nazi wolf in pacifist's clothing." Ickes claims to get his inspiration from Washington, Lincoln, and Prime Minister Churchill. The Prime Minister, by the way, said that this is no time to moralize about communism.

Another Cabinet member, Secretary Knox, said a few days ago that we must immediately "clear the Atlantic of the German menace." Knox is several weeks behind Minnesota's appointed junior Senator in asking for American naval intervention.

Senator BALL urges America to face war courageously now. That will be done if we are attacked. In that event we will fight for home and country, but let us not invite war. The Senator pictures France as a country that tried to make peace with Hitler. She is today suffering from the so-called peace settlement after the World War, and is a next door neighbor of Germany, not 3,000 miles away.

READY TO REPEL INVADERS

Members of the American Legion and other service organizations who were in the World War know something about war from first-hand knowledge. They know the suffering and the agony that men must go through in the hell of battle. They have seen thousands of comrades killed outright and thousands of others maimed for life. They appreciate more than any other class of our citizens the suffering that is still being endured by these men who served in the last war and who are now filling all the beds in the 80 Government hospitals that were built to take care of the disabled.

I am firmly of the opinion from conversation with men who served overseas in 1917 that all of them want America to be adequately prepared to defend herself. I am equally convinced that the veterans of our previous wars would be willing and eager to defend America against invaders. But I am just as convinced that the overwhelming majority of veterans of the last war are opposed to another expeditionary force being sent to a foreign country to help settle any quarrel that is going on in the Old World. On this Independence Day it is well to remind ourselves of what Washington once said: "I want an American character."

WHERE IS DEMOCRACY IN RUSSIA?

Those who would have America go to war say that we must fight for democracy. It was recently announced from Washington that the United States as the arsenal of the democracies will supply Soviet Russia with munitions of war. Thus we find President Roosevelt, Willkie, Stassen, and Ball ranging themselves on the side of the purging Joseph Stalin.

Russia is at war with Finland, and the Soviet air forces are bombing the civilian population of gallant little Finland, a country which approximates our conception of democracy as closely as any country in Europe, with the possible exception of the Scandinavian countries and Switzerland. Our munitions in the hands of Communist Russia are to be used to subdue democratic Finland, and all this in the name of democracy. Recent events have made it plain that all talk about America's going to war for democracy is a travesty and a farce.

There is plenty of evidence that Stalin's agents have worked in America to create class hatred. I know something of what they did to the progressive movement in Minnesota, but will not here dwell on that.

FOREIGN TRADE MYTH

One of the main arguments advanced by the war-minded is that we must make war to protect and defend our foreign trade. In 1929 our foreign trade equalled 10 percent of our total trade. That was the peak.

The latest available statistics disclose that American foreign trade was 4 percent of our total trade in 1939. Since then many of the markets of European countries under Hitler's domination have been closed to us, and it is now reliably estimated that our foreign trade is less than 3 percent. It is for this 3 percent of our total trade that some of our citizens urge us to go to war.

During the last 12 months of the World War the United States spent almost $20,000,000,000. With greater mechanization the cost of war has greatly increased. Today an effort comparable to our effort in the World War would cost at least forty billions a year. For the cost of America's participation in Europe's war for 6 weeks we can buy and destroy, if necessary, our surplus wheat and

cotton, or, better still, we can buy and distribute to those of our people who are undernourished and underclothed all of our surplus wheat and cotton.

I do not believe in a foreign policy which goes to war on a calculated basis of profit in dollars and cents. I believe there are civilization values, cultural values, spiritual values, which flow from peace that cannot be measured in money.

WE WILL HAVE TRADE

But even on the basis of a cold-blooded dollars-and-cents foreign policy we will save money in the long run if we stay at home and mind our own business and accept and pay for the curtailment of foreign trade which results from a war-torn world.

America, however, is as nearly self-sufficient as any nation. And let us remember that, regardless of the outcome of this war, America will have foreign trade. For example, the East Indies will continue to sell rubber where there is a big market, and in turn those islands and other countries will need our exports.

Even the victors as well as the vanquished in war have to return to the paths of peace if they are to recover from their own exhaustion.

I am a liberal. I believe that liberalism is largely an attitude of mind. It is the attitude which wants to be helpful to the underdog, which wants to make his lot better wherever opportunity offers.

True liberalism seeks not to destroy but to preserve the basic fabric of American government, American law, and American life. True liberalism rejects communism, fascism, nazi-ism, and all the other "isms" which today afflict the national life of America. True liberalism seeks to work out within the fabric of our fundamental law a more equitable distribution of this world's goods and preservation of the personal liberties which have been handed down to us in America by those who came before us.

GUARD CIVIL LIBERTIES

The preservation of these personal liberties is absolutely essential to the working of the democratic process in America. Without free speech, a free press, free religion, and the right of free assembly, democracy cannot work. In these days of complicated issues confronting our people it is only by argument and counterargument, and fact and counterfact, that our people become informed, that the popular opinion slowly crystallizes, and ultimately makes its effect in governmental action.

Should America ever go to war again even our civil liberties are in jeopardy. War brings a rising tide of intolerance. It prompts neighbor to suspect neighbor and friend to suspect friend. Under the guise of war necessity, the civil liberties are curtailed, restricted, and all too often ultimately destroyed by war. If we would guard democracy in America we must guard our fundamental civil liberties which are, and always will be, the very lifeblood of our democratic process.

In these days of turmoil, excitement, and emotion, let us reaffirm our original and traditional American policy. As Hoover has said, we should "maintain a nondefeatist, nonisolationist, and noninterventionist status."

Let us "improve the four freedoms within our borders that the light of their success may stir the people of the world to their adoption."

LET US HELP BUILD

Let us concentrate on how humanity can win the peace, and how freedom and economic security can be harmonized.

On this Independence Day, let us rededicate ourselves to the principles laid down in the Declaration of Independence. Let us reaffirm the foreign policy of Washington, Jackson, and Lincoln. Let us make America strong for defense, and keep America strong economically. Let us keep calm and think clearly. Let us penetrate the fog of propaganda, hate, and falsehoods that comes to us from Europe and from some people here in America, who would profit from war as was done in 1917–18 when 22,000 new millionaires were created in America.

Let us think of America first in order that we might preserve our heritage of freedom, and be in the best possible position when this awful war is over to serve the peoples of the world. "With malice toward none, with charity for all," let us continue to serve mankind with an example of peace and freedom, and a generous hand of helpfulness, rather than to try by force of arms and bloodshed to impose our will on other nations. Let us help rebuild the world, but let us do it in the American way.

Hibernians Pledge Allegiance to Constitution and Institutions of Government Founded Thereon

EXTENSION OF REMARKS

OF

HON. MARTIN L. SWEENEY

OF OHIO

IN THE HOUSE OF REPRESENTATIVES

Monday, July 28, 1941

RESOLUTION ADOPTED AT NATIONAL CONVENTION, ANCIENT ORDER OF HIBERNIANS, ST. PAUL, MINN., JULY 22–24, 1941

Mr. SWEENEY. Mr. Speaker, under leave granted to extend my remarks in the RECORD, I include the following resolution adopted at the national convention of Ancient Order of Hibernians, St. Paul, Minn., July 22–24, 1941:

As American citizens, proud of our Irish ancestry, we again pledge our unswerving allegiance to the Constitution of the United States of America and to the institutions of government founded thereon.

We pledge our undivided support, moral and material, to the defense of America, its ideals, its free institutions and laws, and we commend our Senators and Members of Congress for their action of national preparedness, particularly our past national president, Representative MARTIN L. SWEENEY, from Ohio.

We abhor and condemn every form of aggression whether it be the aggression by a totalitarian or imperialist dictator or by the representative of a self-styled democracy. And further:

Resolved, That we renew our spiritual allegiance to our Sovereign Pontiff, Pope Pius XII, and express our full sympathy with his efforts to restore peace to the world, and we hope that rulers everywhere will listen to his pleading for a return of reason and sanity in the councils of nations before chaos comes.

Resolved, That we, as the organized representatives of thousands of citizens of Irish blood, who cherish the ideals of liberty and justice and those principles of government handed down to us by great Americans of the past, insist that the pledges be kept which were made to the people of the United States before the last national election by the leaders of both major political parties, that American soldiers would not be sent to take part in the war which has developed out of the power politics of the Old World. If the political leaders in this country break faith with the people who are opposed to American involvement in another foreign war, the first principle of our democracy which is "that governments derive their just powers from the consent of the governed," will be violated and the foundations of American liberty imperiled.

Resolved, That we congratulate and commend the people of our blood and race in Eire for the example which they have given to a war-mad world by adhering to an attitude of strict neutrality, at a time when the rulers of other lands, impelled by the desire to retain loot of old conquests, or by ambitions for new possessions, and to acquire greater power, are exposing millions of human beings and many countries, to the horrors and devastation of modern warfare. We rejoice because the people of Eire and their spokesmen have resolutely refused to be drawn into the war by surrendering territory to England or any other nation for war bases, as such a surrender would be a violation of Eire's neutrality and an abandonment of her sovereign right to control her own territory and make her own decisions on questions involving her peace and security.

Resolved, That we urge the Government of the United States to sell ships, arms, ammunition, food, and other commodities, in the quantities requested by the Government of Ireland, to enable the Irish Nation to maintain its policy of absolute neutrality.

Resolved, That we again denounce the puppet government set up by England in six counties of Northeast Ulster as a despotism functioning with the aid of subsidies from the English Imperial Treasury. An English commission, which investigated conditions in that area declared that under the government in power there, "the rule of law and justice has been abrogated." We arraign the Government of Northern Ireland before the court of American public opinion for having governed tyranically and unjustly since it was brought into existence, by English statecraft and to keep Catholics and Protestants divided in that area, in pursuance of the old imperialist policy of "Divide and conquer."

We demand in the name of justice that Irish nationalists imprisoned there without a charge being preferred against them be liberated and that the boundary set around these six Irish counties be abolished, and that they be restored to the Irish nation, of which they are a part.

T. V. A. Concentrates Help Feed Britain

EXTENSION OF REMARKS

OF

HON. PHILIP A. BENNETT

OF MISSOURI

IN THE HOUSE OF REPRESENTATIVES

Monday, July 28, 1941

Mr. BENNETT. Mr. Speaker, when the Tennessee Valley Authority was set up originally, it was promoted principally on the theory that the enterprise would be a great boon to the farmers of America through the production of fertilizers. Today I learn through an article in the St. Louis Post-Dispatch of Sunday that much of the fertilizer produced by T. V. A. will go to enrich the soil of England. Already 40,000 tons of concentrated superphosphate have been ordered by the British Government.

Where, Mr. Speaker, does the American farmer come in on this deal? Will he be taxed, and taxed off the farm, just to give everything we can to the British? When are we going to stop coddling foreigners and start taking care of our own people?

Mr. Speaker, I ask unanimous consent that the article from the St. Louis Post-Dispatch of July 27 be included as part of my remarks. I want the American farmers to know that the benevolence of this administration is not local in character, not State-wide in prospect, but world-wide in fact.

The article follows:

T. V. A. CONCENTRATES HELP FEED BRITAIN WITH FEWER SHIPS

Concentrated superphosphate fertilizer produced in T. V. A.'s electric ovens will help to feed the people of England under war conditions, by maintaining fertility of British soil.

Because the concentrated T. V. A. product requires less than half the shipping space of the normal superphosphate, the British Government has ordered 40,000 tons to be supplied as rapidly as possible.

The concentrated superphosphate made by T. V. A. is 45 percent available plant food. This means 45 pounds of plant food in a 100-pound bag. The ordinary type of commercial phosphate fertilizer contains about 15 to 18 percent available plant food. The concentrated product thus reduces the volume of material which must be handled and shipped to get a given amount of plant food to the soil. This is highly important in view of the shortage of ships to carry supplies to England.

Steam Power Development

REMARKS

OF

HON. FRANCIS E. WALTER

OF PENNSYLVANIA

IN THE HOUSE OF REPRESENTATIVES

Monday, July 28, 1941

Mr. WALTER. Mr. Speaker, during recent weeks we have been hearing of a shortage of power, and our attention has been directed to the possibilities of the development of the St. Lawrence waterway in order to relieve this shortage. It seems to me we can very easily kill two birds with one stone by providing for the increase of the facilities of the existing companies that manufacture power by steam. The anthracite region of Pennsylvania is within a radius of 200 miles of one-fourth of the population of the United States, and if power plants were located in that section it would be a comparatively simple matter to move the coal from the mines to the power plants, and the power could then be distributed to the sections where it is needed.

According to my understanding, the Government advances money to manufacturers of war matériel, which is repaid to the Government in annual installments. Why cannot the same system be employed in the creation of electric power facilities? By so doing there will not be added to the multiple problems of the anthracite-coal regions of Pennsylvania that of increased unemployment. The fact that transportation costs could be greatly reduced if power was manufactured in the anthracite regions should be taken very seriously into consideration, as well as the cost of producing power in steam power generating plants. I have been very reliably informed that the power produced at Lake Wallenpaupeck costs considerably more than the power produced at a steam power generating plant within 50 miles of the water-power development. In the sections of the greatest industrial activity, power can be provided cheaper than and the cost of installation would be less than the cost of a water-power development.

The anthracite-coal regions have suffered ever since the World War, and are still suffering, because of the overdevelopment of the coal-mining operations that took place at the time of the World War. The defense effort has not relieved unemployment in the coal regions, because no new industry has located there, with the result that our relief load is nearly as great as it was during the depression years. The only thing that can bring about stability in this region is an increase in the use of anthracite. The construction of the St. Lawrence River project will very materially affect one of America's basic industries without justification. Much of the coal used in Canada comes from the anthracite section of Pennsylvania and is used in the manufacturing plants in Canada. In the event that the St. Lawrence project is completed, this market will be very seriously affected, with the resultant loss of work for thousands of our coal miners.

I earnestly hope that the Government will cooperate with some company that produces electric power through the use of coal powered steam plants in the construction and operation of a plant or plants that will provide the power so badly needed in our defense effort. In view of the fact that Army engineers have completed studies of the Delaware River and have prepared plans for the damming thereof, work could be promptly commenced on a steam-power program.

Electric Energy Is the Magic Key to Production—The A. V. A. Is Production

EXTENSION OF REMARKS

OF

HON. CLYDE T. ELLIS

OF ARKANSAS

IN THE HOUSE OF REPRESENTATIVES

Monday, July 28, 1941

ARTICLE FROM THE SOUTHWEST AMERICAN, FORT SMITH, ARK.

Mr. ELLIS. Mr. Speaker, one of the clearest and most concise statements I have seen yet on the proposition of power production and the development of the abundant natural resources of the Southwest is contained in an editorial which appeared on July 18 in Arkansas' third largest newspaper, the Southwest American, of Fort Smith.

I quote the article written by the editor, Mr. Clarence F. Byrns, in full as follows:

Electric energy is the magic key to production, in peace or war time.

The area which has power plants, whether hydro or steam, has the foundation for a great industrial wealth, in peace or war time.

The vast expansion of electric energy production, occasioned by the war, can easily become the foundation on which we shall build a new and higher level of life when the war emergency has ended.

The particular application of those truths to our situation here in the Southwest is this:

We have a prospect of important increase in our power production facilities as a result of the war emergency. The Federal Government is planning to spend tremendous sums to build hydro and steam plants to get electric energy where it can be produced economically, and to encourage industry where the power is available.

We have at the moment a prospect of a steam power plant in western Arkansas, fired by Arkansas-Oklahoma coal.

We have the best opportunity that has yet appeared to get favorable consideration for our long-time dream, the Arkansas Valley Authority, for development of the power, flood control, navigation, and irrigation possibilities of our streams.

The Federal Government is preparing for a long war. The Federal Power Commission, fitting its plans to this long-range war program, has proposed to President Roosevelt a power expansion program designed to spend a billion dollars over a 5-year period in developing new electric energy sources.

Leland Olds, Chairman of the Commission, said:

"There is no question about this investment being self-liquidating, as all the proposed units would be installed in the normal course of events.

"The total investment in steam stations will average about $75,000,000 to $100,000,000 a year in addition to the cost of the generating units. This investment may be expected to come largely from private sources.

"The total investment in hydro projects, including dams, reservoirs, power houses, etc., but exclusive of the cost of generating units, will average about $170,000,000 a year, of which more than one-third will be allocable to flood control, navigation, and other benefits."

Reading between the lines, this program means the Arkansas Valley Authority has an excellent chance for favorable action now to serve the double purpose of power production for the war effort and a foundation for economic growth after the emergency is over.

The sponsors of the Arkansas Valley Authority have thought of it chiefly in terms of a long-range program for production of cheap power, flood-control works, navigation aids, and irrigation supplies in the slack period when the war is over. It has not been expected that it would be approved immediately or that actual work under it would start during the war emergency, except for the projects already underway in the area under control of the United States engineers.

This tremendous program of power expansion sponsored by the Federal Power Commission changes the picture materially.

Here in the valleys of the Arkansas, the Red, the St. Francis, and the White, there is abundant opportunity for development of hydroelectric power by harnessing the energy of falling waters. The United States engineers have proposed for final construction

no less than 35 separate projects in the valleys of the 4 rivers, and others are under consideration. Two important dams for power production and flood control are under way in this section of the A. V. A. area at this time. Norfork Dam in Baxter County, Ark., is under construction, and recommendations have recently gone to Congress for additional funds to equip it for power. Denison Dam, between Oklahoma and Texas, is under construction as a dual-purpose project. Table Rock and Bull Shoals Dams, on the White River in north Arkansas and southern Missouri, are being urged for immediate construction. All these are part of the Arkansas Valley Authority program.

If the administration approves the expansion program now proposed by the Federal Power Commission the valleys of the Arkansas, the Red, the St. Francis, and the White offer ideal opportunity for doing the very thing the Commission is recommending. Power production can be greatly expanded in this section of the Nation. That production can contribute vitally to the defense effort, and it can contribute vitally after the war to a level of life in the Southwest which our people have never known before.

Mandatory Joint Income Tax Returns

EXTENSION OF REMARKS

OF

HON. PAT McCARRAN

OF NEVADA

IN THE SENATE OF THE UNITED STATES

Monday, July 28, 1941

ARTICLE BY GODFRY N. NELSON

Mr. McCARRAN. Mr. President, there appeared in the New York Times on July 20 a very able article by Mr. Godfry N. Nelson on the subject of the proposed change in the tax law whereby joint returns would be compelled on the part of husband and wife. I ask that the article be inserted in the RECORD.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

[From the New York Times of July 20, 1941]

PROBLEMS POSED BY JOINT RETURNS—ECONOMIC, SOCIAL, AND LEGAL ASPECTS OF THE PROPOSED CHANGE DISCUSSED—UNCERTAINTY IS STRESSED—CONSTITUTIONAL STATUS UNDETERMINED—LAWFUL AVOIDANCE ALSO POSSIBLE

(By Godfrey N. Nelson)

If the provision for mandatory joint income tax returns of husband and wife should be permitted to remain in the forthcoming tax bill, nearly 10 percent of the anticipated revenue will be placed in jeopardy. The total revenue sought is $3,500,000,000, of which the compulsory joint return is expected to raise $323,000,000.

Undesirable tax measures, the legality of which, however, had not been questioned, have been enacted in the past and in the course of time either repealed or not reenacted—two undistributed profits taxes, for example—one shortly after the World War and the other more recently. Both were experimental legislation and neither was adopted in a period of national emergency. Now, in an extreme national emergency, it is sought to enact a measure which is not only of doubtful validity, but in itself unsavory, and in some of its aspects contrary to what should be public policy. One must doubt the wisdom of such legislation at this critical time.

MOVE IS HELD EXPERIMENTAL

The enactment of the compulsory joint return would be in the nature of experimental legislation both from the point of view of constitutional uncertainty and because of its possibility of legal avoidance. It is questionable that even a liberal court would view the issue as lightly as did Justice Holmes in his dissenting opinion in the Hoeper case (284 U. S. 206). He knew the majority opinion, not his opinion, made the law. Moreover, the issue now would be Nation-wide, not merely State, and conceivably many resulting controversies as to respective liability of the husband and wife for the higher rates of taxes on the combined basis would find their way to the courts, culminating ultimately in the divorce courts. Any form of taxation which even potentially can lead to a disturbance of domestic relations is a threat to the tranquillity of the home and the family.

Apart from its constitutional uncertainty, it is a question whether the mandatory joint return provision could be administered without advantage to those who legally sought to avoid it. The law now is that in order to obtain the right to make joint returns the husband and wife must make their returns for identical periods; they must both use the calendar year or the same fiscal period, the latter being a taxable year ending at the close of any month other than December.

Certainly, if the husband and wife determine to make returns for different taxable periods, they could not be deprived of so doing. Their business interests may be such in fact as to require unlike taxable periods. And if they have different taxable years, they could not make joint returns. Prior to 1918 individuals were required to make returns on the calendar-year basis. Since then, however, all taxpayers having books of accounts are required to report income on the basis of the accounting period employed in keeping the books. Only taxpayers who do not have books must compute their incomes and file returns on the calendar-year basis. It is highly unlikely that the original law, confining individuals to the calendar-year basis, could be reenacted.

Heretofore only married couples living together have been permitted to file joint returns. If they lived apart, they were required to file separate returns. Although the personal exemption must be apportioned in case of a change of status during the year, as from single to married, a married couple must live together at the close of the taxable year in order to be entitled to file a joint return. Since married couples not living together could hardly be compelled to make joint returns, separation at the close of the year would seem, technically, even under the mandatory rule, to require the filing of separate returns. But this merely illustrates how conveniently the proposed rule may be circumvented. Or will it be required that couples living apart shall periodically report their marriage status in order to entitle them to file separate returns? A sort of periodical questionnaire. This would call for rather unsocial social legislation.

Except for its profound seriousness, the proposal suggests extravagant situations, as, for instance, a husband joining the Army in order to save income taxes. The taxing authority would have to take the position that he was living with his wife despite his absence, which, on the other hand, he would have the right to claim under present law in order to obtain the exemption of a married man. Whose word will be determinative if he asserts his right to a separate status?

Perhaps the proposal was presented by the committee with a view to placing the burden elsewhere to suggest a substitute. Last Sunday this column suggested a tax of 1 percent on all salaries and wages, to be collected at the source, carrying no exemption. If one-third of the national income consists of earnings from employment and the national income is estimated at $90,000,000,000, such a tax should raise a revenue of $300,000,000. No separate return would be called for except one from the employer stating only the total pay roll and 1 percent of that amount.

If the Congress, in the face of a questionable constitutionality and the administrative complications, should persist in legislating the committee's proposal, there are other legal phases which will be dealt with by the courts. In *Schlesinger* v. *Wisconsin* (270 U. S. 236) (in which Justice Holmes also dissented) invalidating an inheritance tax on gifts presumed to have been made in contemplation of death, the Supreme Court observed that the tax was defended on the theory that, exercising judgment and discretion, the State legislature found the taxation necessary in order to prevent evasion of other taxes. The court concluded that "A classification for purposes of taxation must rest on some reasonable distinction. A forbidden tax cannot be enforced in order to facilitate the collection of one properly laid."

Dinner in Honor of Members of Rivers and Harbors Committee

EXTENSION OF REMARKS

OF

HON. CLYDE T. ELLIS

OF ARKANSAS

IN THE HOUSE OF REPRESENTATIVES

Monday, July 28, 1941

ADDRESS BY HON. PIERRE F. CASGRAIN, SECRETARY OF STATE OF CANADA

Mr. ELLIS. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following address delivered by the Honorable Pierre F. Casgrain, the Secretary of State of Canada, on July 21, 1941, at the dinner given by the Dominion Government in honor of the members of the Rivers and Harbors Committee of the United States House of Representatives at the Royal St. Lawrence Yacht Club, Pointe Claire, Province of Quebec:

Members of the House of Representatives in the United States Congress and gentlemen, as we are meeting in Quebec, by the great river, discovered by Cartier, it is not unfitting that my first words of welcome to you should be in the language of Lafayette and Laurier.

C'est plus qu'un agréable privilège, c'est un véritable réconfort d'accueillir dans notre pays les distingués réprésentants de la grande nation américaine.

Aussi le Canada tout entier vous souhaite-t-il la plus chaleureuse bievenue.

Il est tout naturel que cette réunion économique et amicale ait lieu dans la grande province canadienne et française, face ou grand fleuve que vous venez d'explorer. Et la vieille province est heureuse de vous accueillir en se souvenant des relations amicales qui ont toujours existé entre les deux pays depuis prés de trois siécles et que servant d'exemple à toutes les autres nations du monde.

I am glad to welcome you in the Province of Quebec which is today so well led, in church and in state.

This French welcome will also help to remind you that friendly relations between our two countries date as far back as 1651,

when a Quebec delegation visited the American Colonies to propose a treaty of trade and friendship, the first reciprocity treaty declined by you, gentlemen of the South.

May I also remind you while delving into our common past, that you are not the first committee of Congress to visit our shores. You had predecessors, and most distinguished ones.

Indeed, three signers of the Declaration of Independence—Samuel Chase, Charles Carroll, and the great Benjamin Franklin—came to Montreal in 1776 to adjust the difficulties of the officers of the American Army in Canada.

At that time American finance, with its Continental paper money, was so far from leading the world that the delegates had to borrow silver from Canadian friends to pay for their transportation from St. John to Montreal.

I feel sure there has not been any occasion for borrowing in the course of the present trip; things have greatly changed since those days. I fear that most of the borrowing has been reversed, but the friendship has continued unabated for over a century between our two countries.

Perhaps there are no two peoples who feel so much at home when visiting each other, and there are, perhaps, no two countries who exchange the whole years so many visits. Our Prime Minister vacations in Virginia and your President does some of his fishing in New Brunswick.

For several years my own constituency boasted the presence of President Taft as a summer resident. This generously proportioned, huge visitor used often to donate part of his wardrobe to neighboring villagers and fisherfolks. Returning the next summer, he asked a woman what she had done with his last suit: "Well," she said, "with the coat I made two suits for Joseph and Baptiste; with the trousers legs I made pants for Henri and Adélard, and with the seat I made a sail for my husband's boat."

Today it is my great privilege to welcome you in the name of Canada, as the distinguished representatives of the great American Nation, of which we are proud to say that she is our neighbor, our friend, and also our economic and moral ally.

You have come to Canada on an economic and pacific mission, but this mission will indirectly tend to increase our war effort.

It is your President who said that "wartime industries urgently require additional power that could be developed on the river and that the pressing demand for ships would be effectively met only by making possible their construction at points on the Great Lakes."

He also said, "The Government of the United States of America is engaged on a great defense program. It is determined to supply all such aid in material to Great Britain, the members of the Commonwealth and their allies as may be necessary to enable them to bring the war to a successful termination."

These are noble words which ought to ring in the ears and impress the mind of every true Canadian and true American. The world cannot be half free, half Nazi.

Your mission more especially proclaims the moral and financial alliance that binds our two countries in their common wish, will, and aid for the victory of free and democratic institutions against the tyranny and violence of brutish dictators aiming at the destruction of religion and liberty.

It is not my intention to enter into the field of your mission. You have come to see and judge for yourselves.

Our own task is only to welcome you and extend to you all facilities during your visit.

The undertaking in hand will, I have no doubt, prove highly beneficial to both countries.

The agreement which brings us together today will not fail, notwithstanding certain fears unjustified, to bring to the Province of Quebec real benefits, such as the stabilization of the water level of the St. Lawrence at Montreal, the increase in commerce and trade, and the establishment of new industries, due to electrical power which will accrue from the development of the St. Lawrence waterway.

Criticism born from ignorance, fears, even if supported by legitimate interests, will I have no doubt, prove unfounded and unjustified. As one who from his birth has always admired the beauties of our great St. Lawrence, as one who has always lived in Montreal—I have never been afraid of this project; I always had faith in it. I believe we must look beyond the present moment and the present day. Population will expand, production increase, which both require more power and better transportation facilities. The future does not belong to men of little faith.

When the Erie Canal was built in 1825, there was only a population of 11,000,000 in the United States; today the canal has to serve 135,000,000 population.

Today the duty of everyone is to discharge his immediate task to the best of his ability. So civilization and liberty expect every man to do his duty.

It is up to every one of us to keep his courage, faith, and hope hitched up to the stars.

Today Canada fights on land, on sea, and in the air, and her forces are growing all the time, and will grow according to the needs of Britain.

Canada today is spending more than 40 percent of her income for war and victory, and we are not sparing our men either.

We have stood for peace in the past, we now war for right; and it is because the Province of Quebec wants to remain French, with its British institutions, that she fights so nobly with her sons at the side of Britain; and it is because she wants to remain free that she works hand in hand with her neighbor, the great American Nation.

Canada, however, does not forget that war is an accident and that she must even in war prepare for the future. That is why she is going ahead with the St. Lawrence waterways development. In the working out of this far-seeing and far-reaching project, she feels doubly confident, since she has the immense advantage and benefit of the American cooperation.

So Canada is glad, this evening, to welcome the distinguished delegates of the American Congress, as she knows that their presence is one step further toward the realization of the magnificent plan of an open seaway from the Atlantic to the heart of the North American Continent.

Letter of the Fifth Avenue Association of New York

EXTENSION OF REMARKS

OF

HON. MARTIN J. KENNEDY

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Monday, July 28, 1941

LETTER FROM THE FIFTH AVENUE ASSOCIATION OF NEW YORK TO PRESIDENT ROOSEVELT

Mr. MARTIN J. KENNEDY. Mr. Speaker, I am in entire accord with the request of the Fifth Avenue Association of New York as contained in a letter to the President under date of July 10.

The correspondence follows:

THE FIFTH AVENUE ASSOCIATION, INC.,
New York, July 24, 1941.

Hon. MARTIN J. KENNEDY,
The House of Representatives,
Washington, D. C.

MY DEAR REPRESENTATIVE: For your information, I am enclosing a copy of our letter of July 10, 1941, addressed to the President urging that consideration be given to the removal of some of the Federal bureaus, agencies, and commissions to New York City in view of the shortage of housing and office space in Washington D. C.

We hope that you will use your good influence in helping to accomplish this desired end.

Very truly yours,
WM. J. PEDRICK, *Vice President.*

THE FIFTH AVENUE ASSOCIATION, INC.,
New York, July 10, 1941.

Hon. FRANKLIN D. ROOSEVELT,
The White House, Washington, D. C.

MY DEAR MR. PRESIDENT: The expenditure of billions of dollars for national defense purposes necessarily involves the creation of new agencies and bureaus and the expansion of existing governmental departments. According to a recent congressional committee report, the effect of such an enlarged program of activities has created a serious problem in Washington in providing adequate office space and housing facilities to meet these new demands.

To relieve this congestion and also to make room in Washington for those defense bureaus that must remain there, the Fifth Avenue Association recommends that some of the departments, bureaus, and agencies of Government be moved to New York City. It seems hardly necessary to point out what this city has to offer, but the following are some of the advantages it possesses and can provide:

1. Adequate and comfortable housing accommodations for workers.
2. Plenty of vacant office space in well built and conveniently located buildings.
3. Every facility for the expeditious handling of business.
4. Ample hotel accommodations.
5. Educational and recreational facilities, such as art galleries, museums, theaters, parks, beaches, and so forth, that are exceptional in their scope and variety.
6. A large and varied labor market.
7. One of America's greatest railroad points.

While it is appreciated that Washington is the headquarters of the Government, New York City has the largest business, financial, and shipping facilities. It would, therefore, appear reasonable and logical that consideration be given to moving to this city such bureaus as the Maritime Commission, the Interstate Commerce Commission, and the Securities and Exchange Commission, thus releasing the space occupied by these agencies and making it available for the emergency defense bureaus which, of necessity, must be located in Washington.

Mayor LaGuardia has advocated and urged the removal of some of the Federal agencies to New York City, and in wholeheartedly supporting the idea the Fifth Avenue Association strongly feels that such a move would be mutually advantageous to the Government and to the city of New York.

Respectfully yours,
WM. J. PEDRICK,
Vice President.

The Congressional Front

EXTENSION OF REMARKS

OF

HON. EVERETT M. DIRKSEN

OF ILLINOIS

IN THE HOUSE OF REPRESENTATIVES

Monday, July 28, 1941

JOURNAL FOR A WEEK

Mr. DIRKSEN. Mr. Speaker, in the week beginning July 21 the greatest highlight of the week was the message of the President delivered to Congress on July 21, in which he requested an Army of unlimited size to serve for an indefinite period. On that same day Congress recognized the tumultuous protest which came from the wheat areas of the country and passed H. R. 5300, which has for its purpose a modification of the penalty provisions on wheat in certain hardship cases where small yields or small acreage are involved. On July 22 the House passed the Defense Highway Act of 1941, authorizing the construction of a strategic network of highways supplemented by access roads, off-street parking lots, and flight strips along the highways for the landing of airplanes. This measure authorized an appropriation of $262,000,000. On Wednesday, July 23, the House considered a number of bills dealing with postal workers, including one measure which provides a longevity bonus of $100 per year after 10 years of continuous service to the Federal Government, and an additional $100 for each additional 5 years up to the thirtieth year of service. The net effect of this measure would be that a postal employee who had worked for the Federal Government for 25 years would receive an annual bonus of $400 after the twenty-fifth year, in addition to his regular base pay. On Thursday, July 24, the House considered a supplemental appropriation bill which provides more than $7,000,000,000 for additional requirements for the Army, the Navy, and the United States Maritime Commission. The largest items for the Army were $443,000,000 for clothing and supplies, $347,000,000 for the Signal Corps, and $204,000,000 for the Air Corps. This bill carried $698,000,000 for the United States Maritime Commission in furtherance of a program which embraces the ultimate construction of more than 1,200 vessels. Within the next few months it is expected that cargo vessels will be completed at the rate of 1 per day. This measure also carried $35,000,000 for the construction of a new War Department building on the Virginia side of the Potomac River. Objection developed to this item. The committee in charge of the bill withdrew further consideration until Monday. These are the highlights of the legislative week and embrace authorizations and expenditures exceeding seven and one-quarter billion dollars. The President's message was followed by the introduction of a bill for a congressional declaration of an emergency under which draftees might be kept in service for more than a year. The floor fight on that measure will probably begin on the fourth day of August.

THE SOVIET JOINS UP

In normal times, it is not customary for foreign embassies and legations to inform Congress of what is happening in their countries. Their functions are essentially diplomatic and commercial, and contacts are made through the State Department. But the war has changed all that. Believing that the Congress and the country should be informed of what was taking place overseas, first one country and then another began to publish and supply a digest of information. First came the Nazis with what was known as the German Library of Information. Then came Poland and Czechoslovakia with bulletins. Later came Norway and China. Latest addition to the bulletins which now appear regularly is that of the Soviet. It is issued by the Soviet Embassy in multigraphed form about 10 pages in length and contains a variety of treatises. Included in the list of articles are those on Parachutists and Glider Pilots in the U. S. S. R., Bulgaria Under Germany's Heel, Soviet People Praise Stalin's Appointment as People's Commissar of National Defense, together with recent war communiques.

THE ILLINI COUNTRY

The State of Illinois has enjoyed membership in the sisterhood of the United States for 123 years. In 1820, but 2 years after admission to the Union its population was but 55,211, substantially one-half the population of the city of Peoria. Today its official population, by the census of 1940, is 7,897,241. From 1810 to 1820 the population increased by 349 percent. In the following decade it increased by 185 percent. From 1830 to 1840 it was 202 percent. From 1840 to 1850 the increase dropped to 78 percent but turned up to 101 percent between 1850 and 1860. Thereafter, with but one exception, there has been a steady decline in the rate of increase in population and in the last 10 years amounted to but 3.5 percent. Deaths, lowering birthrate, and departures account for this gradual decline in the rate of population increase. In 1820 Illinois had but 3 cities. Today it has 208. Perhaps the most interesting trend in Illinois population is the continuing increase in the number of people who reside in cities and the declining percentage of those who reside in rural areas. Just 100 years ago, only 2 out of every 100 persons in Illinois resided in the cities. The other 98 were classified as rural. From that time on, the gravitation toward urban life has continued until in 1940, 74 out of every 100 people reside in the cities and but 26 in the rural areas. This trend has great industrial and economic significance.

CHANGE BEGETS CHANGE

Suppose you operated a distillery? Suppose you place a barrel containing 49 gallons of spirits in a warehouse and left it for 4 years? Suppose at the end of 4 years, the barrel contained but 42 gallons? Suppose the Government made you pay internal-revenue taxes on the number of gallons which were originally placed in the barrel? You would then be paying tax on 7 gallons of spirits which you did not have and could not sell. Believe it or not, as brother Ripley would say, that's exactly what happens. Through evaporation and outage, the number of gallons of spirits in a barrel diminishes with the years. Sixty years ago, Congress took cognizance of this fact and established by law what is known as the Carlisle allowance—named after Congressman John G. Carlisle, of Kentucky—which permitted distillers a credit of 7½ gallons for loss over a period of 3 years. This loss allowance has been gradually increased until it now amounts to an allowance of 13 gallons per barrel on spirits stored for 80 months and 13½ gallons for any period over 80 months in warehouse. This formula has been in existence for many years, but conditions change and there is now a demand to change the formula because it is estimated to cost distillers $6,000,000 a year in losses in excess of those for which allowance is made. Today, barrels used in the distilling industry are larger and have a longer stave. Hence losses are greater. The white oak staves in use today are more porous than those of two generations ago. This increases loss. Years ago, barrels were made by hand and the staves were "rived" by hand which partially sealed them. Today, barrels are machine made. This is another loss factor. Finally, spirits are stored in heated warehouses today which increases evaporation. The distilling industry is asking Congress to relieve it of the burden of internal-revenue taxes on spirits which they do not have because they have gone with the wind.

Proposed Separate Air Force

EXTENSION OF REMARKS

OF

HON. PAT McCARRAN

OF NEVADA

IN THE SENATE OF THE UNITED STATES

Monday, July 28, 1941

GALLUP POLL

Mr. McCARRAN. Mr. President, I ask unanimous consent to have printed in the RECORD a preliminary Gallup Poll on the subject of whether or not there should be a separate air force for the defense of this country.

There being no objection, the poll was ordered to be printed in the RECORD, as follows:

[From the Washington Post of July 26, 1941]

THE GALLUP POLL

MAJORITY IN WHO'S WHO SURVEY APPROVE SEPARATE AIR FORCE; 27 PERCENT ARE UNDECIDED

(By George Gallup, director, American Institute of Public Opinion)

PRINCETON, N. J., July 25.—Whether America should have an independent Air Corps headed by a separate Cabinet department, or

continue with Army and Navy air sections as at present, remains a subject of debate in official Washington and in the American press.

While the general public has yet to hear all the arguments pro and con, the opinion of at lease one relatively well-informed group of citizens has apparently been thrown on the side of a separate Air Corps. A survey of representative groups of men and women listed in Who's Who in America, familiar red book of American achievement in many fields, shows those with opinions about 2 to 1 in favor of a new air establishment.

Twenty-seven percent are undecided

Educators, scientists, engineers, businessmen, political leaders, and others in Who's Who were asked:

"A bill has been introduced in Congress to provide for a separate national air force under a Secretary of Military Aviation. Do you think Congress should pass this bill?"

The answers of those in the cross section were:

	Percent
Favor separate air force	49
Oppose separate air force	24
Undecided	27

Daylight Saving

EXTENSION OF REMARKS

OF

HON. EDWIN ARTHUR HALL

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Monday, July 28, 1941

EDITORIAL FROM THE CHENANGO (N. Y.) TELEGRAPH

Mr. EDWIN ARTHUR HALL. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following editorial from the Chenango (N. Y.) Telegraph:

[From the Cenango (N. Y.) Telegraph]

LET THE SUN MOVE

"* * * and he said in the sight of Israel, sun, stand thou still upon Gibeon; and thou, moon, in the valley of Ajalon." Thus spake Joshua. "And the sun stood still, and the moon stayed, until the people had avenged themselves upon their enemies."

It was on that day the Amorites were delivered up before the children of Israel. Perhaps this is a portentous moment in which history is repeating itself, for Franklin D. Roosevelt asks the power of Congress to command the sun to stand still so that our enemies can be delivered up before him.

The President, in the daylight-saving-time bill, seeks the means to establish the time wherever he chooses because of the need for conserving electric power. While we, too, believe that the Nation's resources should be turned all out to the war effort, nevertheless it is significant that power shortages are possible only in a few isolated sections of the country and it is doubtful if moving the clock hands would effect any appreciable savings.

Furthermore, localities where power is at a premium could themselves adopt time which would serve best.

The President and the Congress, in our opinion, have more important matters for consideration.

United States Aid to Russia

EXTENSION OF REMARKS

OF

HON. THOMAS D. WINTER

OF KANSAS

IN THE HOUSE OF REPRESENTATIVES

Monday, July 28, 1941

RADIO ADDRESS OF HON. FREDERICK C. SMITH OF OHIO

Mr. WINTER. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following radio address of my colleague, Hon. FREDERICK C. SMITH of Ohio, delivered over the Columbia Broadcasting System Wednesday evening, July 23, entitled "United States Aid to Russia":

Fellow Americans, the President has announced it to be the policy of our Government to give aid to Russia in her war against Germany Supplies for Stalin are doubtless already on their way to Russia. We are told that a request will soon be made to Congress for additional billions in appropriations for the lend-lease program, much of which is to be used for aid to the Soviet Union.

Americans have been told that in our aid to England we have been promoting certain ideals, the establishment of the four freedoms, etc. Just how now can we square those ideals with the ruthless policies of the red Stalin? Should Russia, with the aid of England and America, be able to defeat the despised Hitler, what should we expect Stalin to demand at the peace table?

How, indeed, shall America enforce the four freedoms on communistic Russia?

Much as we may desire the destruction of Hitlerism, we as free Americans cannot afford to pay the price in money and blood to strengthen and enhance the power of communistic Russia.

We, who have been and are opposed to the United States entering the European war, have consistently claimed the war was not being fought for idealism, but was in fact a continuation of the age-old hatreds and struggles for power which have kept Europe embroiled in wars for centuries.

America has no place in such a war, and could contribute nothing toward a permanent peace, should she enter it, as was abundantly proven by our entry into the World War. If any proof of our position were needed, surely this struggle between Hitler and Stalin should be sufficient. Certainly no one will contend that either Stalin or Hitler are fighting for idealism, or the four freedoms of which we have heard so much.

Assuredly the new line-up of forces in Europe should give America cause to carefully consider the implications and the likely consequences to our Nation of joining up with Stalin in this war.

I consider any alliance between our country and Russia as an act of the utmost gravity and fraught with the most dire consequences to our Nation. There is no doubt that any union between ourselves and Russia will operate strongly to encourage the further development of communism in this country. It will, I fear, do much more than this.

The association of our people with Russians in a war must have the effect of disarming the opposition which our people have been developing against communism. We cannot become partners in war with Red Russia without in some degree condoning communism.

What, for example, about the work of the Dies committee? Of what value will it be to us now? Will not all the good it has done in exposing the subversive forces which are imposing their vicious schemes upon our country be wiped out by this joining up of our Nation on the side of Stalin? Will not such an act in a large measure give immunity to the foreign agents serving Russia in the cause of communism in our country?

Certainly the communistic elements which swarm in high and low places in our Government need no longer fear this committee.

Note the effect this new alinement of ours has already had upon the leading communistic elements in our country. Before Russia and Germany engaged in this war against each other, and before the President made his promise of aid to Russia, those Communists vehemently protested that the war was imperialistic and that the United States should stay out of it.

Immediately following hostilities between Hitler and Stalin, and the President's promise of aid to Russia, these leading Communists immediately crawled in bed with the war group of this country who are doing everything possible to catapult us into the war.

According to newspaper reports, Robert Minor (who is perhaps as red as Earl Browder, whose place he is filling while the latter is in prison) said it was the sacred duty of the American workers to produce every article of war at the greatest possible speed for war on all fronts against Hitler.

Harry Bridges, west-coast red, told the Maritime Union at its convention in Cleveland recently that he favored helping anybody, even Tory England, if it meant helping Russia to defeat Germany. Overnight the Daily Worker, leading Communist paper, switched from its position of opposing our entrance into the war, to support of the war policy.

My fellow Americans, I ask you, are these communistic forces interested in what is best for America, or do they serve Red Russia?

Are these Communists interested in preserving our way of life, and our form of Government, or do they seek only to strengthen communism, not only in Russia, but in our own land as well?

Do they seek to build America strong for her own defense, or are they using this opportunity to weaken and destroy that which we as Americans cherish and love? The answer is all too obvious to leave any doubt.

Communism is seeking to destroy everything that opposes communism throughout the world.

What a boon, also, this alliance with communistic Russia will be to the political planners in Washington, who have drawn so much of their inspiration from the Moscowinian philosophy of nihilism.

It is when we reflect upon how well the ground is prepared in our own country for the spread and growth of communism, and the extent to which it has already infiltrated itself into our institutions and Government that we realize the dangers of this unholy alliance with Red Russia.

If our people in general only knew what this subversive cult really is, and how strongly it has already entrenched itself in our country, they would be more able, and more concerned, to protect themselves against its further spread.

I believe nothing is needed so much in this country as a true understanding of what really constitutes communism. The usual definitions of communism were formulated at a time when little or nothing was known of the real operation of this cult. Now, however, we have before us the grand experiment of communism. For nearly 25 years Russia has been operating under this political scheme, on a scale, and in a way, that leaves no doubt of what communism really is, not in theory but in action.

So if we wish to know what communism really is and what it does to the lives of the

people, individually and collectively, how it affects their institutions and way of life, all we need to do is look at Russia.

One can now see in Russia what really happens where communism is in complete control, the starvation and massacre of millions of people; millions more confined in concentration camps; the ruthless tearing from their hearths of members of families and banishment to distant places, possibly to perish from cold and want; the destruction of all labor rights, and the institution of conscript labor; the wholesale murder of the clergy and destruction of churches.

In short, communism in Russia reduced a hundred and sixty million people to an indescribable state of barbarism.

At the same time that we note what Russia is and has done, it may help us to understand better where we are headed for by making a few comparisons.

The Bolsheviks in Russia confiscated all the people's gold and silver money and forced them to use print currency.

Our Government also confiscated all our gold money and forced us to use print currency.

Communism in Russia nationalized all the banks.

Our Government also is now well on its way to complete ownership and control of all banks.

The Communist government in Russia fixes by decree all prices and wages.

Government price fixing also is developing rapidly in this country and threatens now to include wages.

In Russia all homes are owned by the Government.

The United States Housing Authority now has a plan under way which, if continued also will lead to complete Government ownership of all homes.

Communism in Russia operates through a gigantic bureaucracy. Is it not true our Government has developed also into a gigantic and all-powerful bureaucracy?

Thus it is seen that the foundation has already been well laid in the United States for the full development of communism.

A dangerous fallacy prevails among our people that communism establishes itself by the violent overthrow of government. This was largely true of Russia, but in our country the principal means by which communism has entrenched itself is by deception, by concealing its true aims, Government control and regulation, under the cloak of the public good.

We see in the 49-cent wheat penalty a perfect example of how this deception operates. Certain farmers are penalized, not for wheat they might plant in the future, but for wheat which they had planted a year ago and were already harvesting.

By a long series of receptive pieces of legislation and false propaganda the farmers, and a good part of Congress, have been blinded to the real purpose of the political planners of the triple-A farm program.

Always they claimed this program would be voluntary—never compulsory. Now, when they have succeeded in getting sufficient power, they come out into the open and reveal it to us that their real aim always has been to make the farm program compulsory for all farmers.

By the most cunning and sinister scheming they succeeded in setting up what, in my opinion, history will designate as one of the worst injustices and frauds that ever was perpetrated upon any people, namely, the so-called wheat-marketing-quota referendum. This scheme was so devised by the political planners as to make certain its passage; in fact, they could almost count the votes before they were cast. Less than 1 in 6 farmers in the United States were permitted to vote. Only 7 percent of the farmers of the United States voted for the so-called quotas.

The laws that set the referendum up were so cunningly framed that if the marketing quota carried the farmers who had signed up with the triple A would receive high Government loans on their wheat, but if the referendum failed they would receive no Government loans on their wheat.

Here was a strong inducement to the few farmers who were allowed to vote to cast their ballots for the marketing quota. At the same time this set-up acted as a powerful threat that they would be punished if they voted the wheat-marketing quota down.

Thus were the few farmers who voted "yes" in the referendum completely deceived and tricked into voting the 49-cent penalty onto their own neighbors and friends and making compulsory for all farmers the triple A farm program. If this penalty is allowed to stand it will strongly tend toward totalitarian regimentation of all farmers.

Nearly every segment of our economy is now infested with communistic elements which are undermining it. It is, as stated, only when we realize how far this subversive cult has already insinuated itself into our whole scheme of life that we can appreciate the danger of tying ourselves up in a war with Communist Russia.

Communism is a real threat to America today. Our entrance into the war would greatly increase that danger.

America now has no business trying to straighten out the world. We have all we can possibly do to prevent our own self-destruction.

As true Americans our first duty is to preserve our own country, our freedom, our Constitution, and our form of government. Let us defend America not only from aggressors from without but from those forces within our borders that insidiously seek her destruction. In defending communism in Russia we are defending communism in the United States. No man can serve two masters. We cannot serve both liberty and communism. Ye cannot serve God and mammon.

Why Power is Needed

EXTENSION OF REMARKS

OF

HON. JOHN C. BUTLER

EDITORIAL FROM THE NEW YORK TIMES

Mr. BUTLER. Mr. Speaker, under leave to extend my remarks in the RECORD, I include an editorial published in the New York Times, July 19, 1941.

A review of the testimony of witnesses recently appearing before the House Rivers and Harbors Committee on the question of the construction of the St. Lawrence seaway project, would lead us to believe that there is a great power shortage in the United States, due to the underdevelopment of power by private utilities.

Clearly, any underdevelopment in this field is not the fault of the private utility industry which has spent over $650,000,000 a year during one 5-year period, over $700,000,000 during a subsequent period and $308,000,000 during the years of the depression for over-all construction. I have no connection whatever with the power utility companies, but I believe that they are unjustly branded by the fair-haired boys of this administration in order to cover up their own mistakes and unjustifiable practices. Under the guise of national defense they are straining every effort to put through another T. V. A. in the northeastern section of this country by developing the St. Lawrence water power by claiming a shortage of power for defense industries.

I believe that investigation will clearly vindicate the private concerns who have been struggling under the yoke of tax policies, rate policies, Federally financed and subsidized competition. This article very clearly states my views on the subject, and I therefore take the privilege of inserting it in the RECORD so that my colleagues may also have the benefit of its clear analysis.

The editorial follows:

[From the New York Times of July 19, 1941]

WHY POWER IS NEEDED

Through the Federal Power Commission the Government has announded an electric-power expansion program involving the expenditure of perhaps $470,000,000 annually for the duration of the defense emergency. This is to be paid for in part out of Federal funds supplied by the R. F. C., though it is expected that the steam plants in the main will be financed by private intertests, while the Government will supply the funds directly for the hydroelectric expansion.

There can be no doubt that the size of our defense program is limited by the extent of our electric-power facilities. But the policies of the administration must bear a heavy share of the responsibility for whatever power shortage now exists. In many ways—through tax policies, rate policies, federally financed and subsidized competition, the policies of the Securities and Exchange Commission—the administration has profoundly discouraged private investment in and expansion of the electric-power facilities of public utilities. The "death sentence" law applying to public-utility holding companies was drawn not in a judicial and constructive but in a punitive and vindictive spirit. The inevitable effect was to undermine the confidence both of public-utility managements and of investors and to lead to a drying up in the flow of capital into private utilities.

In the 5 years from 1921 to 1925, inclusive, the private utility industry spent an average of $659,000,000 a year for over-all construction purposes (steam plants, hydro plants, transmission, and distribution lines, etc.). In the 7 years from 1926 to 1932, inclusive, the average spent by the private utilities for this purpose was $711,000,000 a year. But in the 7 New Deal years from 1933 to 1939, inclusive, the amount spent by the private utilities for electric power expansion averaged only $308,000,000 a year. The difference cannot be set down to the depression, for the earliest period includes the depression years 1921 and 1922, and the second period the actual depression bottom of 1932.

It is significant that the falling off in private expansion of more than $400,000,000 a year in the New Deal 7-year period almost equals the $470,000,000 annual program now planned by the Government. But lost time cannot now be made up. A healthy expansion program in private utility construction in the years from 1933 to 1940 would have greatly reduced unemployment and the Government's relief burden. Today, however, the labor, materials, and time given to electric power expansion must necessarily be at the expense of some other part of the defense program. Those in charge of priorities must

decide, for example, whether we are to have fewer planes, tanks, and guns in the next 2 years, in order that we may have more big turbine generators to help us turn out more planes, tanks, and guns 2 years from now. If power expansion had been what it could and should have been, this problem would not now have arisen.

Proposed St. Lawrence Seaway in Relation to Transportation

EXTENSION OF REMARKS

OF

HON. JAMES E. VAN ZANDT

OF PENNSYLVANIA

IN THE HOUSE OF REPRESENTATIVES

Monday, July 28, 1941

STATEMENT BY THE BUREAU OF RAILWAY ECONOMICS, ASSOCIATION OF AMERICAN RAILWAYS

Mr. VAN ZANDT. Mr. Speaker, recently the Department of Commerce in a report made public by Mr. Wayne C. Taylor, Under Secretary of Commerce, released for distribution part 5 of the St. Lawrence survey entitled "The St. Lawrence Seaway and Future Requirements."

It is revealed that the survey is being issued in several sections or parts, and at this time parts 3 and 7 have not been made available. These missing sections of the survey are very important, since they will contain estimates of future traffic on the project and its economic costs and benefits which should be made available to the Rivers and Harbors Committee as well as to Members of Congress before the committee hearings are concluded.

Part V of the St. Lawrence Survey ignores the defense aspects of the project despite the repeated urging of advocates of the St. Lawrence project that it is a vital arm of our national defense. The absurdity of the claim that the St. Lawrence project is necessary to our national defense is becoming increasingly evident as the searchlight of truth is focused on the many wild claims made in support of this economic monstrosity.

The views expressed in part V of the St. Lawrence Survey do not appear consistent in view of the study made by the Bureau of Railway Economics, and it is pertinent at this point to discuss the fallacious observations that we are being asked to accept in part V of the St. Lawrence Survey.

Practical railroad men whose lives have been spent in operating and expanding the railroads of our Nation are best qualified to convey the true picture of the future of the American railroad industry.

At my request the Bureau of Railway Economics of the Association of American Railroads has compiled the following information which refutes the observations of the Department of Commerce contained in part V of the St. Lawrence Survey. The article referred to is as follows:

PROPOSED ST. LAWRENCE SEAWAY IN RELATION TO TRANSPORTATION

The Committee on Rivers and Harbors began hearings on June 17, in the course of which to consider and formulate a report on H. R. 4927, designed to provide for the improvement of the Great Lakes-St. Lawrence Basin, for the purpose of both transportation and power.

The committee has heard many witnesses for and against the project, and the hearings are still in process. In addition, it has had submitted to it for consideration parts of a study by the United States Department of Commerce entitled "The St. Lawrence Survey." This survey, "designed to explore the economic advantages and disadvantages of the St Lawrence waterway and power project and its effects upon existing harbors," is being issued in several sections or parts. Only five parts (I, II, IV, V, and VI) have been issued to date. Thus the complete results of the survey are not yet available, and the two missing parts will contain estimates of future traffic on the project, and its economic costs and benefits. These parts (III and VII) should certainly be made available to the Rivers and Harbors Committee and to Members of Congress before the committee hearings are concluded in order that they may reach their decisions in the matter on a complete, rather than a partial, record.

Part V of the St. Lawrence Survey, which has recently been issued by the Department of Commerce, is entitled "The St. Lawrence Seaway and Future Transportation Requirements." It is devoted largely to an estimate of freight traffic that will be offered to the railways for movement in the future. Having reached an estimate of the future traffic volume, part V then proceeds to consider the ability of the railroads to handle such a volume, and reaches the conclusion that they will fall down on the job. Therefore, the St. Lawrence project should be carried out in order to relieve congestion on the railroads.

Although the St. Lawrence waterway is being urged upon us today as a national-defense measure, part V largely ignores the defense aspects of the project. This is not surprising, in view of the fact that at best the project could not be made available for navigation purposes for from 4 to 8 years ahead. Within that time, the defense emergency peak will have been passed. So far as transportation is concerned—and the same is true of the power phase of the project—its importance in the national-defense program is hard to find.

The authors of part V clearly regard the St. Lawrence project as of negligible importance for national defense. In making their elaborate forecasts for the future, they start with the year 1950 and end with 1969. They pass over the intervening period between now and 1950, when rail carriers must meet the extra traffic load resulting from the defense program. That extra load, in fact, will be met this year, and in 1942 and in 1943, long before the St. Lawrence could possibly supply relief to the transportation agencies of the country. The load is being met this year, and the railroads expect to meet the load next year, and the year after, without any assistance from the St. Lawrence project.

For the longer look ahead, and it is only the longer look that is significant in the case of a waterway that will not be ready for use inside of from 4 to 8 years, the country will have not a shortage of transportation facilities, but a surplus. This fact is fully established by outstanding authorities, and is generally accepted.

Part V of the St. Lawrence survey is devoted to developing the assertion that there will be a large increase in available railroad traffic from 1950 on. The future traffic requirements for agricultural products, manufactured articles, and mineral products are examined in detail. The conclusions reached are stated briefly in table 32, on page 62, of the report. Taking the so-called medium estimates throughout, the authors of part V show that the average annual totals of tonnage originated on class I railways have been and will be as follows:

	Tons
1930–39	859,542,000
1950–59	1,099,180,000
1960–69	1,303,545,000

They point out that their annual estimate for the 1950–59 period is 28 percent greater than the actual average for 1930–39, and that their estimate for 1960–69 is 52 percent greater than the 1930–39 average. They then proceed to prove, to their own satisfaction at least, that the railroads will be unable to handle any such tonnage aggregates as those estimated by them for the future.

The estimates of future railway traffic arrived at in part V appear to be generous estimates, but they may be accepted as approximations. Any venture into the future of this country, 10 to 30 years ahead, is a highly speculative undertaking. The railroads do not contend that their traffic will not increase in the future; on the contrary, they earnestly hope that there will be growth, and that the progress will be as great as estimated in part V. We can reasonably join them in that hope. Furthermore, no one who looks to future progress in the United States would question that railroads will share in the commercial and industrial activity of the country.

Part V makes an estimate of an average annual railway tonnage of 1,099,180,000 tons in the 10-year period 1950–59. Can the railroads handle such a volume of traffic? Part V replies in the negative. The record of the railroads themselves supplies an emphatic affirmative answer. They have handled such a volume in the past, they are handling it today, and they will handle it in the future if it is offered to them.

Look at the record. The railroads surpassed this total of 1,099,180,000 tons of freight as far back as 1913, again in each of the 5 years from 1916 to 1920, and in each of the 8 years from 1923 to 1930. It was closely approached in 1937, when rail carriers originated 1,009,000,000 tons of revenue freight. It will again be surpassed this year, 1941, by from seventy-five to one hundred million tons, while indications are that it will be surpassed by even greater margins in 1942 and 1943. What the railroads accomplished 28 years ago, in 1913, they can accomplish 10 to 20 years from now, in the decade beginning 1950. If the railroads handle more than that amount of freight in 1941, 1942, and 1943, they can certainly handle it in 1950, 1951, and 1952, and later years.

Part V next estimates an average annual tonnage of 1,303,545,000 tons in the 10-year period 1960–69. If such a traffic develops, the railroads will have 10 additional years to prepare and expand their facilities for it, to whatever extent may prove necessary. But take the record as it stands. Such a traffic level as part V estimates for the 1960–69 decade has been surpassed a number of times in the past, as it was in the years 1917, 1918, 1920, 1923, and in each of the 5 years from 1925 to 1929. Present indications are that the railroads will handle more than that volume of traffic in 1942, and a still greater tonnage in 1943. What they are doing today and tomorrow, they certainly can do 20 to 30 years from now. To claim otherwise is equivalent to saying that the rail industry is incapable of expanding its equipment and motive power to meet future expansion of traffic, a claim that is challenged by the whole record of that industry, down to the present moment.

For more than a hundred years the railroads have carried the tonnage that has been

offered, and with few, if any, car shortages in recent years. It is safe to assume that they can be depended upon to meet the requirements of future years. Traffic expansion in the future will probably be relatively less than it has been in the past.

Furthermore, the recent expansion of railroad tonnage came in a few months, not over the period of a decade. Yet the railroads have carried, and are carrying, this increase without car shortages. During the first 6 months of 1941 railroad carloadings were 17.3 percent greater than in the same period of 1940 and 30 percent greater than in the same period of 1939.

As a matter of fact, the authors of part V themselves admit the elastic nature of the railway plant, particularly that part of it represented by motive power and freight-car equipment. They stated that the amount of equipment actually required to handle traffic can be quickly increased in response to increased traffic demands. Page 68 of part V carries this statement: "New cars can be purchased, locomotives can be repaired or constructed as desired." The report adds that "the way and structures of railroads as presently constituted will be assumed to be sufficient, with repairs, to handle increased traffic in the future." This is a sound assumption, based on the fact that the fixed plant of the railways can handle a much larger traffic than the present level with no great need for physical expansion.

Part V might have added that railroad equipment sufficient to handle the potential traffic assigned by it to the proposed waterway can be provided at a cost far less than that of the waterway. In addition, provision of railroad equipment is, under normal conditions, a matter of speedy accomplishment. On the other hand, part V admits (p. 1) that under normal conditions the St. Lawrence project would not be completed inside of 7 years, and further states, on page 83, that it would take some time to establish facilities and services on the waterway, if constructed, before full use could be made of the new route. The exact language used in part V is as follows:

"It is very unlikely that the seaway will accommodate its maximum additional traffic in the very first year. As new shipping facilities and services will have to be established, it will take some time before full use is made of the new route. The increase of St. Lawrence traffic to full capacity will come gradually. This has been the experience on other canals."

Again, it is admitted that the St. Lawrence as a navigation project would be closed by ice for 5 months or more each year, when it will be of no service whatever, and when the railroads will be called on for such stand-by service as may be required.

Part V discusses the St. Lawrence project from the standpoint of the railroads as a national group, and does not relate its findings to the special problem in the area to be served by the project. Such a study should consider the waterway in connection with those particular railroads with which it will compete. If the waterway is to be constructed to relieve the railroads of traffic which which they must purchase additional equipment to handle, surely the roads most concerned would be those in the St. Lawrence area. Furthermore, a detailing of the commodities that might be expected to move on the St. Lawrence waterway would have been enlightening, and would have made the findings more useful.

It would appear that the fears entertained by the authors of part V, with respect to the inability of rail carriers to meet the traffic demands over a period of 10 to 30 years ahead, are wholly groundless.

The authors of part V contradict themselves in one important respect. They magnify the extent to which the St. Lawrence waterway, if constructed, would relieve the railroads of a traffic load that they contend will be too great for them, while at the same time they minimize the importance of the St. Lawrence traffic in its relation to total railroad traffic. They say that 10,000,000 tons per year is the maximum amount of American commerce that will use the project. This is in fact a negligible proportion of total railroad traffic, and the relief the project will afford the railroads will also be negligible.

This seems to be tacitly recognized in part V. The negligible character of the anticipated St. Lawrence traffic is emphasized over and over again. For example, the report at page 4 says:

"The St. Lawrence seaway will accommodate a small part of the increased demand for transportation."

Again, on page 8, the report minifies the importance of the St. Lawrence traffic, in the following language:

"In face of these magnitudes it is plain that the additional American traffic of 10,000,000 tons that may use the St. Lawrence seaway at its maximum utilization recedes into insignificance. A glance at the Interstate Commerce Commission statistics will show that the annual fluctuations of traffic on American railroads are many times this amount.

"Under these circumstances, the additional traffic that will utilize the St. Lawrence seaway will be a slight, almost unnoticeable, recession from the large increases in traffic which the railroads can confidently anticipate."

And again, in closing the summary of part V on page 9, the author says:

"The St. Lawrence seaway will do no more than assist in carrying a small part of the greatly increased load in the future for which the railroads are not yet equipped."

These statements are more an argument against the waterway than an argument for it. If the tonnage to be diverted from the rails is so trivial in amount, certainly the Government under present defense conditions, where every dollar is vital, cannot afford to spend this large sum of money for a project which accomplishes so little.

However, the railways would lose more, by reason of the construction of the project, than the 10,000,000 tons that would be diverted to the St. Lawrence. That loss alone would cost them close to $60,000,000 in freight revenue, of which more than $25,000,000 would be taken out of the pay roll of American railway labor. In addition, the National Coal Association has estimated that the power and transportation phases of the project would mean a loss to the coal industry of perhaps 40,000,000 tons of coal output per year, or even more. This loss to them would also be a loss to the railroads in freight revenue from hauling coal of at least $90,000,000 per year.

While the total loss to the railway industry cannot be computed with exactness, it would be at least $150,000,000 of freight revenue per year, of which railway labor would contribute more than $65,000,000 per year. This represents the jobs of more than 35,000 workers.

American labor would lose, American producers of coal and other materials purchased by the railroads would lose, the railways would pay smaller taxes to the Government and would have less net for themselves. The chief beneficiaries would be foreign operators of merchant ships. No transportation benefit would accrue, so why spend hundreds of millions of dollars at this time on so doubtful an enterprise?

Furthermore, to carry out the project now would funnel off needed funds, material, and manpower into activities that cannot be useful for several years ahead, while the immediate and crying needs of the defense program are to that extent unsatisfied.

It will be seen from this brief review that the author of this report has not taken the trouble to examine the statistics indicating the amount of traffic handled by the railroads through the years. The whole argument falls to the ground when consideration is given to the fact that the large amount of traffic predicted for the railroads is not large at all, considered in the light of what the railroads have accomplished and what they will easily be able to accomplish.

Then again, no action should be taken by Congress based upon the theory that the railroads should not be allowed to expand and increase their activities as essential agencies of transportation and important employers of labor. What reason can be given for saying that the railroads should be deprived of $150,000,000 of revenue per year, which will deprive 35,000 workers of employment, in the interest of a project which will be of benefit only to foreign shipping and which will be so serious a detriment to American interests?

Famed Speech of Chief Seattle

EXTENSION OF REMARKS

OF

HON. WARREN G. MAGNUSON

OF WASHINGTON

IN THE HOUSE OF REPRESENTATIVES

Monday, July 28, 1941

ARTICLE FROM SEATTLE (WASH.) STAR

Mr. MAGNUSON. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the famous address of Chief Seattle, commemorating the signing of a treaty with the Indians, which was printed in the Seattle Star of June 21, 1941:

[From the Seattle (Wash.) Star of July 21, 1941]

HERE'S FAMED SPEECH MADE BY CHIEF SEATTLE

(By Chief Seattle)

Yonder sky that has wept tears of compassion upon my people for centuries untold, and which to us appears changeless and eternal, may change. Today is fair. Tomorrow it may be overcast with clouds. My words are like the stars that never change.

Whatever Seattle says the great chief at Washington can rely upon with as much certainty as he can upon the return of the sun or the seasons. The white chief says that big chief at Washington sends us greetings of friendship and good will. This is kind of him for we know he has little need of our friendship in return. His people are many. They are like the grass that covers vast prairies. My people are few. They resemble the scattering trees of a storm-swept plain. The great, and I presume—good white chief sends us word that he wishes to buy our lands but is willing to allow us enough to live comfortably. This indeed appears just, even generous, for the red man no longer has rights that he need respect, and the offer may be wise also, as we are no longer in need of an extensive country.

ONCE-COVERED LAND

There was a time when our people covered the land as the waves of a wind-ruffled sea cover its shell-paved floor, but that time long

since passed away with the greatness of tribes that are now but a mournful memory. I will not dwell on, nor mourn over, our untimely decay, nor reproach my paleface brothers with hastening it, as we, too, may have been somewhat to blame.

Youth is impulsive. When our young men grow angry at some real or imaginary wrong, and disfigure their faces with black paint, it denotes that their hearts are black, and that they are often cruel and relentless, and our old men and old women are unable to restrain them. Thus it has ever been. Thus it was when the white man first began to push our forefathers further westward. But let us hope that the hostilities between us may never return. We would have everything to lose and nothing to gain. Revenge by young men is considered gain, even at the cost of their own lives, but old men who stay at home in times of war, and mothers who have sons to lose, know better.

DIFFERENT GODS

Our good father at Washington—for I presume he is now our father as well as yours, since King George has moved his boundaries farther north—our great and good father, I say, sends us word that if we do as he desires he will protect us. His brave warriors will be to us a bristling wall of strength, and his wonderful ships of war will fill our harbors so that our ancient enemies far to the northward—the Hydas and Tsimpsians, will cease to frighten our women, children, and old men. Then in reality will he be our father and we his children. But can that ever be? Your God is not our God. Your God loves your people and hates mine. He folds his strong protecting arms lovingly about the paleface and leads him by the hand as a father leads his infant son—but He has forsaken His red children—if they really are His Our God, the Great Spirit, seems also to have forsaken us. Your God makes your people wax strong every day. Soon they will fill all the land. Our people are ebbing away like a rapidly receding tide that will never return. The white man's God cannot love our people or He would protect them. They seem to be orphans who can look nowhere for help. How then can we be brothers?

TWO RACES

How can your God become our God and renew our prosperity and awaken in us dreams of returning greatness? If we have a common Heavenly Father, He must be partial, for He came to His paleface children. We never saw him. He gave you laws, but had no word for his red children, whose teeming multitudes once filled this vast continent as stars fill the firmament. No; we are two distinct races with separate origins and separate destinies. There is little in common between us.

To us the ashes of our ancestors are sacred and their resting place is hallowed ground. You wander far from the graves of your ancestors and seemingly without regret. Your religion was written upon tables of stone by the iron finger of your God so that you could not forget. The red man could never comprehend nor remember it. Our religion is the traditions of our ancesors—the dreams of our old men, given them in the solemn hours of night by the Great Spirit; and the visions of our sachems, and is written in the hearts of our people.

Your dead cease to love you and the land of their nativity as soon as they pass the portals of the tomb and wander way beyond the stars. They are soon forgotten, and never return. Our dead never forget the beautiful world that gave them being. They still love its verdant valleys, its murmuring rivers, its magnificent mountains, sequestered vales and verdant-lined lakes and bays, and ever yearn in tender, fond affection over the lonely hearted living, and often return from the happy hunting ground to visit, guide, console, and comfort them.

Day and night cannot dwell together. The red man has ever fled the approach of the white man, as the morning mist flees before the morning sun.

However, your proposition seems fair and I think my people will accept it and will retire to the reservation you offer them. Then we will dwell apart in peace, for the words of the great white chief seem to be the words of nature speaking to my people out of dense darkness.

It matters little where we pass the remnant of our days. They will not be many. The Indians' night promises to be dark. Not a single star of hope hovers above his horizon. Sad-voiced winds moan in the distance. Grim fate seems to be on the red man's trail, and wherever he goes he will hear the approaching footsteps of his fell destroyer and prepare stolidly to meet his doom, as does the wounded doe that hears the approaching footsteps of the hunter.

ALL WILL BE GONE

A few more moons. A few more winters—and not one of the descendants of the mighty hosts that once moved over this broad land or lived in happy homes, protected by the Great Spirit, will remain to mourn over the graves of a people—once more powerful and hopeful than yours. But why should I mourn at the untimely fate of my people? Tribe follows tribe, and nation follows nation, like the waves of the sea. It is the order of nature, and regret is useless. Your time of decay may be distant, but it will surely come, for even the white man whose God walked and talked with him as friend with friend, cannot be exempt from the common destiny. We may be brothers after all. We will see.

We will ponder your proposition and when we decide we will let you know. But should we accept it, I here and now make this condition that we will not be denied the privilege without molestation of visiting at any time the tombs of our ancestors, friends, and children. Every part of this soil is sacred in the estimation of my people. Every hillside, every valley, every plain and grove has been hallowed by some sad or happy event in days long vanished.

EVEN ROCKS REMEMBER

Even the rocks, which seem to be dumb and dead as they swelter in the sun along the silent shore, thrill with memories of stirring events connected with the lives of my people, and the very dust upon which you now stand responds more lovingly to their footsteps than to yours, because it is rich with the blood of our ancestors and our bare feet are conscious of the sympathetic touch. Our departed braves, fond mothers, glad, happy-hearted maidens, and even the little children who lived here and rejoiced here for a brief season, will love these somber solitudes and at eventide they greet shadowy returning spirits. And when the last red men shall have perished, and the memory of my tribe shall have become a myth among the white men, these shores will swarm with the invisible dead of my tribe, and when your children's children think themselves alone in the field, the store, the shop, upon the highway, or in the silence of the pathless woods, they will not be alone. In all the earth there is no place dedicated to solitude. At night when the streets of your cities and villages are silent and you think them deserted, they will throng with the returning hosts that once filled them and still love this beautiful land. The white man will never be alone.

Let him be just and deal kindly with my people, for the dead are not powerless. Dead, did I say? There is no death, only a change of worlds.

United States Must Stand United in Peril

EXTENSION OF REMARKS

OF

HON. JOHN W. McCORMACK

OF MASSACHUSETTS

IN THE HOUSE OF REPRESENTATIVES

Monday, July 28, 1941

ARTICLE FROM THE BOSTON TRAVELER

Mr. McCORMACK. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following article from the Boston Traveler of July 19, 1941:

UNITED STATES MUST STAND UNITED IN PERIL—MUST GUARD AGAINST REPEATING ALMOST FATAL CIVIL WAR DISUNITY

(By George Farnum, Boston lawyer and former Assistant Attorney General of the United States)

We are at war—to all intents and purposes. It is true we are not actually shooting at an enemy, but we have decisively taken sides in the great conflict. We are acting in the vital role of "the arsenal of democracy." Military supplies and equipment are moving to Britain in ever-increasing volume. We are supplementing her merchant marine. Our citizens have enlisted in her fighting forces and are employed in numberless civilian roles that aid and abet those who bear arms.

English war vessels are being repaired and reconditioned in our navy yards to an extent preempting much of their capacity for such work. Our fighting craft are patrolling miles of sea lanes that embrace the life lines of democracy—the shipping routes between America and Britain. We have occupied and established a far-flung strategic base on Iceland and are contemplating other equally bold steps to insure hemisphere defense. Consular relations with both Germany and Italy have been terminated, and the end of diplomatic relations may come at any time.

FORCED UPON US

To a large majority of the American people these things have been the inevitable results of circumstances forced upon us and dictated by the realistic logic of adequate national security. But whatever regrets may be indulged, whatever mistakes may have been made, the eloquent fact remains that the leadership under which this situation has come to pass was so ardently desired by the American people that, to insure it, they broke a political precedent previously regarded as sacred.

In any event, what has transpired is water over the dam. We cannot retrace our steps in this hour of peril, even in the remote event that we should wish to do so. We have crossed the Rubicon. Our commitments have been irrevocably made. If there was a time when it were other than folly to vacillate and procrastinate, that time has definitely passed. This is the hour for maximum effort by a united nation, thoroughly aroused to the dangers, grimly determined to dedicate its entire resources in men and materials to national defense, and convinced that there can be no security for democratic America if Great Britain is crushed by the brutal force of the Nazi war machine.

CONFIDENCE IN PRESIDENT

In this critical situation no man can do his country a greater injury than to undermine public confidence in the President by

reiterated and violent attacks on his purposes and policies, and by persistent efforts to impugn his motives. Blinded to urgent realities or lukewarm to basic loyalties is that man who in this hour of peril abuses the privileges of free speech, whether in the halls of Congress, on the radio, or in the press, to deliberately play upon the fears, prejudices, and passions of the people.

Free discussion is one of our fundamental rights, guarded by constitutional guaranties. But, like all rights, it should be exercised with an intelligent understanding and responsible sense of time and occasion. History has demonstrated that the welfare of a democracy depends to a large degree on the self-discipline of the people and, in times of emergency, on their readiness to cheerfully subject themselves to self-imposed restraints.

CIVIL WAR DISUNITY

The outcome of the Civil War was put in grave jeopardy by the disunity of the North. In retrospect, and with the dispassionate judgment now possible of the issues involved, the violent feuds, turbulent dissensions and bitter recriminations of the times seem incredible—to say nothing of the martyrdom to which Abraham Lincoln was subjected throughout the years that he kept his lonely vigil on the bridge of the wracked and storm-tossed ship of state. The cost of this disunity in the prolongation of the conflict and in its losses of men and material can never be acurately computed, but it is certain that the North paid dearly for its divided councils.

Exemption of Salaries of Soldiers and Sailors From Income Tax

EXTENSION OF REMARKS

OF

HON. ROSS A. COLLINS

OF MISSISSIPPI

IN THE HOUSE OF REPRESENTATIVES

Monday, July 28, 1941

Mr. COLLINS. Mr. Speaker, I am introducing a bill to exempt the salaries of persons in the military or naval forces from the income tax. This bill contains substantially the same provisions as section 213 (b) (8) of the Revenue Act of 1918, approved February 24, 1919.

In order to strengthen the national defense under conditions which are threatening the peace and security of our country we should relieve our soldiers and sailors of all the burdens which it is possible to remove. All citizens are under obligation to do their parts. So far as possible the burdens should be equitably divided. However, those men who leave their businesses, their homes, and their dear ones, those who face the dangers and make the greater sacrifices which will be required, give far beyond that which is contributed by those who remain at home. Furthermore, these men do not share in the increased earnings of the rest of the people of the country and likewise their buying capacity is lessened because of higher prices they must pay for articles they have to buy.

The soldier should feel that he is serving a government which appreciates his services. He should feel that the people at home recognize the great service he is rendering and that they are grateful for it. After we have done all we can we still owe him a debt of gratitude.

Therefore, as one means of building up the morale and courage of our defending forces and of expressing our appreciation of their services and patriotism I propose that we relieve them of the income tax.

Resolutions of the American Legion of New Mexico

EXTENSION OF REMARKS

OF

HON. CLINTON P. ANDERSON

OF NEW MEXICO

IN THE HOUSE OF REPRESENTATIVES

Monday, July 28, 1941

RESOLUTIONS ADOPTED AT STATE CONVENTION

Mr. ANDERSON of New Mexico. Mr. Speaker, during the State convention of the American Legion in New Mexico, members of the Civilian Conservation Corps failed to pay respect to the flag of our country as it passed by them during the parade.

Members of the American Legion of New Mexico were properly upset and disturbed by the situation, feeling that it could only be due to a lack of training or the result of ignorance as to the regulations and practices automatically observed by citizens of this country.

Further, the Legion feels that there is a flag code designated to govern respect for and use of the flag. This code the American Legion heartily endorses as do all citizens of our land generally.

It is my feeling that the American Legion is continuing to serve America well when it calls attention to the flag code, and when it urges the adoption of appropriate legislation governing the civilian use of the flag as outlined in that flag code. It is my hope that the officers of the Civilian Conservation Corps will take recognition of the incident at the convention in Ruidoso, N. Mex., and will make sure that the persons in charge of their camps do not fail to insist upon the strictest observance of the respect due to the emblem of this country. Further, it is my hope that the Congress of the United States may at this particular time pass appropriate legislation to guard against the improper use of the flag of the United States, and to make sure that the treatment of the flag is not left to chance.

I desire to include certain appropriate resolutions adopted in convention by the American Legion, two of them dealing with the flag and proper respect for it, and a third, touching the problem of German sailors now interned in New Mexico and permitted to roam at large in their internment camp.

Whereas yesterday, June 19, 1941, during the parade of the National Colors by the United States Army, the American Legion and its auxiliary, and the Boy Scouts of America, employees of the Civilian Conservation Corps failed, neglected, and refused to pay respect to the flag of our country; and

Whereas we believe such disrespect was due to disinterest, lack of training, and discipline; and

Whereas we believe that of all persons who should respect, honor, and revere the flag of our country are those who are the recipients of the Nation's bounty, in excess of those of equal rank, who are presently in the armed forces of our Nation: Now, therefore, be it

Resolved by the American Legion, Department of New Mexico, in convention assembled in Ruidoso, N. Mex., That we condemn and deplore the obvious laxity, ignorance, indifference, and lack of instruction prevalent in the Civilian Conservation Corps regulations and practices; and be it further

Resolved, That a copy of this resolution be sent to the Corps Commander at Fort Sam Houston, Tex., Area Commander at Fort Bliss, Tex., to the New Mexico congressional delegation in Congress, and to the Director of the Civilian Conservation Corps at Washington, D. C.

DONOVAN N. HOOVER,
Department Commander.

Attest:

H. W. NEELY,
Department Adjutant.

Whereas the Federal Government has seen fit to quarter in New Mexico an appreciable number of interned German nationals; and

Whereas it has been brought to the attention of the officers of the American Legion, Department of New Mexico, that notwithstanding the most recent difficulties in the relations between the German Government and the Government of the United States of America, that such interned German nationals are presently permitted to roam at large in and about their internment camp: Now, therefore, be it

Resolved by the American Legion, Department of New Mexico, in its twenty-second annual department convention, now assembled in Ruidoso, N. Mex., That the officers of the department be, and they hereby are, directed to request the New Mexico congressional delegation to make appropriate representations to the responsible authorities in Washington for closer supervision and control of said interned German nationals; be it further

Resolved, That a copy of this resolution, properly certified, be enclosed with such representations, addressed to the Honorable CARL A. HATCH and DENNIS CHAVEZ United States Senators, and Hon. CLINTON P. ANDERSON, Member of Congress, Washington, D. C.

DONOVAN N. HOOVER,
Department Commander.

Attest:

H. W. NEELY,
Department Adjutant.

Whereas the Constitution of the United States provides that all people living within its boundaries shall have the right of free speech, freedom of the press and the permission to worship their God in any manner they see fit; and

Whereas a large number of groups who do not have the welfare of the United States at heart, and are taking advantage of their privileges of citizenship; and

Whereas some of these groups are carrying on and abusing some of the privileges permitted in this country, especially in relation to the flag of our Nation; and

Whereas in the United States there is a flag code designated to govern respect for and the use of the flag, which code the American Legion heartily endorses: Now, therefore, be it

Resolved, by the American Legion, Department of New Mexico, in convention assembled at Ruidoso, N. Mex., That the Congress of the United States be urged to adopt appropriate legislation, governing the civilian use

of the flag, as outlined in the flag code, and provide penalties for the improper use of the flag of these United States.

DONOVAN N. HOOVER,
Department Commander.

Attest:

H. W. NEELY,
Department Adjutant.

Beware of Foot-and-Mouth Disease

EXTENSION OF REMARKS
OF

HON. HENRY O. TALLE

OF IOWA

IN THE HOUSE OF REPRESENTATIVES

Monday, July 28, 1941

Mr. TALLE. Mr. Speaker, as pointed out in the preface to Farmers' Bulletin No. 666 issued by the Department of Agriculture, the "foot-and-mouth disease is one of the most universal diseases of cattle as well as one of the most difficult to suppress." It is a disease which takes its toll not only among cattle, but it strikes at other farm animals as well. That it is difficult to eradicate once it has taken root is attested to by the fact that "in most European countries the disease has gained such a foothold that it has probably become a permanent infection."

At the present time this dread disease does not exist in our country, but in years past it has been a costly evil. In the bulletin already quoted it is stated that—

the United States has suffered nine foot-and-mouth visitations, ranging in date from 1870 to 1929. Fortunately, after persistent efforts by the Government, the States, local authorities, and individual stockmen, each outbreak was entirely stamped out.

It is, therefore, a threatening evil at all times, and alert attention should be paid to the timely warning of Dr. H. A. Seidell, chief of the division of animal industry in my State, as emphasized in the following letter:

STATE OF IOWA,
DEPARTMENT OF AGRICULTURE,
Des Moines, July 22, 1941.

HON. HENRY O. TALLE,
House of Representatives,
Washington, D. C.

DEAR SIR: House file 5032, if enacted, would give authority to the Secretary of the Treasury to lift the sanitary embargo on chilled and frozen meat carcasses from countries where foot-and-mouth disease and rinderpest exist. The recent ruling of the Attorney General admitting frozen mutton and lamb carcasses from Tierra del Fuego perils the livestock industry and the human health of our country.

Congress should enact legislation that will protect this Nation from the disastrous condition that would result from the lifting of this embargo which is our only defense against the introduction of these two most dreaded diseases, namely, rinderpest and foot-and-mouth disease. The latter is the most dreaded of all livestock diseases and affects all cloven-hoof food-producing animals as well as others.

The virus or germs of these diseases are not affected by freezing and can be carried on shoes, clothing, or by poultry, birds, dogs, etc., that have been in the immediate vicinity of the infected animals. Furthermore this virus is carried in the lean or muscular tissues, the bony structures, the internal organs, the hide, etc., of the diseased animals. Science has proven that this virus or germ will live in frozen carcasses for a period of 9 months or longer.

At the present time the United States and Canada are the only countries free of rinderpest and foot-and-mouth disease. During the winter of 1914 and 1915, we had quite a severe outbreak of foot-and-mouth disease in Iowa and some of the other States which cost the States millions of dollars to destroy all animals on the infected farms.

If it is necessary for us to import meat products from the foreign countries where these diseases exist, they should be in a canned form where the meat has been properly cooked as that is the only sure means of destroying the organisms that cause these diseases.

Thanking you for any consideration you will give us on this measure, I am,

Very truly yours,

H. A. SEIDELL,
Chief, Division of Animal Industry.

Mr. Speaker, farming involves many risks and hazards. Some of the risks such as droughts and windstorms cannot be controlled. But experience over a long period of years has proved that the foot-and-mouth disease can be eradicated, although the remedy is a costly one. It is saner and cheaper to prevent it from taking root. The old adage that "an ounce of prevention is worth a pound of cure" was never more fully applicable than in a matter of this character. Let us beware of the foot-and-mouth disease.

The events leading up to the danger which now confronts the livestock industry in the United States, as pointed out in the preceding remarks, may be summarized in chronological order, as follows:

First. Section 306 (a) of the Tariff Act of 1930 reads as follows:

(a) Rinderpest and foot-and-mouth disease: If the Secretary of Agriculture determines that rinderpest or foot-and-mouth disease exist in any foreign country, he shall officially notify the Secretary of the Treasury and give public notice thereof, and thereafter, and until the Secretary of Agriculture gives notice in a similar manner that such disease no longer exists in such foreign country, the importation into the United States of cattle, sheep, or other domestic ruminants, or swine, or of fresh, chilled, or frozen beef, veal, mutton, lamb, or pork from such foreign country is prohibited.

Second. The foot-and-mouth disease is prevalent in Argentina, hence, the importation of the above-listed products from that country is prohibited.

Third. In 1935 the State Department negotiated a treaty with Argentina which, if ratified, would have modified section 306 (a) of the Tariff Act of 1930; article III of that treaty proposed to "zone" Argentina and to permit the importation of animal and plant products from the zones which were free from diseases and insect pests. Our livestock industry, naturally, objected to the zoning proposal for the practical reasons that (a) there is no way in which the United States could govern the transportation of these products from an infested to a noninfested area in a foreign country; (b) nor could our country supervise the employees of a foreign government in enforcing the regulations. This treaty was sent to the Senate on June 5, 1935, and was referred to the Committee on Foreign Relations. The committee did not act upon the treaty and, consequently, it has never been ratified.

Fourth. It was, therefore, a startling revelation which came to light on June 26, 1941, when the following Associated Press dispatch was sent out from Buenos Aires:

Daniel Amadeo Videla, Argentina's Minister of Agriculture, announced tonight that the United States had agreed to permit importation of meat from Tierra del Fuego territory at the southernmost tip of South America.

Since it is a sheep-raising section, only fresh frozen or chilled lamb will be available for export from Tierra del Fuego. No immediate shipments were expected, since the territory's output all goes to Britain at present.

The minister termed the agreement an important step in dissolving the years-long dispute between Argentina and the United States after the latter barred importation of Argentine meat due to prevalence of hoof-and-mouth disease.

The announcement of this agreement between the United States and Argentina came as a complete surprise to the livestock industry, the Senate Foreign Relations Committee, and the American public as well.

Fifth. Tierra del Fuego (references: Encyclopedia Brittanica and Encyclopaedia Americana) is an archipelago (group of islands) at the southern extremity of South America from which it is separated by Magellan Strait. At the First Narrows and at other points the strait is scarcely a mile wide. Politically, it is divided into two parts: (1) The western part, an area of 19,500 square miles, belongs to Chile; (2) the eastern part, an area of 8,500 square miles, belongs to Argentina and forms a territory of that republic.

Sixth. The following facts have now been revealed with reference to the secret agreement announced on June 26 from Buenos Aires:

(a) On April 10, 1941, the United States Secretary of State addressed an inquiry to the United States Secretary of Agriculture requesting an opinion from the legal division of the Department of Agriculture as to "whether Tierra del Fuego may be regarded as a country, separate from Argentina and Chile, within the meaning of section 306 (a) of the Tariff Act of 1930."

(b) On May 14 the Secretary of Agriculture referred this inquiry to the Attorney General of the United States.

(c) On May 16 the Attorney General signed an opinion to the effect that Tierra del Fuego, though a part of Argentina, was not the same foreign country within the meaning of section 306 (a) of the Tariff Act of 1930 and that meat and livestock could be imported therefrom to the United States at the discretion of the Secretary of Agriculture.

Mr. Speaker, the Tariff Act of 1930 sought to prevent further outbreaks of the foot-and-mouth disease and has been fully successful in this objective. It is most regrettable that a questionable interpretation of the law by the Attorney

General may expose our people to this peril again.

At this point attention is called to the following comments on my remarks by Mr. George Stimpson, Washington correspondent, in the Gazette, published in Cedar Rapids, Iowa, on July 27, 1941:

TALLE ATTACKS ARGENTINE IMPORTS—SAYS THEY EVADE LEGAL SAFEGUARDS AGAINST DISEASES—REASONING WHICH LED TO TIERRA DEL FUEGO PACT CALLED QUESTIONABLE BY REPRESENTATIVE

(By George Stimpson)

WASHINGTON.—Representative HENRY O. TALLE, of Decorah, Saturday declared that the State Department is circumventing a specific act of Congress forbidding the importation of meat from a foreign country in which foot-and-mouth disease is prevalent.

Under the tariff act of 1930 the importation into the United States of cattle, sheep, other domestic ruminants, hogs or fresh, chilled or frozen beef, veal, mutton, lamb, or pork is specifically forbidden from any foreign country so long as rinderpest and foot-and-mouth disease is known to exist in that country.

Up to the present day the Secretary of Agriculture has never declared under the terms of the act that foot-and-mouth disease has ceased to exist in Argentina.

But the United States Government, for obvious reasons wanted to placate Argentina as part of the good-neighbor policy and make it possible to purchase Argentine beef and other meat products.

TREATY NEGOTIATED IN 1935

So in 1935 the State Department negotiated with Argentina a sanitary treaty, one provision of which would permit the importation of animal products from disease-and-insect-pest "zones" in Argentina, notwithstanding the specific prohibition in the 1930 Tariff Act.

The Senate Foreign Relations Committee proceeded to pigeonhole this sanitary treaty, and in spite of pressure from Secretary Hull has persistently refused to present it to the Senate, largely because of the objection of Senators from the Western cattle States. There are several on the Foreign Relations Committee.

Later President Roosevelt patted Argentina on the back by publicizing the fact that Argentine canned beef had been purchased for American military use.

Then, out of a clear sky, as TALLE points out, a few weeks ago the Argentine Minister of Agriculture announced that the United States had agreed to permit importation of meat from Tierra del Fuego, a territory of Argentina separated from the mainland by Magellan Strait, which in some places is only about a mile wide.

SAYS CONGRESS SURPRISED

The Argentine Minister said that only frozen or chilled lamb would be available from Tierra del Fuego, and that no immediate shipments were expected because of the British demands, but he hailed the agreement as an important step in dissolving the old dispute between the two countries over the foot-and-mouth disease. This announcement, declared TALLE, came as a complete surprise to the Congress, the livestock industry, and the public.

This, according to the Iowa Congressman, is what happened behind the scenes:

On April 10, 1941, Secretary of State Hull asked the Secretary of Agriculture for the opinion of the latter's legal department as to "whether Tierra del Fuego may be regarded as a country, separate from Argentina and Chile, within the meaning of section 306 (a) of the Tariff Act of 1930."

Secretary Wickard, apparently realizing that it was a hot potato, referred the inquiry from Hull to Attorney General Jackson, who on May 16 signed an opinion to the effect that Tierra Del Fuego, though a part of Argentina, is not the same foreign country within the meaning of the Tariff Act of 1930 and that the Secretary of Agriculture may at his discretion import meat and livestock from that area.

TALLE said it "is most regrettable that a questionable interpretation of the law by the Attorney General may expose our people to this peril again," referring to the dreaded foot-and-mouth disease, which, if it once establishes itself in a country, is difficult to eradicate.

He adduced evidence to show that the foot-and-mouth disease is one of the most universal diseases of cattle; and that it is difficult to eradicate once it takes root is attested by the fact that "in most European countries the disease has gained such a foothold that it has probably become a permanent infection."

The Iowa Congressman raises another interesting point. Since the United States has no control over internal affairs in Argentina, what is to prevent the taking of all sorts of livestock and meats from other parts of that Latin American country and sending them to Tierra Del Fuego for transshipment to the United States?

"Farming," declares TALLE, "involves many risks and hazards. Some of the risks such as droughts and windstorms cannot be controlled. But experience over a long period of years has proved that the foot-and-mouth disease can be eradicated, although the remedy is a costly one. It is saner and cheaper to prevent it from taking root. The old adage that 'an ounce of prevention is worth a pound of cure' was never more fully applicable than in a matter of this character."

Food for Thought

EXTENSION OF REMARKS

OF

HON. WILLIAM T. PHEIFFER

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Monday, July 28, 1941

Mr. WILLIAM T. PHEIFFER. Mr. Speaker, under leave to extend my remarks in the RECORD, I include a timely and thought-provoking question propounded by the gentleman from Minnesota, Hon. RICHARD P. GALE, in a recent news letter sent by him to his constituency:

When and if the war ends by an English victory, a Hitler victory, or a stalemate, will the United States be friendless, accused, in any event, by England of helping too little; by Germany of helping too much?

In propounding this question, our colleague, with his usual perspicacity, hit the nail right where the manufacturer intended.

Dinosaur Tracks in Oklahoma—Testimony of Gov. Leon C. Phillips Before the Committee on Rivers and Harbors

REMARKS

OF

HON. JOHN E. RANKIN

OF MISSISSIPPI

IN THE HOUSE OF REPRESENTATIVES

Monday, July 28, 1941

Mr. RANKIN of Mississippi. Mr. Speaker, our able and distinguished colleague the gentleman from Oklahoma [Mr. DISNEY] told us a few minutes ago that W. P. A. workers in his State had found dinosaur tracks that are said to be a million years old.

Just what devastation that ancient quadruped wrought in his day we do not know. But I do know that we have uncovered in Oklahoma tracks of a monster more dangerous and more deadly to the prosperity of the people of that great Commonwealth than all the dinosaurs that ever roamed the jungles of prehistoric times.

I refer to the Power Trust, that gigantic octopus that sprawls over the Nation, reaches its tentacles into every home and every business establishment that uses electricity, and sucks the lifeblood from the ultimate consumers of electric lights and power.

Victor Hugo once described the octopus as one of the most baneful of all living beings. He said that it wrapped its tentacles around its helpless victims and sucked out their lifeblood, and that it was so vicious that under its sinister gaze a seed would never sprout and an egg would never burst to life.

Therefore, the octopus has been selected as a fitting emblem of the Power Trust, and its record in Oklahoma is a fair sample of its ruthless depredations.

In 1940 the people of Oklahoma used 1,164,094,000 kilowatt-hours of electricity, for which they paid $26,462,962. Under the T. V. A. rates the cost would have been $13,119,888, which shows an overcharge, according to those rates, of $13,343,074.

Under the Ontario rates the cost would have been $11,757,509, which shows an overcharge, according to the Ontario rates, of $14,705,453.

I know it will be charged that the Ontario system pays no taxes. I have a record of the taxes paid by the power companies in Oklahoma in 1936, and the Federal Power Commission informs me that there has been little or no change since that time. In that year all the taxes, cash contributions, and free services paid or rendered by both private and public electric utilities in Oklahoma, including both State and Federal income taxes, amounted to $3,321,576. Take

that from the overcharges according to the Ontario rates, and it still leaves a net overcharge of $11,383,877.

This equaled the value of more than 227,000 bales of cotton at 10 cents a pound—which is more than cotton sold for in Oklahoma last year. That would be more than 2,500 bales, on average, for every county in Oklahoma.

Just how the people of that State can continue to stagger under such a burden is more than I can see. They have coal, gas, oil, and water power in the State in sufficient quantities to produce all the electricity they need, and at the lowest possible rates. That power could be distributed over the State, and extended to every farm home in Oklahoma, at the T. V. A. rates or the Ontario rates without loss to legitimate investors. That would bring to the people of that proud Commonwealth a new day of happiness, contentment, and prosperity for all.

Several days ago Governor Phillips of Oklahoma came to Washington and appeared before the Committee on Rivers and Harbors, of which I am a member, in opposition to the development of the St. Lawrence project, and I had the pleasure of cross-examining him. I am inserting here some of the questions and answers as they appear in the records of the proceedings.

EXTRACTS FROM TESTIMONY OF GOV. LEON C. PHILLIPS, OF OKLAHOMA, BEFORE THE COMMITTEE ON RIVERS AND HARBORS ON THURSDAY, JULY 17, 1941

Mr. RANKIN. Now, let us get back to the power situation. You say that instead of developing this St. Lawrence we should develop the power to be produced by steam in Oklahoma; is that what you say?

Governor PHILLIPS. I said that you can get closer to it or that that is necessary in national defense, within a period of a year and a half, by the development of the natural resources in Oklahoma and Texas, so that it will come within the stated reasons of an emergency defense measure.

Mr. RANKIN. I agree with you that we can develop electricity in Oklahoma and distribute it anywhere in Oklahoma at T. V. A. rates, to farmers, to householders in towns and cities, to merchants and manufacturers, amortize the investment within a reasonable time, and pay a reasonable return on legitimate investments.

Governor PHILLIPS. I am talking about the minerals we need for defense.

Mr. RANKIN. I understand. I am talking about electricity.

Do you know how much electricity they use in Oklahoma a year?

Governor PHILLIPS. I do not have that total in mind; no.

Mr. RANKIN. Well, last year you used 1,164,094,000 kilowatt-hours.

Have you ever compared the rates in Oklahoma with the T. V. A. rates and Ontario rates, to see how much you are overcharged?

The overcharges in Oklahoma last year, Governor, according to the Ontario rates amounted to $14,706,453.

Now, we have a man who testified here the other day——

Governor PHILLIPS (interposing). Of course, that all depends. That is a relative proposition and depends on where we are going.

Mr. RANKIN. Now, we are just talking about the overcharge.

According to Ontario rates——

Governor PHILLIPS (interposing). I do not know who made those figures. They might be right. I say I am not prepared to go into that proposition. I did not prepare for it. I did not think it would be germane to this subject.

Mr. BEITER. The Governor is correct. It is not germane.

Mr. RANKIN. Yes; it is. The gentleman from Buffalo does not think that anything is germane that is in favor of the bill.

Now, Governor, I know that they will come back and say that the difference is that the power companies pay taxes in Oklahoma.

I dug up the taxes in Oklahoma which the power companies paid for the year 1936.

Governor PHILLIPS. I will agree with you on that. We raised their taxes. I was on a commission that raised their taxes this year. They will pay. We will make them pay.

Mr. RANKIN. I find they paid $3,321,576.

Governor PHILLIPS. They will be worse than that next year, because we went into that; we raised them. They will not go down.

Mr. RANKIN. That is both public and private electric utilities. That included the taxes, cash contributions, and free services rendered, and also their State income taxes and Federal income taxes.

Governor PHILLIPS. I do not hold any brief for that bunch.

Mr. RANKIN. And that still left a net overcharge——

Governor PHILLIPS. Notwithstanding that little story I saw in the CONGRESSIONAL RECORD a few months back.

Mr. RANKIN. That still left a net overcharge to the people of Oklahoma $11,383,877 for last year.

Governor PHILLIPS. You see, that gets to be relative. We put in $65,000,000 taxes into the Federal Government last year to help buy some of this other stuff that we are not getting back there.

Mr. RANKIN. Yes; that is in the State; but I am talking about your electric utilities.

Now, do you know how much power the average householder uses in Oklahoma?

Governor PHILLIPS. I know how much I use, but I do not know about anybody else.

Mr. RANKIN. Well, I will tell you. They use only 59 kilowatt-hours per month.

Governor PHILLIPS. I used more than that.

Mr. RANKIN. Where they have the T. V. A. rates, I notice here, they used 170 kilowatt-hours a month in my town, and that enabled them to use those electrical appliances necessary for the average home and the average business establishment.

This engineer who testified the other day—and he was a very brilliant gentleman—and I think that he is present in the room today—I have his statement before me, and it shows here that you could generate power with coal in New York at from 3.4 mills to 4.5 mills a kilowatt-hour.

Governor PHILLIPS. Well, of course, I went this far, Mr. RANKIN——

Mr. RANKIN. Wait a minute. In New York they have to ship in their coal.

Governor PHILLIPS. That is a good thing; we need to send it to them.

Mr. RANKIN. You have coal over a large part of Oklahoma; at least, over a large area of it.

Governor PHILLIPS. Yes; all over eastern Oklahoma.

Mr. RANKIN. You have gas all over Oklahoma?

Governor PHILLIPS. Yes; all over the State.

Mr. RANKIN. What can you buy coal for laid down at the mouth of the mine in Oklahoma?

Governor PHILLIPS. Well, there are five different grades. All of the way from 70 cents for slack to $2.50 for fancy lump.

Mr. BEITER. You have an oil pipe line from Oklahoma into my district.

Governor PHILLIPS. I beg your pardon.

Mr. BEITER. You have a pipe line running directly into my congressional district from Oklahoma.

Governor PHILLIPS. What State?

Mr. BEITER. New York.

Mr. RANKIN. The gentleman opposed that, did he not?

Mr. BEITER. No.

Governor PHILLIPS. It was not built by Government subsidy.

Mr. RANKIN. If you can lay this coal down—I am taking the top figures—if you can lay this coal down at $2.50 a ton, you can generate power and distribute it all over Oklahoma at or on T. V. A. rates or the Ontario rates. You can do the same thing with oil.

Governor PHILLIPS. You have got to have four or five miracles performed in the Interstate Commerce Commission before you can do that. You cannot ship coal from western Arkansas to Memphis, Tenn., as cheap as you can ship it from Pennsylvania out there.

Mr. RANKIN. I am not talking about shipping it across the State line.

Governor PHILLIPS. You cannot ship our coal up there at all.

Mr. RANKIN. You do not have to ship it. You can generate this power at the mouth of the mine and distribute it all over Oklahoma with long-distance power lines, and nothing in the world can keep you from doing it.

Governor PHILLIPS. I am for that program.

Mr. RANKIN. Nothing in the world can keep Oklahoma from being a veritable electric paradise, and yet here we find that they are struggling along under a burden of overcharges amounting to more than $11,000,000 a year after allowing for taxes.

Governor PHILLIPS. What we need to do in Oklahoma is to be permitted to grow enough cotton and corn to make a living.

Mr. RANKIN. All right. Because it takes so much of what they make to pay for the things that cheap electricity would afford them. Now then, Governor——

Governor PHILLIPS. Of course, a great deal of our State is sparsely settled and we could not have electricity out there; nobody could ever run a line out there.

Mr. RANKIN. Yes, we can; we can get it to every farmer in the country.

Governor PHILLIPS. Somebody else would have to do it.

Mr. RANKIN. We are going to get it to every farm home in America, and it is not a question of the Government going into business, and it is not going to ultimately cost the Government anything; but it will add untold billions to the wealth of the Nation and untold comforts and conveniences and relieve untold drudgery to the people in Oklahoma and people on the farms everywhere.

Governor PHILLIPS. I just say that I am not in favor of doing that until we get some guns into the hands of our soldiers. We may not want to put in those lines in that light.

Mr. RANKIN. We can do that without withholding a single gun from a single soldier, a single cap, or a single article from the Army, or anything that is necessary for any soldier.

Now, Governor, you have natural gas in Oklahoma?

Governor PHILLIPS. Yes, sir.

Mr. RANKIN. In addition to your water power, you have a world of natural gas in Oklahoma.

Governor PHILLIPS. Yes, sir.

Mr. RANKIN. A large portion of that gas is going to waste, is it not?

Governor PHILLIPS. No, sir; no, sir.

Mr. RANKIN. What you call sour gas?

Governor PHILLIPS. No, sir; there is not any of it wasted in Oklahoma.

Mr. RANKIN. I see.

Governor PHILLIPS. Secretary Ickes to the contrary notwithstanding; no, sir.

Mr. RANKIN. All right. Now, Governor, you can produce gas as cheaply in Oklahoma as they can in Louisiana, can you not?

Governor PHILLIPS. Yes, sir. Of course, that is a relative term. We have some fields that are 1,800 feet and some 6,000, and you can drill a hole in Oklahoma a thousand feet deep as cheaply as you car in Louisiana.

Mr. RANKIN. All right.

Governor PHILLIPS. And whether it is going to cost a stated number of dollars, a different number of dollars, depends upon the strata from which the oil and gas is taken.

Mr. RANKIN. But you can produce this gas just as cheaply in Oklahoma as they can in Louisiana?

Governor PHILLIPS. Yes, sir. Our boys down there are doing it.

Mr. RANKIN. In the State of Louisiana they are generating electric power—the Louisiana Power & Light Co. is—and shipping it up into Arkansas and selling it at wholesale for 2.2 mills per kilowatt-hour. That is prime power. You can do the same thing in Oklahoma, can you not, if they can?

Governor PHILLIPS. I am not familiar with that. I would not be able to state.

Mr. RANKIN. If you can produce this power with gas in Oklahoma as cheaply as the Louisiana Power & Light Co. is generating it in Louisiana and laying it down 200 miles away in Arkansas; if you can even do that, you can wipe out this $11,000,000 overcharge to the people of Oklahoma; increase the use of electricity in every home, every business establishment, increase the use of electrical appliances which go to make the homes and business establishments more profitable and more attractive, more pleasant, and more free from drudgery, and at the same time electrify every farm home in Oklahoma.

With that picture before you, do you not think that instead of opposing this power program that we are trying to take to the people of the Northeast you ought to join us and help to produce electricity at rates that the people can afford to pay?

Governor PHILLIPS. We are talking about some of our farm problems——

Mr. RANKIN. No, no

Governor PHILLIPS. And I say to you, the problem in Oklahoma, if you are talking about what we need is we need to have relief from this condition whereby you can put a man in jail for growing 11 acres of wheat when he ought to be growing 50. Somebody comes around after he has planted and says, "You cannot grow but 9."

We cannot electrify the farms in Oklahoma until we get a farm program which fits.

Mr. RANKIN. How many counties do you have in Oklahoma?

Governor PHILLIPS. Seventy-seven of them.

Mr. RANKIN. Seventy-seven counties.

Governor PHILLIPS Yes sir.

Mr. RANKIN. Have you ever figured out how many bales of cotton at the present prices these overcharges for electricity in Oklahoma amounted to last year?

Governor PHILLIPS. No.

Mr. RANKIN. An average of over 2,000 bales of cotton for every county in the State, after allowing for all taxes, cash contributions, and free services paid or rendered by both private and public electric utilities.

The record shows that while the private electric utilities in Oklahoma paid only 11.9 percent of their gross earning in taxes, cash contributions, and free services, the publicly owned plants paid 55.1 percent of their gross earnings in taxes, cash contributions, and free services.

Mr. Speaker, if we had the support of every Governor and every other official throughout the country, we could reduce electric light and power rates to their proper levels in Oklahoma and in every other State and could electrify every farm home in America at rates the farmers could afford to pay.

The World's Problem

EXTENSION OF REMARKS

OF

HON. ARTHUR CAPPER

OF KANSAS

IN THE SENATE OF THE UNITED STATES

Tuesday, July 29 (legislative day of Monday, July 28), 1941

ARTICLE BY REV. CHARLES M. SHELDON

Mr. CAPPER. Mr. President, I ask unanimous consent to have printed in the RECORD a brief article by Rev. Charles M. Sheldon, entitled "The World's Problem," which appeared in the Pathfinder magazine as a guest editorial from the pen of this distinguished clergyman. Dr. Sheldon, author of many religious works, but well known as the writer of In His Steps or What Would Jesus Do, now lives in his eighty-fifth year in Topeka, Kans. He is hale and hearty, and his comments on the current scene are always interesting and timely.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

[From the Pathfinder of June 28, 1941]

THE WORLD'S PROBLEM

(By Dr. Charles M. Sheldon)

There are a great many problems facing the human race at present, and a good many people are discussing them from the platform and in the press and on the street, and there is a Babel of tongues that result in a great deal of confusion and make a great deal of noise without much real value.

There is the economic problem, the financial problem, the taxation problem, and, to cap all, the war problem. The papers are full of all these problems, and the Morning Shudder and The Evening Depressor take away the average citizen's appetite for breakfast and ruin his digestion for dinner.

For, after all, the greatest problem in the world is the human problem. We will never have a better world until we have better people. And we will never have better people until the human race repents, turns around and goes the other way from the practice of hate and selfishness and greed, and begins to practice love and friendship and the brotherhood of man.

Jesus paid no attention to human governments. He lived under the worst totalitarian government, called the Roman Empire, and He never mentioned it but twice. He spent His whole time teaching men how to behave. For conduct is what makes history, not knowledge of science or sociology or languages or graduation from universities that have never taught the student to love anyone. And until the human race begins to live as Jesus lived and taught, we shall continue to have war and economic troubles and trouble of every sort.

I have been waiting all my life to hear some Member of our Congress stand up in the Senate or the House in Washington and tell the Members the truth about human conduct as Jesus taught it. I have never heard such a talk from any Member of the Congress. They talk politics and economics and everything but conduct. It is human behavior that the world needs today, the behavior that loves instead of hates and believes in friendship instead of force. And until we have that sort of human race we shall always have human trouble on earth. The greatest human problem is the "human problem."

And when that is settled all other problems will be settled.

The Investigation of Royalty Payments

REMARKS

OF

HON. CHARLES KRAMER

OF CALIFORNIA

IN THE HOUSE OF REPRESENTATIVES

Tuesday, July 29, 1941

Mr. KRAMER. Mr. Speaker, as chairman of the Committee on Patents of the House of Representatives, I feel impelled to make a few remarks in connection with some recent hearings of our committee on the subject of royalty payments.

The Committee on Patents held these hearings on three similar joint resolutions, 32, 73, and 123. These resolutions were designed to deal with a problem which arises from the fact that certain foreign countries, principally Germany, prevent the payment to American citizents of money due to them from the use of patents, trade-marks, and copyrights of that country owned by American citizens. Some citizens of foreign countries own American patents, since by treaty this country is obligated to grant patents to citizens of other countries on an equal basis. Americans who may be operating under these foreign-held patents had to pay royalties to the foreign owners under their contracts and agreements. Consequently there was a very unequal flow of royalty payments—Americans had to make their royalty payments to foreigners, but at the same time royalty payments due to Americans from abroad would not be paid, owing to the control of the foreign government.

The resolutions provide that in case a foreign government refuses foreign exchange to its nationals for the payment of the use of patents, trade-marks, and copyrights owned by American nationals in such country, although the nationals of such country receive payments due them from Americans, all amounts due from persons in the United States shall be paid to the Secretary of the Treasury. The Secretary would deposit this money in a special account and would be au-

thorized to pay the claims of persons in the United States from the special account.

Testimony before the committee showed that in a number of instances royalty and other payments under patents due to American citizens from foreigners have not been permitted to be paid by the foreign country, and there is no doubt that this practice is extensive in several countries.

Reports on the resolutions have been received from the Department of State, the Treasury Department, and the Department of Justice. It is pointed out by these reports that the resolutions are very restricted, dealing with only a narrow aspect of a larger problem of international payments, being concerned solely with payments under patents, trademarks, and copyrights, and that the matters covered by the resolutions should be a part of the study of the larger problem. The Department of State indicates that the procedure contemplated by the resolutions would raise questions of a difficult character, both legal and practical, and that the amounts of money involved in the payments which would be affected by the resolutions form a relatively small proportion.

It may also be pointed out that the resolutions as drawn might be inconsistent with our treaty relations with countries other than those intended to be affected.

The recent action of the President of the United States in freezing the assets of the Axis countries accomplishes one of the principal results of the resolutions, that is, the prevention of the sending of royalty payments to those countries. In view of this action the resolutions are believed to be unnecessary, at least in their present form.

For the above and other reasons the Committee on Patents has not taken further action on any of the three resolutions.

During the course of its hearings the committee had occasion to receive testimony bearing on the subject matter of an article appearing in a magazine published in Philadelphia. Inasmuch as this article has been inserted in the Appendix of the CONGRESSIONAL RECORD—page A2300—I feel it is necessary to make a few comments on this matter in justice to the company concerned.

The article is headed "Is Hitler financed by America's defense program?" and the subtitle refers to "the way United States dollars flow into the Nazi war treasury." The article refers to the Rohm & Haas Co., of Philadelphia, and two related companies. The whole implication of the article, the manner in which it is written and in which the material is arranged, amounts to an indictment of the company, an accusation that it is unpatriotic, and that it is working in a way detrimental to the best interests of the United States. The article is not merely a factual statement but is written in a manner calculated to contain many inferences, such as that this company, with mysterious German connections, is not only sluicing money into Hitler's hands, but apparently is a little more than anxious to see that Hitler gets the money.

The committee has been given full information concerning the company and its activities, which presents a wholly different picture from that obtained in the article.

The business was established in this country in 1909 to manufacture here a chemical product which had been invented in Germany by one of the partners. The partnership was incorporated in 1917 and subsequently half of the stock was seized and sold by the alien property custodian—later repurchased by the company. Since that time there has been no alien control in the company; the stock being controlled by American citizens.

The company has been and is engaged in manufacturing and introducing new products. Some of these were developed by their own research, and others were obtained by purchasing patents or securing rights under patents for inventions made abroad. Many of the products manufactured eliminated the necessity of importations from abroad.

The company has a subsidiary which was purchased and is practically entirely owned by it. Another company, the Resinous Products & Chemical Co., was organized in 1926 to manufacture synthetic resins, which had been invented in Germany. Thirty percent of the stock was paid for the rights to the inventions, and this stock was subsequently transferred by the German owner to a Luxemburg corporation. Complete details as to the ownership of the stock in the three companies are in the committee records.

All of the testimony presented to the committee cannot be reviewed here. Two of the products made by the company or the associated company which are mentioned in the article will be briefly discussed, and also the question of royalty and other payments. The article refers to "Tego glue film," a cementing film which is used in making plywood, which is used in airplanes and for many other purposes. The article states, "Hitler shares Tego profits, too," and, further, that the product is "a great source of revenue for the gold-hungry Nazis." This sounds as if Germany were receiving vast sums of money. The testimony shows, however, that with respect to royalties which the company pays on this product, a total of $22,109.08 was paid in 1940 to a New York corporation, on which amount both Federal and State income taxes are paid by the recipient. Payment of the royalty for the first quarter of 1941, amounting to less than $9,000, was intentionally delayed and was not paid until after consultation with the Department of Justice and being advised by the Department, after investigation, that there was no basis for withholding of the payment. A letter from the Department of Justice concerning this payment follows:

DEPARTMENT OF JUSTICE,
Washington, D. C., May 22, 1941.

Re Theodore Goldschmidt Corporation.

Mr. S. C. KELTON,
Secretary, Resinous Products & Chemical Co., Philadelphia, Pa.

DEAR MR. KELTON: Since about April 22 you have repeatedly discussed with me the question of paying to Theodore Goldschmidt Corporation of New York City the royalty on Tego Gluefilm for the first quarter of 1941, amounting to $9,299.03. You had agreed not to make this payment without letting the Department of Justice know in advance. At the end of last week you mentioned to me that the Theodore Goldschmidt Corporation is insisting on having the payment made, and you showed to me on Tuesday of this week the letters from the Theodore Goldschmidt Corporation, insisting on this payment.

The Theodore Goldschmidt Corporation telephoned you again this morning, but you refused to accept the call until I could get an answer from Washington on this point.

I accordingly took this matter up with the Department of Justice as of today, and you are advised that the Department of Justice has no basis at the present time for requesting you to withhold this payment.

Yours very truly,

WALTER R. HUTCHINSON,
Special Assistant to the Attorney General.

The New York corporation receiving the payment also assured the company that they were owned entirely by American citizens, and that none of the royalty payments would be sent abroad in any form.

With respect to dividends due on the portion of stock in the subsidiary which is owned by a Luxemburg corporation, no payments to them have been made for over a year and a half, the assets of Luxemburg having been frozen by Presidential proclamation in May 1940.

Another product mentioned in the article is plexiglas, a plastic which is used in airplanes and also in many nondefense fields. This product was first developed in Germany, and rights to the inventions were acquired by the company in 1934. Their development of the product, their facilities, and their cooperation in the defense program has been very important. Prices have been reduced, rather than increased. The office of the Chief of Air Corps of the War Department recently wrote to the company as follows:

WAR DEPARTMENT,
OFFICE OF THE CHIEF OF THE AIR CORPS,
Washington, June 26, 1941.

Mr. C. S. KELTON,
Secretary, Rohn & Haas Co., Philadelphia, Pa.

DEAR MR. KELTON: Your testimony before the Patents Committee of the House of Representatives on June 12, 1941, has been brought to my attention. This hearing appears to have been in connection with reports of an attack upon the patriotism of your company.

During the past 4 years your company has been a source of supply for plexiglass used in the manufacture of Army airplanes; and the quantities of plexiglass now required by the present increased program of airplane production requires a major part of your output. Your company has always been most cooperative and has increased capacity and by entering into the competitive field reduced prices for plexiglass to meet the Air Corps' constantly expanding requirements.

O. P. ECHOLS,
Brigadier General, United States Army, Chief, Material Division.

The company has been most cooperative in the national-defense program in every possible way.

The company has not paid any royalties to Germany either directly or indirectly since January 1, 1941, on any sales of the products manufactured by it or its
